Industrial Topics.

TYPES OF THE PRESENT.

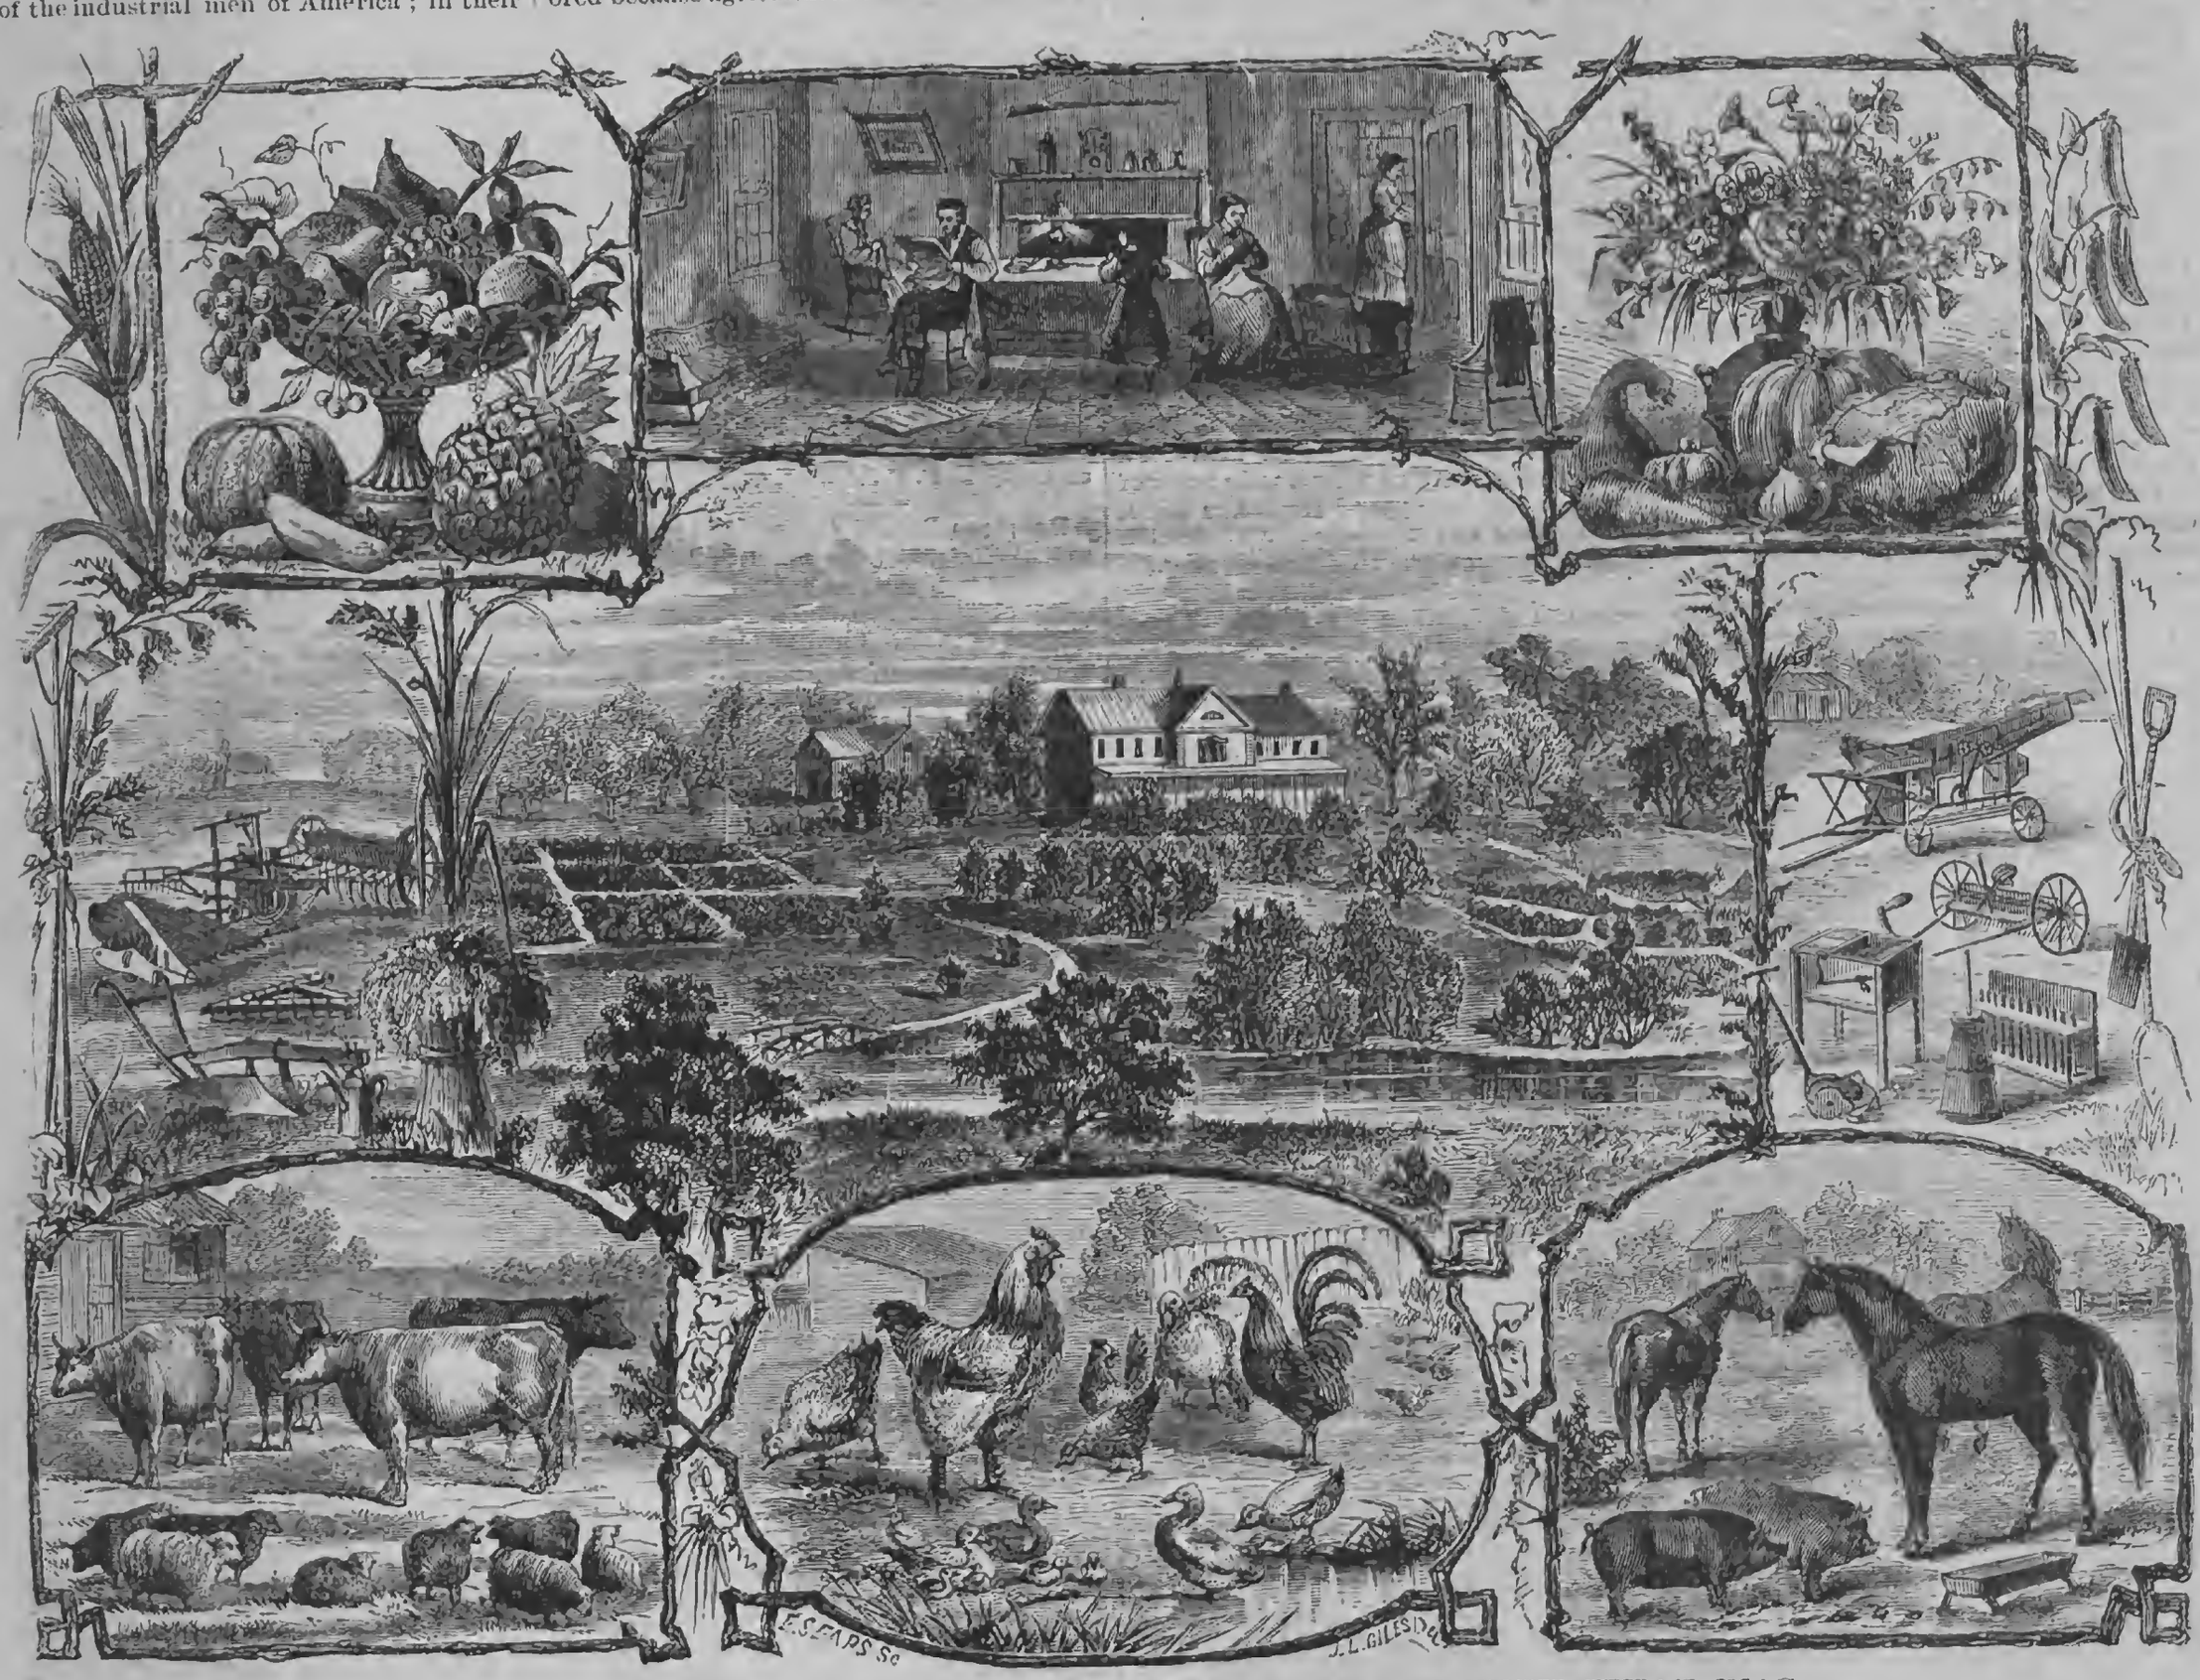
WHAT we realize to-day in the home life of the industrial men of America; in their methods and in their relations to each other; in their independence, thrift, culture and intelligence, is so different from that of twenty years ago that to close our eyes and strive to recall the past and then open them upon the present, is like waking from a Rip Van Winkle slumber. The then and now are connected with a chain of industrial events, too long to be catalogued, that have brought to the working people of this country elements of power and prosperity which they have not been slow to mold for their own use. Then it was common to talk of the dignity of labor—to preach that it was honorable, as if it were doubted; and it was doubted then. But now the politician does not use that palatetickler. The dignity of labor depends upon the accomplishments of the laborer. Labor does not necessarily dignify any one; but it is always honorable if honorably performed with an honest purpose. Upon the man depends the dignity and honor of the work he does. And to-day Agriculture is more honored because agriculturists are more intelligent, cultivated, and better business men than they were twenty years ago.

Contrast the condition of American agriculturists, and their homes, and home comforts with those of other countries—of France for instance, which claims to be the most enlightened nation on the globe. The truth is, their labor is not dignified with brains; here it is; also in England, though even England, with her more exact, complete, thorough agricultural system, is not far, if any, in advance of us in the average intelligence and accomplishments of her agricultural population. Her system is more complex and thorough of necessity—that is all; and the science she uses is a necessary tool just as a ditching shovel is necessary to the man who drains land; but it does not follow that men who have no land to drain are the less intelligent than those who do, because they do not keep ditching shovels.

Life to-day in the Rural Homes and on American Farms means and is more to our people than ever before. Culture and refinement are rapidly taking the place of ignorance and boorishness. Our school system and the cosmopolitan character of our life innovate upon the old-time traditions and habits and break up the trammels which, within our memory, bound men down to a plodding, dreary, and almost hopeless life of toil. There are brighter homes and happier faces in the country today. Social life has assumed new phases and we begin to see the dawn of what is to be in the future—a higher and better type for the American Farmer.

There are too few thinkers, too few calculators, too few disciplined minds among agriculturists, although the necessities of modern business are fast begetting them. We cannot help congratulating the young men upon the farms and in the gardens of to-day, upon their better opportunities, and the young women upon the rapid decrease of the social chasm which separates them from those who occupy the highest positions in American Homes.

We started to say that on this page we have attempted to give a picture typical, in a small sense, of the present, and let our readers make their own comparison with the past. We have aimed not to exaggerate in any sense; in our judgment we have not even selected the highest types, but simply representative ones. We have no words of buncombe to say. Our readers do not need advice nor encouragement in general terms. Specific aid in specific industries it is our duty to furnish so far as we may; and the aim with us is to be to "improve the general average," and so labor to perfect the typical man and agriculturist of 1872 that at the close of the New Year we (all of us) can look back upon our work and note "Progress and Improvement."



TYPES OF THE PRESENT—WHAT IS, FOR COMPARISON WITH WHAT WAS.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Cuttings of Roots.—*Dec.* 18.—In the oldest book I have on forest tree culture, that of MOSES COOK, 1675, the author recommends raising various species from root cuttings. This system is of course adopted only with those species which do not grow readily from cuttings of the branches, such as Elm, Ash, Hickory, and Maple. As our nurserymen have had considerable experience in propagating raspberries, blackberries, and various kinds of ornamental shrubbery by root cuttings, perhaps they might extend the same system to forest trees. Florists propagate many kinds of plants by root cuttings, and I have been making root cuttings to-day of some choice *Bouvardias*, hence these remarks on this subject.

Double Chinese Primroses.—*Dec.* 19.—No one kind of plant has given me more pleasure this winter than my Double Chinese Primroses. They commenced blooming early in autumn and are still full of their exquisite double flowers, resembling small roses. From a dozen plants in five-inch pots scores of flowers have been cut, and still the number is scarcely lessened, as new ones come forward every day. This is just the plant for ladies to keep in their parlors or conservatories, as it requires little care, moderate heat and it blooms at the very time we want flowers most and are likely to appreciate them very highly. They are propagated by cuttings of the side or lateral shoots taken off in spring and then potted in sand, then placed under a bell glass or in a hot-bed, where a close, warm atmosphere can be secured.

Japan Ivies.—*Dec.* 20.—Every time I receive anything from Japan in the way of plants I instinctively ask myself, "what next?" I had supposed that all our European cousins possessed the Ivies, but here comes a lot from Japan with the most beautiful variegated leaves imaginable. The Japanese, like their near relatives, the Chinese, are very particular about keeping the various "castes" among their people distinct and pure; but when it comes to plants they have gone to the other extreme, and mixed species and varieties to such an extent that botanists will have enough to do if they ever attempt to classify them. The Japanese seem to be very fond of variegated plants, and the oddities of this kind already received are really marvelous. Their variegated oaks and maples are splendid acquisitions to our gardens, but there are many more in the same line yet to be had, if we only get the right man well established in that far-off, but very interesting country. Perhaps Gen. CAPRON is the man to bring about an agricultural and horticultural exchange between the two countries; but of this we shall know more in a few years.

Rose of Jericho.—*Dec.* 21.—Every one who has passed through the streets of New York in the last two or three years, must have noticed on the stands of sidewalk merchants, small moss-looking plants, labeled "Resurrection Plants, or Rose of Jericho." The latter name is perhaps the more attractive of the two, because anything that comes or purports to have come from the Holy Land, possesses a particular value to many people. The little plants, however, sold in our market, are not the true Roses of Jericho, but merely a species of Bird's-nest-moss, *Selaginella lepidophylla* from Lower California. If these apparently dry and dead plants are placed in water, they soon swell out, their beautiful leaves expanding until they assume the original size and color, hence the common name of "Resurrection Plant.

The old and original Rose of Jericho resembles its American namesake, but is known to botonists as *Anastatica hierochuntina*, and might, with as much propriety, be called a cabbage as a rose. It is a very small and insignificant plant, but its hygrometical properties have always attracted the attention of travelers in its native country. During the rainy season the plant flourishes, but when a dry time comes the root stock breaks off, the leaves roll up into a ball, the winds blowing it over the sands until rain again falls. Many volumes and monographs have been written about this insignificant little plant, the earliest of which, that have come to light, is that of JOHN STORMS, 1607, exhumed from the shelves of some old book-worm in Europe a few years since.

The California species, so abundant in our street, is really a pretty plants for house culture, and especially adapted to Wardian cases.

Making Cuttings of Shrubs.—*Dec.* 22.—Cuttings of hardy shrubs may be made at almost any time during winter; but if taken off from the plants before very severe weather, they will be more certain of growing. During pleasant weather I have a quantity of the young shoots, of kinds desired, carried into the cellar, and these are made up during stormy days. The larger proportion of our hardy ornamental shrubs are readily propagated in this manner, and there is no reasonable excuse for the scarcity which is frequent in country towns. *Deutzias, Philadelphus, Weigelas, Lonicras*, and scores of other beautiful species, may be propagated from cuttings of the ripe wood taken off at this season and kept in a cellar until spring. The shoots should be cut into sections of about six inches in length and then buried in earth, sawdust, or some similar material that will prevent drying, until the time arrives for planting.

A Cold Snap.—Mercury went down last night to 8° below zero—the coldest weather we have had this season. The ground is covered with snow, therefore small plants are well protected.

Too Many Kinds of Plants.—*Dec.* 23.—One of the most serious mistakes which almost every one makes in cultivating house plants, is in trying to keep too great a variety. Professional florists, as well as amateurs, fall into the same error, and the results are, failures with a greater or less number of species. If the house is kept warm enough to make a certain species of plant thrive, others are likely to fail because the temperature is too high for them, and mildew and rust follow. An atmosphere in which Geranium and Heliotropes thrive is too warm for Camellias, Heaths, and Azaleas. The beautiful Orchids are certainly very tempting plants, but one needs a house especially arranged for their culture, and the same is true with many other orders, families and genera; and it is far better to confine ourselves to a few species and of these select the best varieties growing there to perfection than to undertake more than we can accomplish. I certainly do not claim to have escaped falling into this far too common error of trying to cultivate a great variety selected from a wide range of families; but each year I resolve to lessen the number and come nearer perfection with the remainder. Ladies often complain of certain plants failing under the best care they can give, while others succeed perfectly, which only shows that different plants require widely different treatment.

The Apiarian.

BEE HOUSES.

IN a late issue of the RURAL NEW-YORKER appears the following:—"I have never seen anything in the RURAL about bee houses. I would like to build one, and desire information. Please inform me how to build one, and what size to make it for three or four swarms."

We never saw a bee house for summer use that was of any value. Intelligent bee keepers have no bee houses for summer use. The best place to locate bees during summer is under trees. We place our bees under apple and cherry trees—one hive to each tree—on the north side, so as to be in the shade at mid-day. The hives front the southeast. They should be kept apart from each other, at least a rod. Two rods are better still. We sometimes set the hives within four feet of each other, but only when crowded for room. When the hives are on separate stands, and kept apart as indicated, it is more pleasant and convenient to examine their contents. If several hives are on a board and sit within a few inches of each other, as is the practice among those who still adhere to the old box hive, the bees are altogether too neighborly to be profitable. On such stands it is extremely difficult to examine any one of the hives without disturbing the rest. This makes bees irascible.

For winter use it will hardly pay to make a house for simply "three or four" hives of bees. A house suitable for wintering bees in is somewhat expensive. A good house cellar will answer every purpose. Put them into the cellar as soon as cold weather sets in. My bees this year were moved to the cellar December 2d. Sometimes we put them in as early as the 20th of November. In this latitude they are not moved to their summer stands till about the 20th of March or the 1st of April. All depends on the weather, as they should not be taken out unless the weather is warm enough for them to fly freely. The temperature should not be less than 60°; at 50° bees will chill.

A cellar under a house is a good place for bees in winter if it be dry, warm, and free from vegetable exhalations. All cellars that have sandy, loamy, or gravelly bottoms are generally dry enough. But do not set the hives on the bottom of the cellar. Set them on a board and about two feet above the cellar bottom. The boards in my cellar rest on the ends of barrels. M. M. BALDRIDGE.

Kane Co., Ill.

Field Crops.

FIELD NOTES AND QUERIES.

About the Flax Crop.—I should be glad to learn from those who have had experience the past season, whether the crop has been a profitable one; if so, whether the profit has been derived from the seed or from the fiber, or both. Also, in what market it has been disposed of.—A FLAX GROWER.

Cut Grass Early.—A field on the flats, seeded with grass in 1870, failed to catch good. Very early in spring of 1871 it was re-seeded with timothy and clover, twelve quarts to the acre. This caught good, but the land being rich brought forth a heavy crop of weeds which, when eighteen inches high, June 20, I began to cut; completed the harvest July 4. To my surprise, this cold December weather, the sheep are doing well on it. Cut grass early.—M. H. N.

"Snow Corn."—Is there a variety of corn known by the above name? I have heard of it and that it is an excellent hominy corn; but I never could find any. Can you tell us anything about it?"—C. B. S., *West Virginia*.

Some years ago, travelling in the Valley of Virginia, we found a snow-white corn which was highly esteemed for this purpose—a flint corn. We never saw it anywhere else and do not remember the name of the man who grew it, hence we can give our correspondent no information.

Sanford Corn.—I planted two quarts of seed on one-third acre of land; hills 3 1-2 feet apart, three kernels to the hill. About one-third failed to grow. Land not first-rate. The only manure applied was a handful of ashes to the hill, when the plants were four or five inches high. Produce—thirty-six bushels of hard corn, no soft. It suckers more than sweet corn. I took from one hill eight good ears growing from two kernels. I simply give facts. Your readers can form their own opinions as to failure or success.—T. B. P., *Akron, O.*

Peerless Potato Crop.—As I have seen so little spoken of the Peerless Potato as a potatoe for general crop, I will give a statement of about two and a quarter acres I planted of them. I had 530 bushels of them, grown in hills three feet apart each way, planted on timothy sod, and manured with about 100 pounds of Peruvian guano to the acre; had only 15 bushels of small potatoes in the whole 530 bushels. Have sold $461 worth of them and have 120 bushels left. I filled one barrel with 92 potatoes; dug one potato that weighed 5 1-4 pounds. My Early Rose planted beside them did not do one-half as well. The Peerless, with me cooks very dry and mealy.—P. D. H., *East Penfield, N. Y.*

Comparative Weight of Corn and Cobs.—At Geneva, Ill., on Saturday, Nov. 25, according to the Republican of that place, eight farmers compared samples of their corn of this year's crop. Four ears of one lot were weighed and the weight found to be 2 lbs. 11 oz. An equal weight of each sample was then taken, when each was shelled and the shelled corn weighed. These weights varied from 2 lbs. 2 1-2 oz., to 2 lbs. 4 1-2 oz. The eight samples unshelled weighed 21 lbs. 8 oz.; shelled 17 lbs. 11 oz. The weight of the cob then was 17.7 per cent. of gross weight. These samples were all of Dent corn and may be supposed to be of the best corn raised in Northern Illinois this year. In selling corn in the ear the weight allowed for a bushel of shelled corn varies considerably—ranging from 68 to 72 pounds; the latter when the corn is not well dried; the former for good corn late in the season. These selected lots showed a weight of a little less than 12 1-2 pounds of cobs for each bushel of shelled corn; or 68 1-2 pounds in the ear would give 56 pounds of shelled corn.

Shrinkage of Corn.—The New England Homestead says:—"On the ninth of last October, a committee of the Hampden County Agricultural Society examined a field of corn belonging to WILLIAM MATTOON of Springfield, and harvested an average portion containing two hundred and sixty-two feet, being ten feet less than one square rod. The corn was taken to the agricultural store for safe keeping and drying. At the time of harvesting it weighed forty-five pounds. Being suspended from the upper part of the store it was left until the twenty-ninth day of November, when its weight was thirty-one and one-fourth pounds. It was now shelled and cleaned. The result was twenty-two and one-half pounds of corn, and at the rate of seventy-seven bushels and thirty-five pounds per acre. It will be readily observed that the shelled corn was just one half the original weight of corn and cob. This corn was of the Dent variety but appeared to be well ripened. We believe it to be quite common to estimate the corn crop by calling seventy pounds a bushel. Had the above-named crop been decided on this basis the result would have been one hundred and five bushels instead of seventy-seven."

The Swine-Herd.

MORE ABOUT CHESTER WHITES.

F. D. CURTIS in the RURAL NEW-YORKER of Dec. 16th, in commenting upon my communication relative to the Chester White hogs as a thorough-bred, don't seem to understand the point I made in proof of the position that the Chester White is a thorough-bred, or rather he does not embrace the whole testimony in his reply, when he says in effect, that my argument was based upon the fact that a cross between a Chester White and a Poland China sow produced *nine* white pigs. He overlooks the second cross of one of those half-breeds being again crossed upon a Poland China sow and the produce being *five* white pigs and *three* spotted ones. My argument was founded, not upon the single cross, but upon both the first and second, and showing that the white blood must be the strongest, from the fact, that a pig from a Chester White boar and a Poland China sow being half Poland China, when bred to a Poland China sow got a majority of white pigs. From the fact that there were three black crosses to one white cross, and a majority of the pigs being white and resembling in build, shape and size of ears the Chester White, I held that the Chester White must be a thorough-bred—capable of impressing its own likeness upon its descendants down to the third generation.

Mr. CURTIS goes on to say:—"Much confusion has arisen concerning this breed (the Chesters) from the fact that there are two families—one with lopped ears and one with straight or erect ears." Now, I do not admit that there are any Chester White hogs with "straight or erect ears." When a man shows me a pig with straight or erect ears and calls it a Chester White, I either conclude that he thinks me a fool and desires to impose upon me, or that he is a fool himself and has been imposed upon by some sharper, dealing in Suffolk, or some other straight and erect eared white pigs. Hence I protest against Mr. CURTIS, or any other man's trying to create the impression that there are two families of Chester White hogs, one of which has straight or erect ears.

In regard to Mr. SILVER'S Improved Chester White hogs, I have to say that they are not thorough-bred Chesters, for Mr. SILVER claims that he has, by crossing them with other white breeds, *improved* upon the genuine Chester White hogs, as bred in Chester Co., Pa. I purchased my Chester White hogs, from which my present stock is derived, from THOMAS WOOD, GEO. B. HICKMAN, JAS. YOUNG and N. P. BOYER of Chester Co., Pa.; and while I claim that I have *improved* upon the stock purchased from them, I have not done it by crossing with other white breeds, but have accomplished the improvement by a careful selection of animals for breeding purposes.

Mr. CURTIS' description of a thorough-bred Chester hog is, in the main, correct; but I am breeding off the large legs, big tails and large, heavy, lopped ears. I select for breeding purposes, pigs with a good coat of bright white hair, a short nose, broad and dished face, ears small and thin, with points hanging over the eyes, long body, short neck, small legs below the hock and knee, smooth skin, without wrinkles or folds, a full ham, running down well to the hock, a broad back a little arched, deep sides, and one that keeps fat and fit to butcher all the time, when properly fed. This is my kind of a Chester White hog.

Mr. CURTIS' proposition to have a Swine-herd book, may be original with him; but I have been advocating it for the last two years, and as long ago as last March had an article published in the National Live Stock Journal upon the subject of requiring pedigrees for hogs exhibited at Fairs for premiums. Not only so, but I have written articles upon the same subject for the Iowa Homestead, the Council Bluffs Bugle, Central Union Agriculturist, and several other agricultural papers. Inclosed I send you my ideas as expressed in a letter to the Central Union Agriculturist, Aug. 23, 1871, together with the editor's reply thereto, both of which, as they accord with your views and with those of Mr. CURTIS, might be published as giving additional strength to Mr. CURTIS' proposition.

LYSANDER W. BABBITT.

Sheep Husbandry.

THE WOOL GROWERS AND MANUFACTURERS IN COUNCIL.

THE Syracuse Convention of December 20th was a great success. The local attendance was large, considering the inclemency of the weather; and never on any previous occasion of the kind have so many States been represented. As stated in the report of the proceedings below, nearly all the principal wool growing and wool manufacturing States had delegates in attendance, and these delegates were chiefly men of experience and ability—well known men—in their respective industries. The unanimity which characterized all the individual expressions of opinion, and all the proceedings, may well be regarded as remarkable. In respect to the Wool and Woolen Tariff, there was no dissenting voice from either growers or manufacturers to the resolutions which were adopted that that Tariff is just and satisfactory and, requires no "tinkering" whatever. The meager sketch, in the proceedings, of the remarks of the different speakers, gives scarcely any idea whatever of what they said; but we learn the speeches were fully reported and are to be published hereafter.

NATIONAL CONVENTION OF WOOL GROWERS AND MANUFACTURERS.

PURSUANT to a call made by the Presidents of the National Wool Growers and Wool Manufacturers' Associations, a National Convention of the representatives of the wool and woolen industries of the United States met at Syracuse, N. Y., December 20th. Nearly all the principal wool growing and wool manufacturing States of the Union were represented. The Convention was called to order by Hon. J. WILEY EDMONDS of Massachusetts, and, on motion of THEODORE POMEROY of Massachusetts, Hon. HENRY S. RANDALL of New York, was chosen President.

The following gentlemen were chosen Vice-Presidents:—W. R. SANFORD, Vermont; GEORGE GEDDES, New York; J. C. STEVENS, Ohio; A. M. GARLAND, Illinois; SAMUEL ARCHER, West Virginia; JAMES SLOCUM, Pennsylvania; BENJAMIN FLINT, California; ELI STILSON, Wisconsin; —— HARDING, Massachusetts; —— ROBINSON, Connecticut; —— GIBSON, Minnesota; —— OAKES, New Jersey.

JOHN L. HAYES of Massachusetts was chosen Secretary, and HENRY CLARK of Vermont, JAMES S. MCCONNELL of Illinois, J. MCDONALD GLENN of Pennsylvania, and JOHN P. RAGAN of ——, Assistant Secretaries.

S. D. W. HARRIS of Connecticut, moved that a committee of seven be appointed by the Chair to prepare Resolutions and an Address. (Mr. H. declined to act on the committee.) The Chair appointed the following committee:—Mr. HAYES of Mass.; Mr. ROBERTS of ——; Mr. MILLER of Vt; Mr. NORTON of Wis.; Mr. GLENN of Pa.; Mr. COSSITT of N. Y.; Mr. FLINT of Cal. The Convention then adjoined to half-past one o'clock, P. M.

AFTERNOON SESSION.

The Convention was called to order at 1.30, P. M., by President RANDALL, who, on taking the Chair, submitted the following remarks:

PRESIDENT RANDALL'S ADDRESS.

GENTLEMEN:—I thank you for the honor you have done me in appointing me President of this National Convention of Wool Growers and Wool Manufacturers.

In considering the objects which have brought together this assemblage of gentlemen from so many different States, we shall perhaps start with a better understanding of the subject, or rather a better recollection of the facts bearing on that subject, after taking a brief survey of the history of our wool industry, and of the legislation pertaining to it, for the last ten years.

The opening of the war of the rebellion commenced a new and distinctive epoch in the wool industry of our country—materially changing its previous conditions and relations in matters affecting its profits. The war, and the resulting dearth of cotton, vastly increased the consumption of wool in the Northern States. This correspondingly stimulated its production in those States and in foreign wool exporting countries. The influx of foreign wools, paying mere nominal duties, was very large. The annual imports from Buenos Ayres, which down to 1862 had fallen short of 5,000,000 pounds, suddenly rose to upwards of 17,000,000 pounds, and in 1864 it reached nearly 24,000,000 pounds. The annual import from the British possessions in Africa rose from less than 4,000,000 pounds in 1862 to nearly 14,000,000 pounds in 1864. The highest average annual cost at place of export of these Buenos Ayres wools—Mestiza wools, as they are known in commerce—during our war, was in 1864; and it was but 15.1 cents per pound in gold. (I shall be understood as hereafter speaking of all money in gold unless otherwise expressed.) Before the war these wools had averaged but 13 cents per pound. The circumstances of low priced land and labor, and pasturage through the year, which contribute to their cheap production, are well known.

The port charges, export duty, expense of transportation, &c., on these wools was 5.57 cents per pound. The duty, under the tariff of 1861, on wools costing less than 18 cents per pound at place of export, was 5 per cent. *ad valorem*, or less than a cent a pound on Mestiza wools. Thus when wools were exceptionally high in Buenos Ayres, they could be delivered with all charges paid, in New York, at a trifle over 21 cents per pound. At ordinary home prices, they could be so delivered at 19 cents per pound. They were imported in the dirt, were often burry, and owing to the weakness of their fiber, lost much in the processes of manufacture; so that two pounds, as imported, made only as much cloth as one and one-twelfth pounds of American clothing wool in average condition. Put in the same condition with the latter, they stood the American manufacturer about 38 cents per pound.

Now what was the cost of growing clothing wools, in the principal Northern wool growing States of the Union, anterior to the war? The average prices at which wool sold in our markets, from 1827 to 1861 inclusive, was 50.3 cents per pound for fine; 42.8 cents for medium, and 25.5 cents for coarse. The fine and medium qualities (which correspond with Mestiza wools) averaged 46½ cents. The statistics of the husbandry lead clearly to the conclusion that this price was not more than ordinarily remunerative. From 1840 to 1860 sheep only increased 20½ per cent. in numbers, while our population increased between 70 and 80 per cent. Our import of woolens more than doubled. These facts do not indicate a very flourishing wool industry.

The war which opened in 1861 about doubled the cost of labor and subsistence, increased direct and indirect taxation, and enhanced the prices of all the articles which enter into wool production. It therefore correspondingly raised the cost of that production. Buenos Ayres and some other countries, with the development in wool production they subsequently attained, might have competed ruinously with us before the war: after the latter produced its effects, and the foreign supply of wool became sufficient, nothing prevented the latter from driving us from our own markets, but the aversion of our manufacturers—used to our strong and washed wools—to work the weak, dirty, burry Mestiza wools. This exhibited good taste, and I would fain hope, in a reasonable number of cases, good morals, for the Mestiza cloths, though soft and handsome, lack the wearing properties of those made of United States wools. Indeed, it is difficult to work the former without strengthening the warp by the substitution or admixture of stronger wools.

In 1861, a wool and woolen tariff, framed by that eminent friend of those industries, Mr. Morrill of Vermont, passed Congress, and it was designed to afford adequate protection to both. But our growers had not then taken any pains to furnish their friends in Congress with the facts on which their proper amount of protection depended, and hence that body was compelled on this vital question to act, to a considerable extent, on conjectured data. The Act imposed a duty of three cents per pound on wools costing twelve cents and under, at the place of export, and six cents per pound on those costing more than twelve cents and not exceeding twenty-four cents. This tariff would have fallen short of its object—which was to give our clothing wools sufficient protection by a six cent duty—had it been honestly carried out. But by the fraudulent contrivances which are always resorted to to get in commodities at minimum duties, a large proportion of the foreign wools competing with ours paid only three cents duty.

New York wools, occupying a middle place in prices, brought on the average, in gold, 41½ cents per pound in 1861: 44¼ cents in 1862: 50¾ cents in 1863: 41½ cents in 1864; and about 44½ cents in 1865—during the whole five years averaging only one cent and two mills per pound more than during the thirty-four preceding years, when the cost of living and production was so much less.

Yet we are met with the anomalous fact that during the war the number of our sheep and the product of wool rapidly increased; sheep advanced greatly in price, and the husbandry presented to superficial observers all the ostensible indications of prosperity. I can but touch on the reasons. During that period wool averaged in currency 69.42 cents per pound—20.63 cents higher than the average of the thirty-five preceding years. This seemed a good price, and incommercial men were slow to appreciate the distinction between the value of gold and a legal tender currency. The great increase in the demand for wool, and the flourishing condition and rapid extension of woolen manufactures afforded further encouragement, and excited the public mind. The prevailing idea that, in the phrase of the day, "King Cotton" was dead, induced the expectation that the enormous consumption of wool would be permanent. It was believed that the restoration of the Union would only increase the number of consumers of our wool. And, finally, those who understood the inadequacy of the existing protection, anticipated that our war debt would demand for many years to come an amount of revenue which would, under the adopted theory of discrimination, ensure the specific and adequate protection of wool. Accordingly, multitudes rushed into the business producing that rise in the demand for sheep, and in their prices, which I have mentioned. These circumstances stimulated improvements, and extraordinary prices were paid for choice animals to effect those improvements in the shortest time. Nearly all the money made in sheep husbandry during the war was made on the sale of sheep and not on the sale of wool.

How many of these expectations exploded like bubbles at the close of the war, I need not inform the experienced growers and manufacturers here present. I must pass very rapidly over what followed. Both the wool and woolen interests were prompt in acting in the emergency. Before the close of 1865 the National Associations of the two industries met in this city. It was a meeting as auspicious as important in its results. Those who had opposed and thwarted each other for half a century, now grown wiser, placed themselves on the just and sound platform of mutuality—equal protection to both industries—and they appointed committees to act jointly in preparing the draft of a wool and woolen tariff to be submitted to Congress through the Internal Revenue Commission. These committees performed Herculean labors in collecting full statistics of their respective industries; held repeated meetings in New York, Philadelphia and Washington, and finally, after sifting and weighing every clause and word, agreed on the draft of the bill which passed Congress almost without alteration.

It would take up too much time to review the voluminous and singularly uniform testimony on which we acted, in fixing the proper rate of duties. We aimed to so fix them on wool, as barely to prevent foreign wools from selling in our markets below the actual cost of domestic production. Regardful of the interests of the consumer, and willing to trust to our own industry and skill, we asked for equality in our markets and nothing more. We asked for justice and not for favor. And I believe we attained these precise objects as nearly as practicable in the provisions of the law.

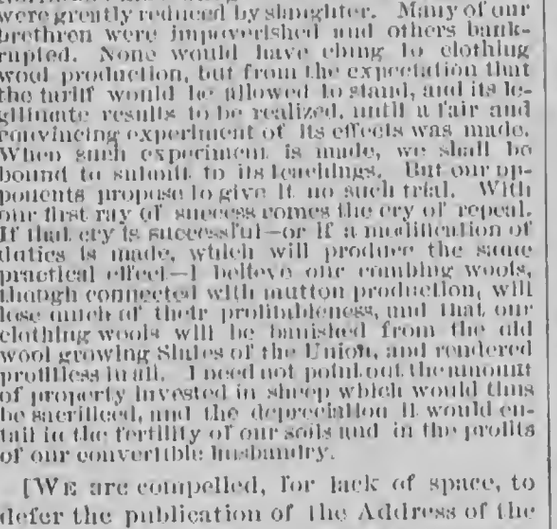
Most unfortunately the bill failed to pass in the session of 1865-66; and in anticipation of its passage the ensuing session, 70,000,000 pounds of wool, and woolens of the value of $57,115,000—almost equalling the entire imports of the four preceding years—were imported in 1866 under the existing low duties. The Government, too, when the war closed, threw millions of dollars worth of soldier's woolen garments on our markets, and they were sold greatly below the cost of their materials. These and other causes which have been often publicly stated, contributed to prevent the tariff from producing its legitimate results. It took three years to get rid of these obstacles. It was a bitter period to us. Nearly every pound of clothing wool grown in the Northern States was grown at a loss. Our flocks were greatly reduced by slaughter. Many of our brethren were impoverished and others bankrupted. None would have clung to clothing wool production, but from the expectation that the tariff would be allowed to stand, and its legitimate results to be realized, until a fair and convincing experiment of its effects was made. When such experiment is made, we shall be bound to submit to its teachings. But our opponents propose to give it no such trial. With our first ray of success comes the cry of repeal. If that cry is successful—or if a modification of duties is made, which will produce the same practical effect—I believe our combing wools, though connected with mutton production, will lose much of their profitableness, and that our clothing wools will be banished from the old wool growing States of the Union, and rendered profitless in all. I need not point out the amount of property invested in sheep which would thus be sacrificed, and the depreciation it would entail in the fertility of our soils and in the profits of our convertible husbandry.

[WE are compelled, for lack of space, to defer the publication of the Address of the Convention to the President and Congress, and the balance of the proceedings of the Convention, until our next issue, when we may have to abbreviate even that. We gave the substance of the resolutions adopted in our last issue.—EDS. RURAL NEW-YORKER.]

Dairy Husbandry.

AN IMPROVED BUTTER-WORKER.

IN RURAL NEW-YORKER of June 17, 1871, I saw a drawing of a Butter-Worker. Now, I think that mine is an improvement on all others that I have seen. The bedpiece is four feet long and two feet wide at the end, made of two-inch sugar maple plank. The sides are three inches wide, also of sugar



maple. The roller is fifteen inches long and seven inches in diameter at the handle, the angle being the same as the bed upon which it rolls. No patent right.—H. WILCOX.

RECENTLY, in our visit among the butter makers of Tompkins Co. we saw a butter-worker very much liked, and regarded as an improvement on that figured in the RURAL NEW-YORKER and referred to by our correspondent. The improvement consisted in having the slab or bed-piece broader than that of the old worker and dispensing with the side-pieces. It was simply a plain slab, similar in shape to the figure *d*, *a*, *b*, *c*, in the above engraving, and which we have lettered for the purpose of showing the form, &c. The front side is a little broader and more rounding than that of *d*, *c*, shown in the figure. The advantage of having no sharp corners to clean will be obvious.

WINTER BUTTER-MAKING.

I HAVE commenced making butter, and do not understand why it is sometimes very poor. I am very careful about all the little things, wash all the pans myself, and do not more than half fill them. My butter is usually good, but it will not keep long, and several wish to get butter for the winter from me. I do not let the milk stand over twenty-four hours, and churn while the cream is sweet. I want a new churn, for the old-fashioned one my husband took among other farm things is too small, and we have four new cows. Can you tell me which you think best, and also the price? I would like to know at what temperature the milk should be kept, for I think seventy-five is a little too warm. I churned four or five hours last week, and was obliged to leave until the next day. It looked like lard, and after working it over thoroughly was very poor. I think the cream was too warm when I churned. By stirring it once or twice each time I add to the cream, I have made butter come in a minute and a half, or at least two. Will you please let me know what gives the best color in the winter. Mine is a little pale?—JENNIE JENKINS, *Le Roy, N. Y., Dec.* 5, 1871.

THERE are a great many causes that operate to the injury of butter. It is important to keep the dairy utensils and the dairy-house clean and sweet. The trouble complained of by our correspondent probably comes from setting the milk in uneven temperature, sometimes too warm and sometimes too cold. The best temperature for setting the milk is about 50° and not above 65°. When milk is kept at this temperature and allowed to stand but twenty-four hours, and the cream then taken off and churned, it ought to make a nice quality of butter. The temperature of the cream when ready for churning should not be far from 60°. In cool weather the cream sometimes goes to churn too cold, and when no attention is given to test its temperature with a thermometer, the churning may be prolonged on account of its low temperature. In such cases, if warm water be added to the cream to raise its temperature the butter will come without difficulty. The butter-maker should always be provided with a good thermometer, and depend upon that, in testing the cream, rather than guessing at the temperature, as many do, by applying the finger or hand.

If the cream was 75° when put in the churn, it was much too warm, and would be very likely to make poor butter. We should presume that cream churned at this temperature and the butter worked thoroughly—probably over-worked—would have the appearance of lard. Care should be taken not to over-work butter. It requires but very little manipulation. Wash out the buttermilk by pouring cold water over the mass, manipulating it just sufficient to free it from moisture having a milky appearance, and then work it no more than is necessary to incorporate the salt evenly.

There is probably no churn that will give better results than the old fashioned dash-churn. The only objection is that it works rather hard and requires a good deal of muscle in the churning. The Blanchard churn is operated with more ease, and is a good churn. We cannot give a list of prices for these implements, but must refer our correspondent to the advertising columns of the RURAL.

We do not believe it is a good practice to have the "butter come" in so short a space of time as a minute and a half or two minutes. The best butter is made when churning occupies from a half to three-quarters of an hour. At this season of the year when cows are fed upon nothing but hay, the butter is apt to lack in color. By feeding meal and roots in addition to the hay, the color will be improved. But where artificial color is required, we know of nothing better than Annattoine or dry extract of Annatto. It is now prepared in fluid form, especially for butter, and may be had at the shops. If a pure article of basket Annatto can be had, it may be prepared also in fluid form by cutting with concentrated potash and sal soda. The mixture should be allowed to stand until all sediment is at the bottom of the vessel, then pour off the liquor and strain through a fine cloth, using sufficient in the cream at the time of churning to give the desired shade of color to the butter.

To make good winter butter the cows should be fed liberally with early cut hay, bran or Indian meal, with a daily mess of roots of some kind. Then by attention to temperature in setting the milk and in churning, there should be no trouble in making "nice butter."

The Herdsman.

NOTES FOR HERDSMEN.

Weight of a Short-Horn Calf.—WM. H. NORTON, Springwater, N. Y., writes that he bred a short-horn calf the past season whose weight at six days old was 148 pounds; at two months old, 336 pounds; at five months old, 586 pounds; at nine months and eighteen days old, 830 pounds. This calf had all the milk of the dam, and meal when he would eat it.

Cows Aborting.—I have two valuable cows, one four years old the other three years old. They have both lost their calves within ten days past. Both cows are in first-rate condition, well fed and well cared for, being stabled nights and running out in the day-time. One's time would have been out in February and the other in March next. They have both been stabled and cared for alike, fed quite heavy on pumpkins all through the month of October and the fore part of November. Since that time they have been fed mostly on corn stalks, with a few potatoes, cut up, and a little meal on them. I had left off milking one; the other I had not. Did the pumpkins that they ate or the corn stalks have anything to do with their loosing their calves? Or was it owing to something else?—H. R. C. DALE, *Wyoming Co., N. Y.*

WE have seen it asserted (though we have had no such experience) that feeding cows pumpkins with the seeds in them will cause them to abort. We do not believe corn stalks have anything to do with producing such a result.

Pomological.

SMALL FRUITS IN 1871.

ALTHOUGH the RURAL NEW-YORKER has kept its readers pretty well informed in regard to the introduction of new varieties of the small fruits during the past year, it may be well to again glance over the list and add some notes in relation to the comparative value of older sorts.

Blackberries.—We have little to add in regard to blackberries. No new ones of value have been introduced during the past season, at least none that are better than those previously cultivated. The Briton and Western Triumph are said to be excellent varieties for the extreme Western States, but with us at the East they are inferior to several of our older and better known sorts. The Furley, received from Kansas a few years since, appears to be nothing more than a common wild variety and of no particular value. Among the twenty or more sorts in cultivation, we place Kittatinny at the head of the list as combining more good qualities than any other. For size alone, we have none that will equal the Wilson's Early, but the plants are tender in Northern localities and the fruit is only second-rate in quality. Dorchester still holds a front rank for earliness, the plants hardy and the fruit sweet and good.

Raspberries.—The excitement which prevailed a few years since among fruit growers in regard to new varieties has, in a great measure, subsided; but a few have appeared during the past season, some of which may be of value. We have already so many excellent sorts in cultivation, that he who undertakes to make still further progress has a difficult task in hand. That it is possible, we admit; but not probable, at least not by the "chance seedling" system so much relied upon in years past. Among the Black-Cap raspberries, a few new ones have been announced. The Burns, from Kansas, is said to resemble the Doolittle, although the originator says it is better in flavor. Ontario is another new sort, somewhat after the style of the McCormick (Mammoth Cluster). It is of large size, and believed to be valuable. It originated near Newark, Wayne Co., N. Y., the original plant having been found growing wild. The Canada Black fruited with us the past year for the first time; but we do not find it any better if as good as some of our older favorites. The Yosemite Giant, received from California, where it is said to be of large size and excellent flavor, has almost completely failed with us. A few plants survived the winter of 1870, and the past season fruited. The berries are quite large, seed-grains small and numerous, covered with bloom; sweet, juicy, but not high flavored. The Leucodermis, from Oregon, grows vigorously and bears abundantly, and although the berries are large and of good flavor, their dark purplish color and dull bloom make them unfit for market. The following are all excellent thoroughly tested sorts that may be relied upon for general cultivation:—Doolittle, Fay's Thornless, Seneca and McCormick. There are several twice-bearing sorts, as well as a number of yellow caps, that may be added as fancy varieties for garden culture.

In foreign sorts we have neither received nor tested anything better than those well known to every fruit grower.

In American varieties of the red raspberries, there are a few new ones claiming attention. Baldwin's Choice, from Illinois, appears to be a variety of our common wild red, but we need more experience with it before deciding upon its merits. Herstine's Seedlings promise well, particularly the Herstine, which is a strong and vigorous grower; berries large, handsome and of excellent flavor. Further experience is required in regard to hardiness, but as these varieties all come from a hardy stock, (the Allen,) we have little to fear on this point.

A mammoth variety of the wild flowering raspberries of the Northwestern States and Territories, viz., *Rubus Nutkanus*, is announced in some of the Western papers, but the statements made in regard to it should be taken with considerable allowance, inasmuch as it is not a true raspberry, but belongs to what is popularly known as the Flowering Bramble, of which we have two very common native species—one with large purple flowers, (*Rubus odoratus*,) and the other white, (*R. Nutkanus*.) The fruit of these flowering brambles is quite large, but of a very insipid and rather nauseating flavor. The plants grow vigorously in almost any kind of soil, and produce an immense quantity of suckers. It may be that the new Mammoth announced has none of these faults, but of this we shall probably know more a few years hence.

The "Welcome" is another new sort claiming attention. It is a twice-bearing sort, after the style of Belle de Fontenay, which it resembles very closely, both in plant and fruit. It originated near Mount Holly, New Jersey.

EPIMEDIUM ALPINUM RUBRUM.

Currants.—No new varieties of currants worthy of note have been introduced during the past year. There has been no improvement made in currants within the past fifteen or twenty years, but there is room for it, and we hope some one or more of our enterprising horticulturists will take up this fruit and make it a specialty, and see whether it is possible or otherwise to produce a sweeter variety than any now known.

Gooseberries.—This fruit is in nearly the same condition that we find the currant, there having been but little progress made in the past four years. Smith's Improved Houghton is, however, an advance upon the parent stock, being considerably larger and of a lighter color, otherwise not materially different.

Strawberries.—New strawberries appear to be "always in order," and with very slight indications of an abatement. From the South we have General Beauregard, Stonewall Jackson and Southern Excelsior. The Western States send us Cowing's seedling, Cassaday's Russell, Monarch of the West, and several more with very promising names. In the Eastern States there is but a slight falling off in the number of new sorts exhibited, but still enough to show that our strawberry growers are wide-awake. Durand's "King of the North," and Turnbull's Champion and Excelsior give promise of large size; their other merits must be decided by experience in soils not specially prepared for seedlings. The Kissena, raised by Prof. HUNTSMAN, carried off the higest prize at the Bliss Exhibition last summer. This very promising berry was figured and described in the RURAL NEW-YORKER June 24th, page 396.

President Wilder, from which so much was expected, seems to have caused some disappointment, it being neither as large, prolific or good as many were led to believe. It will probably take the same position in which we find many older sorts, being adapted to certain soils and localities and not to others.

With all the grand improvements announced and promised we find ourselves at this time just in the same position that we were ten years ago in regard to varieties for general cultivation; the Wilson's Albany taking the lead, Green Prolific, Downer, Triomphe de Gand and two or three other well-known sorts following close in the wake of this most popular of all strawberries.

Floricultural.

FLORICULTURAL NOTES.

Epimedium Alpinum Rubrum.—This elegant, hardy, herbaceous plant, is but one among the rare acquisitions received from Japan in the last ten years. It was introduced into our gardens direct from Japan, and is known to the few who possess plants as *Epimedium Japonicum*, but we think it is the same as the one originally introduced into the St. Petersburg Botanic gardens in 1844, from Japan, and named by MORREN, in. *Jour. d'Hort.* of that pear, as *E. alpinum var, rubrum*.

Whether our plant should prove to be identical with the one named by MORREN, or otherwise, it is certainly a valuable acquisition to our list of hardy herbaceous plants. It is well suited for shady borders and rock work; also for greenhouse decorations, blooming as freely when grown in pots as our well known *Dicentra spectabilis*. There are, as yet, few of these plants in this country; but as it can be propagated with great rapidity we presume they will soon be abundant.

The plants grow in dense clumps somewhat like our common *Spiræa (Astilbe) Japonica*, throwing up numerous flower stems twelve to eighteen inches high. A portion of one of the flower stems, with leaves and flowers natural size, is shown in the accompanying illustration.

The outside of the flowers is bright red, the edges of the petals folding over, so that the color is seen when looking at the inside of the open flower. Inside, the petals are white, with a light stripe of red running down the center of each.

The long panicles of flowers possess a delicate grace, which is scarcely exceeded by any other plant of this class. The leaves and flowers retain their bright, rigid appearance for several weeks, whether grown in the forcing-house or in the open border.

There are several other species of *Epimedium* deserving a place in our gardens; but few of them have ever been cultivated in this country. But we hope the introduction of the one we have noticed will call the attention of our florists to this long neglected but highly ornamental genus of plants.

The Poultry-Yard.

SATINETTE PIGEONS.

THIS delicate variety of birds is very active on the wing and in its native clime flies long and well. The Satinette is highly prized in England, for its beautiful plumage and dignified and upright carriage. Smyrna, a seaport town of Natolia, in Asiatic Turkey, is said to be the place where this breed was originated, but it is not known there under the name of Satinette, which is given them by English breeders.

The London Poultry Chronicle, from which we take our illustration of this beautiful pigeon, says it "will compare favorably with any known breed in form and feather, and what the Scabright Bantam is among poultry such is the Satinette among pigeons."

The points of the Satinette are as follows: The head is round; the beak short, strong, and flesh-colored; the eye is large and dark; the neck is gently tapered, and well arched; the breast prominent, and a large frill must be well defined (as shown in the illustration,) from the neck to the breast; the body small and compact; the legs and feet well feathered, and entirely covered to the nails; the carriage of the bird must be erect, and in most points of form bearing resemblance to the Owl. The head, neck, breast, belly, thighs, and lower part of back pure white; on the sides of wings, primary coverts, and saddle of back is a ground tint of a light and delicate pinkish brown, deepening in tone towards the edges of each feather and terminating in a fine black fringe upon all the smaller feathers on the sides and shoulders of wing; the coverts, however, are not fringed with black at the edges, but they, in company with all the feathers upon which the brownish color is visible, are distinctively marked with black spear points. Thus there is a variety of graduated shades of rich brown upon every colored feather, bordered by a fringe of black, such as may be seen in the Hamburgh fowls. The tail of the bird is of a slaty blue color, with a broad band of black at its extremity; in the centre of this band, and upon each of the twelve feathers of which the tail is comprised, should be a distinct and well-defined white spot. This peculiar feather is not found in any other variety of pigeons and forms one of the chief characteristics of this breed.

We are not aware of any of these pigeons being either owned or bred in this country; if there are any we hope to see them at the next exhibition of the New York Columbarian Society.

JAPANESE BANTAMS.

THESE beautiful and trim little birds have been highly praised for their peculiar and unique appearance, so much so, that we have been induced to picture them in the columns of the RURAL NEW-YORKER. They were shown at the Annual Show of the N. Y. State Poultry Society, and attracted marked attention. Their appearance is such as to make a decided impression, in their favor, on those who have seen them. The American Agriculturist says "the whole form and style of these unique little fowls are such as to distinguish them from all others, although they vary greatly in color and markings among themselves.

"Their bodies are small and very compact; legs short and smooth; combs single, erect, and very large in both sexes; heads carried well back, making the fowls remarkably 'pigeon-breasted.' The backs almost disappear between the necks and tails. The tails are carried more than erect, leaning forward, and in the case of male birds, frequently extending further forward than their heads. The fluffy 'coverts' at the base of the tails are quite remarkable. Their wings are carried drooping, like several other varieties of bantams. The color is white, with black tails and tips of light feathers. They are a sprightly, vigorous, hardy breed, at present rather a novelty, and likely to bring pretty high prices for some time to come. They should be bred to preserve their peculiarities of form in the highest possible perfection; the plumage in each flock should be kept true to certain definite markings; very small size should be a requisite in breeding stock."

POULTRY NOTES AND QUERIES.

Points of Dark Brahmas.—ROBERT YATES, Sandusky, O.:—We have answered the above question time and again in the RURAL NEW-YORKER. Dark Brahmas should certainly have pea-combs, we care not what the Illinois Association say in favor of single combs, they are not admissible; well pencilled plumage, neck hackle silvery white, striped with black; no vulture hocks, yellow legs, and well feathered. The cocks should have pea-combs, black, or black and white striped; light, almost white hackle and saddle striped with black and white tails. Vulture hocks are feathers growing below the knee-joint, and projecting outwards. By pea-comb, we do not mean the thick, heavy "beefsteak" comb, but one nicely and evenly serrated.

PORTRAIT OF A SATINETTE PIGEON.

Hamburgh Fowls.—A new subscriber.—All the sickle and principal feathers of a Silver-Spangled Hamburgh cock's tail should be white with a black spot at the end of each. The Golden-Spangled's should be yellow in the place of white with the black spot.

Committeemen Exhibiting.—C. COLBY, Conn.—We do not see any good reason why a judge at any poultry show should not be allowed to exhibit his stock because he is to pass judgment upon his own poultry. If he is not honest his colleagues should be, and not swayed in their judgment by his opinion. Then, again, we believe every man, in whatever position he may be placed, is honest until he is proved otherwise.

What Ails My Turkeys?—This question is asked us by H. W. M., Illinois; from his description of the disease we should say his turkeys are affected with diarrhœa. The causes for this disease are various, among which are too scanty supply of grain, dampness, undue acidity in the bowels, or unwholesome diet. For a cure, we have used, with good results, five grains of powdered chalk; five, do., of rhubarb, and three of cayenne pepper. If the relaxation is not speedily checked, give a grain each of opium and powdered ipecacuanha every two or four hours.

JAPANESE BANTAM COCK.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

Scarlet Fevers.—Seeing an inquiry in the RURAL NEW-YORKER about scarlet fever, I send the directions given me several years ago by an intelligent physician, and which I have followed with profit in my own family:—"Dissolve a lump of saltpetre as large as a hickory nut in a tumbler of cold water, to clear the throat, and operate on the kidneys. Give cream tartar water, sweetened, to drink, enough to move the bowels daily, but not to physic thoroughly. Just as the eruption comes through the skin or begins to, rub the body all over with a piece of salt pork. Be careful about exposure to taking cold. Nursing is more than medicine. That is all we Doctors can do with scarlet fever."

If the throat swells on the outside after the fever passes off, poultice with mustard as long as it can be borne.

The symptoms in the cases I have had were chills, and vomiting followed in the course of twelve hours by the scarlet eruption. The skin looks sometimes as if it had been scalded. The fever lasts four or five days, and when it subsides is followed by profuse sweats.—AUNT LIB.

Sleeping-Rooms with Plants.—In answer to L. R., Reading, Pa., under query:—"Are House Plants Injurious?" Permit to say, that all healthy plants, during the day, throw off oxygen and absorb carbon; but during the night the reverse takes place—oxygen is absorbed and carbon is thrown off. To man, oxygen is life, and carbon death. Although the amount of oxygen taken up by plants during the night is not yet determined, if they are to be kept in the sleeping-room, it should be large and well ventilated, in order that it may contain enough pure air for the consumption of both sleepers and plants. L. R.'s harm results from inhaling air *breathed* by plants during the night as that which has already been breathed by man. Treat your plants, then, as if they were human beings, and enlarge your sleeping-rooms accordingly.—DR. F. J. B., *Andover, N. Y.*

JAPANESE BANTAM PULLET.

A Cancer Cured.—I wish to tell how I cured my cancer, last summer, without pain or money. Eight years ago a cancer came on my nose. It grew slowly for several years; the last two years it grew fast, and it got frightful. It was beginning to eat out my left eye. I had paid out hundreds of dollars, and tried doctors from far and near. Nobody did it any good. Last summer I drank wild tea and [illegible] grounds on my nose every night; [illegible] the cancer was cured. I told it to a good many who had cancer. I know two have cured their cancers since. I am sixty-two years old. I believe Wild Tea grows most everywhere on high land.—CHARLES YARDLEY, *Pittsburgh, Pa., Dec. 6, 1871.*

WE do not know what "Wild Tea" is. We do not know of any plant that has it as a local name. Will not our correspondent send us a specimen plant that we may determine its true name?

Stock, Poultry, &c.

SHORT HORNS—of Most Fashionable Herd Book Pedigrees, all ages and sexes. Bull Calves and Heifer Calves of superior quality. Berkshires Imported, pedigree animals selected from the Queen's pens, Windsor Castle, Eng. Model Pigs, Sows in Pig, and Imported Boars—a superb lot of all ages and sexes. A pack of Foxhounds are kept at "Greendale," and surplus stock annually sold off. A number of superior animals now for sale, warranted as true on the Red Fox as the compass to the N. P. 200 superior MAMMOTH BRONZE TURKEYS, single, in pairs, or trios. Thirteen head of superior High-Bred Fast Trotting and Racing Brood Mares and Fillies "Messenger" and "Bashaw" Blood. I have collected them at great expense, and now desire to dispose of them at a great sacrifice for cash, real estate, or will sell on time, or as it is my intention to breed only cattle, hogs and sheep, will exchange them for such stock. Catalogues now ready. Address, **H. C. GRAFF, Box 400, Maysville, Ohio.**

Short-Horn Cattle and Berkshire Pigs.—Imported, and home bred, of superior quality. For sale by JONATHAN TALCOTT, Rome, N. Y.

SHORT-HORNS from stock imported from England and Scotland, from noted milking families. A few males and females, old and young, for sale low. WM. J. MARKHAM, Avon, N. Y.

OHIO IMPROVED CHESTER HOGS produce most Pork for food consumed. Address L. B. SILVER, Salem, O.

SPANISH MERINOS.—WE OFFER FOR sale, low, a limited number of our surplus of fine thorough-breds. Send for Catalogue. Orders solicited. JOHN SHELDON & SON, Moscow, N. Y.

THE BERKSHIRE BOAR THAT took 2d Prize, N. Y. State Fair, 1871; 1 year old. Two young Sows, in pig by him; pigs six weeks old. Also, one JERSEY BULL, dam imported. Four SHORT-HORN BULLS and HEIFERS. Six SOUTHDOWN EWES. Also, FANCY PIGEONS and DARK BRAHMAS. All at reasonable prices.
JOSEPH JULIAND, Bainbridge, N. Y.

ALDERNEYS.—For Sale, two very nice cows, squirrel gray color, three and five years old; served by prize bull imp., "Mogul." Price, $150 each. Address J. CARTER BROWN, 2d, lock box 141, Providence, R. I.

FIRST ANNUAL EXHIBITION
OF THE

BRAHMAS AND COCHINS.
I now offer for sale a few first-class fowls, in pairs or trios, *properly mated for breeding*, consisting of
Light Brahmas, of noted Duke of York strain.
Dark Brahmas, bred from the celebrated cock Black Prince.
Buff Partridge, White and Black Cochins, bred from the most renowned importations. Also
Light and Dark Brahma and Buff Cochin Cocks, selected for breeds at five dollars each.
No inferior birds are allowed to go from my yards.
Eggs for sale, from my selected breeding stock, during the hatching season.
ELBRIDGE C. COMEY,
Quincy Mass.

CHOICE ASIATIC POULTRY—LIGHT AND DARK BRAHMAS, Buff, Black, White and Partridge Cochins.
PHILANDER WILLIAMS,
Taunton, Mass.

FOR SALE.—PAIRS OR TRIOS OF PARTRIDGE Cochins, Dark Brahmas and Houdans, guaranteed pure, and from Warner's imported stock, at reduced prices. Address S. RUSSELL JONES, 143 Southwest St., Syracuse, N. Y.

IVES' STOCK OF LIGHT BRAHMAS— From twenty years' careful breeding, and warranted, in purity, second to none in this country, boxed and delivered to Express, $10 per trio, or $5 per dozen. JOHN S. IVES, Salem, Mass.

FOR SALE.—My breeding stock of Houdans. Took 1st prize at N. H. State Fair last October Two Cocks and seven Pullets. Price, $25.
E. H. WHITNEY,
Cambridgeport, Mass.

Domestic Economy.

A NEW YEAR'S TALK.

As we look over the past, and with fancy make real the invisible, we feel the clasp of thousands of kindly hands, and see the smile on as many dear faces, whom a year ago, we wished a "Happy New Year." We

FIG. I.—PELERINE. FRAME WORK WITH PATTERN WORKED IN.

are all better acquainted to-day, and can say it with even less formality than then. And "Happy" may it be—not in the sense of ease and pleasure, but in that of growth. The woman, whom this dead year's discipline has made noblest, most unselfish, most faithful and CHRIST-like, should to-day be the happiest. As we never have the choos-

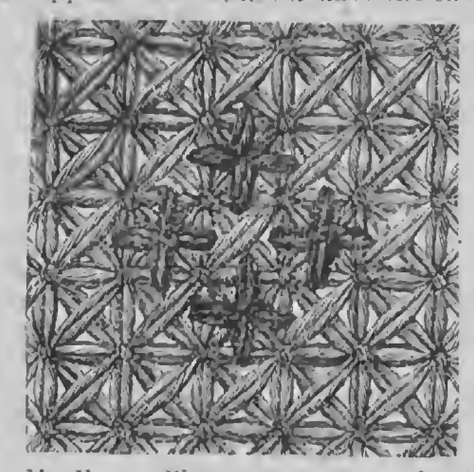

FIG. II.—FRAME WORK, (IN THE FULL SIZE) TO PELERINE.

ing of discipline the only way left open for us is to make the best use of whatever comes to us. The loss of friends, the destruction of home and property, disappointments in innumerable shapes, suffering in its multiform types, each and all are the shaping and polishing tools that tend to make us worthy for a better life.

FIG. III.—CROCHET JACKET FOR CHILDREN, EDGE BORDER.

But as labor is the prime blessing of existence, so distasteful labor is the hardest and most grievous to be borne, especially when there is no hope of a way opening to something better. How many women in the past twelve months, who washed and ironed, baked, cooked, patched and cleaned, until their souls revolted to bitterness at the

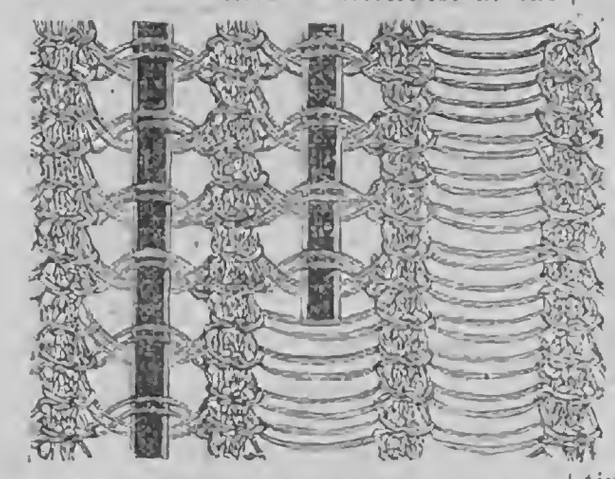

FIG. IV.—KNITTED STRIPE PATTERN, TO BE RUN THROUGH WITH SILK OR RIBBON, FOR SHAWLS, JACKETS, ETC.

slavish routine, when suddenly lifted to the plane of positive sorrow saw how ungrateful they had been to be miserable over the petty things of life while the greater things had remained to them intact! How many fathers and mothers who spoke hard and heartless words to their little ones have wept bitter tears of repentance over the little dead faces, insensible for ever more to word or kiss!

If it were not for reminders of dread possibilities how hard, how thoughtless, how unkind we should all become. The fact that all things will soon come to an end—all discords, all hates and loves, all opportunities for kindness or its reverse, guards us from many a stroke of anger, and many a look or word of hateful passion. The experiences of the dead year should guide us into safer and nobler paths in the New. It taught us grandly, if but this one thing, *well*, that there's *no surety in delay*. Putting off from one day to another what ought to be done *to-day* is the secret of nine-tenths of the failures in the world. Prompt action is equivalent to success. It makes the house Home *to-day*, instead of to-morrow. It begs pardon at once for wrongs done, instead of waiting until next day when the hurt has worn ridges in the heart. It wins the confidence of the child, and saves him for good. It spurns vice, ere its hideousness becomes familiar.

If within the three years we have labored to make this Department a help as well as a comfort to thousands of women, we had fully succeeded, there would be nothing left for us to do. It is always far below our ideal, and the best it ever comprehends, is oftentimes the result of some suggestion which comes to us in letters from women who apologize for their "poor work at writing." The best one can do always has its mission, and the simplest soul may utter the word that shall be the key note to a great redemption. "Domestic Economy" does not mean "Cooking," any more than does "Domestic Life." It comprehends the sphere of Home, and how best to make it attractive in every sense of the word. It should be a magnet drawing every man's and woman's heart to its peaceful hearthstone, its pure and blissful influence.

Modes and Manners.

WORSTED WORK.

THERE is a fascination about crochet work, especially when the materials used are of soft, bright wool, that no woman's dainty fingers can well resist. The shops are full of such work, in many styles and shapes. Among the most stylish are sleeveless waists or jackets, with postillion back. Aside from the knitted and crocheted things, are those

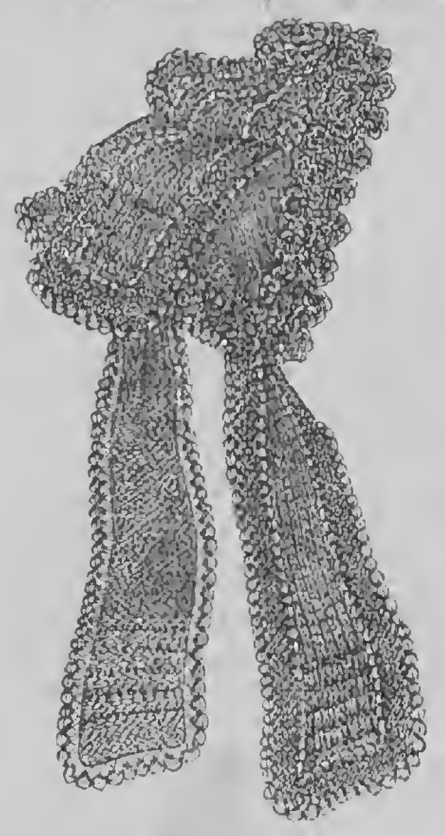

FIG. V.—FANCHON.

made on frames, as shown in Fig. I., the Pelerine with fringe. Fig. II. gives the work in full, the dark crosses being of silk floss put on when the work is done. For a new beginner, some simple shape should first be tried, as a square, or half square for hood or shawl. The shape of the frame, of course, controls the shape of the garments. Place at regular intervals brass-headed nails or tacks, crossing the yarn as shown in Fig. II., and tie at the crossing. When made of white wool, and embroidered with white silk floss, the effect is beautiful. Any colored floss may be used, to suit one's fancy. The pelerine and hood (Fig. V.) may both be bordered with swan's down, and be suitable for evening concerts, &c. Fig. III., a child's jacket, is of fawn colored Berlin wool, with reddish brown border; from eight to ten ounces are required. Fig. IV., shows a border which may be rendered more attractive by the addition of ribbon. The materials for this three-cornered hood (Fig. V.) are six ounces of white and a few skeins of lilac Berlin wool, and white floss silk. The border around the trimming and ties is a netting, the outer two of silk, the next of lilac wool, and the next two of white.

A MILD-TEMPERED woman is a balsam that heals matrimonial sorrows.

Seeds, Flowers and Green-House Plants.

VICK'S ILLUSTRATED FLORAL GUIDE FOR 1872.

Address HENRY T. WILLIAMS, Prop'r, 5 Beekman St., New York.

A GREEN-HOUSE AT YOUR DOOR.

SAVE EXPRESS CHARGES, AND HAVE YOUR PLANTS COME FREE BY MAIL.

Our improved method of forwarding plants by mail having proved such a decided success during the past two years, we have been induced to enter upon it on a much more extensive scale. We grow our plants for mailing, in small pots, and in packing we allow almost the entire ball of earth to remain; the box which we use is light, yet sufficiently strong to prevent them from injury. Plants packed in these boxes will be found to arrive in as fine condition as though sent by express.

Achyranthes,	4	distinct sorts for..	$1.00
Coleus, Golden,	6	do. ..	1.00

Verbenas,	13	do. ..	1.00

Entire collection of 13 species (one of each) for $2. Any six of the above collections for $5; or the entire 13 for $10. All of the above plants are labeled except Verbenas.

My Illustrated and Descriptive Catalogue of New and Beautiful Plants will be ready Feb. 1st. Mailed free to all my patrons of last year. To all others on application.

IOWA CITY, Iowa, March 18, 1871.

The plants ordered by mail came in splendid condition; all are alive and have already forgotten their journey of 1,300 miles. I am glad to know of so cheap and satisfactory a way to supply our wants.

W. H. HUBBARD.

BENNETTVILLE, S. C., March 24, 1871.

The flowers sent by you were received in good time. I was really surprised at their size, for I tho't, as they would be sent by mail, that they would be very small. They are equally as large as some received by express from other Florists. I am perfectly delighted with them—so many—so beautiful, and in such good order.

MRS. LAURA MOORE.

SACRAMENTO, Cal., March 17, 1871.

The plants forwarded by you on the 7th, by mail, reached me in eight days, in first-rate condition. Upon examination I can discover no injury done to them in their long journey.

G. L. SIMMONS, M. D.

Address CHARLES A. REESER, Pleasantville, Pa.

The Literary World.

NEW PUBLICATIONS.

The Country of the Dwarfs.—By PAUL DU CHAILLU. New York: Harper & Brothers.

THERE is no living traveler who sees so much, and remembers so well, as DU CHAILLU. His African explorations have afforded him an inexhaustible supply of materials from which to draw for the instruction and entertainment of young and old. He has been charged, at times, with drawing upon his imagination. The present volume might more properly be termed "African Scenes and Adventures," inasmuch as only a small portion is devoted to the country of the Dwarfs. DU CHAILLU'S description of this strange race, living not far from Niembomi, corresponds with Dr. KRAPF'S. They have prominent cheek bones, yellow faces, low and narrow foreheads, black and red hair, thick lips and flat noses. They are very wild and shy, and will scamper away from their settlements if a white man appears, as fast as their legs can carry them. DU CHAILLU, who has not inappropriately been termed the "children's friend," is now preparing a series of volumes based on his travels in the Frigid Zone during the past year.

The Land of the Vedas: being Personal Reminiscences of India. By Rev. WILLIAM BUTLER, D. D. New York: Carlton & Lanahan.

WE know comparatively little, and desire to know more, concerning India. The present work will go very far toward gratifying this desire. It is very copious and complete, numbering over five hundred pages and containing numerous illustrations and statistical tables, together with an excellent map of the country. For fifteen years Dr. BUTLER was a missionary in India, and he writes from personal observation and experience concerning the people, their religions, mythology and customs, and concerning the great Sepoy rebellion, which nearly cost him his life. He is at times rambling in his descriptions, and somewhat disposed to be "preachy" in his style. We cannot expect, however, to find the polished, condensed writing of the man of letters in the descriptive narratives of those who spend their lives among active, stirring scenes.

Border Reminiscences.—By R. B. MARCY. New York: Harper & Bros. 1872.

NO one can remain in the army for any length of time without acquiring a large fund of anecdote. Who that sat around the camp fires during the late unpleasantness, cannot recall scores of such yarns, spun by comrades to while away the hours. In this new volume Gen. MARCY has collected some of the best of these stories which he has heard during his long military career. One possessing any appreciation of humor cannot peruse a single chapter without shaking his sides with laughter.

Chapter ninth is devoted to the Prairie Indians. The tenth and concluding chapter touches upon the rapid settlement of the Northwest; contrasts the enterprise of Americans and Englishmen, and embodies Gen. MARCY'S views concerning the Texas Pacific, North Pacific, and Union and Central Pacific Railroads.

Lucia, Her Problem.—By AMANDA M. DOUGLAS. New York: Sheldon & Co.

MISS DOUGLAS is one of our most popular story writers, and this last volume from her pen, which recounts the trials of a young girl who ran away from home, and finally married her lover, sustains her former reputation. She manages to keep up the reader's interest from beginning to end, and has given us a novel superior to the majority which find their way to the printers. The occasional intimations as to what is to follow, might better, perhaps, be omitted from the opening chapters. As in the telling, so in the writing of a story—the force of the denouement is weakened by inklings of it, given in advance.

The Wedding Journey.—By W. D. HOWELLS, Boston: J. R. Osgood & Co.

MR. HOWELLS is one of the most charming of living American writers. We recall no one who gives so much promise of filling the place of either HAWTHORNE or IRVING. In the above serial, which ran through the Atlantic, he describes, in his best vein, what a newly married couple saw and experienced on the round trip from Boston through New York, Rochester, Niagara Falls, to Quebec, and back again. An entire chapter is devoted to Rochester, which the writer styles the "Enchanted City." A more captivating book has not appeared this year.

The Wonders of Water.—From the French of GASTON TISSANDIER; edited with numerous additions, by SCHELE DE VERE, LL.D. New York: Charles Scribner & Co.

A VERY good companion-book to Reclus's descriptive history of "The Earth." The work is very handsomely gotten up on tinted paper, contains numerous illustrations, presents a mass of instructive and entertaining information, and constitutes one volume of the Illustrated Library of Wonders which Scribner & Company are bringing out.

Oldtown Fireside Stories.—By HARRIET BEECHER STOWE. Boston: James R. Osgood & Co.

THE author of "Uncle Tom's Cabin" has her enemies as well as friends. All unite, however, in giving her credit for being a powerful writer, for possessing original ideas and presenting them in such a manner, in her various stories, as to arrest the attention, if they do not always harmonize with the views of the reader. Her Oldtown Stories, reprinted from the Atlantic Monthly, make a very handsome volume.

Bivouac and Battle: Or, The Struggles of a Soldier.—By OLIVER OPTIC. New York: Lee, Shepard & Dillingham.

THIS is the fifth of the "Onward and Upward" Series, in which the hero, PHIL FARRINGFORD, figures as a soldier. The incidents of the story are located on both sides of the Atlantic. They carry a moral with them, and will be perused with decided interest by juvenile readers.

Ought We to Visit Her?—By Mrs. ANNIE EDWARDS. New York: Sheldon & Co.

A CAPITAL story, which will add to the reputation Mrs. EDWARDS has already made through "Archie Lovell," "Steven Lawrence, Yeoman," and "Susan Fielding."

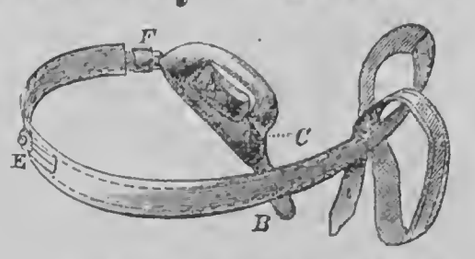
Pomeroy's Trusses.



These trusses are made under six different patents granted to us during the last six years, and embody the most important improvements ever made in this class of instruments. Our celebrated "Finger Pad," "Adjustable" and "Night" trusses are unrivaled for the support of hernia, combining the utmost security with a degree of comfort unattainable by any other means; and hence, as experience shows, are more likely to effect a radical cure than any other.

They are recommended by the very best surgical authorities, and have received the highest awards and most flattering reports at all the late Fairs of the American Institute.

No one should purchase a truss without first calling on or writing to us for information and advice.

New School Books.

SWINTON'S WORD-ANALYSIS.

A word Analysis of English Derivative Words, with practical exercises in Spelling, Analyzing, Defining, Synonyms, and the use of words. By Wm. Swinton, A. M., Professor of the English Language, University of California, and author "Condensed History of U. S.," &c. 128 pages. Price *for examination*, 25 *cents*.

The prominent points of this book are:

1. The clear and simple method of word-analysis and definition.
2. The practical exercises in spelling, defining, and the *use of words* in actual composition.
3. The adaptation of the manual, by its progressive character, to the needs of the several grades of public and private schools.

CATHCART'S YOUTH'S SPEAKER.

Selections in Prose, Poetry and Dialogues, suited to the capacities of Youth and intended for the Exhibition Day requirements of Common Schools and Academies; with many new and original pieces. By Geo. R. Cathcart, A. M. 120 pages. Cloth, price *for examination*, 75 *cents*.

The prominent points of this book are:

1. The selections are suitable to the exhibition day requirements of Common Schools and Academies.
2. They are adapted to the understanding of the younger pupils.
3. As far as practicable, only pieces that are fresh or that have not heretofore been used in a book of this kind are presented.

ROBINSON'S EXAMPLES.

Arithmetical Examples, Mental and Written. With numerous Tables of Moneys, Weights, Measures, &c., designed for review and test exercises. By D. W. Fish, A. M. Cloth. 282 pages. Price *for examination*, 75 *cents*.

This work covers the whole ground of Arithmetic, and can be used in connection with any series, or other text book on the subject.

Single copies of any of the above, if required for examination with a view of introduction, will be forwarded by mail on receipt of appended price.

SATURDAY, JANUARY 6, 1872.

BRIEF BUT HEARTY GREETING!

For days, we have been, and are now, far too busy to think of anything formal in the shape of a New Year's Introductory to this Volume of the RURAL NEW-YORKER. We write with the rustle of leaves (letters) that are steadily falling (from every State in the Union and the Canadas) upon our table,—the scratching of the pens of our Subscription Clerks,—the calls for copy,—the requests to decide this or that point as to the mechanical details of the new-style RURAL,—the importunities of Advertising Agents, who want all the space for their own use, and——well! with all this melange of demand, and the general noise and confusion of preparation for the Campaign, we sit down to very hastily say (for the last page must close for the press in two hours) that we wish you all a Happy New Year, and to promise—nothing!

The regular, reliable and able members of our Editorial Staff who have aided us to make the RURAL NEW-YORKER the "Best, Cheapest and Most Popular Journal of its Class in the World"—BRAGDON, FULLER, JUDD, RANDALL, WILLARD, HARRIS, RILEY, LEWIS, WAGER, and the steady old, practical and talented Contributors, too numerous to mention (in our limited space)—are still with and for MOORE'S RURAL, and its fast-augmenting parish of readers. There is to be no retrograde. It is our purpose, and will be our effort, to improve. Neither labor nor expense will be spared to render this year's issues more attractive and useful than those sent forth in any preceding twelvemonth since the establishment of the RURAL NEW-YORKER.

And pray is that not enough to say, especially as we are in a hurry and constantly interrupted? Nay; we must, and do most cordially, thank the RURAL'S hosts of friends for their continued evidences of friendship, manifested in many ways—for the good words they write and the generous deeds they are doing in its behalf. Bowing respectfully in grateful acknowledgment, we give as a sentiment a paraphrase of an old one:—"Here's to your health and your family's: may you all live long and prosper!"

OUR NEW YEAR'S CALL.

It is well for each man and woman to have a good opinion of him or herself. In fact, it is necessary to success. We want it distinctly understood, therefore, that we conscientiously strive to merit our own good opinion. We speak now as a Journal and not as an Individual. We think we have some reason to do so; for, leaving our own judgment out of the question, we have cumulative and substantial evidence that a great many other people think that we are entitled to such an opinion of ourself. And now that the New Year has dawned and we have put on our new dress—from *head* to *foot rule*—we respectfully submit whether we have any reason to reverse the high opinion we have hitherto cherished concerning the RURAL NEW-YORKER!

But then! We want to respect those whom we meet weekly. We want them to feel that we respect them. Out of respect to them do we not make our New Year's Call in our best "bib and tucker?" Are we not deferential? Are we not amiable and polite? Don't we want to keep up a regular calling acquaintance during the year 1872, and all the years thereafter? But we must insist, not only as a matter of courtesy, but as a matter of mutual interest, that our calls shall be returned. We want to talk over with and learn from our friends the way they do things and what they learn in the doing. If they discover any errors in their practices that it will benefit others to avoid, we want to know what they are; or any good growing out of their experiences that others may legitimately share, of course we want to know it, for it is our well-known purpose to act as a sort of intermediate and garrulous gossip between our friends, taking care, so far as possible with our garrulousness, not to make mischief. If JOE BROWN wants to know how JIM SMITH does a thing, or what he would do under certain circumstances, we want to ask JIM about it and tell JOE: it would be a great pleasure to us. If SALLY SORROWFUL desires BETSEY BRIGHTNESS to tell her any of her secrets, we offer our good services to get BETSEY'S secrets from her.

So you see we're fixed up and ready to be the *confidante* and confidential adviser of all upon whom we call. That is just it; and we shall always expect a pleasant, cheerful welcome and the most intimate relations with every member of the families we may visit during the year. We don't intend to intrude, nor to be regarded obtrusive. We shall cease calling upon the first intimation that our company is not desirable; but we are bound to make it desirable if we can. So here we are! What do you say to the proposal?

RURAL NOTES AND QUERIES.

The Rural's "New Departure" in Form and Style may not please everybody,—we do not expect *that*,—but we think people of good taste and judgment will say the change is a decided improvement. Such is the verdict of a good many level-headed journalists who have seen proofs of pages, the new vignette heading (which is pronounced unequaled) and other items. This number has been gotten up in great haste, and is necessarily imperfect—but we won't stop long to apologize, inasmuch as the proverb says "He that excuseth accuseth")—especially as a rush of advertisements has greatly interfered with our wishes and arrangements. Moreover—but the new-style RURAL is before you, Reader; examine and give your verdict—Guilty or not guilty?

Political Reform.—Our article on this subject in a recent number, has called out a number of strong indorsements from readers in different parts of the country. For example, a gentleman from Wenham, Mass., writes:—

"Having read in the RURAL NEW-YORKER, of the 16th inst., your article headed "Political Reform," and presuming you would like some encouragement from your readers, I take this opportunity to give you my sentiments on the subject in a few words. The opinions advanced in the article I cordially approve, and it appears to me (in the present corrupt and venal condition of our country's affairs) that all neutral or independent journals should agitate the matter of Political Reform in all its bearings, to the utmost, in order to stir up the honest people of the country, of all parties, to unite and rise in their might, to sweep the present corrupt mass of officeholders from their positions, and put in their places men of *ability* and *honesty*, and by so doing save our Government and Country to future generations. Hoping you will continue to agitate the matter in the same calm tone and independent manner, I remain," &c.

Canandaigua Lake.—Elsewhere we give an illustrated article descriptive of this beautiful lake and its surroundings, from the pen of ex-Senator WILLIAMS of Yates county—being the first of a series on the Lakes of Western New York. We think these articles will prove of general interest and value to thousands, while the illustrations must render them attractive.

—For courtesies, and aid in procuring photographs, sketches, etc., of scenes on Canandaigua and other lakes, we are indebted to J. J. MATTESON, (editor of the Repository and Messenger,) WM. HILDRETH, (Deputy U. S. Marshal,) and M. FINLEY & SON, (Photographers,) of Canandaigua, and also to A. E. BEERS, (Photographer,) of Rushville.

Plowmen's Club.—Talking of the lack of good plowmen in the country, an old farmer said to us something ought to be done to improve the character and quality of this work. We suggested that it would be an excellent plan for plowmen in a neighborhood to organize in clubs, meet, with their teams and plows, and compare their implements, modes of adjusting and using them, and learn of and stimulate each other. We once knew such a Club which met one afternoon each week; and the improvements made in the neighborhood plowing thereby was most striking.

A Word to Advertisers.—Our advertising space is over-flooded, "and more too." We were compelled to refuse advertisements proffered some days before going to press. As it is, in consequence of a miscalculation as to the elasticity of our forms, we are compelled to leave over several columns. The only apology we can render advertisers whose favors are deferred is that we had rather apologize to them than to our readers, upon whose rights we have already encroached and of whom we beg pardon.

"Brondlands," the former 22,000 acre farm in Champaign Co., Ill., first owned by M. L. SULLIVANT and later by JOHN T. ALEXANDER, is now reported to have again changed hands, having been purchased by four parties for $450,000. It is to be divided into small farms and again sold. This is the way all large farms must go, sooner or later, in this country. There is no law of entail to prevent it, thanks to the good sense of the American people.

RURAL BREVITIES.

DON'T run in debt this year.

SOMETHING to save!—manure!

FILL UP the ice-houses early.

THE Massachusetts Ag. College's next term commences Jan. 11.

THREE hundred thousand tea plants in California are doing well.

FIFTY YEARS ago there was not a pound of fine wool grown outside of Spain.

MILK slightly turned sour is a common cause of diarrhea in children and infants.

PETER HENDERSON sends us an elaborate and complete catalogue of seeds for 1872.

DOES farming pay? What does your balance for the year answer to that question? Tell us.

TOO MANY fall and too few winter varieties of apples, it is asserted, are planted in Wisconsin.

WINDMILLS for pumping water for stock grow more and more popular when the snow flies.

COLORADO is importing a large number of Short-Horn bulls for the improvement of its herds.

IT IS STATED that a Californian has lost nearly 1,700 sheep, by poison which he had prepared for squirrels.

THE MAINE Agricultural and Mechanical College has more students and better accommodations than ever before.

ENGLISH grocers are finding great fault with Normandy butters because there is so much water (not brine) in them.

CHAS. LEE, North Blandford, Ct., grew an acre of corn for soiling, which averaged ten feet high and weighed, cured, ten tons.

A CORRESPONDENT is informed that we know of no way to make any kind of business pay, permanently, without *hard work!*

IN NEW HAMPSHIRE a mine is being worked which yields a fertilizing substance known in market as Stevens' Mineral Fertilizer.

JOHN HAROLD sends us the Thirtieth Annual Report of the Queens Co., N. Y., Ag. Soc. It is a live Society and has a live secretary.

VICK'S CATALOGUE of seeds for 1872 is the biggest work of art the year 1871 has produced in the catalogue line, so far as we are posted.

AT the Union meeting of farmers at Manchester, N. H., Dec. 12, 1871, potatoes enough were exhibited "to dine a regiment of Irishmen."

A. M. BURNS, Manhattan, Kan., is writing a book on grape, blackberry, raspberry and strawberry culture, designed for the inexperienced in the West.

AT Windsor, Conn., tobacco growers are selling their tobacco growth for 1871 at 75c. per lb. for wrappers, 10c. to 20c. for seconds, and 5c. to 10c. for fillers.

WE acknowledge an invitation from E. S. RALPHS, Cor. Sec'y Western N. Y. Poultry Soc., to attend the annual show of the Society, Jan. 18-23d, at Buffalo.

FRANK W. TYLER wants to know the price of farm lands in Southern Indiana, and what inducements it offers to men of small means who desire to engage in farming.

JUDSON'S Branching Corn is pulled and hauled by those who have, and who have not, been successful with it. The secret probably is that there has been too much swindling in seed.

HON. JAMES BROOKS, speaking of Japanese agriculture, says;—"Proud as I am of the arts, sciences and marvelous doings of my own country, I blush when I compare American farming with this!"

THE RURAL Farmers' Club, Enfield, Conn., have been discussing this resolution;—"*Resolved*, That the raising of tobacco by farmers is immoral." The discussion was decided to be "a drawn battle."

INDUSTRIAL SOCIETIES.

North Worcester, Mass., Ag. Soc.—Officers for 1872: *Pres.*—JOHN H. LOCKEY, of Leominster. *Vice-Pres.*—Leonard Downe, Fitchburg; Joseph Cozzens, Leominster. *Sec. and Treas.*—George S. Houghton, Fitchburg. Captain E. T. Miles was chosen a member of the State Board of Agriculture for three years.

Meramec, Mo., Hort. Soc.—This Society elected the following officers, Dec. 6, 1871: *Pres.*—T. R. ALLEN. *Vice-Prest's.*—L. D. Votew, Wm. Brown. *Sec. and Treas.*—John Fraser, Pacific City, Mo. *Ex. Com.*—C. Whitsell, G. Faul, Dr. Galny.

Patrons of Husbandry.—The National Grange of this Order meets in Washington, Jan. 3. In 1870 38 new Granges, and in 1871 131 were organized. Iowa is the strongest hold of the Order, it having 92 Granges.

South Seaville, N. J., Farmers' Club.—Officers elect: *Pres.*—GEORGE M. POST. *Rec. Sec.*—F. S. Townsend. *Cor. Sec.*—T. E. Van Gild. *Treas.*—David Townsend. *Librarian.*—Daniel Wheaton. Meets every Monday evening.

The Delaware Poultry Soc. holds its Second Annual Exhibition at Wilmington, Del., Jan 11-17. W. D. Bush, *Rec. Sec.* and *Treas.*, Wilmington, Del., will furnish Premium List.

The Michigan State Poultry Ass'n holds "a grand National and State Exhibition of Poultry," at Detroit, Jan. 25-30. Competition open to the world.

The Iowa State Hort. Soc. holds its sixth annual meeting at Des Moines, Iowa, commencing Monday evening, January 15.

The Northern Ill. Hort. Soc. holds its annual meeting at Princeton, Ill., Jan. 23-26. It's a live organization.

The South Miss. and E. La. Ag. Ass'n holds a meeting and market fair at Osyka, Miss., Friday, Jan. 26.

The Missouri State Hort. Soc. holds its 13th annual meeting at Kansas City, Jan. 9-12.

The Publisher's Desk.

We print One Hundred and Fifty Thousand Copies of the First Edition of this issue of the Rural New-Yorker.

RICH HOLIDAY PRESENTS!

All the actual or intending Agents of the RURAL NEW-YORKER who wish to make their friends handsome or useful Holiday Presents, should hurry up and send in Clubs (or parts of large Clubs) soon as possible, selecting the Presents from our Premium List. We can send most articles promptly—by first return Mail or Express. Our desire is to make happy as many people as we can during and after the Holidays.

*** See Premium List in Rural Oct. 28.

A Vote of Thanks is hereby tendered to old and new Agent-Friends for the liberal manner in which they are clubbing us from all parts of the country! Though our receipts have thus far greatly exceeded our anticipations, we will endeavor to bear the infliction. While old Agents are doing better than ever before, scores of new ones are doing nobly—several having sent us over $100 each, for new clubs, during the past two weeks. Go on, Friends, old and new, near and distant, and you will not only get "*Good Pay for Doing Good*," but have the consciousness of benefiting your fellow citizens.

Rural Boys and Girls at Work.—The Boys and Girls are doing "right smart" in sending us Clubs. A goodly number have already sent Clubs of from 5 to 30 subscribers. (See letters from Girls and Boys on page 27.) A letter just received from WILBER E. JONES of Kalamazoo Co., Mich., (inclosing $60 for 30 Subscribers) is so good that we give this extract:

"This is my first attempt at getting up a club for a paper, and I think that I have done very well for a farmer boy of sixteen. My father has taken the RURAL for a good many years, and he has always saved them and sowed the volumes together, and us children take pleasure in getting them out and looking them over, as we always find something new in them. Mother says that she had rather have the RURAL than any Ladies' Magazine. For premium, please send me, by express, Webster's Unabridged Dictionary."

Moore's Rural and Arthur's Magazines.—Our readers are reminded of our offer to send the RURAL and ARTHUR'S MAGAZINES at low rates. As given in our issue of Dec. 2, the terms are as follows: For the RURAL NEW-YORKER and ARTHUR'S Lady's Home Magazine, one year, $3.50; for the RURAL NEW-YORKER and Children's Hour, one year, $3; for the RURAL NEW-YORKER and both of the Magazines, one year, $4.50. Subscriptions must commence with Jan., 1872, and be for one year. Address D. D. T. MOORE, 5 Beekman St., New York.

The Rural as a Present.—Our readers are reminded that in all cases where a *Subscriber* sends the RURAL NEW-YORKER to a relative or friend, *as a present*, we only charge the lowest club-rate—$2 a year. The lowest price for copies thus sent to Canada is $2.20 and to Europe $3. The RURAL is a valuable gift, and one which reminds the recipient of the kind donor fifty-two times in the course of the year. Many order it as a present to distant friends.

Extra and Specimen Copies of this number of the RURAL will be forwarded to our Agents and a good many other sensible people. Will those receiving them do us and their friends the favor to show and circulate, with a view of increasing our circulation? We desire all to note Contents, Style, &c., and then decide upon the merits of our claim that the RURAL NEW-YORKER is the *Best and Cheapest Weekly in its sphere of Journalism.*

Bound Volumes of the Rural New-Yorker.—Back volumes of the RURAL, handsomely bound, are constantly kept on hand at its Publication offices. Vol. XX. for 1869, containing 828 pages and over 800 illustrations, $4. The Semi-annual Volumes, issued since Jan. 1, 1870, $2.50 each. The volumes being too heavy for the mail, are usually sent by Express or as Freight, subject to charges.

Our Premiums Approved.—We are in receipt of many letters from recipients of Premiums, praising the articles they have secured—such as the U. S. Watch Co.'s Watches, Reed & Barton's Plated Ware, Weed's Sewing Machine, the Continental Washer, (very strongly approved,) Universal and Novelty Wringers, &c., &c.

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Our Premiums.—Agents entitled to Premiums are requested to designate what they prefer and notify us how and *where* to send—whether by Freight or Express.

No Traveling Agents are employed by us, but any person so disposed can act as Local Agent, on his or her own authority, and secure premiums, etc.

Show Bills, Specimen Numbers, Etc., sent free to all disposed to form Clubs for the RURAL.

All Remittances by *Draft*, P. O. Money Order or Registered Letter are AT OUR RISK.

THE MOTHER'S NEW YEAR'S REVERIE.

WHAT is baby LILLIE dreaming
When this angel smile is beaming?
Cannot mamma hear the music
That is whispered in thine ear
And see something of the beauty
That to baby must be near?
Happy faces! Sweetly smiling,
All the thoughts of earth beguiling,
Showing thee, in mid-day slumbers,
Back to play-grounds left behind

That were thine, ere earthly shackles
With thy spirit-half entwined.
Precious treasure! little starling!
Will they guide thee, LILLIE darling?
Help thee carry nature's burden
Through the devious ways of life?—
Take thee back again triumphant
Over passion, over strife?
Yes, I see thy smile inditing
Heaven's answer, while 'tis lighting

Up thy features like an angel's—
As those features were before
Heaven sent them to inhabit
The dimpled form my LILLIE bore.
LILLIE smiles and mamma ponders;
Body sleeps while spirit wanders
Like some bird that tries its pinions,
Stealing from its prison strong—
From the door that sleep is guarding,
Back to realms of light and song.

THE OLD YEAR AND THE NEW.

An old man totters on the road
  Bow'd down with age and care;
His locks are white and float about
  Like snow-flakes on the air—
The clouds are gathering darkly round,
  The night seems settling fast,
The wind sends forth a moaning sound,
  The owlets flutter past.

The old man halts along the road,
  He sees the gathering gloom—
No hope has he—no power to stay
  His fast approaching doom.
He sees the children pass him by,
  And sadly turns his face;
He knows too well that he must die,
  The New Year take his place.

He hears the children clasp their hands,
  And shout aloud for glee,
He marks them hasten on their way
  The glad New Year to see.
And then he hears the midnight chime,
  Ring out his funeral knell;
His life fades fast—he rests at last
  The New Year breaks the spell.

A little child now leads the way
  His step is light and bold,
His hair is bright and floats about
  Like threads of burnished gold.
The clouds are passing swift away,
  The morn seems soft and clear,
The night has pass'd—the sun's bright ray
  Brings in the glad New Year.

Farewell Old Year! Your work is done
  A new one fills your place;
The darkest night will pass away
  The morning dawn apace!
We cannot bring the dead to life,
  Nor wasted hours recall;
But in the coming year we may,
  Perhaps, atone for all.

[English Magazine.

Stories for Ruralists.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker, BY TWO WELL-KNOWN AUTHORS.

I.—The Coming Storm.

"The dearest old place in all Virginia," said Margaret Heatherstone softly to herself, as she looked out on fields and forests, on acres of broad undulating land, so weirdly beautiful in the light of the calm full moon, that the young lady unconsciously glanced back into her chamber to see if some inhabitant from the realms above might not have stolen in unawares. "It is astonishing," she continued in the same soft tone, "how strangely the moonlight and silence affects me to-night! Why, I am actually freezing! I wish I hadn't been so cross to Harry, poor boy! But then, dear me! what business has he to expect so much? I wonder how far he has got?" and the speaker leaned out of the window and looked wistfully up and down the broad avenue; and then, in a little cooing tone, strongly suggestive of the lark's call for its mate, said:

"Ah, Harry! ah, Harry!" And then, with bated breath, waited the result of her cry. The meaning and necessity of the preparatory interjection none but a born Virginian would be able to understand, and whether she could explain said meaning is at least quite doubtful. Into this "Ah!" Margaret Heatherstone threw her whole soul. It was a sweet, bewildering cry, showing both the beauty and the wilfulness of the woman's character. There was a world of affection in the tone—and yet before it reached the Harry it died out—and the expression on the proper noun was as dictatorial and imperious as that of a queen demanding obedience from her subject.

A low, prolonged whistle was the first sound that greeted the listening ears; then a broad, stalwart form suddenly sprang from the shadow of the branches, and appeared in full sight—the round silver moon at his back, and the bright bewitching face of the mistress of his heart just in front of and above him.

"Why didn't you go home, Harry?" inquired the vixen with a light laugh.

"Why didn't you let me, you bad, naughty girl?" came the response in clear, manly tones.

"Because I was afraid! As true as I live, I felt like a ghost up here, all alone. See what a spooky look the moon has to-night; listen a moment to the strange minor the wind has taken on; and what is that Harry?" as another sound was wafted on the wings of the soft southerly breeze. Clear and low as the tones of an Æolian harp, came the first strains; then there was the sound of exultation, of defiance; strains of a love—a passion so sublime, so resolute in doing and daring, and wailing, that Margaret Heatherstone pressed her hand upon her heart, and, sinking on her knees, buried her beautiful head in the window drapery.

"Why Margaret; don't be frightened. That's nothing but the niggers in old Hannibal's cabin, singing 'John Brown.' By George! they are having a jubilee to-night," as the exultant tones rang out again: "John Brown's body lies a mouldering in the grave—his soul goes marching on."

"It's well your father don't know of this. Where *are* you, Maggie dear?"

"Here I am, Harry Traverse," replied the lady almost defiantly—her mood changing in a moment, as she realized the necessity of firmness. "Don't you dare to tell him a word about this! Don't you dare speak about it to anybody!—Do you hear?"

"I won't, if you say not, of course!" replied the young man. "But I certainly think, Margaret, he ought to know of it: Old Hannibal has already too much influence with the rest of the niggers, and if I had anything to say about it, I should suggest that your father get rid of him in double quick time. He is the most dangerous fellow on the plantation."

"Well, you haven't anything to say about it! and, excuse me, it's none of your business! Poor old Hannibal! Dear old Hannibal! He and all the rest of 'em shall sing 'John Brown' to their hearts content. How sweet and pure their voices are. Remember your promise, Harry. If you fail me in this, or in any thing where the negroes are concerned, I will never speak to you again so long as I live. Good night, Harry!"

"Good night, dear! But wait a minute, Margaret. Whisper, darling! Do you love me?"

"No, you goose!"

"Not a bit?"

"Not a particle."

"Whom do you love?"

"Old Hannibal and John Brown. Good night!"

"Was there ever such a girl born?" muttered the young man as he walked away.

"It comes as natural for one to torment him as it does to breathe," said Margaret, as she prepared to retire. "Men are natural autocrats! I ought to have been a man, for I hate to be ordered! If I loved a man more than my own soul, I don't believe I'd marry him if I found I was expected to! But isn't it strange how late those negroes are singing?" Margaret seated herself by the window again, and listened this time to a hymn which she had taught a few of her father's slaves, but which they had altered to suit their own ideas of melody. She recognized the words and the spirit of the words more than ever before. To her, these strains seemed like the voices of avenging angels. Tears filled her eyes, and she waited in silence till the last note died sweetly away. This was the hymn:

"He'll shield you with a wall of fire,
With flaming zeal your breasts inspire—
Bid raging winds their fury cease,
And hush the tempest into peace.
  So he will! So he will!

"And when your labors all are o'er,
Then we shall meet to part no more—
Meet with the blood-bought throng to fall,
And crown our Jesus Lord of all.
  So we will! So we will!"

Old Hannibal's voice rang out clear and distinct as a trumpet blast in the last line, and the last words that Margaret Heatherstone uttered before falling asleep that night were:—"Dear old Hannibal! God bless old Hannibal!"

Col. Harrison Heatherstone was a Virginian by birth and education. His property, consisting of rich tobacco plantations, and valuable real estate in and about Richmond, had been in the family for generations. The quaint old mansion where they lived the greater part of the year, was about nine miles from Richmond, on the James, and most charmingly situated. On the east was the peaceful river; at the south a lawn swept smoothly into undulating meadows; stalwart oaks, some of them a hundred years old, made great masses of shadow upon the soft grass, and the evergreen magnolia and the holly grew in native vigor and luxuriance. On a high bluff back of the house was a grove of red cedar, through whose delicate, graceful foliage the wind played, making exquisite shadows on the sterile earth at their feet. But more of these anon. The house was of the Southern type, with broad piazzas running along three sides, provided with comfortable rustic seats; with every window on the ground floor a door, whence the inmates could issue at will to the pleasant outdoor world. The parlor, library and sleeping rooms for the family were all on this floor; the dining-room extended back of these, and the kitchen was a detached log building back of all. Not far from the house—a quarter of a mile, perhaps—were the negro quarters, the stables and offices, all built of logs.

The aristocratic and somewhat eccentric family occupying this pleasant Virginian home, will be better known to the reader by a few years' intimacy than by any description—but a few hints as to outside appearances must be furnished here.

Col. Harrison Heatherstone was tall, spare, dark and commanding. He was about fifty years old, and had never known a day's illness in his life. His wife, Mrs. Sabrina Heatherstone, was in personal appearance an excellent match for the Colonel. She, too, was quite tall for a woman; of erect figure and graceful carriage. She was her husband's junior by at least ten years, and had been for a few short months previous to her marriage the so-called belle of Richmond. Considering that Col. Heatherstone married the lady on her seventeenth birthday, it is plain to be seen that her reign as queen of society must, indeed, have been a short one. Three children were born to them. Alfred Heatherstone, the eldest child, was at the opening of our story just twenty-one, and as frank and generous a fellow as ever drew breath. Every slave on the plantation adored him, and every friend and acquaintance of the family was always instinctively attracted to Alfred. In personal appearance he resembled neither father nor mother; his eyes were gray, his hair a light brown, his complexion delicate, and his features wonderfully regular. By strangers he was called "The Greek," on account of this strange symmetry of form and feature. The next son was George, a dashing, rollicking, don't-care boy of twenty, the very image of his mother, and as hard to manage as a two-year-old colt.

Of Margaret you already know something. She was a brunette, slender, but exquisitely formed; all curved lines and graceful, swaying motions. Her head was shapely and well harmonized, and crowned with an abundance of dark hair, so dark as to be almost black; there is a difference in hair, and Margaret's was of that vital kind that clusters and clings and would never be mistaken for a lifeless wig. Her forehead was wide and not too high, her nose dainty, her upper lip shaped like Cupid's bow, and in its soft red curve rested the under lip, just full enough for kissing. The chin had in it a hard line or two, enough to show resolution and defiance if the occasion needed it. The poise of the head was full of pride and nobility, and the whole make up of the girl plainly promised truth and common sense. Margaret was one of those dual women, or rather complete women, that we sometimes see, who combine seemingly opposite traits in a perfectly blended feminine sphere. She could be the pretty, piquant, wilful, fascinating pet, and you would suppose that was her whole character; she could be the firm, clear-seeing, resolute woman, the guide and philosopher in emergencies. But as yet she new little of herself, and her friends knew still less; events alone could develop Margaret Heatherstone's real nature, and the diamond is sooner or later dug out, no matter how securely it may hide itself. Up to the beginning of this story our little Virginienne had shown but little except the soft, playful, affectionate side of her character, with some dashes of pretty defiance and charming naughtiness. These last demonstrations were gotten up for the special benefit of young Traverse, who sometimes played prince and sometimes slave—and quite as often the latter as the former—to the exacting little beauty whom he adored.

Poor Harry! the chain galled sometimes. Sometimes he made up his mind so stoutly that he would not bear it. That sort of resolution never paid, however, for when our brave lover went into Margaret's presence, thoroughly armed for defence, the little witch was sure to be so demurely and dangerously penitent, so arch and sweet, and altogether womanly, that his armor fell off at the first glance of her eyes, and he was tenfold more in love than ever. Margaret despised a coquette, but Harry was so desperately devoted, so plainly her captive, that she couldn't forbear a little innocent despotism, and the best woman will on occasion let her mouse go for the sake of getting him back again, and thereby testing her power.

Margaret's awakening the morning following the scenes described above was not a pleasant one. In fact, for several weeks past she had been conscious of troubled dreams, making her sleeping moments most tiresome and unsatisfactory. That there was cause for apprehension could not be doubted. This was early in the fall preceding the breaking out of the war, but when she talked the situation over with her father and brothers, there seemed nothing so desperate about it after all, and a score of times during the day did poor little Margaret take herself to task for a nervousness and irritability which, on account of her quick powers of intuition, were quite in keeping with the circumstances of the future. A traveling phrenologist had declared, after a careful examination of Margaret's cranium, that she had a "skylight to her brain that would enable her always to look ahead and guard against the storms of misfortune." Already, in imagination, was this home of her father's desolated. Already had her brothers marched off to the scene of action, and when her favorite servant—a sweet-faced quadroon—entered her room to assist her in her toilet, she was just in the act of begging old Hannibal not to leave her—praying him to remain with her as long as he lived, telling him that no one could ever love him half so well as did his dear little Margaret.

"Oh, Miss Maggie! dear Miss Maggie!" said the slave, listening in wonder to the strange petition.

"Breakfast will be cleared away if ye don't scrabble now mity fast. Dat Colonel in a mazing tare dis morning about something; better hurry up!" continued the quadroon.

"Oh, Fanny, is that you?" inquired the young lady, trying to open her sleepy eyes.

"Dear me, what have I been dreaming? or rather, what havn't I been dreaming this whole livelong night? What did you say about pa, Fanny? Cross, is he? What about?"

"Why it seems dat Massa asked Jake dis morning what de niggers was a doing las night so late, and Jake, de flat-headed nigger, say he know noting at all about de performances. Well, Massa didn't do noting just den, an arter a few minutes lapsed, in walked dat slab-sided old Hannibal.—

"Fanny," interrupted her young mistress, with considerable dignity, "Why is it that I am so constantly compelled to correct you about your language? In nothing else do you ever annoy me. Why will you in this?"

"De fac of de business is jus heah, Miss Maggie. You always will forget a powerful sight more than she members; but you see Hannibal he walk in with Massa's boots; ny golly! didn't they shine, though? You coold jus see your face in 'em, and Massa say, very polite like and kind—"Quite chilly dis morning, Hannibal!" Hannibal say, "Yes, sah, quite!" Then Massa keep on: "Golly, didn't you know what he was up to?" I hemmed and barked, and almost scraped my throat, trying to make dat foolish old Hannibal know that he'd better be a traveling; but you might as well ham to a stone. Den Massa say, "Hannibal, what was all that noise about las night?"

"Las night?" says Hannibal, bery innocent like.

"Yes, las night!" plied Massa. "I tink Jakes been a lying to me. Now be careful you don't attempt to try dat game on."

"Did you ever ketch Hannibal in a lie, sah?" said dat tormenting lump of pompensuess.

"Not that I know of," said Massa—looking dat nigger all over mity curons like. Den Hannibal say—"What time you hear de noise, Massa?"

"Late into the night. It woke me up from a sound sleep, and I thought I heard your voice and Jake's, and half a dozen more singing."

"I did not know, Massa, dat it was so bery late," said Hannibal. "But I specs we got so interested in our singing that we done gone forgit ebery ting else. 'Pon honor, Massa, Hannibal no forgit agen, if you'll jus' forgive him dis time."

"So of course," continued Fanny, all of a sudden bursting into tears, "Jake's got to ketch it now. If dat Hannibal had held his old tongue dere wouldn't a been all dis trouble. He allers wiggles out ob ebery ting. He neber hab no decency nor noting else."

"He has decency enough to tell the truth," replied Margaret, as she took the comb from the hand of her maid and smoothed back her beautiful hair. "And that's more than Jake had. Jake will be punished now, I suppose?"

"Ten lashes," sobbed Fan.

"I have saved him before, and perhaps I can this time," said Margaret, kindly, "but *my* patience will give out after a while if he doesn't learn to tell the truth."

"But he'd got whipped all the same," said Fanny, whose ideas of right and wrong had entire reference to the system of rewards and punishments.

"We will talk this over again after breakfast, Fanny, and now you may go," replied Margaret, her composure, apparently, about to give way.

"The same old story, over and over again, that I have heard ever since I was a baby," continued she, as the door closed on Fanny's retreating figure.

"I wish I could cease thinking. If I don't stop right where I am, I shall soon reach a place where I can no longer sympathize with my family. The right and the wrong of these things are being argued in my mind night and day, and the more I reason the more uncomfortable I become. As long as I am powerless to be of any service any way, why may I not be allowed to rest in peace; or if I must take up the cudgels, why may they not be brandished as my father and brother and Harry would approve?"—[To be continued.

Ladies' Port-Folio.

MODESTY

THERE is a sweet, though humble flower,
Which grows in nature's wildest bed;
It blossoms in the lonely bower,
But withers 'neath the gazer's tread.

'Tis reared alone, far, far away
From the wild, noxious weeds of death;
Around its brow the sunbeams play,
The evening dew-drop is its wreath.

'Tis modesty; 'tis nature's child;
The loveliest, sweetest, meekest flower,
That ever blossomed in the wild,
Or trembled 'neath the evening shower.

'Tis modesty; so pure, so fair,
That woman's witcheries lovelier grow,
When that sweet flower is blooming there,
The brightest beauty of her brow.

[*Lucretia M. Davidson.*

ADVERTISING FOR WIVES.

WE trust none of our lady readers are so foolish as to ever answer the advertisements for wives, which frequently appear in the papers. It may be safely asserted that the man who cannot obtain a wife without advertising does not deserve one. Only the crusty old bachelor who has been "mittened" in every quarter, or the unprincipled adventurer, seeking to deceive, would ever think of resorting to such means for obtaining a matrimonial partner.

There was a time, however, when the practice was looked upon as legitimate, and reputable in France and England. At the commencement of the present century there were numerous offices in Paris for negotiating marriages, the proprietors of which regularly advertised themselves as matchmakers. In 1797, "A New and Original Grand Matrimonial Intercourse Institution" was organized in London, which advertised a "mode of accelerating and promoting the union of the sexes in the bonds of holy matrimony."

A few years later a Matrimonial Exchange was established in the same city, the candidates being arranged in classes "to suit any wants." In 1838 there was announced, in London, the publication of a "Portfolio for the Inspection of Ladies, and which will contain copies of the letters, without name or address, from gentlemen of rank and fortune, gentlemen of private fortune, officers in the army and navy, and other professional gentlemen of high respectability and fortune, who are sincerely desirous of uniting themselves in marriage with ladies of respectability." Individual advertisements for wives were very common in the newspapers of the last century, and it is noteworthy, observes a writer on the subject, that in nearly all such cases money was required with the ladies.

NAUCH GIRLS.

WE know less about the women of India than those of any country, though there are one hundred millions of them. This is due mainly to the restrictions and jealous seclusion to which they are subjected. Not only are they, as a general thing, kept far in the back ground, but they are denied the benefits of education on the theory that education in the hands of women would most likely become an instrument of evil power.

There is one class of women, however, in India known as the Nauch girls, who are entirely freed from these restraints. Dr. WILLIAM BUTLER, in his new and valuable volume on "The Land of the Veda," tells us that these Nauch girls court publicity, and you can see them everywhere. This order of females is also released from the doom of an illiterate mind. They can read, write, and quote the poets, and jest with the conundrums and wise saws of the land. Their title means dancing-girls. No man in India would allow his wife or daughter to dance, and as to dancing with another man, he would forsake her forever, as a woman lost to modesty, if she were to attempt it. In their observation of white women there is nothing that so much perplexes them, Dr. BUTLER says, as the fact that fathers and husbands will permit their wives and daughters to indulge in promiscuous dancing. No argument will convince them that the act is such as a virtuous woman should practice.

Whenever, therefore, there are to be any ceremonies or festivities they employ the Nauch girls to do their dancing. Four or five of the latter, tricked out in all their finery, and jewelry, and tinkling ornaments on their arms, necks, and feet, will for four or five dollars down jest and sing songs. But even they don't dance except with their own sex. Though they correspond to what perhaps are known as the pretty waiter girls in this country, they are, Dr. BUTLER tells us, the only intelligent and cultivated class of Hindoo women.

CONCERNING TEETH.

NO lady need be told that a beautiful set of teeth adds not a little to her general attractiveness. She may be the model of neatness in other respects, but if her molars betray lack of care, she will be put down as uncleanly. At the same time there is danger of overdoing the thing, and ruining the teeth in making them white and pure. Nine-tenths of the tooth-powder preparations sold by druggists, at the present time, are injurious, and ought never to be taken into the mouth.

It is a lamentable fact, that our American women lose their teeth at a much earlier age than do those of other countries; this has been attributed to a variety of causes.

PETER KALM, the Swedish writer, who described in a very intelligent manner what he saw and heard during a trip through the United States, observed a frequent loss of teeth among settlers from Europe, especially women. After discussing and rejecting many modes of explanation, he attributed it to hot tea and other hot beverages; and came to a general conclusion that "hot feeders lose their teeth more readily than cold feeders." Mr. CATLIN, who some years ago gave, in England, an interesting exhibition of Indian scenery, dresses, weapons, etc., noticed that North American Indians have better teeth than the whites. He accounts for the difference in this strange way, that the reds keep the mouth shut, whereas the whites keep it open. The teeth, he says, require moisture to keep their surfaces in good working order; when the mouth is open, the mucous membrane has a tendency to dry up, the teeth lose their needed supply of moisture, and thence come discoloration, toothache, ticdoloreux, decay, looseness, and eventual loss of teeth. Mr. CATLIN scolds the human race generally "for being less sensible than the brutes in this respect, and the whites especially in comparison with the red. We keep our mouths open far too much. The Indian warrior sleeps, hunts, and smiles with his mouth shut, and respires through his nostrils. Among the virtues attributed to him to closed lips, one is excellent—when you are angry keep your mouth shut."

It would certainly be a decided gain to humanity if the Mrs. Candles and juveniles could be made to believe that much opening of the mouth tends to ruin the teeth.

MISS LILLIAN EDGARTON is discoursing before the New England societies on Gossip, as follows: 1. The honestly sympathetic gossip. 2. The harmlessly curious gossip. 3. The petty envious gossip. 4. The calumnious gossip. The latter class she subdivides as follows: 1. The public hall-door gossip. 2. The confidential gossip. 3. The moral purist gossip. 4. The political gossip. 5. The woman's rights gossip.

Reading for the Young.

LULU'S SCHOOL.

BY LAURA SOUTHGATE.

COME here now, Miss Pussy, stand up on your feet;
Hold open your book, and your lesson repeat.
The *play* you like best, first of all you may tell;
Catching mice, I suppose—that is said very well.

LITTLE LULU'S SCHOOL.

And then you may say, in plain simple words,
Why a cat may catch mice, but must never touch birds.
And next you may tell me about those young kittens—
The poor little dears who lost their mittens.

And then I shall ask, for I'm sure you must know,
About that good cat who lived long ago—
Who put on his boots, and by wisdom and pluck,
Brought about to his master the very best luck.

And then I will tell you a story most sad,
About a poor puss, and a monkey so bad
That he stuck in the hot coals this poor pussy's claws,
To pull out his nuts, and save his own wicked paws.

Here! here!—naughty Tom! set up there in disgrace;
You need'nt put up your back, and make such a face,
And cry so, and make such a terrible fuss,
And you've scribbled my work-basket all in a muss.

And what do I see down there on the mat,
But a very disgraceful, bad, naughty cat.
Naughty Lilly; to pull your good sister's tail,
When she's saying her lesson, and tries not to fail.

Your lesson to-day was learning to count,
And here you've done nothing but wiggle about.
You and Tom shall be shut in the closet all day,
But Spunk shall have a new doll, and shall go out to play.

Riverdale, N. Y., Christmas, 1871.

OUR LETTERS FROM BOYS AND GIRLS.

A NEW YEAR'S GREETING to our Young Friends, all over the Continent! May they be Happy and Good during the whole year, and many future ones—and ere long become model MEN and WOMEN.

Until the Girls and Boys commenced writing for the RURAL NEW-YORKER, we had no idea of the number of our young friends. Why, there seems to be a host of them, and they have placed us in a pretty fix—for here we have several hundred letters from Young Ruralists all over the land, and not space enough to publish a tithe of them this week. Well, we will do the best we can—that is, give the gist of as many of the letters as possible—and then try to do better in future. We will start with the Girls, as they have beaten the Boys by sending the most letters:

Prairie Flowers.—LILLIE L. MARTIN, eleven years old, who is next to the highest grade in the village school, writes from Caldwell Co., Mo., as follows:—"We live away out here in Northwestern Missouri, and I think it is the most beautiful country in the world in the summer time, for we have so many wild flowers on the prairies. There are different kinds of flowers for each month, from early spring until November, and oh! such pretty flowers we never saw anywhere else, and the fields and woods are gay with them all the time. I don't do much in summer but go to school, do chores for mother, and gather wild flowers."

Ship Loads of Stone.—A little girl, nine years old, living in Massachusetts, writes a nice letter, in which she says:—"My name is NELLIE L. S. I live in Lanesville, near the harbor, where ships come to be loaded with stone. There are six quarries near Lanesville, from which stone are taken to be sent to New York, Philadelphia and Boston. They are used to pave streets and construct buildings. The Masonic Temple in Philadelphia, and the Post-Office in Boston are now being built of granite from this place. We also have vessels which go fishing from Lanesville. This place is growing very fast, and there are many houses and stores being built."

A Good Girl Agent—Is EUNICE DAVIDSON of Lenawee Co., Mich., who writes:—"I inclose in this letter thirty-two dollars for sixteen subscribers to the RURAL NEW-YORKER. I think I can get subscribers to the number of thirty or more. I think I have done pretty well for a girl of fourteen." [Yes, you *have* done well, and we think you will get more than thirty subscribers after showing the new-style RURAL.—ED.]

A Girl Halter-Breaks Colts.—S. M. F., a girl of eleven, who has never been to school, but will go this winter, writes about her pets from Waukesha, Wis., thus:—"I have been a constant reader of the dear RURAL NEW-YORKER for six years. I can harness a horse, halter-broke a colt, and am learning to bake. I have a little kitten I call "White Moss Rose," and I have a very nice colt, two years old. I halter-break her myself. She is so nice and handsome that I call her "Nellie Grant." My papa has a nice horse he calls "Gen. Grant," and papa has taken your RURAL twenty years, and says if he lives he will take it as many more if it continues as good as in times past. I have tried VIOLA'S recipe for White Mountain Cake, and found it good!"

A Plucky and Successful Boy Agent.—With a draft for fifty dollars comes this letter from LAWRENCE J. SHARP of Steuben Co., N. Y.: "Seeing your liberal offer to all girls and boys who would get up clubs I thought I would try for a Watch. Found it rather hard work to coax some that had not taken your paper to subscribe for it. I have been successful at last, although I blistered my feet in the attempt: but the prize will more than pay me. I am fourteen years old—go to school, and read the letters you are so kind as to publish for us. Am afraid the boys are letting the girls take the laurel without making much of an effort for it themselves. You will find inclosed twenty-five names and fifty dollars. Please send me the Watch." [Aye, plucky Master SHARP, you shall have the Watch, and an extra Premium also on account of those blistered feet. ED.]

Likes Books and Papers. ROBBIE A. L. of Scotch Bush, N. Y., writes: "I am a mason's boy, and I do not have many chores to do. I read all the papers we take, and sometimes my uncle sends me books and papers. A few weeks ago he sent me a book named "Little Men," and I have read it twice. Last Christmas I got "Jack and the Mill" and "Magic Spectacles." I have read them a good many times. I was ten years old the 8th of December. My pa said if I would write you a letter good enough to be published, he would let me take the RURAL NEW-YORKER next year myself. Pa says you must not publish this if it is not composed good enough, for he will take the RURAL any way."

A Dog and Rabbit for Pets.—JOHNNY M. SHERMAN of Huron Co., Ohio, writes:—"My father takes the RURAL NEW-YORKER, and I like it. I am 11 years old. I have a little dog and his name is "Gip;" my aunt gave it to me. He catches rats and mice. I live on a farm. I have a rabbit that I caught. I go to school and to Sunday School."

Wants to Club Us.—G. G. ROBBINS of Graves Co., Ky., writes:—"I am a boy 14 years of age. I wish you would send me show-bills and a specimen copy of the RURAL, and I will try to make up a club. I saw one number of it, dated Dec. 9th, and in it I find 'Riddle No. 4.' My answer is, 'China.' Am I correct?"

A Woodchuck Story—Premiums, &c.—ARTHUR C. JONES writes from Onondaga Co., N. Y.: "My brother caught a woodchuck last summer and shut it up in a barrel. It made believe sick, and he let it out. It couldn't raise its hind limbs, but would turn around to bite if you went behind it. He went out in the barn, and when he came back it had put off to its hole. How is that for woodchuck? We took three premiums at the Skaneateles Fair, last summer—one on sheep, one on wheat, and one on Java hens. We now have 15 little Java chickens about a month old. We keep them in the cellar of our horse-barn."

The Puzzler.

ILLUSTRATED REBUS.—No. 1.

☞ Answer in two weeks.

BIBLICAL SQUARE-WORD.—No. 1.

A BIBLE word signifying confidence.
An article of food.
A farmer's building.
A Jewish prophetess.

☞ Answer in two weeks. ISOLA.

HIDDEN CITIES.—No. 2.

1. EARTH hath enshrouded her.
2. Hunger is the best sauce.
3. Obscurity restores her no more.
4. What I was I do not mourn.
5. With madam as custodian.

☞ Answer in two weeks. FOURTEEN.

PROBLEM.—No. 1.

AN oak falling against an elm of the same hight and 21 feet from it strikes it 3 feet 3 inches from the top. What is the hight of the trees?

Swan, Ind. CHAS. SIMON.

☞ Answer in two weeks.

News of the Week.

GENERAL REVIEW.

The principal event of the week has been an order issued by Judge Brady Saturday, Dec. 30, enjoining Mayor Hall from recognizing the old Board of Aldermen.

Wm. M. Tweed, having resigned, has been succeeded as Commissioner of Public Works by Geo. H. Van Nort, formerly connected with the Park Department, and a Republican in politics.

To avoid sharing the fate of Connolly in Ludlow street jail, Tweed hid himself in the city Dec. 26, and did not appear again until the 29th, when a bondsman had been secured in the place of Terence Farley, who desired to withdraw. Tweed's bail are now justifying.

Horace Greeley has written a letter to a Missouri editor who had nominated him for the Presidency, in which he says he is not the man the Democrats want, being a ferocious protectionist, and recommends them to take some man like Gratz Brown, or Trumbull, or General Cox.

An important change has been made in Cuba. Marshal Concha succeeds Valmaseda as Captain-General.

Admiral Palo has been appointed Spanish Minister at Washington vice Senor Roberts.

DOMESTIC NEWS.

New York City and Vicinity.

DEC. 23, a terrible gas explosion occurred in the purifying house at the Metropolitan Gas Company's Works. The force of the explosion was so great as to completely wreck the building in which it occurred. The tenements in the vicinity were shaken as though by an earthquake, and every pane of glass in the windows was shattered. Soon after the explosion took place, gas was withdrawn from the entire district supplied by the Company, and a large section of the city was wrapped in total darkness.

Only one person was seriously hurt. The damage has been sufficiently repaired to furnish the usual quantity of gas.

An official statement of the debt of the city and county of New York, at the close of business on the 16th inst., has been prepared by Comptroller Green. The city is now paying interest on about $110,000,000, including $20,000,000 held by the Sinking Fund. The net indebtedness, including $6,000,000 of claims already presented on unsettled accounts, and deducting the cash in the city and county treasuries, is $94,533,817.22. The funded city debt on Sept. 14, the date of the last statement before this, was $54,302,808.51; it is now $57,392,308.51; funded county debt, Sept. 14, $27,816,350; it is now $29,971,500.

Gen. Sickles, our Minister to Spain, who has recently arrived here, has important communications to make to the Government at Washington in reference to our relations with Spain. The General denies that he is retained by the combination against the Erie Railroad Directory as counsel.

An application has been made for an attachment against Connolly's property by Patrick Carroll, formerly Superintendent of Markets for $13,398, for provisions furnished Connolly, during 1867, '68, '69.

The Grand Jury, after an investigation, have exonerated Judge Bedford from the charge of receiving $5,500 in a fraudulent manner from the city when Assistant District Attorney for extra services. They say he was legally entitled to the amount.

The Erie Railway Company has completed the transfer of the 60,056 shares of stock claimed by Heath and Raphael.

The jury in the case of Miner, on trial for counterfeiting, have rendered a verdict of not guilty.

Crimes.

THE dispatches in relation to the trouble in Chicot county, Ark., growing out of the murder of the negro lawyer, Wynne, and the lynching of the three murderers, are conflicting. It is evident, however, that the negroes have disbanded and the county authorities are in full possession. The reports that the negroes committed gross outrages, and compelled citizens to leave the county, are discredited.

Dec. 25, a preconcerted outbreak of Ku-Klux at Marshall, Saline Co., Mo., and vicinity is reported to have taken place. A large number of armed men turned out in pursuit of the negroes of the district. Patrols were placed near the town, and every traveler was halted and questioned. All business was suspended, and mob violence reigned supreme. It is not known how many negroes were killed, but a man who left Marshall at 11 o'clock saw the dead bodies of five, two hanging by the neck and three lying on the road.

Dec. 25, the Marshal of Chelsea, Mass., was stabbed while quelling a riot. He shot one of the rioters, and twelve others were arrested. Charles and John Schuncker have been held in $10,000 bail for assaulting the Marshal.

On Christmas day a bloody affray took place at East Arlington, Vt., in a drinking saloon. Farwell & Lawrence, the keepers of the saloon, shot five persons, two of whom have died since, and two more are mortally wounded. One of the victims was Farwell's son, eight years of age. Farwell and Lawrence are under arrest.

Dec. 23, in the United States Court, Columbia, S. C., the jury in the case of Mitchell and Whitsides, Ku-Kluxes, after nearly twenty-four hours' consultation, returned a verdict of guilty on the second and fourth counts. The defense moved for a new trial.

Accidents and Disasters.

DEC. 23, a passenger train bound North, on the Burlington, Cedar Rapids and Minnesota Railroad, broke through the bridge over Sheli Rock River, at Rockford Station, Iowa, precipitating the engine, caboose, baggage car and one coach down twenty-five feet. James Judd, the engineer, Bartlett, a brakeman, and Robert White, the firemen, were instantly killed.

A locomotive on the Rockville Branch of the Hartford, Providence and Fishkill Railroad, exploded, Dec. 23, the engineer, M. S. Collins, being killed and the fireman, named Voght, severely injured.

Dec. 26, the Cosmopolitan Well, at Shrub Grass, Pa., belonging to Botsford & Co., took fire by an explosion of the gas, while drilling, severely burning six men, including one of the owners, Mr. Botsford.

A severe rain storm, with a southwest gale, set in Dec. 22. There was great disaster to shipping on the Pacific coast. The Tule county, opposite Sacramento, half of Stockton, Gilroy and San Jose are flooded.

Obituaries.

THE Rev. James B. Taylor, for the past 25 years Corresponding Secretary of the Foreign Mission Board of the Southern Baptist Convention, died in Richmond, Va., December 22, aged 69 years.

Sidney E. Morse, a brother of Prof. S. F. B. Morse, and one of the founders of the New York Observer, died in this city, December 23, of paralysis, aged 78 years.

The Rev. Robert Jefferson Breckenridge, D.D., LL. D., died Dec. 27, at Danville, Ky., after a protracted illness. He was son of the Hon. John Breckenridge, author of the Kentucky Resolutions of 1798, and Attorney-General under President Jefferson. He was 71 years of age.

A despatch from Rome, Dec. 27, announces the death of Cardinal Amat.

Fires.

Dec. 23, in Hudson, N.Y., incendiaries burned down some of the buildings of the Albany and Boston Railroad Co.

Dec. 25, the Soldiers' Home at Kingstown, Ind., was burned. The inmates will be transferred to Dayton Soldiers' Home. The loss or insurance on the building is not stated.

Dec. 25, during a pyrotechnical display at Macon, Ga., a fire balloon was thrown into a store on Cherry street, which ignited a large stock of fireworks, and the explosion that followed set fire to the building and burned out four stores. Loss about $60,000.

Dec. 24, twelve buildings were burned in Salina, Kan. Loss, $75,000.

The residence of C. A. Woods, at Wheatland, Pa., was destroyed by fire on Christmas day, and two servant girls were burned to death.

FOREIGN NEWS.

France.

THE recent communication of Count Bismarck to Baron von Arnim, in reference to outrages committed on German soldiers and the measures of retaliation proposed to be inaugurated, excites the French press to renewed bitterness against Germany.

The initiative Committee of the Assembly has rejected the proposition to return to Paris.

M. Boilleau is now mentioned as probably the future Minister at Washington.

The Minister of the Interior has taken measures for the further restriction of the liberty of the press.

The Assembly has voted down the proposition for a general income tax.

The West Indies.

THE case of the steamer Hornet is considered settled in Hayti. The Spanish Consul has landed again and re-occupied his post.

Engagements have recently taken place in San Domingo between the Baez's troops and the revolutionists. Cabral was beaten at Nicba, and compelled to abandon the place hastily. His loss was heavy in men and ammunition. He lost even his own clothing. Gen. Pimental resisted the attack of the Baez forces successfully at Santa Guan, and routed them.

Captain-General Valmaseda of Cuba has issued a proclamation in which he gives notice that every insurgent captured after the 15th of January will be shot, and those surrendering after that date will be sentenced to perpetual imprisonment. The negro men are to be treated the same as the whites.

Austria.

THE statement is made on authority that the forthcoming budget will show a surplus of 21,000,000 florins in the receipts over expenditures for the year, instead of a deficit, as was anticipated.

Spain.

DEC. 27, a regiment of Chasseurs sailed from Santander to join the Spanish army in Cuba. King Amadeus was present, and made a farewell speech to the troops, causing immense enthusiasm.

Turkey.

THE Sultan, backed by Prussia and Austria, is sharply pressing the Government of the Danubian Principalities for a settlement of its railway obligations.

Germany.

THE Germans are making a census of the private fortunes of the inhabitants of the invaded provinces of France.

Russia.

A RUSSIAN ukase has been published ordering six men in each thousand to be drawn for military service.

Holland.

THE Roman Catholic Bishops of Holland have united in a memorial to the King, praying him not to discontinue the Dutch Legation at the Vatican.

Great Britain.

THE recovery of the Prince of Wales has been somewhat retarded by an affection just above the left hip.

China.

THE Chinese Government has determined to follow the example of the Japanese and send young men to England and the United States to be educated in the schools of those countries.

THE VERY LATEST.

THE PRINCE OF WALES.

LONDON, Dec. 30.—The bulletin of to-day reports that the rest of the Prince of Wales was at times disturbed last night, by pains from the swelling above the hip, but in all other respects his condition continues to improve.

LOSS OF A RUSSIAN STEAMER WITH ALL ON BOARD.

ST. PETERSBURG, Dec. 30.—The Russian steamship Kuma, plying on the Caspian Sea, foundered in a terrible gale. All on board, officers, crew and passengers, were drowned. The steamer had a million roubles in treasure on board, which is a total loss.

FEARFUL CATASTROPHE IN GLASGOW.

GLASGOW, Dec. 30.—While a large road wagon, propelled by steam, and carrying heavy boilers, was passing through the streets to-day, surrounded and followed by a throng of children, one of the boilers exploded. Five children were killed outright, and seven were so badly injured that their recovery is doubtful. The dead and injured were frightfully mutilated.

Example for the Ladies.—Mrs. Elizabeth A. Monahan of Brooklyn, N. Y., has used her Wheeler & Wilson Machine since 1861. During the war she stitched forty blouses a day of eight hours, averaging about $16 a week: since then she has stitched from thirty to thirty-six linen coats a day. Last year, in three months, she stitched 1,274 linen coats, earning $186.46, besides doing her own housework and tending her baby. She would use no other Machine.

It gives us great pleasure to record the well deserved success of the celebrated piano manufacturers, Messrs. GEO. STECK & CO., in this city, already mentioned in one of our former issues. Within a year they doubled their manufacturing capacities in order that they might fully supply the demand for their pianos. They have obtained the latest patent for improvements in Upright and Grand Pianos, and this patent was so notable that one of their Grands, in preference to all others, was selected as the *first prize* at the great Saengerfest held in this city in June last,—certainly an enviable triumph. The Steck Pianos have gained for themselves the reputation of standing longer in tune and of being more durable than any other instrument manufactured in this country, and as such an instrument is the cheapest in the end, it accounts for the popularity and the increasing demand for the Steck Piano.—C. A. C.

Example for the Ladies.—Mrs. C—— of New York, has used a Wheeler & Wilson Machine since 1857, never averaging less than $700 a year, and for the last five years $1,000. She used the same needle during 1870, and earned with it over $1,000.

Don't Wait for a Cold to go away of itself, for your throat and lungs may become so irritated and inflamed from the accompanying Cough, that Bronchitis or Consumption may set in before you are conscious of danger. Rather get clear of your Cold at once by using Dr. Jayne's Expectorant, a good remedy for loosening a cough and promoting expectoration, and for healing and strengthening the surfaces of the throat and lungs. Sold everywhere.

Example for the Ladies.—Mrs. T. M. Scullin, Troy, N. Y., has used her "dear friend," a Wheeler & Wilson Machine, since 1858 in dress and cloak making. The last six months she earned $332, and the year before, $417.

Make Your Own Soap.—Spread out on a platform your soap grease about four inches thick. To procure and apply the lye, place yourself to the windward of the platform and mention the Jones Scale to a traveling scale agent, and he will pour out enough concentrated essence of lies to saponify the whole mass. Send for Free Price List, and see why the Jones Scale Works of Binghamton, N. Y., can sell the best Four Ton Hay Scales for $75.

Example for the Ladies.—Mrs. J. R. Bowen, Wellsboro, Pa., has used her Wheeler & Wilson Machine almost constantly since 1859 on all kinds of material, without any repairs or personal instruction.

You Cannot do a Better Thing for your wife on a washing day than provide her a Doty Washer and a Universal Wringer. It will keep aches from her back and arms, wrinkles from her forehead and roughness from her hands. It will do the work of a hired woman and save your linen from being scrubbed out and her temper from being chafed out.—*New York Tribune, March 22d, 1870.*

How Delightful it is to be able to remove all the disfigurements from the skin, such as tan, freckles, moth-patches, etc. The delightful and harmless toilet preparation known as Geo. W. Laird's "Bloom of Youth" will effectually remove all such blemish without the fear of injuring the skin. It will leave the skin smooth, clear and transparently beautiful. Sold at all druggists and fancy goods dealers. Depot 5 Gold street, New York.

Another Lie Nailed.—The Hon. Thomas Murphy, ex-Collector, is not nor never has been a stockholder in our works. We supply the Government because our Scales are the best and cheapest. The JONES SCALE WORKS, Binghamton, N. Y.

Example for the Ladies.—Mrs. C. D. Goodman, Cleveland, O., has used her Wheeler & Wilson Machine four and a-half years with the same No. 2 needle that came in it without breaking or blunting it.

Novel and Beautiful Paper Weight.—From the Meriden Cutlery Co. (by J. B. BEADLE, Sec'y,) we have received a solid nickel-silver-plated paper weight,—very appropriate for Agricultural Editors, and exceedingly artistic. It represents a Short-Horn animal of the male persuasion, fastened by a golden cord to a hitching post of burnished silver. Those with whom the Short-Horns are favorites will be delighted with this useful and ornamental article.

More than Four Tons of solid lies have been told by traveling agents regarding us and our Scales. Do not buy until you have sent for our Free Price List and see how, by dispensing with these lazy swindlers, we can sell Four Ton Hay Scales at $75. The JONES SCALE WORKS, Binghamton, N. Y.

Example for the Ladies.—Mrs. Mary Hacher, Muscatine, Iowa, has used her Wheeler & Wilson Machine since September, 1857, and earned from $10 to $20 a week, making dresses and cloaks, from the finest to the heaviest, and her machine is now in as good order as when she bought it.

Watch No. 1154, Stem Winder—Bearing Trade-Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., has been carried by me nine months; its total variation from mean time being only three and a-half seconds per month.—HORACE HATCH, M. D., No. 25 W. 38th St., N. Y.

Another Lie Nailed.—The Hon. Thomas Murphy, ex-Collector, is not nor never has been a stockholder in our works. We supply the Government because our Scales are the best and cheapest. The JONES SCALE WORKS, Binghamton, N. Y.

A Protruding Toe is not a pretty sight, and is never seen where children wear SILVER TIPPED Shoes. They will save half your shoe bills. For sale by all dealers.

SPECIAL NOTICES.

HAIR, SCALP AND FACE.

DR. B. C. PERRY, the skillful Dermatologist, 49 Bond street, who treats with special prescriptions all diseases which destroys the hair, can now be consulted at his New York office for Falling, Loss and Unlimely Gray Hair, Dandruff, Salt Rheum, Ringworm, or any complaint or disease which induces a loss of hair. The doctor cures unnatural redness of the nose or face, black heads, pimply eruptions, moth patches, freckles. Call or send for circular.

HALL'S JOURNAL OF HEALTH

is a Monthly Magazine, *the entire contents* of which are written by Dr. W. W. HALL, the eminent and trustworthy family physician. It has been published for *eighteen* years. Subscription, $1.50 a year. *To Clergymen and Teachers*, $1. HURD & HOUGHTON, New York. The Riverside Press, Cambridge.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

Columbus Discovered America, but it has been found that the only economical Shoes for children are the celebrated SILVER TIPPED—never wear out at the toe, and are worth two pairs without tips. All dealers sell them.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, December 30, 1871.

THE general trade of the week has been active in the receipts of Cotton and firm in Cotton Goods. The business in Invested Bonds shows better than in the week before Christmas. The Holiday shopping trade was fair and about equal to last year, though several causes combined to make many of our people feel poorer—such as the losses on Insurance Stocks by the Chicago fire; the breaking up of the Tammany Ring, which brought down some of the Banks and Savings concerns in which they were interested, and the slower progress of the new Railway undertakings, and the more difficult negotiation of their Bonds. On the other hand the Public Credit of the United States is higher, and the premium on Gold is easier than at the close of 1871.

The following are the comparative movements of the City Banks for the past fortnight:

	Dec. 16.	Dec. 23.
Capital	$187,301,000	$187,301,000
Loans	282,179,100	271,363,500
Gold and Greenbacks	70,283,400	63,982,500
Deposits	217,819,500	199,346,700
Circulation	29,033,800	28,575,600

The heavy reduction in Loans and Deposits is not all owing to contraction, as about $4,500,000 of each are dropped out of the Clearing House returns, which now include only the Banks associated in the Clearing House. Heretofore seven or eight outside Banks have been allowed to report as a matter of courtesy. The contraction, otherwise, however, is very heavy and has caused an extremely close Money Market in Wall street, where the Brokers are paying 7 per cent. and a daily commission of an eighth or sixteenth of one per cent. for carrying over their Stocks. The notable feature in this state of things is that Stocks, especially of the speculative class, go up on the Money stringency.

PRICE OF STOCKS AND BONDS.

American Gold	108⅝	N. Y. Central Stock	95¼
U. S. 5-20's of 1867	115⅜	Do. Scrip	89¾
U. S. 6s of 1881	118	Reading	111¾
U. S. 10-40s, 5 ⅌ cts	109½	Rock Island	107¾
U. S. New Loan	109¾	N. West	67
N. Y. Bounty Loan	109⅝	Do. Preferred	90
Tennessees	64	St. Paul	54
Virginias, new	56½	Do. Preferred	78½
Missouri Bonds	97	Lake Shore	93
North Carolinas, old	34	Ohio and Mississippi	45¾
U. S. Currency 6s	114½	Toledo & Wabash	70½
Central Pacifics	103¼	Erie	33¼
Union do	93	Union Pacific Stock	29
Western Telegraph	70½	Adams Express	91
Pacific Mail	53¾	American Express	60
Lake Shore Scrip	84¼	United States Exp's	65½

The market is all up since our last report, the Railroads 2 to 4 per cent., Western Telegraph 2½, United States Express 2½, Tennessee Bonds 3, Virginias 1½, Union Pacific Mortgage Bonds 2 and the Public Stocks (Gold bearing,) ¼@½ and United States Currency 6 per cents. 1¼ per cent. The market at the close of the Old Year is steady and on the advance.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Dec. 29.

HOLIDAY week has been most religiously kept in commercial matters this week, and we again make only a nominal allusion to a large portion of goods depending upon a wholesale outlet. Beans are dull, and $2.50 is the trade price for prime mediums and $3 for marrows; sales at both prices. Beeswax has had some movement, which has advanced prices to 35@35½c. Broom corn ranges at 5@9c. for old and new common qualities, and 10@12c. for hurl. Butter is selling only for immediate use, and it is thought that with the present stock a revival of trade will not produce much firmness in prices lately current. Cheese is quoted at 13½c. for broken local lots. The market

is undecided; many holders have strong confidence in the future, and have noticeably withdrawn their stock.

Flour has been very quiet at about our last prices. Shippers are not disposed to purchase, on account of panic foreign advices, while holders, in anticipation of an improved demand after the opening of the new year, refuse to make concessions. Superfine State and Western, $5.25@6; No. 2, $4.20@5.20; Western yellow corn meal, $3.70@3.75; rye, $4.25@5.25; wheat is held at steady prices with light sales; red winter, $1.57½; No. 2 Chicago spring $1.48@1.50; red winter, $1.55@1.58. Corn is in active demand for export at 77½c. for new Southern yellow; 76@78 for low to high mixed Western. Oats are firm at 54@56c. for No. 2 Chicago, 56@57½c. for white Ohio, 53@54c. for Western. Barley quiet at $1.14@1.15 for Canada, 85@90c. for Western. Rye at 95c. for Canada in bond.

Pork closed firm, at $13.12½c. for old, $14.50 for new, for January, $11.62½ for February. Beef is dull, at $8@12 for new plain mess, $11@13 for extra mess, $16@18 for prime mess, $18@21 for India mess, tcs. Beef hams nominal, $23@25. Cut meats are entirely nominal. City smoked hams, 12@13c. Smoked shoulders, 6@6½c. Pickled bellies, cured, 7½@7¾c. City pickled hams, 9½@11c. Stearine at 9@9½c. Lard is firmly held at 9¾@9½c. for Western, on spot; January, 9¾c. Bacon is firm, at 7@7¼c. for short rib, 7¼c. for short clear. Dressed hogs are firm, at 5¾@6¼c. Tallow is easier, quoted at 9@9¼c.

Dressed poultry is in good supply, and the receipts now contain more attractive qualities. Western turkeys, fresh, are quoted, 15@16c.; N. J. and near points, 18c.; geese, 12@15c.; chickens, 10@16c. for Western and N. J. Stock that suffered from the thaw has sold largely at a loss for shippers. Quail are in demand, and the stock is reduced; quoted to-day, $2@2.25 per dozen. Western partridges, 75@80c.; prairie hens quoted 90c.@$1. Rabbits very abundant, and slow at 40c. a pair. Venison is easier, but Minnesota quoted 20c. for short saddles, long do., 15@18c.; white deer, 10@12c.

Domestic fruits have to divide the trade with foreign items at this season. Apples quiet at $4.50@5 for selections. Grapes sell a little more freely, with the holiday trade. Pecans very abundant; quoted in original pkgs, 9@10c.

Dried fruits are quiet. Eggs weak, with an increased supply. Sales of Western fresh, 33½@34½c. Limed, 27@29c. Hops are very quiet, without change in price. Potatoes are in only moderate demand, and most dealers have dropped to even money, $2 for choice.

ROCHESTER, N. Y., Dec. 28.—Wheat dull and lower; red winter, $1.40@1.48; white, $1.55@1.65. Corn, 75c. ₱ bushel. Oats, 45c. Barley, 70c. for two rowed, 85c. for four rowed. Buckwheat, 80c. Dressed hogs are doing better, selling at $5.25@5.50. Beef, $5@8 ₱ cwt. Mutton, 10@9c. ₱ lb. Chickens, 13c. Turkeys, 15@16c. Eggs, 32c. ₱ dozen. Butter, 22@25c. ₱ lb. Cheese, 13@15c. Potatoes, 50@55c. ₱ bushel. Apples, 75c.@$1.25.; dried do., 8@9c. Dried peaches, 22@25c. Wool very firm, but none held by farmers; nominal quotations are 55@60c. ₱ lb. Clover seed, $6, retailing at $6.50; timothy, $3@3.50. Hay scarce, $16@24 ₱ ton.

LIVE STOCK MARKETS.

NEW YORK, Dec. 28, 1871.

THIS being the great poultry week of the season, and prices are so low, people turn from the beef to chickens and turkeys. Receipts of live stock have been light. Most of the holiday stock came in before Christmas. That arriving just now sells for less money. The weather early in the week warm and unfavorable; at the close good.

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	5,774	82	1,158	14,758	26,810
Last week	5,262	119	1,158	31,370	51,571
Correspond'g w'k '70.	6,573	69	1,178	30,023	27,373
Average, '70	6,817	97	2,240	28,151	17,108

Beeves.—Though slightly increased from the previous week, the arrivals are still quite moderate, and it is well. The result is that the cattle market has not only held its own but rather gained strength, and the yards show no accumulation of stock. It is hard work to get 13c. for the finest of extra fat animals. There were 2,340 beeves at Monday's market. The quality was fair and demand good. Some well fed Texans sold at 9c., and good Illinois steers at 10¾@11½c. Since then we have had 1,694 head, and the market has rather advanced.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Holiday beeves	12½ @ 13	13 @ 16
Choice bullocks, ₱ lb	12 @ 12½	12 @ 12½
Good to prime	11 @ 11¾	11 @ 11¾
Medium	10¼ @ 11	10¼ @ 10¾
Ordinary	9¾ @ 10¼	9½ @ 10
Poorest grade	8½ @ 9½	8 @ 9
Average of all sales	11 @ —	11½ @ —

Milch Cows.—There is seldom much inquiry for fresh cows during the holidays. The numbers sent in were not large, but there were too many for the very little call. Poor cows have sold very low. Dry cows are only worth $25@35 each. Some very poor cows were offered for sale which were hard to get rid of at $30@45 each, while a few good milkers were sold at $80 per head.

Veal Calves. The light receipts and holiday call for prime milk calves by those who will not use animals sent in ready dressed, cause a little advance in choice live calves. A pen of 123 fat Bucks Co., Pa., calves, 135 lbs average sold at 10½c. Fair to good State veals are worth 9@10c., with poor fed calves down as low as 4@5c. Most of those are now sent in dressed and sell at 7@9c., with milk fed at 12@14c.

Sheep.—Lambs are now very generally classed with and sold at the same price as sheep. Receipts have been very light for some days past, and the market has improved. There is very little of that fancy stock sent in last week, and it would not bring as much now that the holiday demand is over. It is very hard to reach over 7¾c. for anything. One lot of 137 lbs. Canada sold for 7¾c.; but a car of 109 lbs. Ohio fine wool and very fat, sold at 7¾c. Scarcely anything now goes below 5c., a car only medium 84 lbs. Indiana selling at 6¾c., with a car of rough Missouri at 5¾c., and a car of 115 lbs. Canadas at 6¼c.

Hogs.—The market begins to gain strength in view of lighter receipts and a continued good demand. Favorable accounts from abroad lead cutters to active operations, especially in Western dressed, now arriving freely. Live are selling at 4¾@4¾c. Something very fine might reach 5c. City dressed are quoted at 5¾@6¾c., with Western dressed at 5¾@5¾c. There have been over 10,000 Western dressed received during the week.

LATEST, Dec. 29, P. M.—Beeves.—Receipts to-day, 20 cars at Cummunipaw and 11 at One Hundredth street, making 549 head. The market was active and prices still higher, making the strongest market we have had for months. Seven cwt. cattle, not over fat, were sold at 12c. Everything was sold early.

Sheep.—Arrivals to-day only two cars at Forty-eighth street. There is very little stock to operate with. Two cars of 94 lbs. Illinois were sold at 6¾c. Market closes strong.

Hogs.—There were only 9 cars arrived to-day, all at Fortieth street. Sales, 1 car of 198 lbs. Indiana, at 4¾c., and 1 car of Ohio, 240 lbs., at 5 1-16c. Dressed were advanced ¼c., or to 5¾@6¼c., Western dressed selling at 5¾@5¾c.

WEBSTER'S PATENT BUTTON-HOLE WORKER.

Patented June 27, 1871.

One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented!

So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a lifetime. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and traveling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

FOOT LATHES, best in the country. WOODMAN & PIKE, Lake Village, N. H. Circulars free.

PERSONAL ITEMS.

GADSHILL has been purchased by Charles Dickens, Jr., who now lives there.

THE Rev. Miss Mary Graves has been appointed pastor of the Unitarian Church at Mansfield, Mass.

THE women of Rome are getting up a subscription for a statue of Garibaldi, to be erected before his death.

DR. EBENEZER BOYDEN, a wealthy retired physician, aged 70 of Billerica, Mass., committed suicide, Dec. 24, by hanging.

MISS NILSSON'S share in the profits of forty-three performances of Italian opera in New York amounted to $50,000.

CARL ROSA pays Wachtel $28,000 for fifty nights. In the spring he is to appear in Italian opera with Madame Parepa-Rosa.

MR. GEORGE LUNT, formerly editor of the Boston Courier, has accepted a position on the staff of the Washington Daily Patriot.

JACOB BARKER, a Philadelphia broker, well known in financial circles throughout the United States, died in that city Dec. 25, aged 93.

MD'LLE NILSSON'S losses by fire in Paris are said to have been eighty thousand dollars, which, added to seventy thousand reported in Chicago, foots up two moderate fortunes.

VERDI, the composer, is described as an odd, puzzling character—stiff, abrupt, icy, to mere acquaintances, avoiding society, never expressing an opinion, especially upon musical matters; a man of untarnished honor and proverbial shyness.

A FEW months ago Madame Ollivier refused to admit to her saloon any ladies costumed in full dress. She gave the cold shoulder to the beauties who were all shoulders. Now it is the Crown Princess of Prussia who has set herself at the head of a plain dress movement.

Implements, Machinery, &c.

To Proprietors and Patrons

OF

CHEESE FACTORIES.

It has been demonstrated that in order to make good cheese the milk must be delivered at the factory in good order, and in order to accomplish this end everything that comes in contact with it must be free from all impurities, and it is often the case that the milk from a few cows brought to the factory in a can not properly cleansed will spoil a vat of five or six hundred gallons, and then the cheese maker has to take the credit of making poor cheese. The worst thing that factorymen have to contend with is the old cans in which the milk is conveyed to them. The usual way of making them has been to put them together of small sheets of tin—the cover in several pieces and the bottom with an extra or independent hoop to protect the lower edge of the cylinder, which of course makes innumerable seams in the cylinder and cover that give room for impure matter to collect; the constant working of the cover soon makes the seams give way, causing the cover to sink; and the hoop at the bottom soon gives out and causes the can to leak; besides, it being almost impossible to keep it cleansed properly, it is very expensive to the dairymen as well as a source of great annoyance in constantly repairing leaky cans.

In order to do away with this great annoyance, the Iron Clad Can Company have, at a great deal of trouble and expense, perfected a can for this purpose by the process of stamping and the use of wrought iron, that does away with all the former difficulties, and not only makes a Can which is easy to cleanse, but is the most substantial one ever manufactured. It is the IRON CLAD MILK CAN. There are but two seams in the whole can and cover. The bottom and lower hoop are struck up from one solid piece of wrought iron, into which the cylinder (consisting of but one sheet) is placed, after which it is riveted to the hoop (which is part of the bottom) and soldered, both in and outside, making it impossible to give way or leak, under any circumstances, as it does away with the Tin bottom and all outer or independent Hoops for the protection of the seam or lower edge of the Can, which practice has shown will not answer the purpose, as they will not stand the hard usage to which they are subjected. The cover and rim are pressed from one piece, doing away with all seams, making it easy to cleanse, and at the same time the most durable one ever manufactured, there being no seams to come apart or gather impurities, as in the old way, by double seaming the rim on to the top, which, by the constant working of the cover, soon gives away, and causes your cover to sink. It is for the interest of every Dairyman and Cheese Factory proprietor to use the Can. There are parties who try to sell other cans by calling them Iron Clad, or something similar; but do not be deceived; all of the regular make are stamped with our trade mark, "Iron Clad Can Co.," on the bottom and cover.

We also call your attention to our Re-tinned Cheese Hoop. They are put together of the best English iron, after which they are tinned, making them as one solid piece, with which we have a metallic follower, one of the best improvements in the pressing of cheese, there being nothing to shrink, swell or broom up; they always work easy, and fit the Hoop nicely, and will last a life-time; and many other things we have not space to describe, such as Milk Pails with Bottom, or the principle of the Can, Atmospheric Churn, &c. Send for a descriptive circular to IRON CLAD CAN CO., 51 Dey street, New York.

"THE THRESHER OF THE PERIOD."

NICHOLS, SHEPARD & CO.

GRAIN-SAVING, TIME-SAVING, MONEY-MAKING,

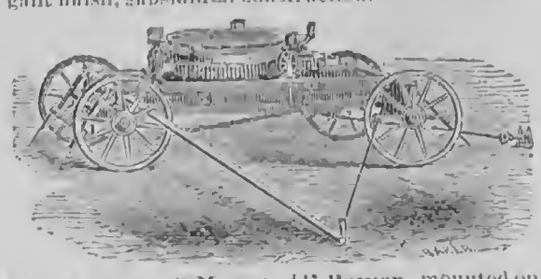
"VIBRATOR" THRESHERS

AND THEIR ELEGANT CONVERTIBLE

"MOUNTED" AND "DOWN" HORSE-POWERS.

Office and Factory at Battle Creek, Mich.

Recognized, in the trade and in the field, as the "leading thresher" of the period. **Fully established** through many years of successful use. **Endorsed** by more than sixty thousand farmers and grain raisers who have employed and used them. **In use** in eighteen States and four Territories, with largely increasing demand and growing popularity. **Universally commended** as embodying the only *true principle*, and pronounced the "coming machine." **Pre-eminent** for saving grain, saving time, fast work, perfection of cleaning, adaptation to varying conditions of grain, convenience, ease of draft, and ease of management. **Peculiarly adapted** to handle Flax, Timothy and other seeds, so difficult with others. **In demand** by grain raisers, at remunerative prices, while neighboring machines are idle. **Attractive** in simplicity of parts, having only four belts and one set of gears. **Specially noticeable** for making no "litter," and requiring no "cleaning up" process after it. **Ascertained by farmers** to save them the cost of their threshing bills, by the increased saving of grain, alone, over and above the best of others. **Obtaining** the "pick" of jobs and extra prices for its work. **Unrivaled** in durability, handiness, ease of management, ease of draft, elegant finish, substantial construction.



The elegant "Mounted" Power—mounted on four wheels, where it remains when in operation. **Attractive features:** Securely fastened with two stakes; levers, tumbling rods, etc., carried with it; the "angling" line shaft, by which all short kinks are avoided in "coupling up;" all boxes, journals, shafts and gears independent of the wood frame; gears "clutch" on; only one key used; convertible to different speeds, at trifling cost, to match other machines; of the lightest draft, very durable, easily and cheaply repaired; sold separately, if desired, and speeded to match other separators or machinery.

The Improved "Down" Power, similar in construction to the above, except it is not "mounted," but can afterwards be converted into "mounted," if desired.

All persons who think of buying a new Thresher and want the "leading machine," and all farmers who raise grain and want it threshed, saved and cleaned to the best advantage, are cordially invited to send us their address, and receive (*free*) our Illustrated Pamphlet and Circular, containing a full description of these superior machines, with other valuable information. Address

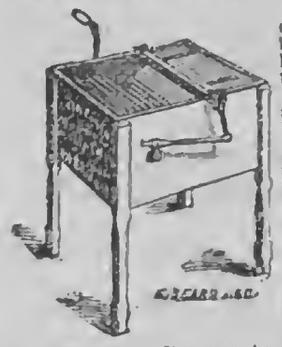
Implements, Machinery, &c.

CONTINENTAL WASHING MACHINE.



It never fails to give entire satisfaction, and in every instance the longer it is used the better it is liked.

It took First Premium at N. Y. State Fair, at Utica, 1870.

Also, First Premium, N. Y. State Fair, at Albany, 1871.

Also, First Premium, Pennsylvania State Fair, 1871.

Machine has been on the market about one year, and 5,000 sold to all parts of the United States.

It has the unqualified endorsement, after use in their respective families during the past year, of

D. D. T. MOORE, Rural New-Yorker,
HORACE GREELEY, New York Tribune,
L. A. CHASE, Am. Agriculturist and Hearth and Home,
Hon. HORATIO SEYMOUR, Utica, N. Y.
Hon. HEMAN J. REDFIELD, Batavia, N. Y.
X. A. WILLARD, Little Falls, N. Y.

And hundreds of others from all parts of the United States.

It will wash a single collar or any amount of small articles at once up to the bulk of two or three sheets. It will wash the collar or wristband of a shirt, the hem of a garment, the feet of stockings or any part of any clothing that may require washing more than the rest, and it will wash them clean. For washing bedding it cannot be excelled. A half-grown boy or girl can operate the machine with ease. It does not rub the clothes a particle, and consequently does not wear them or tear off the buttons, which alone makes it worth many times its cost. Its action upon clothes is to turn and squeeze, thereby forcing the water through them; the mass revolving in the suds.

So rapid, easy and thorough is it in its operation that in every case those who have purchased and used it say they no longer dread washing.

All who feel the want of a machine, that will fully sustain all the recommendations given, are invited to try the **CONTINENTAL**, which will be shipped, as directed, on receipt of the price, $15.

If entire satisfaction is not given after four weeks of fair trial, the money will be refunded to all who will thus notify us.

Agents wanted everywhere, to whom liberal inducements will be offered, and exclusive sale given.

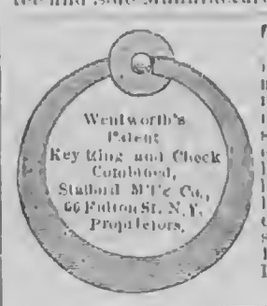
Needles

FOR ALL SEWING MACHINES can be obtained at about one-half the usual rates by ordering direct. Singer's, 10 cts. per doz.; Wheeler & Wilson, 10 cents; Howe's, 50 cents; Grover & Baker, 50 cents, and others in proportion. Inclose the amount and needles will be returned by first mail. Address

EAGLE NEEDLE CO.,
Watertown, N. Y.

BEST CIDER MILL IN THE MARKET IS THE JERSEY APPLE GRINDER.

With a two-horse power, it will grind fine and uniform, over 100 bushels of Apples per hour; is so constructed as not to be injured by the stones; and when used in connection with the PORTABLE JERSEY CIDER PRESS, five gallons of Cider per bushel of Apples can be obtained. For Illustrated Pamphlet, address R. BUTTERWORTH, Trenton, N. J., Patentee and Sole Manufacturer.



These German Silver RINGS will not rust, break or spread apart, and are one of the strongest rings made; there is room for a name and address to be stamped or engraved on either side; they can be easily opened or locked by turning the washer. Money easily made with GEM OUTFIT, containing dies, etc., for stamping rings and checks. Price only $12. Sample Ring, 15 cents.

Implements, Machinery, &c.

Front view M teeth showing dress and set of 2 points to cut in line

All Saws warranted to Coil and Touch uninjured.

NOT ONE FAILED IN 20,000.

THIS SAW possesses several great advantages over the ancient V tooth, which has hitherto been relied on, especially in cross-cut saws. The strength, stiffness and durability of these teeth, and their capacity for deep gumming, are so obvious that we will only name four other points of comparison, viz.: speed, ease, simplicity and perfect clearance.

Speed.—All are aware that an ordinary hand-saw cuts only one way; i. e., the front cut is more effective than the back or retreating cut. These teeth, with their opposite cutting faces, IF CUTTING IS LINE, are equivalent to the front cut both ways of a hand-saw, in distinction to the two back cuts of the old V saw. Hence speed is inevitable.

Ease of Cutting.—It is easier to plow a groove in timber than to crush one out. The application of this principle is very perfect, all the teeth being of even length, double pointed, cut with outside vertical and projecting edges, and clear simultaneously with the same.

Simplicity.—This is obvious, all the points being cutters like hand-saw teeth, viz., the same length. No hooks, or thick, raking teeth to be shortened; only one mill file is needed to keep them in order, and they are as easy for the unskilled laborer to sharpen as the old-fashioned saw.

Perfect Clearance.—Continuously cutting and clearing, these opposite "cutting faces" not only cut, but clear, by lifting the fiber above the projecting blades, like a plow, which is the most perfect clearing implement.

NEW YORK, AMERICAN INSTITUTE FAIR BUILDING, Nov. 4, 1871.

E. M. BOYNTON, 73 Beekman St., New York—SIR: This certifies that I saw the Lightning Cross-Cut Saw, worked by hand, by two men, Nov. 2, at this Fair. Said men and saw cut off a sound 8x9 inch chestnut log in 3½ seconds; and 16 cuts of same, *continuously*, in 2 minutes and 18 seconds, or at a rate of a cord of wood in less than nine minutes. I am satisfied that for all purposes of cross-cutting large and small timber, your cross-cuts and wood saws have no rival in speed, in ease, and in simplicity.

I believe their universal use would save a vast amount of money and time, and lighten the toil of millions of men.

J. W. BLAKE,
Superintendent and Engineer
American Institute Fair.

N. B.—These extreme tests are quoted merely to prove what should be obvious—that direct cutting is better than the old V friction process, *used by all other saws*. The cutting of all saws depends much on the proper set, sharpening, and *skill* of the operator. I cannot furnish brains, and skill is attained only by practice. But no saw manufacturer dares to question the superiority of my latest improved saws, or to publicly test the matter.

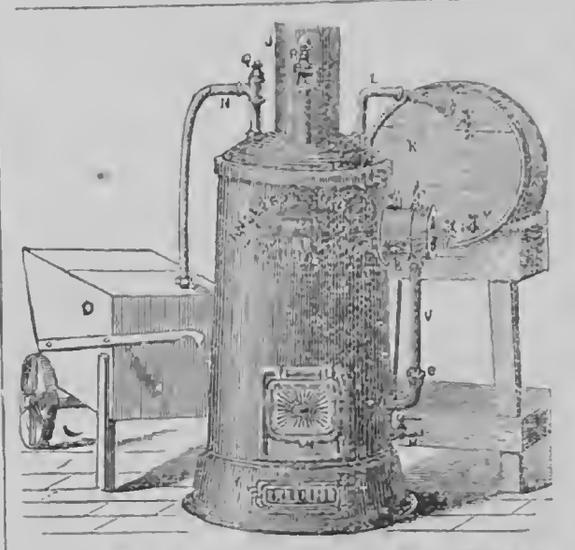
I have reduced the retail price from $1.25 to $1 per foot, and the trade price proportionately, and solicit the patronage of the American public. Beware of worthless imitations and infringements, which will be prosecuted. Do not confound this 1871 pattern with my old 1867 pattern Clearing Tooth Saws, now out of market. All clearing teeth are complicated, as they require to be kept shorter than cutters and frequent re-adjustment. After much experience, I cannot recommend them. Each one of the new Lightning Cross-Cuts has my $500 challenge, and full directions for setting and sharpening any saw, engraved on it. Honest hardware men will procure the genuine for their customers, even if they are overstocked with inferior goods, but where they do not keep them, Agents are wanted. A six-foot Cross-Cut and Back-Saw sent on receipt of $6. Express will cost from 40 cents to $1 to places this side of the Mississippi River by special contract.

N. B.—Millions of Axes are used for cutting wood; a Lightning Cross-Cut Saw, either for one man or for two, will cut five times as fast as an ax. Why not try them?

See that the name and warrant are on each saw.

Recent increase of business has compelled me to lease No. 80 Beekman St., adjoining No. 78, where I shall be happy to see Hardware Dealers and Customers.

E. M. BOYNTON,
Sole Proprietor and Manufacturer,
80 Beekman St., N. Y.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK; Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

J. RALSTON & CO.,

170 Front Street, New York.

TO FARMERS.

DOUBLE REFINED POUDRETTE of the "LODI MANUFACTURING CO," for sale in lots to suit customers. This article is sold for *half the price* of other fertilizers, and is cheaper for cotton, corn, tobacco and vegetables than any other in market. It is made entirely from the night soil, offal, &c., of New York city. Price, delivered on board in New York city, Twenty-five Dollars per ton.

I ask attention to the following Testimonials:

HARTFORD Co., Ct., Oct. 26, 1871.

SIR—This is the third year I have used your Double Refined Poudrette on Corn and Tobacco, and find it a valuable fertilizer for both. I had the largest tobacco this year I ever raised, and it ripened earlier than any of my neighbors' who set out at the same time I did. Another year I will put from half a ton to a ton per acre, giving each hill a large handful, as the expense is trifling in comparison to the early and large crops. Yours truly, WM. S. POMEROY.

HARTFORD Co., Ct., Nov. 1, 1871.

GENT:—I have used your Double Refined Poudrette for several years on Tobacco with very good results, and think it one of the best fertilizers made for raising tobacco. Yours truly, ANDREW HAMILTON.

HARTFORD Co., Ct., Feb. 3, 1871.

SIR:—I used the Double Refined Poudrette on Corn, Potatoes and Tobacco. There was but one piece of corn in the neighborhood that grew as luxuriantly as mine did, and that had 30 loads of manure to the acre and mine none. The tobacco started as soon as set, and grew rank and big. I am well satisfied, and shall continue to use Poudrette in place of any other patent manure. W. H. REMINGTON.

A pamphlet giving full directions, &c., sent on application to JAMES T. FOSTER, 66 Cortlandt St., N. Y.

INVESTMENTS.

IMPORTANT TO HOLDERS

UNITED STATES FIVE-TWENTIES.

BANKING HOUSE OF JAY COOKE & CO.,

NEW YORK, Dec. 28, 1871.

The complete success of the New Five Per Cent. Government Loan places it beyond doubt that the entire Public Debt of the United States can be, and soon will be, funded at 6 per cent. or a less rate. The One Hundred Millions of Five-Twenties of 1862, called in for payment September 1, and on which interest stopped December 1, are now nearly all redeemed and cancelled.

In addition to this large amount, the Secretary of the Treasury, being unable to purchase Five-Twenties in the open market at par, or less, in coin, has called in for redemption Twenty Millions more, interest to cease March 7, 1872. This fixed policy of the Treasury Department, and the demonstrated ability of the Government to promptly place a Five Per Cent. Loan, indicate that all holders of Five-Twenties will soon be required to surrender them for redemption, receiving in return either coin payment or bonds of the new issue bearing an average rate of 4 1-2 per cent. interest.

In view of these facts, the present holders of United States securities must decide whether it is not best to make at once such a change of investment as will enable them to realize as profit, or add to their capital, the present average premium of 12 to 14 per cent. on Five-Twenties, while at the same time largely increasing their annual income.

To those who wish to take advantage of the present most favorable opportunity for making the exchange suggested, we strongly recommend the First Mortgage 7-30 Gold Bonds of the Northern Pacific Railroad, now selling at par and accrued interest in currency. The result already accomplished in the construction and equipment of nearly Three Hundred Miles of Road, and the rapid development of the adjacent country, have established the permanency and success of the Northern Pacific enterprise, and created a large and increasing demand for the First Mortgage Bonds of the Company. With their high rate of interest, their ample security, and their convertibility into Lands of the Company at 10 per cent. premium, they constitute a most desirable investment, and can hardly fail to advance considerably above par at an early day.

The holder of a $1,000 Five-Twenty Bond who exchanges it now for Northern Pacifics, thereby increases his principal by 12 to 14 per cent., receiving say $1,140 in Northern Pacifics for $1,000 in Five-Twenties. He also permanently increases the yearly interest income on his investment more than 38 per cent. or from $60.00 in gold to $83.22 in gold.

These most unusual opportunities for the profitable conversion of Government Bonds into Corporate Securities of undoubted reliability, cannot, in the nature of the case, long continue. Loanable capital is increasingly abundant, both at home and abroad; Government and corporate disbursements for interest and dividends in the next ninety days will disengage some Two Hundred Millions of capital, most of which will at once seek reinvestment; really desirable investment securities are scarce compared with the present and probable demand for them, hence an early advance in their value is morally certain. The 7-30 Gold Bonds of the Northern Pacific Railroad are being rapidly absorbed by the people, and the Company expect soon to be enabled to substitute a six per cent. security for the residue of their construction loan.

These facts promise, very soon, to change the entire aspect of the loan market, which is just now so peculiarly favorable to investors, and suggest prompt action on the part of those who wish to exchange securities in time to profit by the present premium of Five-Twenties and the present low price of Northern Pacifics.

The Herdsman.

ENGLISH PRIZE ANIMALS.

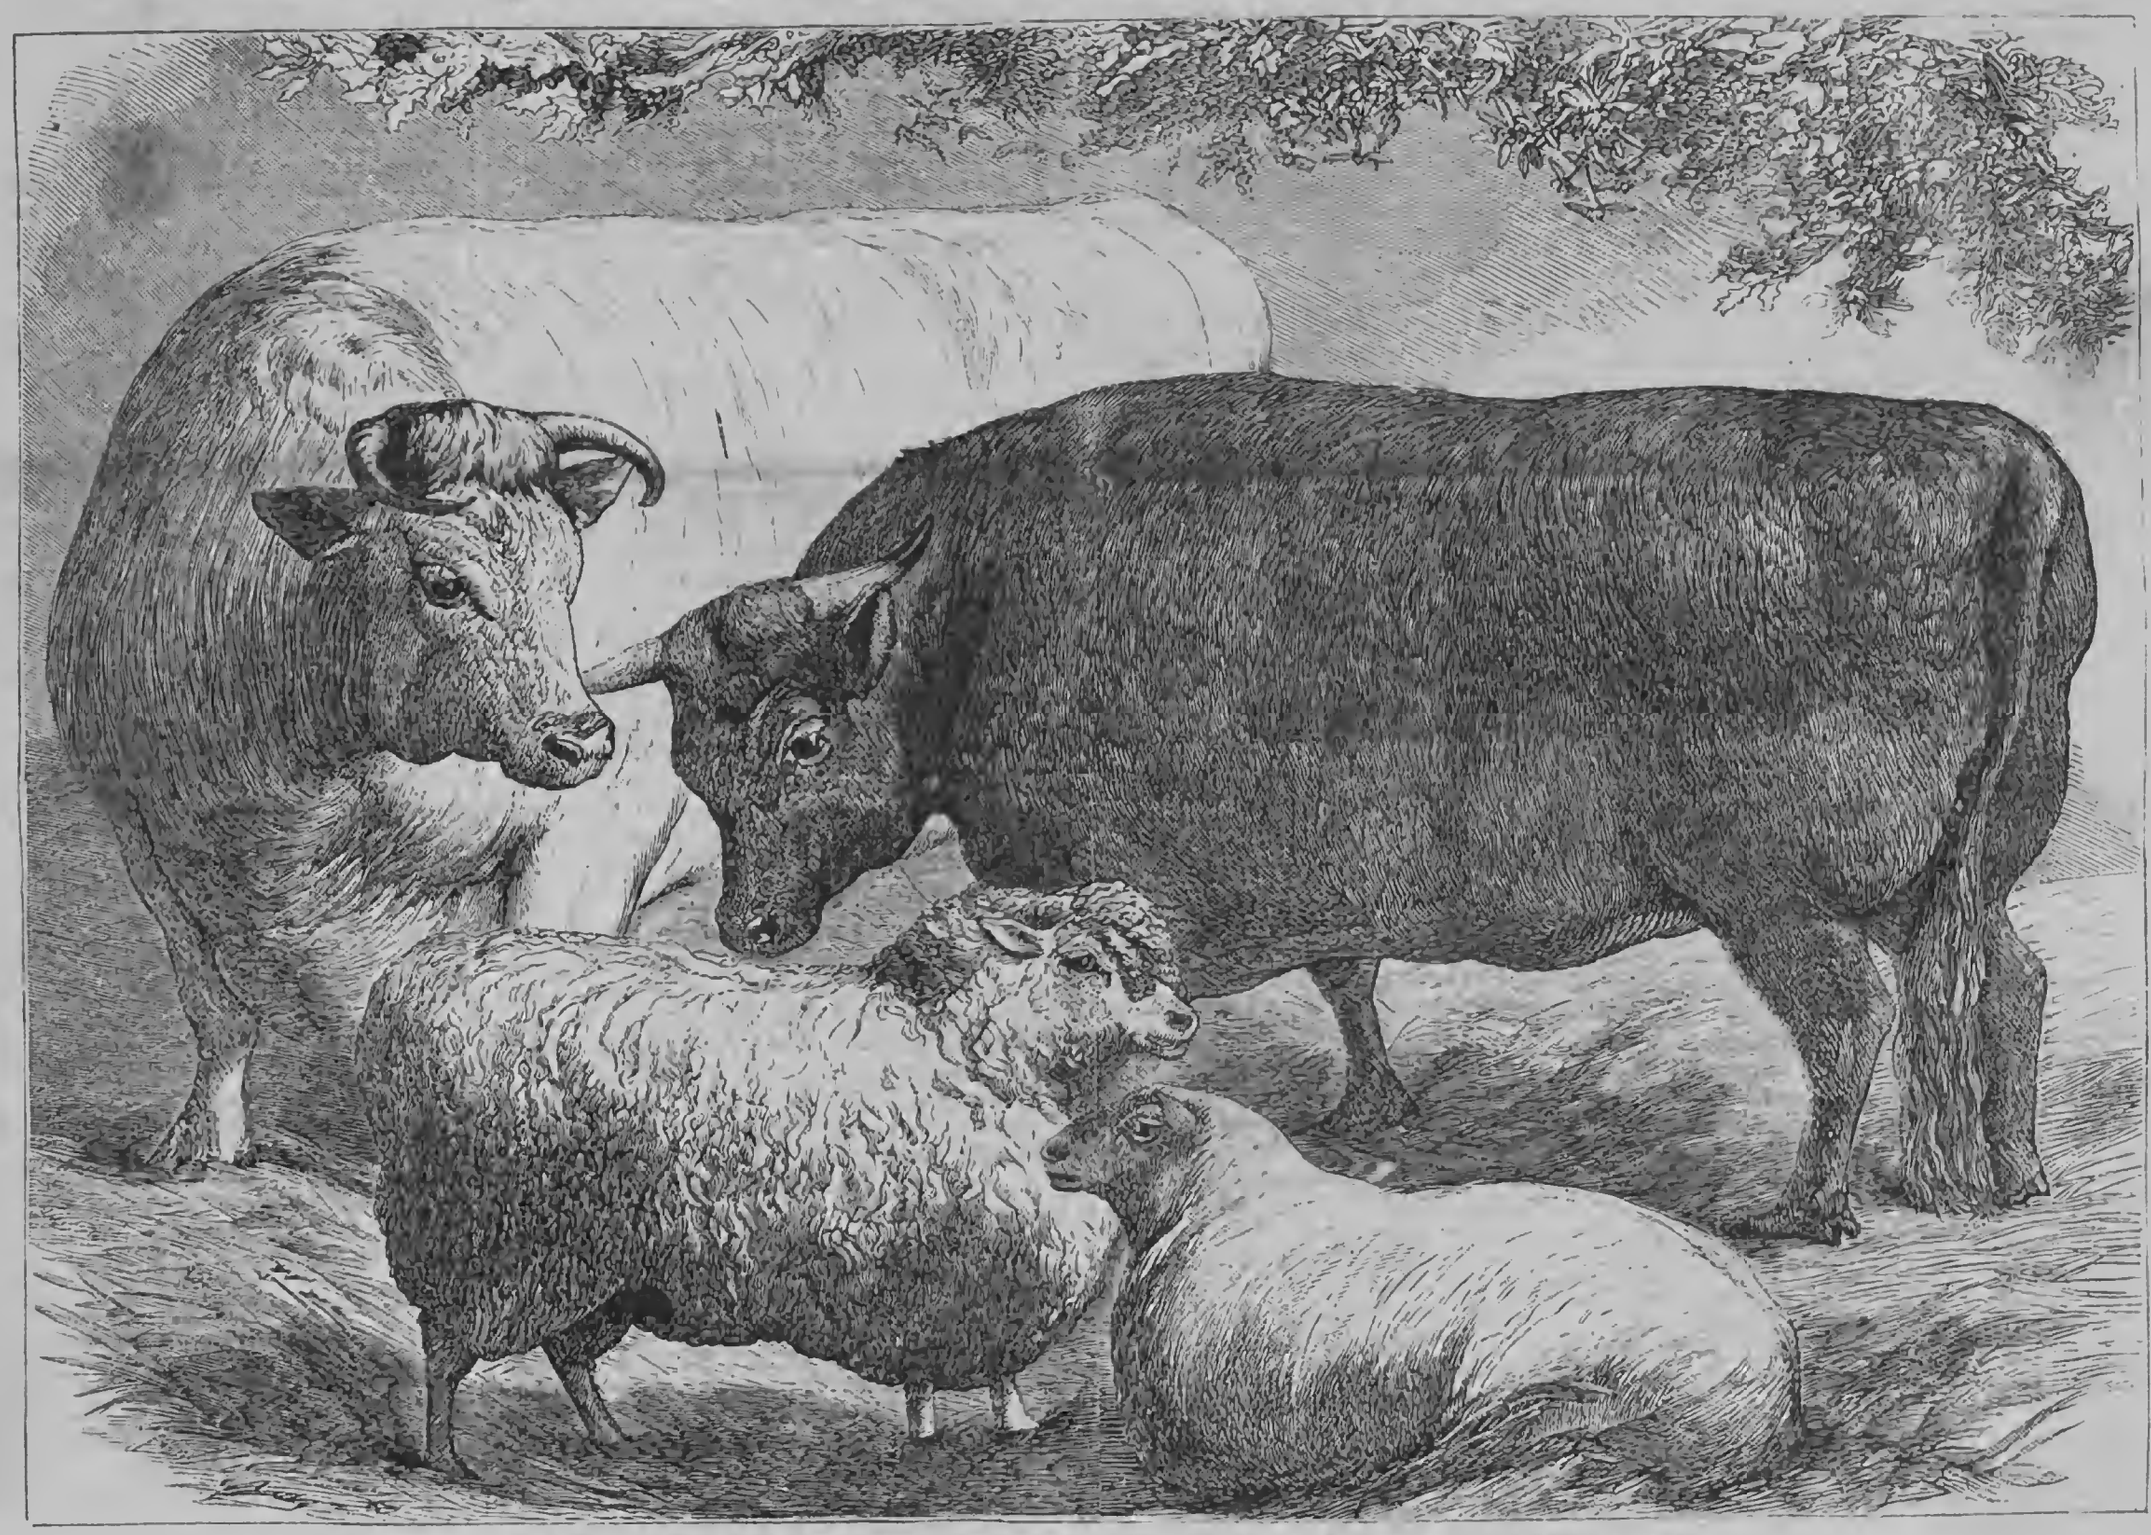
HEREWITH we present engravings of some of the Prize Animals exhibited at the Smithfield [England] Club Show, recently. The red steer in front was bred by her Majesty, Queen VICTORIA, at the Prince Consort's Norfolk Farm, Windsor, and is (says the London News) a particularly neat, well-trained young animal, two years and three and a half months, live weight 10 cwt. 1 qr. 16 lbs. He was exhibited at the Birmingham Fat Show, where he won the first prize of £20 in class 1, there being seven competitors, the Prince of Wales coming third in the class.

The same paper adds that "the large white ox with the sweet head and gracefully curled horns was the 'lion of the show.'" He not only won the first prize of £30 in his class, but took the £40 silver cup for the best steer or ox, or the £100 plate for the best beast exhibited. He was bred by the late Mr. R. STRATTON, and exhibited by his son, Mr. JOSEPH STRATTON, of Atson Priors, Wilts. His sire, Bude Light, was also a son of a Smithfield gold-medal cow, and has the Booth blood flowing in his veins. His dam, April Rose, has been quite a matron, and produced Flower Girl and Village Rose, two noted prize heifers.

From a calf he has always been a good "grubber," and even when down with foot-and-mouth disease, a year ago, kept his appetite well through it. Six pounds of oil-cake and four pounds of meal, with roots and hay at pleasure, and THORLEY'S food as a sweetener, have been his daily portion, and wet or dry, he has never missed his half-hour constitutional. In four years and three months his gigantic frame has evenly swelled out to 22 cwt., and his measurements are: 9 feet 6 inches in girth; 5 feet 5 inches in length from shoulder to tail; 5 feet in hight. His grandest parts are well developed back and ribs, and an immense rotundity of chest and very full thighs.

The sheep on the right is one of Mr. A. MORRISON'S first pen of Hampshire Downs; that on the left is one of Messrs. WHEELER'S prize Cotswolds.

Why do not the butchers of New York City get up an annual Christmas Show, and offer prizes therefor? True, there is always a good show of fat cattle in the yards at Christmas time, but liberal prizes would increase the number and improve the quality.



PRIZE ANIMALS EXHIBITED AT THE SMITHFIELD CLUB SHOW, BIRMINGHAM, ENGLAND.

NOTES FOR HERDSMEN.

Garget.—J. J. HUFFMAN writes:—"I have a Short-Horn heifer that gives bloody milk occasionally. Can you give cause or remedy?"

IT may be that the udder has been injured in some manner or that the cause is garget. If the latter, dig some poke (*Phytolacca decandra*) root and feed a slice or two of it occasionally with potatoes or roots.

Cow with a Hard Lump.—I have a cow with a hard lump between the hind legs on the upper part of the bag. It is as large as a quart cup. It seems to be loose under the skin, with fever occasionally. It made its appearance about four months ago. Will some one tell me what to do?

A SUBSCRIBER.—Bathe the bag frequently with cold water and keep the animal quiet.

Sex in the Offspring of Alderney Cows.—S. B., Greencastle, Mo., discussing the statement that Alderney cows produce more male than female calves, gives the following as a reason therefor:—"When animals are in a normal condition, with regard to climate and treatment, they are in harmony with the laws of nature, and a proper ratio of the sexes for their propagation is maintained. But in transplanting the stock of Alderneys to this country, either the climate or treatment does not suit their natural wants, and nature says the breed must either run out or degenerate, and she stops the production of females, and consequently the reproduction of the race. The highest type of excellence among all domestic animals is always found in the female. When any farm stock is kept too long together, or bred too long in-and-in, there will be a majority of males and a degeneracy of that breed or race. One or two close breedings is sometimes of great advantage in fixing a particular type, but the practice must be followed with great care."

Stanchions for Stock.—In answer to C. F. CARTER, the RURAL NEW-YORKER asserts that it never knew a cow or other animal to be injured when fastened by stanchions as heretofore described in this journal. Some herdsmen prefer chains and large stalls. But when room must be economized stanchions are the best modes of fastening. We gave in our last volume several forms of stanchions; we should be glad to give illustrations of any improvements of which our readers may be aware.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Christmas.—*Dec.* 25.—This should be, among Christians, the greatest of all the days of the year. If they really do believe that "giving to the poor is lending to the LORD," how happy all the poor would be made this day! I fear, however, that this scriptural adage is held by many persons as an ideal theory, not convenient to practice except by those who have hearts capable of enlargement with the same rapidity as their purses. It is, however, a wise law that each and every individual must settle his own accounts with the Great Bookkeeper of human transactions.

Treatment of Sickly Plants.—*Dec.* 26.—In the treatment of sickly house plants few go to work as though they meant to effect a radical cure. Sometimes plants have been given too much water or the soil is ill adapted to sustain growth and, in consequence, they become weak and sickly. The best way is to turn them out of the pots, shake or wash off all the soil from the roots, and, if any are decayed, cut them off; also prune the stems and branches severely and pot again in fresh soil. Set them away in a shady place after giving water sufficient to settle the soil, and then give no more until they become rather dry, adding a little from time to time as returning health and growth appears. I have some Fuchsias and Geraniums that, through neglect last summer, became sickly and dropped their leaves; but by pursuing the above method they have been entirely restored to health and are at this date in full bloom.

Poinsettia Pulcherrima.—*Dec.* 27.—There are few green-house plants that make a better show at this time of year than the "Beautiful *Poinsettia*." The flowers are small and inconspicuous; but the brilliant scarlet of the floral bracts more than make up for their deficiency. A single cluster of these flower-like bracts is in itself a magnificent bouquet worthy of a conspicuous place on the New Year's table, for which I am keeping some of my best specimens. The plants are rather coarse, and possesses little beauty except at the season when the flowers and bracts appear; but being easily cultivated, they are general favorites. The principal points necessary to be regarded in their cultivation may be noted as follows:—1, Start the cuttings in summer and give them plenty of bottom heat. 2, Never allow them to get so dry that the leaves wilt. 3, Do not give too much pot room, and use plenty of drainage; then place in the warmest part of the house. 4, Severely head back old plants soon after blooming, in order to make them throw out as many lateral branches as possible.

Deformed and Monstrous Insects.—*Dec.* 28.—We are not greatly surprise to find monstrosities among cattle, as they are of frequent occurrence. A neighbor owns a cow that has six legs, and it is not unusual to meet all kinds of monstrosities among domesticated animals, and the cause is usually attributed to close in-and-in breeding or attempting to cross widely different races. But how are we to account for such freaks when they occur among lower forms of life, for instance, among insects? Such monstrosities do sometimes occur even among minute forms as well as among the larger animals. Beetles, for instance, have naturally six legs; but not long since a specimen of *Pterostichus Prevostii*, DEJEEN, was found in Switzerland, having two supplemental legs affixed to one of the ordinary hind legs. That insects fight and often become maimed is well known to every observer; but whether such deformities have any effect upon the future progeny is a question I leave for Darwinians to answer. I have a specimen of *Carabus* that has one eye in the proper place and the other half hidden in a depression on the under side of the thorax. Perhaps my capturing of this specimen has presented the evolution of a race of cross-eyed beetles; if so, what a pity.

Grafting Roses.—*Dec.* 29.—A very convenient method of propagating moss and other roses which do not grow readily from cuttings, is by grafting upon pieces of roots. The Manetta, or even some of the free growing China or Prairie roses, will answer for stocks, always selecting thrifty roots of a size that will correspond with the cions to be used. The roots need not be more than two or three inches long, or about the same length as the cions. Splice or whip-graft them, and then place thickly together in the propagating boxes, and submit to gentle heat until a union takes place. This mode of propagation is a very simple one, and should be more generally practiced than, I fear, it is, judging from the scarcity of moss roses in the market. The grafting should be done as early in the winter as convenient, in order to allow of some young growth before the time arrives for planting out in spring. Roses propagated in this manner are superior to the ordinary budded roses, inasmuch as they eventually become established upon roots of their own. The small piece of root added at the time of placing the cion in the propagating bed, usually dies or is overgrown by those emitted from above the junction.

Sowing Tomato Seed.—*Dec.* 30.—It is probably too early to sow seed for a general crop; but those who have warm rooms or a green-house may safely try a few plants. I have some two or three inches high, and expect to have them well loaded with fruit by the time it will do to plant out. A half dozen good strong plants, started early, will yield many a good dish of fruit long before it can be procured from plants taken from a hot-bed in spring. In starting the plants thus early some care is required in pinching off the ends of leading shoots as well as side branches in order to make them grow stocky and bloom early. The plants should also be allowed plenty of room and only one grown in a pot, commencing with the smallest size, and then shifting into larger ones as the plants require it. It is a very easy matter to obtain tomatoes early if one starts in time.

Floricultural.

PLANTS FOR PILLARS AND ARBORS.

PLANTS for covering pillars or trellises should either be all hardy or all tender, for mixing the two kinds is seldom, if ever, advisable. The hardy perennial being so much more robust in habit than the tender, they will generally overgrow and crowd the weaker kinds. A pillar or trellis may be covered with either and look well, but we never advise mixing them.

For permanent hardy plants we would select the following:—*Wistaria*, Chinese, blue and white; Chinese evergreen honeysuckle; Japan do.; golden-leaved Japan; red trumpet, or coral monthly, and Belgian monthly; *Clematis lanuginosa, C. Jackmani, C. Fortuni and C. viticella vinora.*

For tender climbers, *Akebia quinata, Lophospermum scandens, Maurandia Barclayana, Tropæolum perigrinum, Eccremocarpus scraba*, and *Cobea scandens*. To the last class may be added the various species and varieties of the Morning Glory, not omitting that most delicate of all, the *Quamoclit vulgaris*, or Common Cypress Vine.

WINTERING COLEUSES.

THESE plants are almost as difficult to winter as verbenas. If kept too cool, or in a close atmosphere, they are quite likely to damp off or the leaves will die. To keep them safely, the temperature should not be allowed to go below 45 or 50° at night, and just sufficient water should be given to keep them from wilting. If the object is merely to keep the plants through winter, without propagating therefrom, then a rather dry atmosphere is better than a moist one, and very little water should be applied to the roots. Several of our lady readers complain of losing their coleuses in winter, and the cause is, probably, in not attending to the conditions mentioned above. They are not plants well suited for house culture in winter, and those who have no conservatory or green-house should be content with merely keeping their plants alive, even if they do not make much growth. Young cuttings struck in autumn are usually kept through winter with less trouble than old plants.

FLORICULTURAL NOTES.

Rattlesnake Plantain—*Goodyera pubescans.*—J. L. DORSET, Afton, Va., writes: "I would like very much to know the name of the inclosed plant. I have never seen it in bloom."

BOTH common and scientific name are given above. The plant belongs to the Orchis family, and is usually found in oak and pine woods. The flowers are greenish white, and produced on a scape six to twelve inches high.

Blue Glass for Green Houses.—In a communication to Tilton's *Journal of Horticulture*, Robert Buist, Sr., indorses the use of blue glass in green-houses, hot-bed frames, etc. He says:—"I applied a coating of Prussian blue paint, six inches wide, up the center of each row of panes; the result was electric, and the plants assumed their beautiful green color in a few days, and the trusses of bloom came to maturity in a few days. The green-houses had been used to grow geraniums for bedding purposes, but they had lost their color every year about the first of April. The plants were completely rejuvenated by the blue glass.

The Apiarian.

BEE NOTES AND QUERIES.

The Best and Cheapest Winter Food for Bees.—A. P. C. asks experienced apiarians to tell him what is the best and cheapest substitute for honey as a winter food for bees.

Longevity of Italian Bees.—"Are Italian bees longer lived than the common black variety?" asks P. P. It is so asserted by some apiarians; we have no facts in proof thereof, however.

The Tennessee Apiarian Society has elected the following officers: *Pres.*—Dr. T. B. HAMLIN. *Vice-Pres.*—Dr. W. P. Davis. *Sec. and Treas.*—S. S. Hall. *Cor. Sec.*—W. E. Ladd, Edgefield Junction, Tenn.

Mr. Burch's Movable Comb-Hive.—M. M. BALDRIDGE, referring to Mr. BURCH'S description of a movable comb-hive in RURAL NEW-YORKER, Dec. 16, says "a hive made according to those directions would be a damage to the beginner. It would not harm the expert, for he would, or should, know how to make a better hive. A better hive does not mean, necessarily, a more expensive one, but one that would work better and give better satisfaction when full of bees and combs." Added, Mr. BALDRIDGE calls attention to the fact that a genuine Langstroth hive is described.

An Apiarian's Challenge.—A Mr. HOSMER, of Minnesota, at the recent Beekeeper's Convention, at Cleveland, stated that he has 118 stocks of bees. He offers to sell 108 of these at $15 per stock, on this condition:—That if he does not succeed in obtaining 10,000 pounds of honey during the season of 1872 from the ten stocks retained, he will forfeit the price of the 108 stocks he proposes to sell. His bees gather most of their stores from the Linden or Basswood, which is abundant in his section. The mountains near him are covered with these trees, which commence to bloom at the base of the mountains, and successively come in flower, for ten or twelve days, till the top is reached. In weighing the extraordinary yield of one day, he found one hive to have gained 53 pounds.

Treatment of Queenless Stocks.—J. H. THOMAS says:—As it is impossible to obtain queens early enough in spring to save queenless stocks, it is advisable to unite such stocks with other stocks that are weak, or rather with stocks that have become greatly depopulated during winter. This will often prove of great benefit to a stock weak in point of numbers. The addition of more bees increases the heat in the hive and causes the queen to lay a greater number of eggs, and the stock increases in numbers far more rapidly than it otherwise would have done. The hive and combs which contained the queenless stock should be well cleaned after the bees are removed, and carefully saved for another swarm. A hive well filled with combs is of great value, as a swarm put into such a hive is at once prepared to gather honey and store it away. The old combs are cleaned very rapidly, and as there is no comb to build, nearly all the bees can go to the field for honey, bee bread, etc.

Australian Honey Board.—The Melbourne Argus says:—"A tree was felled the other day at Sandy Creek, Wagga Wagga, for the purpose of procuring honey, which it was known had been collected there by a rather large swarm of bees. When the tree was cut down there was found in the hollow one of the most astonishing collections of honey ever known, probably, to have been gathered by one swarm of bees. There were several immense layers of comb ten feet in length, and of great density, extending along the inside of the trunk and almost closing the hollow of the tree entirely. After it had been carried home, (having been wasted considerably by the fall of the tree and the primitive mode in which it was collected,) the comb yielded over two hundred pounds of honey of the purest quality."

Hoarhound for Bee Forage.—We see that at a recent Kansas Beekeeper's Convention it was thought that hoarhound would prove a very important honey producing plant for this country, since it remains in bloom a long time, and when there is scarcely any other source for honey. It was also asserted that the plant is very hardy, never needs sowing but once, and seems to produce honey whether it is wet or dry. Many of our readers are doubtless aware that this plant is a native of Europe and Middle Asia—that it blossoms in July and August, and has been introduced and naturalized in some localities in this country as a medicinal herb. The botanical name is *Marrubium vulgare*. There are several species of *Marrubium* native to this country. If any of our Apiarians have had experience with this plant for bee forage, we shall be glad to know what they think about it.

Industrial Societies.

MEETINGS, ELECTION OF OFFICERS, &c.

Ohio Dairymens' Association.—The eighth annual Convention is to be held at Wellington, O., Jan. 24 and 25. X. A. WILLARD delivers the Annual Address; NORTON S. TOWNSHEND talks on the "Chemistry of Cheese and Cheese Making;" J. H. DICKSON on "Commercial Problems and Fallacies;" ANSON BARTLETT is preparing statistics concerning the dairying interests of the States; LUCIUS HENRICK on the "Expediency of Coloring Curd;" ALLEN WELTON on "Does it Pay to Mess Cows During the Grass Growing Season?" R. BAKER on the "Best Breeds of Cows for Dairy Purposes;" W. A. BRAMAN on "Compensation for Making Cheese—What should it be?" D. L. POPEON "The Best Method of Disposing of Cheese for the Benefit of Producer and Consumer;" Mr. UNDERHILL on "Ohio Cheese in New York Market in 1871." Other topics are to be discussed, reports of factories read and details of practice given.

Vermont State Ag. Soc. and Wool Growers Ass'n.—Officers elect for 1872: *Pres.*—HENRY G. ROOT, Bennington. *Vice-Pres.*—H. S. Morse, Shelburn; William R. Sanford, Orwell; Crosby Miller, Pomfret; Henry Chase, Lyndon. *Treas.*—N. B. Safford, White River Junction. *Sec.*—Henry Clark, Rutland. *Directors.*—John Gregory, Northfield; Elijah Cleveland, Coventry; George Campbell, Westminster; Henry Hayward, Rutland; Henry B. Kent, Dorset; Lawrence Brainard, St. Albans; David Goodell, Brattleboro; Edwin S. Stowell, Cornwall; James A. Shedd, Burlington; C. Horace Hubbard, Springfield; George A. Merrill, Rutland: S. G. Holyoke, St. Albans; Lemuel S. Drew, Burlington; George Hammond, Middlebury; Harley M. Hall, East Burke. *Delegates to the National Wool Growers' Association.*—Hon. Wm. R. Sanford, Orwell; Henry Clark, Rutland; George Campbell, Westminster; Hon. Crosby Miller, Pomfret; Lemuel S. Drew, South Burlington; Col. E. Stowell, Cornwall; Hon. H. M. Hall, Burke.

American Fish Culturists' Ass'n.—The second annual meeting of this Association is to be held at Albany in connection with the N. Y. State Poultry Show, Feb. 7 to 13th. The following papers are announced:—"The Culture of Shad," by W. CLIFT; "Spawning, Races and the Impregnation of Eggs," by A. S. COLLINS; "Introduction of Salmon into American Rivers," by Dr. EDMONDS; "Land-Locked Salmon," by B. F. BOWLES; "Fish in the North Woods of New York," by Dr. HUNTINGTON; "Culture of Trout," by L. STONE.

Oneida Co., N. Y., Ag. Soc.—Officers for 1872: *Pres.*—T. D. PENFIELD, Camden. *Vice-Pres.*—Mark Cheney, Rome. *Treas.*—Jas. Elevell, Rome. *Sec.*—R. Morrison, Kirkland. *Ex.-Com. for two years.*—H. M. Rouse, Marshall; Henry Gleason, Kirkland; John Halstead, Vienna; Barnes Davis, Vernon; R. A. Jones, Whitestown. *Delegates to State Soc.*—Hon. S. S. Lowery, the four members of Assembly from the county, Col. R. G. Savery, B. W. Williams, Hon. Samuel Campbell, Hon. T. D. Penfield.

Illinois State Hort. Soc.—The officers elect of this Society are: *Pres.*—J. E. STARR, Elsa, Jersey Co. *Sec.*—O. B. Galusha, Morris, Grundy Co. *Ass't Sec.*—H. J. Dunlap, Champaign. *Treas.*—Jonathan Huggins, Woodburn, Macoupin Co. *Vice-Pres'ts*—1st Dist., Robt. Douglas; 2d, Sam'l Edwards; 3d, A. J. Humphrey; 4th, E. Daggy; 5th, B. Bullen; 6th, J. M. Pierson; 7th, A. M. Brown. The next annual meeting is to be held at Centralia, the second Tuesday in Dec., 1872.

The St. Louis Poultry Ass'n was organized Dec. 16, and the following officers elected for 1872: *Pres.*—W. G. BENTLEY. *Vice-Pres'ts.*—N. J. Coleman, C. S. Hunt, T. T. Turner, A. Phillips. *Rec. Sec.*—G. O. Kalb. *Cor. Sec.*—B. N. Pierce, 414 Olive St., St. Louis, Mo. *Treas.*—C. H. Turner. *Ex. Com.*—E. W. Puttison, J. C. Hateh, D. O. Butterfield, Geo. R. Robinson, and the officers above named. An Exhibition will be held at St. Louis Feb. 27-29.

Highland, Mass., Ag. Soc.—Officers for 1872: *Pres.*—SIMON H. WHITE. *Vice-Pres.*—Orrin Millard and George W. Holcomb. *Sec.*—J. McElwain. *Treas.*—Geo. S. Bell. *Directors*, Matthew Smith, William W. Gleason, Joshua Bemis, Horace Cole, D. Alderman, Jr. Delegate to the State Board of Agriculture for three years, J. McElwain. The society voted to dispense with the bull, and prohibit the sale of intoxicating liquors at the annual Fair.

Queens Co., N. Y., Ag. Soc.—Officers for 1872: *Pres.*—C. H. JONES, Cold Spring Harbor. *Vice-Pres.*—G. T. Hewlett, Rockaway. *Sec. and Treas.*—John Harold, Hempstead. *Directors.*—Rich'd E. Thorne, North Hempstead; H. W. Rowland, Jamaica; Robt. Willets, Flushing; J. J. Tompkins, Newtown; S. M. Titus, Oyster Bay; S. B. Mersereau, Hempstead.

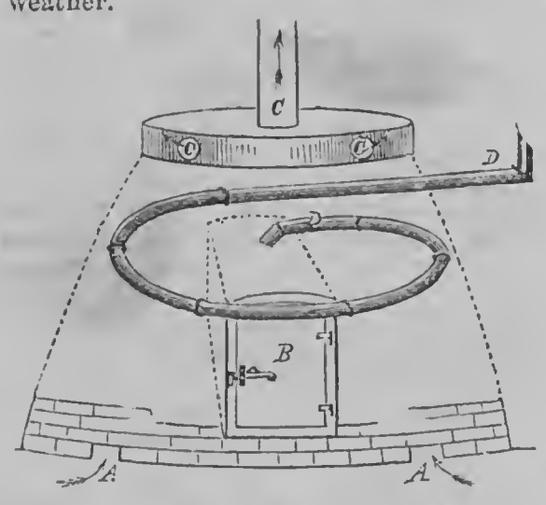
Carroll Co., Md., Ag. Soc.—Officers: *Pres.*—AUGUSTUS SHRIVER. *Vice-Pres.*—Jeremiah Rinehart. *Sec'y.*—Wm. A. McKillip. *Treas.*—Richard Manning. *Directors.*—Edward Lynch, David Fowble, H. E. Morelock, P. L. Slingluff, Joseph Shaffer. Fair for 1872 occurs Sept. 30 and Oct. 1-5 inclusive.

The Bureau Co., Ill., Ag. Soc. holds its next annual Fair at Princeton, commencing Sept. 10.

Scientific and Useful.

FARMERS' HEATING FURNACE.

I INTENDED last Winter to give your readers, if you thought it worth publishing, a description of a "Farmer's Furnace," or heating purposes, that I have now used long enough to become satisfied of its practicability. I should have described it at that time, but finally decided to make myself sure, by a longer trial, that it was all right before advising anything that afterwards might prove a failure. I am now heating my house on the first floor with said furnace. It (the house) is 36x38 feet, and contains four large rooms and a hall 8x36 feet. The second story is similar, but air lights are used when needed, which is seldom; for the hot air arising from lower hall and rooms, in this climate, tempers them sufficient for sleeping-rooms, excepting in extreme cold weather.



A, A, cold air passing in from cellar. B, B, old box stove, large size. C, C, hot air passing into rooms and hall. D, D, D, D, stove pipe from stove to chimney.

In the centre of the cellar, which is of the same size as the house, I placed a large-sized second-hand box stove, around which I built a single brick circular wall, seven feet in diameter at the bottom and four and one-half feet high, drawing it in at the top, as I raised it, so that it measured five feet across. The front of the stove was set back from a true circle about six inches, and the wall at that point was drawn in to correspond; but from the top of the stove it was carried out again so as to make a complete circle at the top. I then had six common elbows made, six inches in diameter, at an angle that would just complete the circle inside of the brick when they were put together, one end of which I attached to the stove and the other I connected with the chimney, passing through the said brick wall near the top. My chimney is built from the cellar floor; but where this is not the case the pipe can run up through a room, thereby heating it to a certain extent.

Over the whole I placed a cap made of galvanised iron, with a rim ten inches high, and a flange turned out at the bottom one inch, which, when placed on top of the brick wall, could be easily cemented to it by using common wall plaster. Out of this rim I carried four eight-inch tin pipes running to the corners of the four rooms and connecting therewith by registers, the same as in the ordinary furnace. The top I made tunnel-shape, the centre dropping down six inches, from which I ran an eight-inch pipe up into the hall. When a fire is built in this stove the heat passes around through this coil of pipe before going to the chimney, and the cold air passing in through four openings, (made in the second layer of brick from the bottom by leaving out one brick one-fourth of the distance around consecutively from the cellar,) becomes immediately heated and passes with a strong current into the room or rooms where the register is open.

Why I call this a "farmer's furnace," is because, *first*, it burns wood, of all kinds, four feet long and 12x16 inches thick, which is the size of my stove door, thereby using up that wood, full of knots, that is hard to work up for the cook stove; *second*, it is easily built and at a small cost, as any second-hand box stove would answer, even if the legs were missing or the hearth knocked off; and *third*, it confines all the dirt and ashes attending a wood fire to the cellar, and gives a good, even and warm temperature in your rooms, unattainable with the common heating stove or fire-place, and what heat escapes in the cellar is not detrimental to it. I find that by replenishing the fire on retiring one room can be kept warm all night, and coals enough left in the morning for rekindling speedily. The stove pipe and elbows would be better made out of galvanized iron, although mine are as good as new and are made of the common pipe.

When the pipes want to be cleaned or the stove replaced the galvanized cap can be easily taken off, which gives plenty of room to work in, and is as easily replaced. The total cost to me of brick work, tin and sheet iron work, stove and registry was about $50, while the ordinary cast and sheet iron, portable, or stationary furnace complete would cost $200. N. O. B.

Fairfax C. H., Va.

USEFUL AND SCIENTIFIC NOTES.

To Prevent Mucilage Molding, C. C. writes the RURAL NEW-YORKER, that he makes it by using one part of alcohol and three parts of water to dissolve gum arabic; and he keeps a bottle of one part alcohol and two parts of water with which to thin it when it becomes too thick. It never molds.

Basswood for Water-Pipes.—We see it asserted that a Mr. ROOT, of Western New York, a farmer, has 300 rods of water-pipe made of basswood saplings, which have been laid nine years and are now, apparently, perfectly sound. He thinks basswood one of the best kinds of wood for underground water-pipes there is.

Size of Nails.—The following table will show any one at a glance the length of the various sizes, and the number of nails in a pound. They are rated 3-penny up to 20-penny. The first column gives the number, the second the length in inches, and the third the number per pound.

Number.	Length in inches.	Nails per pound.
3-penny	1	557
4-penny	1¼	353
5-penny	1¾	232
6-penny	2	167
7-penny	2¼	111
8-penny	2½	101
10-penny	2⅞	68
12-penny	3	54
20-penny	3½	34

From the foregoing table an estimate of quantity, and suitable size for any job of work, can easily be made.

The Horseman.

NOTES FOR HORSEMEN.

To Cure a Knock-Kneed Colt?—Apply a splint, which can be readily made by any one possessing ordinary intelligence. The most perfect I have seen are made on the plans advised by J. WILLIAMS, Shreve, O.—PHILIP MURRAY.

Interfering Horses.—A correspondent asks how a horse should be shod that interferes. We have succeeded by having the inside of the shoe made much heavier than the outside, thus causing the inside of the foot to swing lower than the outside. We have found this effectual in every case within our experience.

What Ails this Horse?—I have a horse five years old, that is all right while going forward, but when backing he raises his hind legs like a horse with the spring halt, but has never been lame since I have owned him—about a year. If you or your correspondents can give any name to the disease, or a remedy, you will oblige—A. L. PARKER.

To Remove a Callus.—Get one ounce of alcohol, five grains hydrate potash, thirty grains iodine; mix and apply with a feather once a day. By the time the amount here given has been twice used the bunch will be nearly or quite gone. I have seen it used with success in removing callus and other bunches, such as blisters or anything that is not bone.—M. P. C., *Hampton, N. Y.*

To Cause the Hair of the Mane and Tail to Grow.—In reply to S. C. DRAKE, in the RURAL NEW-YORKER of Dec. 9th, I beg to give the following recipe, which I have personally proven to be efficient in restoring a healthy growth of hair on the tails and manes of horses:—Corrosive sublimate, (hyd. bichloride,) oxymuriate of mercury, each four grains in one ounce of distilled water. Wash the parts where the hair is thin with warm water and soap, then rub dry with a linen cloth, and immediately after rub in some of the above liniment. If the hair has been rubbed off by the animal's own endeavors to allay cutaneous irritation, then dress with the following ointment: One ounce of fine flour sulphur, one ounce of fine pulverized saltpeter, made into a soft ointment with fresh butter or fresh rendered hog's lard; rub in at night and wash out in the morning with warm water and soap; repeat three or four times. If the hair is scant from natural debility of the capillary organs, then simply use cold water applied with a soft sponge; avoid all combing or brushing, and clean the mane and tail, as the Arabs do, with a coarse flannel rubber.—MIDY MORGAN.

Arboricultural.

FORESTS IN NEW HAMPSHIRE.

ONE half of the area of New Hampshire is covered by forests, and that area is increasing, as many tracts which were formerly cultivated have been abandoned as farms and re-devoted to the growth of trees. In 1869 the value of the cordwood and timber taken from the forests of New Hampshire amounted to $2,351,612.

The railroads and their branches centering in Concord consumed, last year, in the shops and locomotives, 72,000 cords of wood. The aggregate railroad consumption of the State is 123,000 cords per annum. Allowing 30 cords to the acre as the average production we have 40,000 acres annually denuded of these trees every year for fuel. In addition to this the railroads, on an average, renew their sleepers every seven and a-half years, or 250,000 new sleepers every year.

The hard wood lumber used in the State prison of New Hampshire costs $4 to $5 per thousand on the stump.

A growth of white pine sold in 1869 for $10 per M. on the stump for timber which would not have sold for more than $1.50 per M. for cord wood. This lot of white pine had been growing 86 years on a very rocky, poor soil, not worth anything for cultivation, and sloping toward the Northwest, it was estimated at the time of the sale to average 2½ 1-2 M. feet of timber and 16 cords of wood to the acre, and the price paid for it was $235 per acre. Enough of it had been sold from time to time to pay all the taxes upon it. On this basis a man might make simple interest at six per cent. if he had paid for it $38.52 per acre 86 years ago, or if compound interest had been reckoned he could have paid for it $1.75 per acre.

A wood lot on a fair soil and favorable exposure in New Hampshire will average 35 cords of wood after a growth of 36 years. If this can be sold for $1 per cord on the stump, one could afford to give about $4.-37 1-2 cents for the land and make interest on it; but if it sells at $2 he could afford to give very much more.

On measuring a large number of pine logs and counting the rings, the average length was 50 feet; average diameter 22.8 inches; average age 86.76 years; average cubic contents 363 feet, and the average annual growth 4.2 feet, board measure.

Twenty chestnut logs averaged 33 feet in length; average diameter was 21.4 inches; average age 74 years; cubic contents 296 ft.; average annual growth 4 feet board measure.

Twenty red oak logs averaged 30 feet in length; average diameter 18.2 inches; average age 70.1 years; average contents 253 ft.; average annual growth 3.6 feet board measure.

Five hemlock trees averaged 35 feet; average diameter 17.2 inches; average age 77 years; average contents 271 feet; average annual growth 3 1-2 feet board measure.

In Concord, two elms were set out 100 years ago on the same day. The first had ample space to develop itself and had a splendid top. At 3 feet from the ground the circumference was 16 feet 10 inches. The second was much crowded and shaded by neighboring trees; at 3 feet from the ground it measured but 9 feet 4 inches.

Five elms, now standing in Concord, were transplanted from neighboring forests on the 2d of May, 1764; they are now all flourishing luxuriously. Fifteen years ago the largest measured, 3 feet from the ground, 16 feet in circumference. Now it measures 16 feet 10 inches. N. H.

Farm Economy.

BARN CISTERNS.

BARN cisterns, when there is no supply of spring water for the barns, are most profitable. With a windmill to pump the water a stock barn furnished with hose and troughs can be supplied at very little cost, comparatively. This is in answer to an inquiry from a correspondent who asks those who have built such cisterns, to tell him, through the RURAL NEW-YORKER, how to do it and what it will cost.

Since writing the foregoing, we see in the New England Homestead the following which will help our correspondent:—"In ordinary clay soils a cistern may be built without brick—except for the arch—by merely making the excavation of the size and depth required and laying the mortar immediately on the clay sides; if well done with good hydraulic cement, and clean, coarse sand, it will be as permanent as if plastered upon a brick wall. Brick will be required for the arch. To turn this, about eighteen inches below the surface of the ground, a shoulder should be made the width of the brick on which the arch is to rest. One thousand brick will be sufficient for a cistern of the capacity of one hundred gallons, constructed on this plan, and the whole may be built at a cost of $25. On many farms brick may be already on hand and some farmers, perhaps, would prefer to wall the entire cistern from the bottom. To do this, two-thirds, or perhaps three-fourths, more brick would be required.

"The most proper form, and the one which gives the greatest strength to a cistern, is that of an ordinary jug—say ten or twelve feet deep and six or eight feet in diameter at the bottom, increasing in the middle to nine or ten feet, and from the middle upwards the size should be contracted to the base of the arch to six feet or less. Such a cistern will hold from one hundred to a hundred and fifty barrels, and would afford a supply of water for twenty head of animals continually.

"It is important to secure as freshly burnt hydraulic cement as possible. The coarsest sand makes the strongest mortar. This should be clean, that is, free from any clayey or marly substance. Every good mason knows the proportion in which these should be mixed."

Taking off the Hides of Animals.—A leather worker gives the following directions in the Canada Farmer:—"We will suppose the animal dead and placed on its back; the operator, by thrusting his knife point foremost and edge up, makes a slit the entire length of the carcass, from the chin, over the center of the breast in the line of the navel to the vent. Let him now stand by its side, with his face looking the way the head lies, and taking the fore foot in his left hand, run the point of his knife in the line of the cleft of the foot and cap of the knee, up the front of the leg and into the central slit of his bosom. For the hind leg, having reversed his position, let the slit be made in the line of the heel, over the center of the cap of the hock down the back of the ham into the central slit. In this way the hide when spread out will have a square form without long projections, and consequent deep indentions of its outline."

The Swine-Herd.

PIG-PEN PAPERS.

Springwater Valley, N. Y., Pigs.—WM. H. NORTON writes us that D. C. SNYDER, Springwater Valley, N. Y., killed, Dec. 18, 1871, two pigs, eight months and eighteen days old, that weighed respectively 394 and 334 pounds. He does not tell us the breed, nor the mode of feeding, which it might be profitable to know. Let those who send us reports of heavy pigs, give us the *cost* of fattening, and the market price of pork, so that our readers may be able to act understandingly upon such information.

Swine Breeders' Convention.—At the instance of Col. CURTIS, the American Inst. Farmer's Club has appointed a Committee consisting of F. D. CURTIS, Charlton, N. Y.; LUCIUS A. CHASE and MASON C. WELD, New York City, to correspond with swine-breeders, with a view, if thought practicable, of calling a convention to consider their interests and take such action as may be deemed advisable. This action has in view to consider the propriety of establishing a swine-herd book, as a means of protection to both breeders and buyers of blood swine.

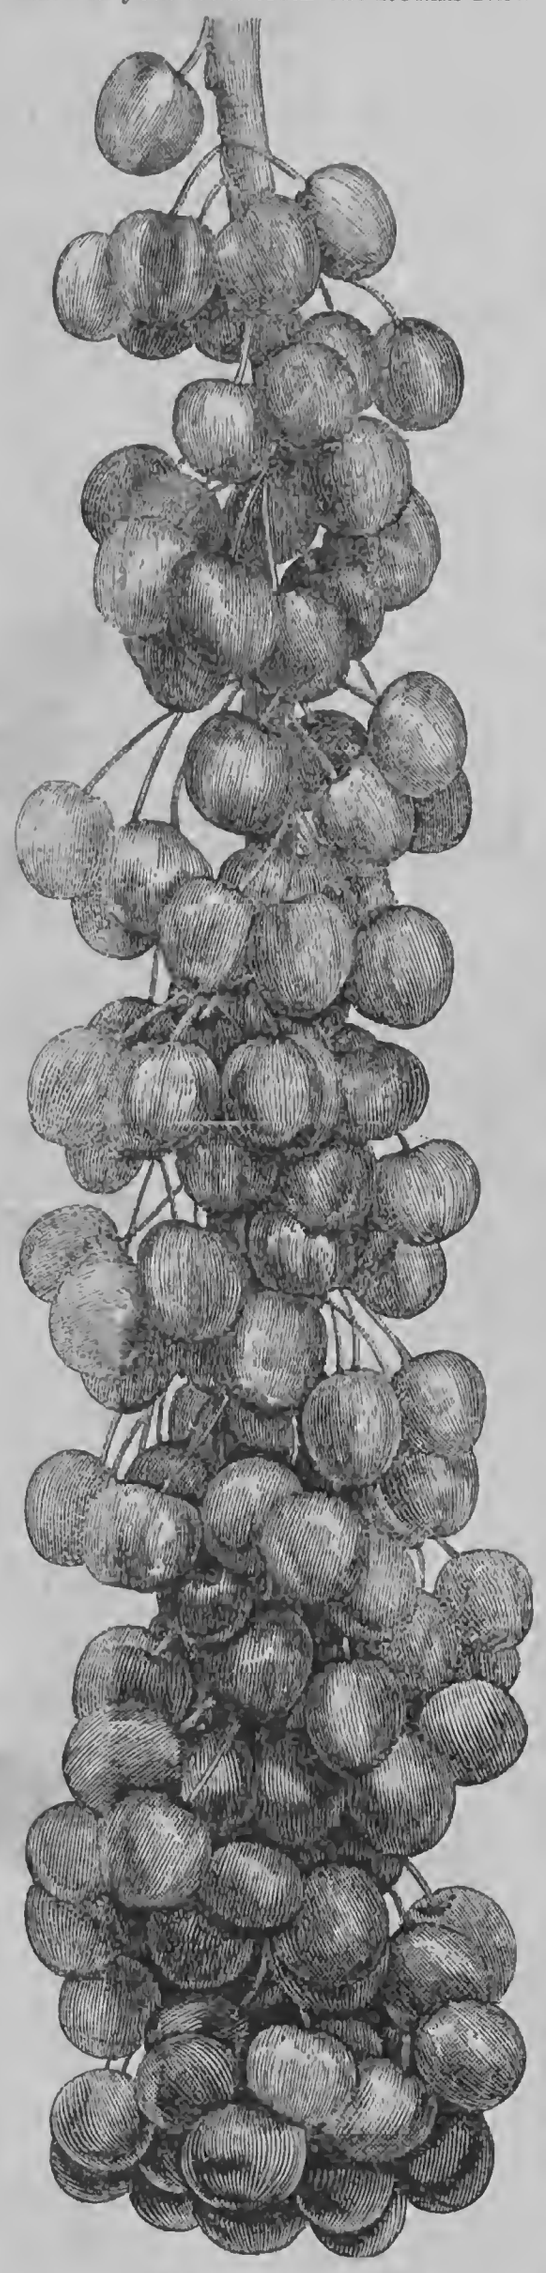
Hog-Cholera seems to have as many remedies as a politician has principles, and we feel compelled to publish them so that in a case of dire necessity there may be a choice. This is the latest one we have noticed. The Rural World says:—"The following cure for hog cholera has been well tested in Illinois during the past Summer, and we are assured has never failed to effect a rapid cure:—Make a strong tea from the May-apple root; for each hundred hogs add one pound of assafœtida, and make a stiff slop with bran. For a cure, feed once a day; for a preventive, once a week."

Hogs Eating Yellow Corn.—For the benefit of "AN IOWA FEEDER," let me state that I fattened four hogs this fall on white and yellow corn *mixed*—fed wholly in the ear. They were fed all they could eat all the time, (tending to make them fastidious in their appetites) but showed no disposition to discriminate between the two colors. Am now feeding three five months—all shoats—in the same way, and with the same results. They get all they can eat twice a day, and are very fat, but make no distinction between the white and yellow.—J. A. W.

Pomological.

ANGERS AND ORANGE QUINCES.

F. R. ELLIOTT writes the Western Pomologist:—"In your October number of Pomologist, I note an article from the RURAL NEW-YORKER, on the Angers and Orange Quinces. It was of old time a received impression that the Angers was only valuable for stocks on which to work the pear, but the proof of a good thing is in its net worth, as an orchard on my own grounds of the Orange and Angers alternate, show according to samples I send you this day by express. By them I think you will find the Angers is of an equal size to the orange, and of as good color, but it—the tree—has a more vigorous early growth, and it does not as early come into bearing. The talk that the orange has many varieties is simple absurdity. Seedlings have of course been grown of it, resulting in anything but the true thing, and although I do not wish to touch the honor or knowledge of any man, yet I must say that for years growers and dealers sold orange quince seedlings as the true Orange quince. Hence comes the remark in your item from the RURAL NEW-



BRANCH OF ROYAL ANNE CHERRY, REDUCED.

YORKER—'that some are nearly globular, others are pyriform, etc.,'—all of which is bosh, and expression wanting in knowledge. Another point relative is the item—'that the Angers is less liable to attacks of quince curculio, owing to its hard surface and woolly covering,'—all of which is nonsense, and untruthful—as you perhaps can see by the samples sent herewith."

WHAT Mr. ELLIOTT intended to prove by the above statement I am at a loss to determine, unless it is that all of our pomologists are in error except himself. If his Orange and Angers quince are the same in size and color they are probably one and the same sort, which of course does not prove that there are not two very distinct varieties known under these two names.

The Angers quince, as known to Eastern pomologists, and from whence Mr. ELLIOTT obtained his plants, if he has any, is as distinct from the true Orange as a wild crab apple is from a Fall Pippin; and I shall hold myself in readiness to furnish Mr. ELLIOTT with plants and fruit of both next season to prove the correctness of this statement.

In the next paragraph Mr. ELLIOTT contradicts himself and proves the truth of my assertion. He says:—"The talk that the Orange has many varieties is simple absurdity. Seedlings have of course been grown of it, resulting in anything but the true thing, * * * * and I must say that for years growers and dealers sold Orange quince seedlings as the true Orange quince."

This is just the point made in my diary, Sept. 7, page 186, RURAL NEW-YORKER for Sept. 23, *i. e.*, that there are many varieties known as the Orange quince. Mr. ELLIOTT evidently does not know the true Angers quince, hence his remarks in regard to nonsense and the untruthfulness of my statement in regard to its less liability to attacks of the quince curculio.—RURALIST.

POMOLOGICAL GOSSIP.

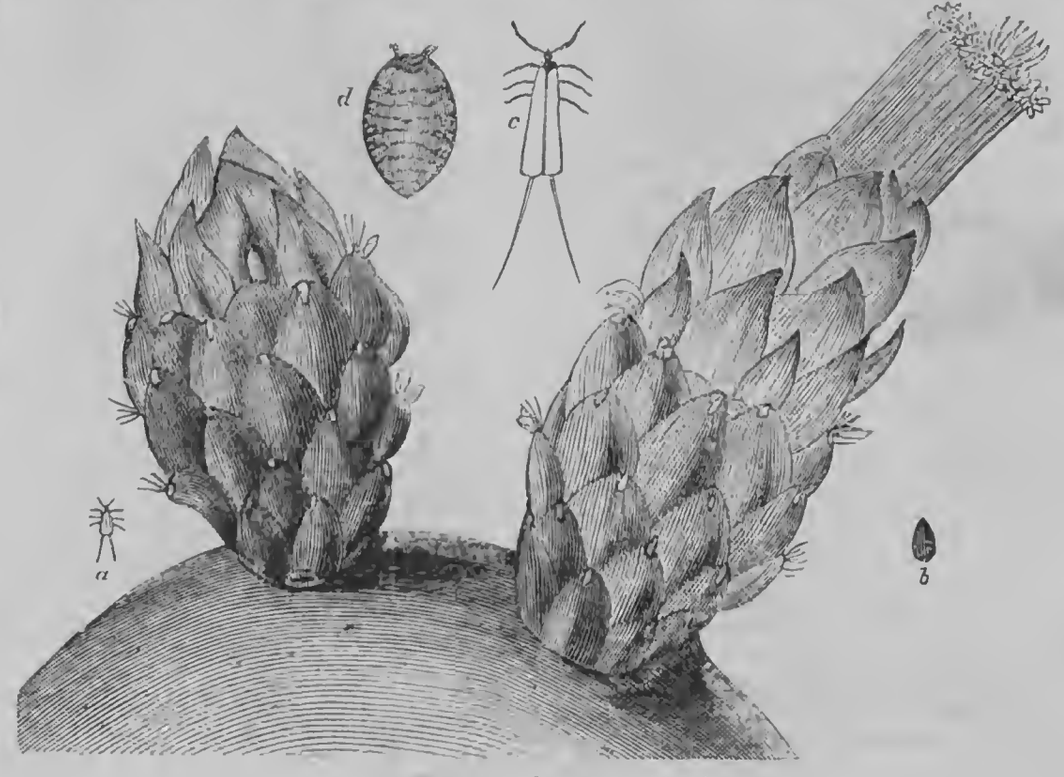
"Royal Anne" Cherry.—From Messrs. RUSSELL, FERRY & WOODWARD, Portland, Oregon, we have received specimens of what is known in Oregon as the "Royal Anne" Cherry, an engraving of which, natural size, we give herewith. We also give an illustration of a fruit branch of this cherry, reduced, showing its habit as grown in that moist climate. This was produced by Mr. SETH LUELLING, near Portland. The length of the branch was 22 inches; size of the cherries, 3 to 3 1-2 inches in circumference; weight of branch, 5 pounds; contained 186 cherries. We do not know this fruit, (under the above name, at least,) and shall be glad if some of the Oregon pomologists will enlighten us. Where did it originate?

The Cuyahoga and Martha Grapes.—The Rural World says:—"Cuyahoga has produced this season bunches of large berries; color white, tending to flesh color; very sweet and rich; somewhat late. The small berries become quite pink and sweet before the main cluster is ripe, while in most other varieties—the Concord for example—the small berries are quite green when the bunch is ripe and black. Martha—in fruit, foliage, health, hardiness and productiveness, stands at the head. Berry medium, china white; foliage very distinct and healthy."

Mr. Upton's Apples.—"A Delaware reader would be pleased to have Mr. C. S. UPTON mention some of his best-keeping apples. Also, the variety of those ninety-nine."

IF the "Delaware Reader" who wrote the foregoing had carefully read the article he alludes to, he would have learned that the variety was the "Twenty-ounce," and that they were *grown* by Mr. GREENMAN. We believe Mr. UPTON is a dealer in (it may be a grower, also, of) apples.

The Guava in California.—According to E. G. HOOPER, in the Pacific Rural Press, a species of Guava (*Psidium cutthyanum*) is cultivated in that State and spoken of favorably. "The fruit is of a deep claret color; the pulp is sweet, and slightly acid. The shrub is highly ornamental, and may be propagated freely by cuttings, and bears at the age of eighteen months. It is a native of South America, and has an external texture resembling the fig—its pulp, a strawberry. It is considered a valuable addition to stone fruits. It produces two crops a year. These plants are propagated from seeds, which, when brought over in the entire fruit, gathered fully ripe, will more certainly succeed. In summer they will require plenty of water. It flowers, in favorable, warm locations, all the year, and will produce fruit the third year.

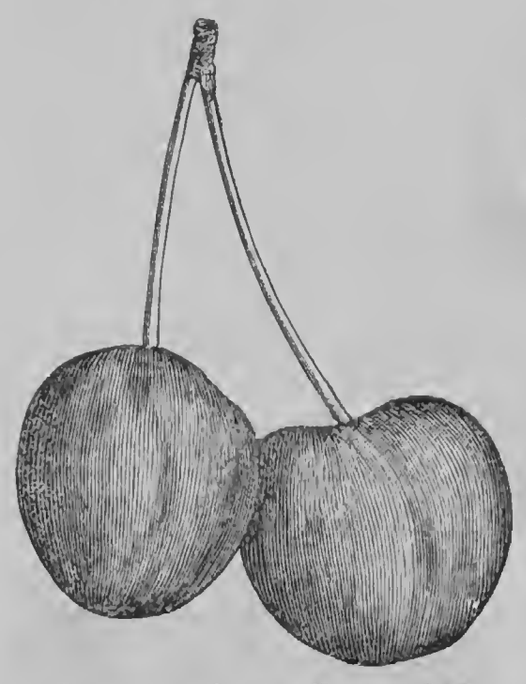


COCHINEAL—(COCCUS CACTI).

Entomological.

COCHINEAL—(Coccus Cacti.)

THE Cochineal insect first became known to Europeans through the Spaniards, soon after their conquest of Mexico in 1858. But it was a long time before its habits were known to scientific men, or any steps were taken to extend its propagation or increase the plants upon which it lives. The Spaniards guarded their plantations in Mexico with jealous care, and would not permit a live insect to be taken out of the country, for fear that it might be propagated by rival nations and thereby create competition in the market.



ROYAL ANNE CHERRY, NATURAL SIZE.

The first recorded instance of any one succeeding in conveying live specimens out of Mexico, is given by Dr. BANCROFT in his "Researches on the Philosophy of Permanent Colors." The French Government had long been anxious to procure the Cochineal for their West India possessions, but failed in every attempt, on account of the watchfulness of the Spaniards. In 1777 M. THIERRY DE MENONVILLE left Port au Prince, St. Domingo, for the purpose of procuring some living Cochineal insects from Mexico, and bringing them to the West Indies, the French Government having appropriated 4,000 livres to pay the expenses of MENONVILLE, who proceeded to Vera Cruz, where he learned that the finest Cochineal was produced at Guaxaca, some 250 miles distant. MENONVILLE pretending ill health, obtained permission to use the baths of the river Magdalena, but instead of going thither he proceeded directly to Guaxaca, where, after making the necessary observations in regard to this insect, and the species of Cacti upon which it was reared, he affected to believe that Cochineal was just the medicine he desired for his pretended disease, (the gout,) and therefore persuaded the superintendent of a plantation to sell him some branches of a cactus covered with these insects. Putting these in some boxes with other plants, for concealment, he was enabled to bring them away among his botanical trifles.

Although MENONVILLE had been fortunate thus far, a revolution which broke out soon after his return caused the destruction and neglect of his treasures, and the Spaniards remained masters of the Cochineal trade for many years thereafter.

The Cochineals feed upon several species of what are known as the Prickly Pear cactus; but the one most extensively cultivated for this purpose is the smooth branched, or *Opuntia coccinellifera*. This species grows six to ten feet high, with obovate-oblong branches almost spineless. The flowers are red, succeeded by a large crimson berry.

In the accompanying illustration a small section of a branch is shown, also a flower bud and mature flower attached, both of natural size.

The difference between the male and female Cochineal insect is so very marked that one unacquainted with them would scarcely suppose that they could possibly be related. The male, *a* natural size, (*c* magnified) has a long depressed body of a dark red. The head is small, furnished with two long feathery antennæ, and the abdomen is terminated with two fine hairs, somewhat longer than the body. The female *b*, natural size, (*d* magnified,) is about twice the size of the male, somewhat convex above and flat below. They have no wings and their legs only serve for clinging to the branch from which they draw their food. The beak or sucker is quite largely developed, but the hairs which terminate the abdomen are much shorter than in the male.

Cactus plantations (which are termed *Nopaleries* from Nopal, one of the common names of the particular species upon which the Cochineal is reared,) are now established in various tropical countries. Those in Algeria are perhaps the most flourishing of any in the East; but they are being extended every year and Mexico is rapidly losing her prestige for the production of this useful article. The amount of Cochineal produced annually is about four millions of pounds.

The Vineyard.

CAUSE OF GRAPE ROT.

J. H. H., IN the Rural World of Dec. 23, states what he has discovered in his efforts to discover the cause of grape rot, as follows:—"I went to work with magnifiers and was not long in finding something that attracted my attention; I discovered spots almost invisible to the naked eye, which, with a magnifying glass, were seen to be circular and composed of white granules, fungus of course. The next morning the little round spots had enlarged and were surrounded by a brown, thread-like halo, which was the beginning of the spot or circle seen on the grape, which we call rot. The original little white spot becomes yellowish and does not spread, and the skin is so much broken that gum exudes from it, which I suppose gave rise to the idea of its having been stung. The brown part goes on until the grapes are entirely destroyed. The rot is confined to the parts immediately under the skin, and if, with a sharp instrument, as a needle, the skin be scarified outside the limit of the fungus, it will lift off, having no connexion with the pulp of the grape, and it will heal and the grape get ripe, provided the wound is not too large. Here, again, in the cutting out of parts affected the bug theory is exploded, for it is the spreading of the fungus under the skin that is doing the mischief. That which attacks the Concord with circular spots and the Catawba by causing the whole berry to become brown, I suspect is the same fungus, differing on account of the nidus, and I also suspect that the mildew on the leaf is the same, and that fungi are considerably metamorphic."

VINEYARD NOTES.

The Eumelan Grape in Saratoga Co., N. Y.—The Eumelan grape was the first to ripen on my grounds the past season, beating the Concord and the Delaware. It proves to be a vigorous grower and very hardy.—F. W. C., *Kirby Homestead Charlton, N. Y.*

Unfermented Juice of the Grape.—Dr. B. F. HEADEN, Santa Clara, Cal., has invented a process by which grape juice can be kept a long time without fermentation. He has it in his possession three years old, it is said. It may be that this will help the solution of the temperance question.

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

Two Hoods for Children.—(Age, one to three years.) Both hoods are easily made larger or smaller, the shape given having been found the most useful and comfortable for little children.

Fig. 1, Child's hood of printed flannel. The scolloped edge in front is laid in quill folds and trimmed with white silk gimp, makes the ruche going round the face. The curtain, or pereline, is joined smoothly to the head part, and gathered to the proper fulness by means of a shir. The bows on the top are lined with stiff muslin, and trimmed, as shown in the cut. Fig. 2 is of white cashmere, trimmed with swan's down and ornamented with ribbon of white sarcenet, one and a half inches wide. The hood parts are quilted and lined with silk. The edge of the last, of course, is not scolloped. The diagrams, Figs. 3 and 4, give half of the parts, with scale of inches.

Boy's Paletot.—This stylish overcoat for boys may be worn with or without the back strap. The trimming is of braid and buttons. The fronts lap under as much as they lap over, (to phrase it awkwardly,) making the front double, so that the trimming may be changed when it becomes worn. It fastens with "blind" buttons and button-holes.

Outside Sleeve with Trimming.—Many handsome sacques, somewhat designed for elderly women, or younger ones with quiet tastes, have only the sleeves trimmed, or possibly the front trimmed across to match. Fig. I. gives a view of an elegant sleeve in velvet, while Fig. II. shows the details of the trimming, which consists of a broad fold of silk laid on with silk braid with a jet ornament.

Applique Trimming.—A novelty in imported garments is in what is called applique. Very fine chenille is woven or put together in the pattern of point or guipure lace. This is applied to silk (or other fabric), which is cut away to correspond with the open places in the chenille. The edges are finished beneath the chenille in button-hole stitch. The effect is very striking, and looks to be, what indeed it must be, a vast deal of labor for mere display.

Use for Crape Shawls.—I saw a very pretty over-garment, for an evening costume, made of white crape, embroidered with blue silk and bordered with blue and white fringe. The shape was a polonaise with a postillion back. It might have been cut from a shawl, as the material was the same, and the skirt beneath was a white organdy with plaited flounces.

Coiffure.—SARAH C, "is young, has rather thin, auburn hair, which curls naturally," and asks how to arrange it. To curl it, brush it around your front finger; let it remain as pushed from the finger until dry. Then split the curls, which will give an appearance of a full suit of hair. Loop it back in imitation of a "cascade of curls," arranging the front so as to be becoming to the face. Wear blue-black velvet, or pale green ribbons. A shell comb at the back, or a bandeau, worn as a coronet, might be worn with advantage. Very little false hair is worn now in comparison with what has been during the past few years. The natural contour of the head is coming into fashion again.

Too Many Visitors.—Mrs. KATE N., writes:—"I come to you for advice, which is neither for Hair Restorative nor how to fashion a dress. It is far worse—*how to get rid of visitors!* My husband and I are both social, lively, and like to have company, but we cannot afford to entertain so much as we find ourselves obliged to do, without being cold and even rude to our acquaintances. We don't wish to move away nor lose the kind feelings of our friends; but it is becoming just impossible for us to be just to ourselves and dispense hospitality such as a large circle of acquaintances actually force from us. Now what can we do?"

I can serve you no better than to point out as an example a woman I once knew whose house from one year's end to another was overrun with visitors. She resolved at length to free herself and her home from the almost unlimited hospitality which had characterized it, reserving, meantime, the few friends she could least spare from occasional visits to her table and fireside. She appointed a day—once in a fortnight—upon which to receive all who might call, from two to five o'clock in the afternoon. At all other times, she was "engaged" to visitors, unless they proved to be people whom she really wished to see. When visiting becomes a burden and an imposition, one is excusable in using decided measures against it. The abuse of hospitality is one of the commonest faults of society, and instead of "hap-hazard" visiting, it would be better for people to confine themselves to special invitations; excepting, of course, the almost social necessity of men "calls."

Field Crops.

FIELD NOTES AND QUERIES.

Potatoes after Cabbage, as a crop, are said to do well. One large grower of cabbage told us recently that he always followed the latter with potatoes.

Winter Oats in Missouri.—The editor of the Rural World says, in answer to an inquiry:—"We sowed them a year ago; they came up well; stood the winter only

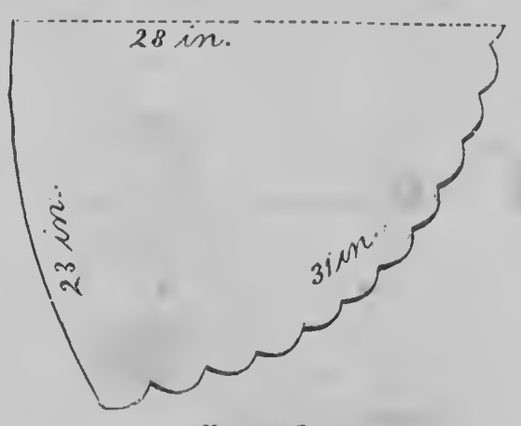

FIGURE 3.

moderately; grew about eight inches high, while rye beside them was three feet; they had but little grain. These did not prove a success."

Best Oats for Louisiana.—A correspondent of Our Home Journal recommends as the best variety for Louisiana the Red or Florida Oat, which he says never rusts, yields well, weighs from forty to forty-five pounds to the bushel, and is raised almost exclusively in Central Mississippi. Best time for sowing is in November, but may be sowed as late as February 15th, and a good crop harvested.

Names of Grasses Wanted.—About eight or ten years ago quite a commotion was created among gardeners on the introduction from England of a substitute for lawn grass—*Spergula pilifera*. Will you please inform me, through the columns of the RURAL, if it proved satisfactory and where seed can be obtained. Also oblige me with the "every day names" of the following grasses: *Agrostis vulgaris tenuifolia, Febusca durinscula, Febusca ovina, Cynosurus cristatus, Poa pratensis* and *Avena Flavescens*.—R. H. KNAPP, *Atlanta, Ga.*

THE *Spergula pilifera* was of no value in our hot, dry climate, and is not much better in England. There are many common names to the grasses you mention, but the best known are as follows:—*Agrostis vulgaris tenuifolia* is fine-leaved Red-Top. We do not know of any Febusca, and presume you mean Festuca. *Festuca ovina* is known as sheep's Fescue-grass, *F. durinscula* is only a variety of the same, growing a little taller and the panicles a little more spreading in habit. *Cynosurus cristata* is crested Dog's tail-grass, and *Poa pratensis* is smooth stalked meadow grass in England, green meadow grass in New England, and Kentucky blue grass, West and South. *Avena Flavescens* is yellow oat-grass.

BOY'S PALETOT WITH DOUBLE ROW OF BUTTONS.—(Age 9—12 Years.

The Gardener.

CELERY CULTURE.

THE Montgomery (O.,) Horticultural Society recently discussed this subject, and JOHN EWING said that the present mode differed materially from that practiced a few years ago. A deep trench was formerly

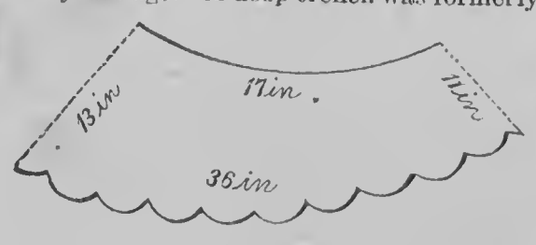

FIGURE 4.

considered the first requisite in the cultivation of Celery. He has practiced plowing open a trench of only moderate depth, but from experience contemplates planting on the surface for the next season. The seeds should be planted as early as prudent in Spring, in beds out-of-doors. Plants grown in this way are much hardier and more certain of success than when sown in boxes.

FIG. II.—FLUTED TRIMMING WITH CHAIN GIMP AND JET AGRAFFE.

The young plants should be cut back once or twice in the beds and before transplanting, to induce a stocky, solid growth. They should be grown thinly in the beds. With proper care they will be ready to be transplanted into the garden rows from the 15th to the 31st day of July. Earlier planting than this is not desirable, as celery makes its principal growth after the nights become cool, and the greatest secret of success is in keeping the plants in good condition until this season arrives; which, in our hot sun and dry atmosphere, is a delicate matter. The hilling-up process should be gradual, beginning when the plant is about ten inches high; and at first only sufficient earth should be drawn up to the plant to keep it from spreading out; the plants should be set six inches apart. Celery loves moisture, and irrigation is of great advantage in its cultivation; the water should not come in actual contact with the plants, but be allowed to gather between the rows. The moisture is absorbed gradually in this way, conducing to a healthy, steady growth. The soil for the growth of celery should be cool, deep, and rich, of a pure loam, free from gravel, and with but little sand.

FIG. I.—WIDE SLEEVE FOR A VELOURS PALETOT.

Monroe's Concord Sweet Corn.—G. N. S., Berlin, Wis., writes the Western Farmer that this corn has "proved to be all that was claimed for it—early, productive, sweet and tender. On many hills I counted twelve ears—three stalks to a hill; ears large, 14 rowed, and cob large.

Dairy Husbandry.

THE MILK TRADE.

[THE following letter, written last May, has been overlooked or it would have appeared promptly. It may, however, be of service to those who are to decide what to do with their milk the coming season; hence we give it now, regretting that it was not made useful last season.—EDS. RURAL NEW-YORKER.]

IN the RURAL NEW-YORKER of May 20, I see a communication from "B." of Manchester, Vt., in relation to the profit of sending milk to New York or making it into butter and cheese. As I have been in the milk business, and have also made butter and cheese, perhaps my experience in the matter may be useful to "B." and perhaps to others.

In the first place, CUMMINGS, BAKER & Co. are well known along the Housatonic Railroad, on which I reside, as middlemen, who take all the profit from the farmers who have all the trouble and expense in the matter. They only make a market for the milk, handle the money, and pay the farmer what they please. "B." says they will *guarantee* three cents per quart for the summer. They guaranteed three cents, and more, on the Housatonic Railroad, but their guarantee didn't amount to much. I have before me one bill received from them in May, 1868, for 26 40-quart cans of milk, in which they return me $13.95, taking out a commission themselves of $5.70, which leaves for the milk but a little over 1 1-3 cents per quart. They had previously guaranteed the farmers 3 1-2 cents per quart, less a commission of 20 cents per can, which they were to have for their trouble. This is but a sample, but it will do. More will be furnished if required.

In relation to the milk business, it has, undoubtedly, been a paying business in years back, and may be now to those favorably situated; but according to the prices that have ruled in New York from January 1, 1871, it has been a losing one. For the last few years, until now, the average price received in New York for the year has been about four and-a-half cents per quart; at that price farmers could make something, provided they had a good customer who paid regularly, and who returned the cans in good shape.

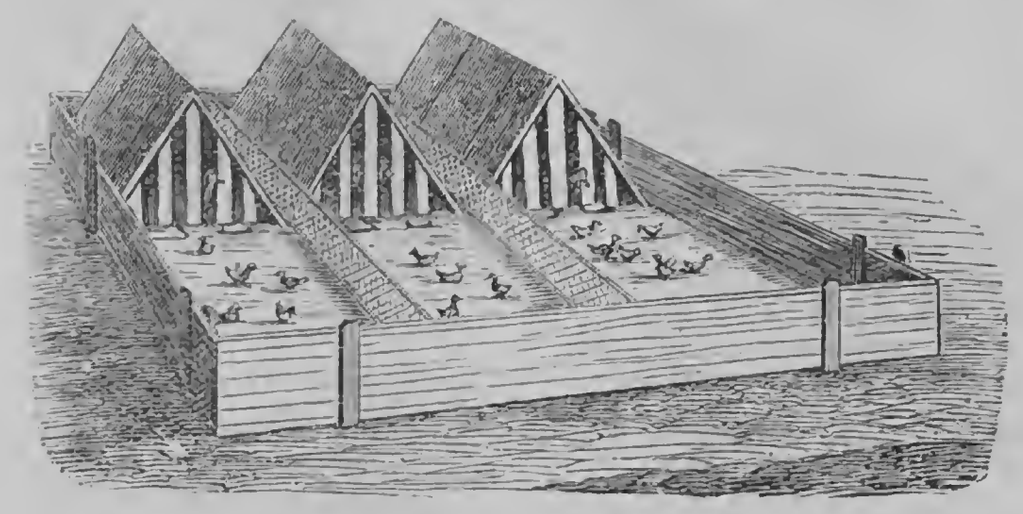
Let us consider the outlay that the farmer has, who is in the milk business:—*First*, The cans of which, if near New York, he has to have one forty-quart can for each cow; if as far from New York as I am, one-and-one-half for a cow. They cost now about $5.15 per can, which is an outlay of $208.75 for a dairy of thirty cows. The loss, wear, and tear, and interest on the cans, will amount to at least $50 per year, which has to be replaced. Some men say they can more than pay that by the water they put in their milk; but we are now talking of honest men.

It is notorious, that the majority of the milkmen in New York are a set of swindlers, who pay only as it suits their convenience; and pay just as little as they can. They occasionally "bust up," when nothing can be got. There are, of course, a few honorable exceptions to the rule, and the farmers who deal with such generally do all they can to suit them, and even take less price for their milk in order to have them keep it. But I may say, that a great many farmers expect to lose the pay for a month's milk during the year. This must be taken into consideration.

It is necessary for a man who makes a good dairy of milk, to make an even one. By this I mean, he must make as much, or but little less milk in winter than he does in the summer. To do this he must have his cows coming in at all times of the year, or as many in the fall as in the spring. Now take into consideration the cost of making milk in winter. The cows have to be fed regularly and heavily on grain, kept in warm stables, and with all the care you can give them, they will not give as large a flow of milk as they would on grass. The expense to make the milk is so great that a good many farmers say they can make more from their summer's milk than they can in winter, when milk is worth 5c. or 6c. per quart. The only advantage, then, in winter, is that it makes a market for your hay and grain.

A farmer who is making butter and cheese can get *more milk* from his cows (as he has them come in in the spring) than I can from mine which come in at all seasons. For he has all his cows in milk in the last season, while part of mine are dry. A dairy of cows that average six cows to a 40-quart can for the year, is an unusually good one; while a dairy of cows where they all come in in the spring ought not to average more than four cows per 40-quart can, as they have the best of the season and when it costs less to keep them.

Suppose "B" can get three cents for his milk in New York—that is, $1.20 per 40-quart can—and he has to run all the risks, loss of cans, &c. By making that can of milk into butter, calling 10 quarts a pound, we have 4 pounds of butter, besides the skim milk, which is worth at least 1 cent per quart to feed hogs; and if his butter sells at 39 cts. per pound, he is making more money than he would if he sent it to New York. Besides, he can keep more cows on his



CHICKEN AND DUCK COOP INCLOSURES.

farm by milking them through the summer and then drying them up; for a new milch cow will eat one-third more hay, besides the grain, than one kept dry through the winter. The law of "Supply and Demand" rules the price of milk in New York. When milk is scarce a good price can be got; but when plenty, hardly anything; and when milk is plenty the milkmen will keep the cans back to prevent your sending more milk than they want.

So many new railroads are being opened to New York that the supply of milk now is more than the demand, and a good many farmers who have been sending milk are making calculations to make butter and cheese, as they find it will pay equally as well, and be less "vexation of spirit."

HARRY SEDGWICK.

Cornwall Hollow, Conn.

WEIGHT OF A QUART OF MILK.

A CORRESPONDENT writes us in regard to the weight of a quart of milk. He says: "I have seen various statements in the papers as to the weight of a quart of milk. They make it weigh different weights, from two pounds to two pounds six ounces, and sometimes even more. What is the standard weight? You may have given it in the RURAL NEW-YORKER, but I cannot find it in back numbers. I always find your statements reliable, and you will confer a favor on me and others by answering this question in the RURAL."

Different samples of milk will vary in weight, according to the quality of each. There will also be a variation in weight, according to the temperature of the milk when weighed. In other words, a quart of milk at 60° will weigh more than a quart of the same milk at 90°. In our tests of milk of fair average quality, at a temperature of 70°, we find the weight, generally, of a quart of milk to be about thirty-five ounces.

In a recent conversation with Mr. GAIL BORDEN of White Plains, N. Y., the distinguished inventor of the process of condensing milk in vacuo, he stated that he had taken great pains to get a correct solution of this matter. Taking the milk from several cows and mingling it together and then thoroughly cooling it, he carried it directly to the "U. S. Sealer of Weights and Measures," who measured and weighed the milk by accurate Government weights and measures. The result was that a quart of milk, so measured and weighed on delicate scales, was equal to two pounds, two ounces, and one-quarter of an ounce (2 lbs. 2 1-4 ozs.) The tests were made with different samples of milk at different times, but without materially altering the weight, and hence he had adopted the above as the true weight of a quart of milk having a fair average quality.

Perhaps one leading cause of dissimilarity in the weights of milk noticed by our correspondent, is the lack of accuracy with which the measuring and weighing are done. A great proportion of the quart measures sold are not accurate, while the scales and weights used may not be perfectly correct. Again, when all these are accurate, considerable caution must be taken in filling the vessel with milk and taking the weight. Hence it will be seen that, with samples of milk of different qualities, weighed at different temperatures, measured in vessels not perfectly accurate, &c., &c., there must be more or less variation in the statements of persons who have given the weight of a quart of milk.

We are inclined to take Mr. BORDEN's weight, above given, as a standard; or, at any rate, a quart of milk having a temperature of 70° may be expressed in round numbers as weighing 35 ounces.

The Poultry-Yard.

FOWLS WITH BLACK BONES AND FLESH.

IN the RURAL NEW-YORKER of Nov. 25, 1871, I noticed an article on "Black Bones in Chickens." The writer seems to think it a disease, (it may be in his case,) but there is a breed from both Japan and China, one having the periosteum (cartilage round the bone) black; and one with the flesh and bones discolored. It is considered a rare breed. An account of it will be found under Ornithology, *Gallus moro* and *Callus crespus*; Encyclopedia Brittanica.—T. LAWRENCE, 62 *West Thirty-sixth street, N. Y.*

RELATIVE to the above query, S. M., of Trumbull Co., O., writes us as follows: "Several years since I bought a pair of pure Black Spanish chickens. They proved to be splendid layers, but unfit for table use, because the flesh and bones were so black. I disposed of them all but one pullet. My other chickens were pure white. When I raised chickens the next summer, some had pure white plumage and blue flesh and bones. I had one of those left when I procured pure Light Brahmas, a year ago last spring. I have killed several chickens this fall, whose skin, flesh, and bones are spotted, and others darker color all over. The eggs which J. H. S. purchased were not pure or else his chickens have a Black Spanish mixture. The plumage of the above-mentioned chickens, when alive, have the markings of the pure Brahmas. Mine at least have."

E. C. C., Falls City, Neb., writes, "that if J. H. S. will examine his chickens closely, he will find they are mixed with the Guinea fowl, but as they are eatable he need not be afraid of the black bones. A few years ago there was scarcely a flock but what was mixed in this way, by the coupling of the Guinea cock with the common hen, in this neighborhood. In some of them the bones would be all black, in others there was one or two, or any number of bones colored. By getting rid of the Guineas and getting new breeds we got rid of the black bones."

POULTRY NOTES AND QUERIES.

Chicken or Duck Coops and Inclosures.—We give herewith a plan for chicken or duck coops with inclosures, which we consider very convenient fixtures in any poultry yard. These coops are made so that they are movable, and can be constructed by almost any one conversant with the use of a hammer and nails; any refuse boards and odd pieces are all that are necessary to build them. The coops can be set in any desired position, then fenced in with boards 12 to 16 inches wide, as shown in the engraving, with stakes driven in the ground on each side of the boards, at intervals, to keep them from falling over; put up in this manner the stakes can be withdrawn at will and the inclosure moved as often as desirable. For partitions our engraver has shown a light wire mesh, which is easy to handle and can be procured at a very small cost. This is fastened into position by pinning down with wooden pins, which, in this way, is made also movable. Ducks kept within this inclosure need only a pan of water to paddle in until they become of sufficient age to leave the mother-hen or duck.

Of Whom Shall we Purchase Fancy Poultry and Eggs?—This has been a question repeatedly asked the past year. Those desiring to purchase eggs of fancy fowls, or the birds themselves, being fearful they would become victims of humbugs and frauds, ask the question. In all cases we have referred such to the advertising columns of the RURAL NEW-YORKER, and we have as yet heard of but one single complaint from this reference. That one isolated case, on investigation, proved only a misunderstanding on the part of the complainant. We make this statement with some pride because of the character of our advertisers and of the advertisements that have appeared in the "Poultry and Stock Department" of the RURAL during the past year, and herewith name some of them and the States where they belong:

New York.—J. Y. Bicknell, G. H. Warner, E. C. Bordwell, L. Burlingame, W. Hanks, W. R. Hills, S. R. Jones, G. H. Leavitt, F. H. Loucks, Wm. Pomeroy, G. R. Hawley, E. C. Comey and E. A. Rowe.
New Jersey.—H. Hales and I. Van Winkle.
Pennsylvania.—D. W. Herstine, J. Krause, D. B. Oates, J. Stone and H. F. Stowell.
Massachusetts.—E. Harlshorn & Son, John S. Ives, Ira B. Sampson and Philander Williams.
Ohio.—C. Floding, Little Man and E. Riddle.
Connecticut.—S. J. Bestor and Asahel Tanner.
Wisconsin.—A. H. Howard and W. E. Stitt.
Iowa.—C. E. Phelps.
Rhode Island.—W. R. Wells.

Hens Eating Eggs, Etc.—Some month or two since I saw an inquiry in your valuable paper with regard to preventing hens from eating their eggs. I am sure that people teach their chickens to eat eggs by throwing the egg shells among the scraps of food that is given them. In this way they get the taste of the cooked egg, and then when sitting they eat them rather than leave the nest to get other food. I have killed many a hen for this when it was really my own or the cook's fault. I now take the shells carefully from the scraps at the table and the slops in the kitchen and throw them in the fire. If not entirely burned when I take the ashes up I throw them back again. Always keep a heap of ashes from the kitchen in the chicken yard, they like it and will go to it immediately after eating. This with an occasional sprinkling of lime, will keep them healthy and make good firm egg shells.—OLD FORTY.

White Dorking Bantams.—INQUIRER, Glen's Falls, N. Y.—We do not recollect to have seen any of them at the poultry exhibitions, therefore cannot give you any information upon the subject.

Weak Fowls.—Fowls that show lassitude or weakness may be strengthened by giving a decoction of citrate of iron mixed with water in such proportion as to give it a very perceptible taste of iron.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

Recipe for Cough Drops.—A lady sends the RURAL NEW-YORKER the following: Tincture of blood-root, two ounces; tincture of lobelia, one-half ounce; oil of spearmint, ten drops; sale molasses, two and one-half ounces. Shake well before using. Dose, one teaspoonful.

Remedy for Chills and Fever.—G. W., Macon, Ga., writes the RURAL NEW-YORKER that he has cured cases of two or three years' standing with two doses, given on separate days, of (for an adult) one tablespoonful of Mandrake or May Apple, (*Podophyllum peltatum*) root. He says, "Grind it in a coffee mill. Clean the mill with corn meal. It can be made into pills with a small amount of flour."

Remedy for Burns.—WM. H. LEWIS sends us the following which he has "thoroughly tested and knows to be good:"—One ounce air-slacked lime and three ounces hog's lard; mix thoroughly and apply to the burn. It will afford immediate relief and when applied to a fresh burn will heal the sore and leave no scar. We may say that whatever will *exclude air* from a burn will give relief.

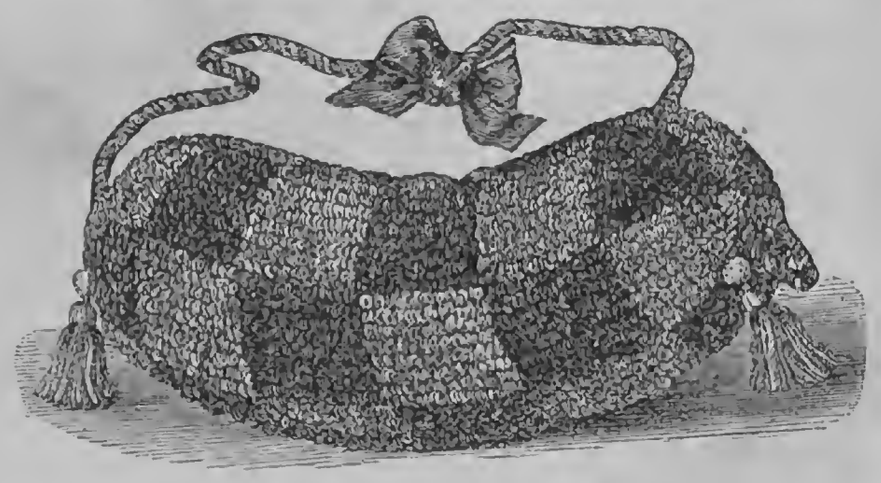
Washing the Hands in Turpentine.—In the RURAL NEW-YORKER, Nov. 18, 1871, we published a statement that what is called lead-paralysis, common among painters, is chiefly produced by washing the hands in turpentine. A Georgia correspondent writes us if, instead of turpentine, *oil* is used, it will answer every purpose, and no ill effects will follow. We thank our correspondent for the information.

Nervous or Sick Headache, says a correspondent of the Cincinnati Gazette, "Can generally be cured if taken in time, by the use of bromide of potass. When the attack is felt to be coming on, take twenty grains of the bromide dissolved in water; go to bed and sleep two or three hours and you are cured. Sometimes it may be necessary to repeat the dose which may be done in two or three hours. The bromide is perfectly harmless, unless taken in very large doses. There will be no danger in taking twenty grains every two hours, until you have taken three doses. But most cases, if taken in hand early, will need only one or at most two doses."

Domestic Economy.

"SMALL THINGS" OF THE TABLE.

Remnants of Food.—A DISH that has no more than the *appearance* of palatableness has at least that much to recommend it. Nicety of appearance is inexpensive and within the reach of the humblest. We have in mind special reference to the serving of the remnants of food, which, above all dishes, require dainty arrangement. If cold meat is



A CROCHET SOFA PILLOW OR BOLSTER.

to be served, it should be thinly sliced and laid on a clean platter. Remnants of food should never be put away in gravy, if intended to be eaten cold. Warmed-up vegetables, stewed fruits, sauces, puddings, etc., should appear on the table in clean dishes, and not in the dish they were sent from the table in, unless cleaned. Some housewives send warmed-up food to the table in the same dish in which they were warmed, which is always untidy. A dish which is presentable at table should not be subjected to the heat required in cookery, excepting, of course, pie and pudding dishes.

The Use of Side Dishes, so sparingly indulged in by many, is productive of real and valuable economy, which ought to outweigh the objection of "having so many dishes to wash." The tiny plates that used to be placed at each sitter, to save the table linnen from beverage stains, are out of date, because nobody now-a-days, except very oldfashioned people with old-time habits, and boors with very coarse habits, set the tea or coffee cup anywhere but in its saucer. On those same little plates, however, or others very like them, butter is served for each individual,—which is the only wholesome, proper and economical way of serving that rather expensive article of diet. And as with butter, so with many other dishes when separately dished—more enjoyable in the eating, and insuring nicety to whatever may be left untasted.

A Word on Carving.—Unless the carver is a prince in the business, he will sometimes cause the table-linen in the neighborhood of his platter to be soiled from bits of meat or spatterings of gravy. To keep his end of the table neat, always spread a very large napkin or damask towel under the meat-platter. It may be removed at the end of the course.

Straw Table-Mats may be cleaned by washing them in washing-soda water. Lay them out in the sun, and, when nearly dry, press them between cloths or papers.

ODDS AND ENDS.

Sofa Bolster—*Knitting or Crochet in Loop or Plush Stitch.*—How to make a sofa pillow, or bolster, like the accompanying illustration, is sufficiently evident from the picture. They are exceedingly comfortable to place under the neck when lying down, and one frequently sees them among travelers, who place them back of the neck while resting in the cars.

Polishing Irons.—Inexpert Laundress, Williamsville, N. Y., writes:—"I furnished myself with a smoothing iron, one finished with a nickel-plated bottom, and constructed so as to heat on the upper side; but as yet I am not able to use it to my satisfaction. Any information on the subject will be gratefully received." The nickel plated smoothing iron you refer to, is used precisely like any other flat iron, dispensing with any other—so the dealers say. We have had no personal experience with it, and invite such as have used it satisfactorily, to report the method employed.

Washing Flannel.—Do all housekeepers know that flannel should never be rubbed on a board, but as loosely as possible in the hands? The harder it is rubbed the more the dirt works in instead of out. Flannel should be washed and rinsed in warm water and dried where the wind will not strike it much. Any one following the above directions need have no trouble about flannel shrinking.—A. S. G.

The Sportsman.

A GOOD "VARMINT" DOG.

SOME one asks in the RURAL NEW-YORKER for information as to how to select a good *varmint* dog. From early boyhood I have had a passion for hunting at night for such game as can better be found at that time than in daylight. These burglarious rascals are very destructive in some localities, especially the raccoon and mink. The opposum is, however, quite harmless and innocent, but by far the best night game for eating. Well cooked, to our taste, the meat is very delicious. I have had several excellent dogs for all night game—of different breeds. In fact, a mongrel breed is better for this purpose than any full blood of any breed. The best dog of the kind I ever owned was a shaggy rat-terrier, crossed upon the common dog. He was as true as steel in hunting all kinds of varmints, and for "treeing" squirrels I never knew his equal. The next good dog I had was a half hound, crossed upon a large "flee." Many's the happy hour I have spent with old "Sounder." I have now a black dog, being half setter and half "flee." The father was a thorough breed setter, the mother a common mongrel "flee." He is six years old, and has caught the present fall and winter nearly forty coons, opossums, ground hogs and minks. His sire was one of the most wonderfully sagacious dogs I ever heard of. Stories of his sagacity would seem so incredible that I forbear to mention any of them.

As before stated, I never saw a thoroughly good varmint dog that was of any pure breed, wholly. Mongrel dogs are far better. The reason is that a thorough bred is more apt to hunt for his special game—for instance, the hound for fox, deer or wild-cat; the setter for birds; the spaniel for water folw, &c.; while the mixed breed is ready for training after rabbits, coons, ground hogs, opossum, &c.

Your correspondent asked for a thoroughly good rabbit and varmint dog combined. I never saw such a dog, nor do I believe the two traits could, or should be successfully combined. If I had a varmint dog that would run rabbits at night, I should soon get rid of him, if I could not break him of this bad habit. The only way to secure a good varmint dog is to train him upon the game you desire him to hunt; and he should be hunted with frequently. If he is inclined to chase other game at night, he must be called in from the race immediately, and flogged as much or as little as his offense merits—always being careful to study the temperament of your dog, for they, like children, are controlled best by giving them only so much whipping as their various temperaments will bear. In other words, some children require more flogging than others; so with dogs. Too much, and sometimes too little, has spoiled many an excellent child, and not less surely, many an otherwise excellent dog. My advice, on the whole, is to procure a half-breed of some kind—say half rat terrier of the large, long-haired breed, and half hound. Or, if more convenient, half ratter and half common dog of any kind, and train him carefully, and your correspondent will then have an excellent "varmint" dog.

WOODMAN.

NOTES FOR SPORTSMEN.

From a Young Sportsman.—I have watched the Sportsman's Department in the RURAL NEW-YORKER, and am very much interested in it. I think that all lovers of sport might make it a matter of amusement as well as benefit. I should like to hear from that gentleman who gave us a recipe for catching foxes and promised to write again.

I am not much of a sportsman, for the reason that I never had any chance to learn. Last year I caught forty muskrats; this year I have not had any time.—NED, *Hyde Park, Vt.*

Bird and Rabbit Dog.—In answer to "A Constant Reader's" inquire, "What breed of dogs to cross to obtain a good bird and rabbit dog," I would say, get a Setter for birds, a Hound for rabbits, and no "crossed" dog for anything.—SPORTSMAN, *Hanover, N. H.*

New Publications.

THE SUN FOR 1872.

TO ALL WHO CAN READ.

The New York Weekly Sun Doubled in Size Without Increase in Price.

With the beginning of 1872 THE WEEKLY SUN has been doubled in size. It now contains eight pages instead of four, making it equal in dimensions to any other weekly secular journal published in this country. At the same time its price has not been increased. It will be furnished to subscribers at the uniform rate of one dollar a year for each copy. To this rate no exception will be made and no reduction will be possible, either to clubs or agents. Every subscriber who sends a dollar will receive a copy for a year.

While THE WEEKLY SUN thus furnishes as much reading matter as other papers published at double or treble the price, it will contain new features which will add greatly to its interest and value as a family newspaper. Its independence of opinion and its unqualified hostility to Tweedism and Grantism, and every form of public robbery, bribery and corruption will be maintained, while in point of political news its readers may rely upon always receiving the most accurate as well as the freshest intelligence that can possibly be obtained. The enlargement enables us also to devote additional space to valuable agricultural intelligence, and to print interesting stories and romances more extensively than hitherto. For miscellaneous reading presenting the quaint and humorous aspects of life, and for useful information respecting not only what takes place in this metropolis and this country, but in all other parts of the world, we now have ample room.

In its new form THE WEEKLY SUN is the cheapest paper of its class in the United States; and we appeal to such of our readers as approve its ideas and objects, and find it interesting and valuable, not only to renew their own subscriptions, but to recommend the paper to their friends and neighbors.

This year is destined to be a memorable one in the history of the country. We are on the eve of a most significant Presidential election, and political movements will for many months be watched with unusual interest. As a journal, free from the trammels of party, THE WEEKLY SUN will continue to uphold the principles of true republican government. Its readers are invited to sustain it in that work. The truth, irrespective of party prejudice or official influence, will always be told in its columns.

Terms of the Weekly Sun.

A journal containing eight large pages, published every Wednesday morning—To all mail subscribers, whether single or in clubs, *one dollar a year each*, always in advance.

DAILY SUN, by mail, **50** cents a month, or **$6** a year. SEMI-WEEKLY SUN, by mail, **$2** a year.

MAP

OF THE

PRESBYTERIAN CHURCH.

THE NEW YORK EVANGELIST is just issuing a fine Map, giving the

BOUNDARIES OF EVERY

SYNOD AND PRESBYTERY

in the United States and Territories, and indicating the chief centers of influence of the re-united Presbyterian Church.

Drawn by the Rev. S. D. ALEXANDER, D. D., and carefully engraved on copper, and printed upon a sheet 32 by 40 inches in size, it gives information at a glance which is not elsewhere brought within the reach of any of our ministers and laymen. Those who have examined it pronounce it

"Just what is Wanted,"

and essential to every one who wishes to be well informed of the progress of the Presbyterian Church in this country. The chief

Geographical Lines, Rivers, Cities,

and, indeed, most places where Presbyterianism has a firm footing, are clearly indicated on this Map, and the array is at once grand and impressive. Issuing from the flourishing old cities of the Hudson and Delaware, the great current of Presbyterian emigration holds its original midland position as it flows westward, a noble river of light, not inaptly pictured in our Memorial vignette.

We do not exaggerate when we say that the Church is now so large that

This Map is a Necessity,

without which no one can speak of its minor divisions and bodies with certainty and intelligence.

It thus meets a real, and not a fancied want, and no pains or expense have been spared, so far as time has permitted, to make it perfect, and valuable to all who receive it. The first object in view has been to diffuse correct information of our Church—*of all its parts.* Such a knowledge not only diffuses a due *esprit de corps* and a just sense of power and responsibility throughout the whole body, but it must precede all real interest and sympathy, and wonderfully helps forward intelligent and harmonious action.

This Map has been issued

ESPECIALLY FOR THE SUBSCRIBERS TO THE EVANGELIST,

and is now sent out to them, accompanied with the good wishes of the season. All who wish it may receive it on the same terms as our old friends and subscribers—*i. e.*, by sending us their names accompanied with $3 for a year's subscription. We trust that our thousands of old subscribers will be gratified, and that we shall find many new ones who need not only the Map, but THE EVANGELIST also. Those who interest themselves in sending us new subscribers, may remunerate themselves for their labor by retaining $1 for each new name sent with the cash. The Map will invariably accompany the first papers sent.

Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk. ☞ Liberal Premiums to all Club Agents who do not take free copies. Specimen Numbers, Show-Bills, &c., sent free.

Advertising.—Inside, 75 cents per line, Agate space; Outside, $1 per line, each insertion. For Extra Display and Cuts, a price and a-half. Special and Business Notices, $1.50 and $2 a line. No advertisement inserted for less than $3.

SATURDAY, JANUARY 13, 1872.

THE NEW STYLE RURAL:

FAVORABLE VERDICT OF THE PEOPLE.

FROM the moment we decided upon and announced (some months ago) a change in the style, page-size and price of this Journal, we were confident it would meet the approval of nine-tenths of our subscribers, and also that our circulation would thereby be materially increased. And yet, though sanguine of success, we confess that we were somewhat nervous and anxious as the time approached for sending forth the first number of this year, with such a decided change in style—in the illustrated heading, particularly: for, albeit, the best judges among journalists pronounced the new-style RURAL a vast improvement, we feared that its old friends might not "see it in that light." But, although the improved paper has not been "out" a week at this writing, whatever fears we entertained are already dissipated—for the RURAL, in its present form and style, is being received most favorably by its patrons and the public. Indeed, our most sanguine hopes are more than realized, as, so far as we have learned, every one who has seen No. 1, Vol. XXV., hails the change with pleasure, and proclaims it a success.

Of course we have not yet heard much from the country in regard to the change—except from callers at publication office—but our daily receipts on subscription are far greater than during corresponding periods of former years—and we anticipate a still greater rush when the new paper shall have reached distant sections of the country and been examined. Enough is known already, however, to satisfy us that the change will prove popular, and we can safely say "Eureka" in regard to the "New Departure" of the RURAL NEW-YORKER.

—We are not insensible to the favors we are now-a-days receiving from both People and Press, and cannot close this article without returning grateful acknowledgments for the influence and cordiality manifested in behalf of the enterprise which is our life work.

LEGISLATION FOR FARMERS.

LEGISLATURES are now in session. These later days it has come to pass that whatever legislation is asked for by agriculturists is too often treated with contempt or ridicule. It is rarely the case that a country member of any of our State legislative bodies proposes any measure looking to the farmer's interest, that he is not made the butt of ridicule and the target for jibes and jeers by the seedy politicians who have a sufficient smattering of law, garrulous tongues, an infinite amount of brass, "taking ways," and the pliancy "for a consideration" that enables them to get the necessary "influence" to arrive at the dignity of "law makers." The trouble is they "see no money" in these measures which appertain to Agricultural Progress. It is only when they are assured that if they do not recognize the validity of the demand upon their magnanimity by right action upon such proposed measures, there will be danger to the political supremacy of the party in power, that they come down from their pedestals and cease their tantrums.

Legislators, many of them, seem to have no idea that they are elected to fatten on jobs and promote special legislation, rather than act for the general welfare. Each man has his bill, big or little, which he is bound to "get through;" and he has one eye out for political promotion. It is this one eye that agriculturists should labor to fasten upon their own interests. It is the only one that is available to them. And they should not hesitate to use it. With some legislators money may cover both eyes; but the Reform Movement, if properly backed up and insisted upon by the people, is likely to induce the caution that will result in wakefulness. Let farmers meet, consult and determine upon measures necessary to the protection and promotion of their interests, and demand the attention of legislators thereto. There should be no cringing nor lack of pushing in this matter. The time for petitions has passed; it is at hand for instruction and demand. These men are servants, not sovereigns. They are representatives, and hold their places by a tenure which is easily destroyed. They should be made to realize this.

COUNT CAVOUR, THE GREAT ITALIAN STATESMAN.—[See next page.]

RURAL NOTES AND QUERIES.

Comparison and Conclusion.—We remember once hearing a man assert that his corn crop was the most profitable one of the year. We asked him how he knew and to give us his figures. He had none. We then took his own estimate of costs of production and subtracting the aggregate from the market value of the crop, showed him that he was "going it blind," and that his corn crop was really the most unprofitable one he had grown. There are many such men, we are sorry to say,—men who do a very large amount of poor guessing in relation to their business. The farmer who can look at his carefully-kept accounts with his crops this first day of the year and know what their comparative profits are, is both fortunate and wise. And the man who is "going it blind," guessing his way through the world, is quite likely to be unfortunate and is foolish. Now is the time for making comparisons and arriving at conclusions that shall guide the work of 1872.

Help for Wisconsin Farmers.—GOV. FAIRCHILD of Wisconsin, has issued a circular, calling upon the farmers and manufacturers of Wisconsin to contribute seeds and implements in aid of the sufferers who wish to cultivate their land in the burned districts of Wisconsin and Northern Michigan. Grass seed is needed by the 15th of February; spring wheat, rye, oats and garden seeds by the 15th of March; potatoes by April 15. Probably 1,000 plows will be needed; also wagons, harrows, and other farm tools. Contributions can be forwarded to A. J. LANGWORTHY, Gen. Ag't Milwaukee and Green Bay Relief Committees, Green Bay, Wis.

The Liberal Club of New York at its last meeting was addressed by ALFRED BRISBANE, upon the "Organon of Thought and Investigation." He claims that we have yet to discover, and apply, the laws which govern the universe of thought as we have discovered and applied the laws which govern the physical universe. Until we do, society and all attempted regulations of it will result in confusion, chaos.

A National Agricultural Convention is called by the Commissioner of Agriculture to meet at the Agricultural Department, Washington, D. C., Thursday, Feb. 15, to take such action regarding agricultural interests as shall be deemed expedient. It is to be composed of representatives of Agricultural Colleges, State Agricultural and Horticultural Societies, and State Boards of Agriculture.

No More Fruit Lists.—The Illinois State Horticultural Society, at its recent meeting, decided not to spend any more time upon the revision of fruit lists for that State, nor to publish any more, but leave individuals seeking information to consult the experience of growers in the locality where they are to plant and be guided thereby. That is most sensible.

The Dollar Weekly Sun has been doubled in size with no increase of price, as will be seen by the publisher's announcement in this paper. The Weekly Sun, like its prototype, the famous Daily Sun, "shines for all"—but just how it can shine so largely, at such a low price, will be a conundrum to many people.

The N. Y. Evening Mail—among the best and most enterprising of New York daily newspapers—opens the new year by issuing a Weekly Edition. It is a beautiful quarto, admirably filled, and neatly printed. We wish it abundant success—a long and prosperous career.

That Beet Sugar Manufacture is profitable in California, seems apparent from the fact that both the Companies experimenting have leased additional land, and propose to extend the area cultivated in beets to 1,000 acres each, the coming season.

Ginseng in North Carolina.—We see it stated that 80,000 to 100,000 pounds of ginseng have been dug from the mountains of Cherokee Co., this past fall, and sold at 25 to 27½ cents per pound.

THE SEASON.

Red Wing, Minn., Dec. 20.—Early winter; 21° below zero Dec. 4 and 5; 40° above zero the 6th. Little snow. Wheat crop light but coming in freely at $1.10. Timothy hay $10; oats, 30c.; corn, 50c.; pork, $3 and $4 per cwt. Very dry the last 4 months.—D. H. T.

Sp. Seaville, Cape May Co., N. J., Dec. 27.—We have had some unusual cold weather for this latitude. Dec. 21st, at sunrise, the thermometer stood 3° below zero; at 9 o'clock P. M., 7° below, after which it grew warm. It has been wet for two months. Dec. 19th three inches of snow; all gone 23d. Wheat looks well, selling at $1.50; corn, 75c.; oats, 50c.; potatoes, 50c.; sweet potatoes, 75c.; butter, 30 to 45c.; eggs, 30c.—W. D.

Martinsburg, Berkley Co., Va., Dec. 26.—Summer crops were inferior; corn about half a crop, in consequence of drouth. Wheat crop good in quantity and quality; peach and apple crops excellent; also small fruits. Wheat $1.50 to $1.50 per bushel: corn, 90c. to $1 per bushel: rye, $1; oats, 50c. to 55c.; potatoes, $1.25 to $1.30; apples, $1.25 to $1.50 per bushel; pork plenty and cheap, ranging from $6 to $7 per cwt.; beef, $6 to $8 per cwt.

RURAL BREVITIES.

THE horses of New York City are valued at $2,000,000.

IN South Berham, Cal., fine squashes sell for $3 to $4 per ton.

SEE advertisement of J. M. BACHELDOR'S Rural Home School.

MINNESOTA is importing broom corn instead of producing it as she ought to.

THE Monthly New England Farmer ceased to issue with the December number.

ILLINOISANS are agitating the subject of permanently locating their State Fair.

J. P. S., Leavenworth, Kan., is informed that a School of Mines is, we believe, established at Rolla, Mo.

THE Kansas Farmer is now issued semi-monthly instead of monthly. It is an excellent journal, and we are glad it is progressing.

THE Michigan State Poultry Association is to hold its first annual exhibition at Detroit, Jan. 25–30, 1872. See advertisement.

MANY of the farmers of Minnesota are asking of the Legislature a law to restrain stock from running in the public highways.

THE New York Rural Club holds its annual meeting and election January 9th. There is to be a paper, a dinner and a good time.

GRAIN valued at $2,000,000 is said to be stored in warehouses along the Willamette River, Oregon, most of which is to be shipped to Europe.

IF you want laborers on the farm, or elsewhere, see advertisement of the Commissioners of Immigration, Castle Garden, New York City.

REPORTS of the doings of Agricultural meetings, if condensed, and of the elections of Industrial Societies, will receive attention, if forwarded to us.

MARSH lands suitable for cranberry culture, near Berlin, Wis., have advanced in value from $1 or less, to $100 per acre. Some forties are held at $25,000.

THOMAS S. PLEASANTS, Petersburg, Va., died Dec. 16. He was a well known agricultural writer and editor of the Rural Messenger from its commencement.

A. BRYANT, Jr., Princeton, Ill., sends us his price list of fruit, evergreen and forest tree seeds; also wholesale price list of nursery stock. He is a reliable dealer.

F. W. POTTER, Wilmington, N. C., asserts that DAVID SANDERS, nine miles from the city, grew melons the past season that weighed 76 and a few that weighed 80 pounds.

SOME one suggests that Agricultural Societies should offer premiums on hay, it being a most important crop. It is a good suggestion, and now is the time to act upon it.

IT is asserted that one who understands the business can make a nice thing stocking the small lakes formed by the irrigating ditches of Colorado with black bass.

JOHN BOSHEN, Ottawa Co., O., has a correspondent states, a swarm of bees of 1871, weighing 114 pounds all white clover honey. How does he know it is all white clover honey?

WILLARD'S *Practical Dairy Husbandry* is now ready for delivery to agents. Copies sent, postpaid, on receipt of price, ($3,) to those residing where there are no agents. Address this office.

The Publisher's Desk.

PUBLISHER'S SPECIAL NOTICES.

Notice to Everybody.—Now is the time to form Clubs for the New-Style RURAL NEW-YORKER. It is the most Popular Paper in the land, and everybody can get up Clubs and secure Premiums. Thousands of our subscribers can do this if they will, for hosts of people only need an invitation to take the paper. If the four or five thousand persons who get their papers in wrappers (at post-offices where only one copy is taken) will make a little effort, each can form a Club, secure a Premium, benefit his neighbors, and also receive his own paper earlier—as Club packages are not delayed in the mail like single papers. Almost everybody can make it pay to help circulate the RURAL. Try it, Reader, and see if it is not profitable.

Our Premiums Approved.—We are in receipt of many letters from recipients of Premiums, praising the articles they have secured—such as the U. S. Watch Co.'s Watches, Reed & Barton's Plated Ware, Weed's Sewing Machine, the Continental Washer, (very strongly approved,) Universal and Novelty Wringers, &c., &c.

Premiums Sent Promptly.—We send all Premiums as promptly as possible. Most articles are sent, or ordered sent, within twenty-four hours of receipt of request. Those not receiving their Premiums in a reasonable time should advise us of the fact.

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Our Premiums.—Agents entitled to Premiums are requested to designate what they prefer and notify us *how* and *where* to send—whether by Freight or Express, if articles are not mailable.

No Traveling Agents are employed by us, but any person so disposed can act as Local Agent, on his or her own authority, and secure premiums, etc.

All Remittances by *Draft*, P. O. Money Order or Registered Letter are AT OUR RISK.

BUSINESS NOTICES.

THERE IS NO NECESSITY

For poor bread, rolls, biscuits or pastry, when housekeepers use DOOLEY'S YEAST POWDER. The perfect purity of the articles entering into its composition insures the same results each time, which deleterious Baking Powders cannot. We challenge comparison with any Yeast Powder in market, knowing full well that no other similar article is put up with the same care and precision as ours. We give good weight, and guarantee quality and quantity as represented. For sale at retail by Grocers in quantities to suit.

COLLINS' CAST CAST-STEEL PLOWS

For $5. For information how to obtain them, address COLLINS & CO., 212 Water St., New York.

Whitcomb's Asthma Remedy.—"A single bottle gave relief."—J. D. CUSHING, *Toledo, O.*

Social Topics.

COUNT CAVOUR.

COUNT CAMILLO BENSO DI CAVOUR, the great Italian Statesman, was born in 1810 in Turin, the capital of Piedmont, that virile Province that has done so much towards the unity of Italy. Italians, and the world, will never forget the great genius who laid the foundation of that dream of the Italian poets and patriots, which has since become an accomplished fact, the unity of the Kingdom of Italy. Some men accomplish marvels in a brief bit of a short life time. CAVOUR was one of these. In 1842 he returned to Italy after profound and protracted study in England. Ten years later, when thirty-eight years of age, he was elected for the first time to the Legislature. Two years afterward his friend, MASSIMO D'AZELIO, proposed to the king that he should join the Cabinet as Minister of Commerce. "Take care," replied VICTOR EMMANUEL. "If CAVOUR enters the Cabinet he will soon be master of it." The king was right.

One by one, under the influence of that great mind which, for a series of years, had been stored with State craft, the objects leading up to the aim of all Italians ambition, were accomplished. All in all, CAVOUR was the greatest statesman of modern times, being considered even superior to BISMARCK. He combined breadth of view, marvelous diplomatic adroitness, financial foresight, and executive ability. He was a great worker, during the Austrian war employing himself sixteen hours a day. While this war lasted he was the chief of five departments, including the War and Marine, and it is thought his excessive labors shortened his life. There was no Italian indolence in CAVOUR, at least; he was a man of the old Roman type.

Only a few years have passed over the grave of CAVOUR, and the court of the king he served so well has been removed to Rome. His name is still fresh and green in the hearts of his countrymen, and is honored and respected by all lovers of freedom in America. Rome, by the great work CAVOUR performed, is now the home of freedom, and Italy is united once more.

For many of the facts embraced in the preceding sketch of Count CAVOUR, we are indebted to his countryman, Capt. CESAR MORENO, the Asiatic Traveler and Navigator, now a resident of the United States.

GRANDMOTHER'S LESSON.—(See page 43.)

SCIENCE FOR WOMEN.

AT Antioch, Oberlin, and several other American colleges, women have for years been pursuing the same class of studies as the men. Two lady members of the same class with the writer, took as high a stand as any of the gentlemen. The belief that women are not capable of the same intellectual development and strength as men is rapidly disappearing. It is found that the weaker sex have even more aptitude than the stronger for some branches. A class for the teaching of natural science has been formed at the College for Women, at Hitchin, England. Until very recently, classics and mathematics were almost exclusively the subjects brought under the consideration of the students, but a demand for the teaching of the natural sciences has arisen, and under the advice of Prof. LIVEING, of Cambridge, the subject of chemistry has been taken to begin with. Mr. HICKS, Natural Science Lecturer at Sidney Sussex College, Cambridge, gives one lecture a week, illustrated by experiments; and Mrs. WHELPDALE, a lady who has had experience in teaching the subject, also gives supplementary teaching once a week. She works under the direction of Mr. HICKS, and acts as a tutor preparing for the lectures. The necessary apparatus has been provided by the college.

GRATIFYING CHILDREN'S CURIOSITY.

THE curiosity of children is not a fault, and therefore we must never censure them for asking questions, or lead them to think that we consider the disposition to do so a fault on their part; but, on the other hand, this disposition is to be encouraged as much as possible.

We must remember that a child, when his powers of observation begin to be developed, finds everything around him full of mystery and wonder. Why some things are hard and some are soft; why some things will roll and some will not; why he is not hurt when he falls on the sofa, and is hurt when he falls on the floor; why a chair will tumble over when he climbs up by the rounds of it, while yet the steps of the stairs remain firm and can be ascended without danger; why one thing is black, and another red, and another green; why water will all go away of itself from his hands or his dress, while mud will not; why he can dig in the ground, but cannot dig in a floor—all is a mystery, and the little adventurer is in a continual state of curiosity and wonder, not only to learn the meaning of all these things, but also of desire to extend his observations, and find out more and more of the astonishing phenomena that are exhibited around him. The good feeling of the mother, or of any intelligent friend who is willing to aid him in his efforts, is, of course, invaluable to him as a means of promoting his advancement in knowledge and of developing his powers.

Remember, therefore, that the disposition of a child to ask questions is not a fault, but only an indication of his increasing mental activity, and of his desire to avail himself of the only means within his reach of advancing his knowledge and of enlarging the scope of his intelligence in respect to the strange and wonderful phenomena constantly observable around him.—*Jacob Abbott.*

THE effect of backbiting is a reaction; backbiters swallow their own words.

NIAGARA FALLS EQUALED IN INDIA.

COL. HAIG, in his account of his journey to discover the best road to Jugdalpoor in the Bastor country, thus describes the falls of Indravati, which must very nearly come up to those of Niagara:—"The falls are certainly one of the grandest sights in India, though from their inaccessible position few will probably ever see them. The river was in flood within ten feet (according to the people on its banks) of its extreme hight. About four miles above the falls (which are a mile below the village of Chitrakot) the Indravati is joined by the Narnagi, a river of about three-fourths its size. The united waters of the two, swollen by the heavy rains to a volume which I reckoned at about thirty millions cubic yards per hour, descend perpendicularly a hight of ninety-four feet over a ledge of sandstone rocks, about 500 yards in length, and slightly curved in place at one end so as to give the fall something of a horse-shoe shape. The rich coloring of the water, varying from a reddish brown at the crest of the falls to a brilliant ochre where more broken in its descent, adds much to the beauty of the sight. The lower part of the fall is hidden by the clouds of spray, and in damp weather, immediately after a shower, when the air is loaded with moisture, these rise even higher than the crest of the falls, fill the whole chasm below, and even hide the country on the opposite bank from view, disclosing only at intervals the final plunge of the immense mass of water into the gulf beneath; the scene then becomes one of the wildest and grandest imaginable."

ALEXIS, the Grand Duke, indulged in a little joke at the navy yard ball at Brooklyn. He danced with two bulky dowagers, and then walked over to where a young lady sat who possessed a sylph-like form, and solicited her hand, saying:—"I desire to dance with somebody of my own weight.

NEVER jump at conclusions. It don't pay.

Our Story-Teller.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker, BY TWO WELL-KNOWN AUTHORS.

I.—The Coming Storm.

[Continued from page 26, last No.]

MARGARET HEATHERSTONE was fast developing into a firm, self-possessed, *just* woman; and yet her relatives had no more idea of her growth, no more thought that the young mind considered by them so plastic and thoroughly teachable, had, to all intents and purposes, outgrown the dominant institution of the age, than they had that the result of the howl about secession would be the death-blow of the "system," and the desolation of the beautiful South. Col. HEATHERSTONE had finished his breakfast, and as MARGARET passed the hall door on her way to the large, airy, straw-matted dining-room, she noticed that he sat in his favorite lounging chair on the piazza, smoking. "Good morning pa," said she, in loving tones, going up softly behind him and placing both little hands over his eyes. "How did you dare to eat breakfast without me this morning?"

"To tell you the truth, dear, I forgot entirely that I had a daughter. I don't know but these niggers will make me forget that I have a soul to save after a while. Torments! If there was any way under the heavens that the work here could be performed by other means, every slave I own in the world might have their liberty, for all I should care."

"But *isn't* there some other way, pa?" and every bit of color forsook MARGARET'S face as she waited for her father's answer.

"Not for me, individually. The only way I could relieve myself from these crushing cares would be to sell out here and go North, and sometimes I am almost tempted to do it. However, such a thing can't be thought of for a moment now, on account of the trouble that seems to be fast approaching a climax. You see, MAGGIE, the Northern States have no right to interfere with our domestic institutions. This I realize, and am prepared to fight it out to the bitter end; still I am most infernally tired [I beg your pardon, little girl] of being rasped to death daily by a set of idle, vagabond niggers."

"I should like to go North, pa," whispered MARGARET. "I wish you would sell out now before it is too late. I suppose you would have to sell the negroes, of course, but then you could be careful to give them a kind master, and we could take HANNIBAL and FANNY and SUSAN, and one or two more house servants, and—"

NOW MARGARET'S cheeks were all aglow. She had never dared say so much to her father before, and now he was listening quietly, betraying not the first symptom of impatience. "Perhaps," whispered Hope, "You may be able to carry out this scheme"—and the excited girl went on with her Northern air castle. Col. HATHERSTONE had heard but two words of the last sentences, and these were, "too late." What could the child mean by these strangely ominous words? And so occupied was he with the train of thought so vividly presented that for a moment he entirely lost sight of the originator. MARGARET kept on talking. Finally he said slowly, and as if awakening from a protracted dream:

"What do you mean by too late, MARGARET?"

"Too late? Did I say too late?" She inquired. "How too late—what about too late?" And now the tones were full of annoyance, as she clearly understood that her father had not heard a word she had said about the North.

"This was it," slowly repeated the Colonel. "I wish you would sell out here before it is too late."

Again MARGARET's cheeks were pallid. Again the poor little heart beat tumultously. , "Too late?" Those words had escaped her before she thought.

"I probably meant what I said," answered MARGARET, taking her hand from her father's shoulder, and leaning against the side of the piazza where she could look him squarely in the face. MARGARET HEATHERSTONE was a brave girl. Even then, once having made up her mind that she was right, all Virginia would not have been able to unsettle her. MARGARET had the stuff out of which martyrs are made; and here let it be said of the State from whence sprang so many of our noblest specimens of manhood and womanhood—that for pluck and courage—Virginia was always ahead—and for endurance in her hours of trial, notwithstanding her hot-house education, she was never surpassed and scarcely equaled by any country in the history of the world.

"Have you no eyes, my father?" continued MARGARET, her fine eyes illuminated by the light of prophesy. "Are you deaf to the sound of the coming hosts? Can you not see that the deathblow has been struck to this system of human traffic. Right or wrong it is doomed—I see it—I know it—I feel it here," placing her hand upon her heart "and this is knowledge. My days and my nights are full of horrible dreams—and the future is all mapped out before me!"

"And in the face and eyes of what you are pleased to call knowledge of coming events, you advise your father to forsake the land that gave him birth; the land that furnished the best blood for the establishment of American independence; the land of his forefathers; the land of his love. In other words, to turn traitor to his principles. MARGARET! MARGARET! I had thought better things of you."

For a moment, the young lady stood pale and still, apparently speechless with terror, and overcome by the thought that she had been guilty of treasonable advice—then rallying, said impetuously:—"You know better than that, Col. HARRISON HEATHERSTONE, and you ought to be ashamed of yourself. I'd rather die myself a hundred times over; I'd rather that everybody should die that belonged to me; I'd rather be left standing alone on the ruins of this grand old place, than to have any one I love show the white feather! and you know it, too!"

"Bless her little heart! So her father does know it;" and the fine-looking man drew the graceful girl down upon his knee, and tenderly encircling her, bade her forget his harsh words, and try and thrust aside the agonizing thoughts of the future. "If we do have to fight, darling, it must be a mighty short-lived business. The fact is, we are prepared to resist invasion; there's no doubt about that; but bless my heart, if there isn't HARRY! What in the world could have started him out so early this morning?" as the young gentleman in question galloped up to the main entrance on a spirited coal-black steed, looking for all the world as if he had been polished for the occasion. "That boy is most awfully in love," said the Colonel, slyly; "can't even wait till night draws her sable curtain to do his courtin', eh?"

"He might have waited till I had my breakfast! I can't bear a man who has no idea of the fitness of things," replied MARGARET, with a pout of her rosy lips, again transformed into the spoiled, willful child.

"Good morning, HARRY," said the Colonel, heartily. "Glad to see you! Made an early start, seems to me."

"Yes, sir," replied the noble fellow, reddening to the roots of his hair as he caught sight of the averted face of his lady-love. "Our papers have just arrived, and I knew that you wouldn't receive your mail until evening, so I thought I'd trot over and bring you the news."

"Welcome, my boy, welcome any how," and the Colonel settled back in his comfortable chair for a careful perusal of the Northern papers, with only a slight bow of recognition to the visitor. MARGARET interrupted her father with:—"Then JAKE is in disgrace, again, I hear, Pa?"

"Yes, and he is going to have a good sound trouncing, too!" and the Colonel opened wide the Tribune, evidently determined upon saying no more on the subject.

"Have you given orders to that effect?" inquired MARGARET, clenching her dainty little hands, and tracing with her slippered foot all sorts of geometrical lines on the floor in front of her father.

"I sent an order by HANNIBAL an hour ago for Mr. HASKELL to see that the young scamp got ten good lashes, and that is very light punishment, considering what he deserves."

"If JAKE receives one lash, even, or one negro on this plantation is ever struck a single blow, I'll pack up my things and start for the North, traitor or no traitor. HARRY, order your horse brought around," and the royal MARGARET marched into the hall, tied on her straw hat, and then waited for her obedient lover to do her bidding.

"MARGARET, child, where are you going?" inquired the Colonel, a shade of reproach perceptible in his voice.

"I am going down to the overseer's office to countermand your order about JAKE, and if he dares to disobey me, it will be the last time he ever has the opportunity."

Col. HEATHERSTONE, strange to relate, looked neither shocked nor hurt at this manifesto of his darling. Truth compels the statement that, if anything, he was a little relieved at having the business thus summarily taken out of his hands. It wouldn't be at all surprising if he reckoned upon just such a result, for these episodes had been of very common occurrence ever since MARGARET could remember. Occasionally a slave would be punished in spite of her watchfulness—but Col. HEATHERSTONE, finding what a terrible family storm a proceeding of this kind was sure to bring about, finally issued an edict that the overseer should never flog a negro without an especial order from him.

"Stop a minute, MARGARET," said her father, as the spirited girl bounded upon the horse and prepared to gallop away. "This howling of the niggers at night must be stopped; and if you are determined to take my business out of my hands, remember that you must manage it. They were in HANNIBAL'S cabin, too, last night, remember that;" and with this parting shot from her father, MARGARET, with a slight nod of acquiesence, rode quickly down the avenue in the direction of the overseer's office.

The majority of the slaves of Col. HEATHERSTONE'S plantation, as everywhere else, were grown-up children, gay, careless, irresponsible, depending on massa for everything, never forced to shirk for themselves. They were in all emergencies very troublesome material to deal with. But to the general rule they were here, as everywhere, noticeable exceptions. Nor were the exceptions confined to the slaves in whose veins flowed the proud Virginia blood. This would be more flattering to the white race, and would better sustain prevalent theories, but it is no less true that some of the clearest-headed, soundest, and most truthful and sterling men among the Southern slaves were found among the full-blooded Africans. Old HANNIBAL was one of these. His father had been bought of a slave-trader by Col. HEATHERSTONE'S father, and his mother had not a drop of white blood in her veins. He was simple as a child and as strong as a lion. He would be burned at the stake before he would tell a lie, yet he did all he honestly could to screen "de oder niggers" when they got into trouble. He was a born leader, and was instinctively taking his place at the head of the slaves, who were all filled with a vague excitement to which their childish natures made them peculiarly susceptible. HANNIBAL had no thought of insurrection, no thought of bettering his condition. He was devoted to his master, and he loved MARGARET with the whole of his faithful soul. But down in the cabin in the light of the blazing pine knots, with the negroes around him, he had sung "John Brown" with more enthusiasm than any of them, and with a strange prophetic pathos thrilling in his voice.

Physically, HANNIBAL was of powerful build, over six feet in hight, with iron strength. He had a hand like a sledge hammer, and a massive head, well developed in the perceptive regions, with large reverence balanced with full self-esteem. His usual mien was grave and dignified, but he had a quiet humor that always lurked near-by, ready to show itself on any occasion, and his kindliness was never-failing.

"Dat nigger, he sit quiet as lamb, if Gabriel toot he horn right straight in he ears; nebber see he riled 'cept few times when Miss MARGRET he boddered. He let de little niggers run right ober him just as if he big log; nebber did see such lump."

This was Aunty MIMY'S opinion of HANNIBAL'S character, and it pretty accurately expressed one phase of it.

HANNIBAL was in no hurry to deliver the order for JAKE'S punishment. He sauntered along toward the negro quarters singing in a chanting monotonous way snatches of hymns that the slaves had altered to suit their own ideas of versification. HANNIBAL was something of a theologian, and he sat down under an oak, about half way to the overseer's house, and began holding a little argument with himself about the words he was singing:

"The sun he done stan still
At Joshua's command.

"Now dis chile he see many things, but he sure he no see how de sun stan still at anybody's command. Dat Joshua must have been powerful man to hold de sun. Dis nigger not sure he did any such thing. Anyhow de sun go fast 'nuff in dese times. He up now big piece and nuffin done. Dat limb JAKE he not eben whipped. Bress de Lord, if dar aint sunshine herself, galloping down de road on Massa HARRY'S horse."—[To be continued.

A HAPPY CHRISTMAS,

AND HOW I WAS INDEBTED TO THE RURAL FOR IT.

BY HARRY.

I KNOW my kind-hearted uncle will excuse me, seeing it cannot damage his credit now, by first referring to the circumstances that brought about the matter, so fresh and grateful to my memory, which I am going to relate. My uncle, by-the-by, is one of those odd characters known as a Naturalist. I cannot say that he is profound, but rather discursive and various—fresh and buoyant as a youth, in spite of his gray hairs, he is as breezy as a boy when out with him rambling over hills and meadows in quest of botanical specimens for his herbarium or beetles and butterflies for his cabinet.

My uncle had a pleasant home in a country village, where he kept a drug store—with numerous friends, but customers barely enough to enable him to meet his ends, or rather to make them meet. He was an unselfish student, not ambitious, and filled up the blanks, for lack of business, in collecting and studying objects of nature. Thus contentedly he passed his time, happy to come out square at the end of the year. His skill in drawing and general information led him to assist neighboring inventors to procure letters patent. Through endorsing, and other losses, he was finally compelled to sell his property and drug store; honestly meeting his creditors, he found himself left with thirty dollars and some furniture, with which he moved to L——, in the spring of 1858. Having no business or capital but brains and a good will, he offered his services as a Solicitor of Patents, and receiving an appointment of Librarian at five dollars per week, with office room in the central part of the city, he eked out a pittance that barely enabled him to keep the "pot a boiling."

It was on the 23d of December, 1858, a mere lad, aged about twelve years, that I was, by invitation, permitted to visit my uncle—to spend a few weeks in the city, over the holidays. Oh, how vividly I remember the impressions made upon my mind as I wandered with my cousin (a lad of my own age) along the streets to look with astonishment upon the gorgeous display of candles, confectionary, and the many pretty and curious toys, and the doors crowded with eager purchasers of Christmas presents. The trifling amount of change in my pocket made me feel poor indeed. I had never seen anything to compare with such temptations, and was a mute observer. In passing through Center Square we saw piles of different kinds of evergreens sold to those desiring to get up Christmas trees. My cousin, having ten cents, concluded to invest, saying that he knew his father and mother would decorate it, and it would be a source of amusement. He purchased a bush, and we carried it home and deposited it privately in the yard. We had a pleasant evening, but no intimation of a Christmas Tree Festival.

On the morning of the 24th, after breakfast, my cousins ventured to hint about getting some toys, and I can recall the sad smile on the face of my uncle when he said: "My dear children, I have but a single five-cent piece to my name, and mother is 'dead broke.'"

"Well, father," said they, "you know our aunt gave us each a gold dollar when here, beside what we had previous. You can take that."

"Alas! dear children, I did appropriate all that, yesterday morning, to purchase necessaries for the table."

Their countenances fell, as if a heavy disappointment had crossed their buoyant hearts. Uncle saw it, and, with a pitying look, he said cheerily, "Never mind, dear children, I have leisure; I have some brilliant foil, gold-leaf and Bristol board, and skill; with willing hands I can make toys as well as others, and color them too. So be of good cheer."

The door bell rang. Aunt being busy in the kitchen, I accompanied uncle to the door, at which stood a female with a sad, pale countenance; timidly looking up into my uncle's face, she begged for a trifle to aid her in her destitution. No questions were asked;—his hand speedily drew forth that *identical five cent piece*, which he handed to the woman with a "GOD bless you!—No thanks; you are welcome to it; it can do me no good." A grateful look, and the woman quietly walked away. Returning to his task, by the time dinner was ready sundry pretty toys were made.

After dinner my Cousin DAVID was sent to the post-office. On his return he brought a few papers and a letter. On opening the letter, a pretty, printed draft was revealed, which was carefully inspected, and proved to be to my uncle's order on a New York bank for $25, signed D. D. T. MOORE. I learned afterwards that my uncle had received a check in a letter, the week before, for $500, which was intended for a person of his name, a miller, from a Philadelphia merchant—to whom he wrote immediately about the mistake in its direction, which was duly corrected. This circumstance, and the fact that no money was expected by him from any source, led him to read the letter through—upon which he called Aunt SARAH to him, showed the letter and contents, saying—"This, though a trifling sum, is greatly enhanced by the very flattering and consoling contents of the letter," which he then read aloud to us. Never was money more gratefully received or well-timed. All of the family expressed their mutual satisfaction for this token of regard from an entire stranger, for services performed to fill up idle moments, in writing pieces. To have them received and deemed worthy of pub- was considered an ample reward and honor, without other compensation.

Well, you may believe me, this draft was cashed that afternoon before three o'clock, and to it we children were indebted for the most happy and cheerful Christmas I ever enjoyed. We had some rare toys, too. Oh, the pleasure the memory yet affords! Conspicuous around the base of our tree, in neat letters, was inscribed. "Thanks to D. D. T. MOORE of the RURAL NEW-YORKER —*God bless him!*"

[THE above having been read and approved for publication by our associate, we allow it to appear, with the remark that HARRY'S uncle under-estimated the value of his contributions—for they were on a scientific subject, ably written, and accompanied by sketches exhibiting accurate knowledge, skill and patient labor.—ED.]

Sabbath Reading.

THE CHRIST CHILD.

AT Bethlehem in the manger,
He lies, a babe of days;
For us he gives himself to death,
O give him thanks and praise!

Whoe'er would hope in gladness
To kiss this Holy Child,
Must suffer many a pain and woe
Patient like him, and mild;

Must die with him to evil
And rise to righteousness,
That so with Christ, he too may share
Eternal life and bliss. [*Tauler.*

A MOTHER'S PIETY.

My parents were scrupulously attentive to have family worship in our family, morning and evening, and to have it at the proper time. It was regarded as a *great* thing and a *real* service, and our mother was particularly careful that all arrangements should be so made that it should not be omitted or pushed into a corner. And even when a very little boy, I had that impression of it; for I never heard either of my parents say of it as some do, "Should we not have worship, and let us go to our several duties;" or, when far on in the night, "Let us have prayers, and get to bed, for we are all worn out."

I feel that many persons feel it to be a heavy burden. It is a hollow formality, standing like a coffin between them and something which is to them of more importance. It was not so in our household. It was a cherished, well-timed, and vital matter, which nothing was permitted to push aside or supplant.

Dear parents, see to have family worship in your households—reading of the Scriptures, prayer, and praise—morning and evening. It will be of great moment both to you and to your children. But it would be better not to have it at all if you were to regard it as a mere drag upon the wheels of morning duties, or a griffin between you and nocturnal repose. Make it a *right* thing; have it at the *proper* time; and put your *heart* into it; and, by God's blessing, it will help your own souls, and benefit your offspring. Some one has said that a house without prayer is a house without a roof. A house without prayer is surely a house "without Christ."—*Selected.*

GIVING THANKS.

I DO not think it so hard to give thanks in great emergencies and persecutions such as Paul endured. In the time of great trouble there is something elevating in the thought or surmounting the trial that lifts one above it. One of the most tranquil times in my life was when I was coming down with a fever and knew it. I nearly fainted on the floor; my brain was superstimulated, and there opened up to me such a vision of God's glory, I was in a trance of joy and glory; but when I was getting well, I was not half as grateful as when I was getting sick.—*Beecher.*

"BE just and fear not. Let all the ends thou aimest at be thy GOD'S, thy Country's and Truth's."

Ladies' Port-Folio.

A SACRIFICE.

BY MARY E. BARTLETT.

THERE'S a grave in my heart, a new-made grave—
Come close, while I whisper low;
There I've buried the love so pure and true,
That blessed me awhile ago.

O'er my love ne'er had passed or death or chill,
'Twas living and warm as the day
When with gentle and noiseless tread it found
To my lonely heart its way.

And it trembled and wept and for mercy prayed
As I digged its deep dark grave;
But I thrust it in, and the sod pressed down
On the treasure I yearned to save.

Above the place with a lavish hand,
I have scattered flowers rare,
And *she* dreams not in her happiness,
That my love lies buried there.

AN OLD MAID'S SOLILOQUY.

"WHY don't you old maids go out West, to Colorado or Wyoming, Idaho or Montana, and get married?"

Why don't we? Goodness gracious, sir! Do you mean to insult us? You talk as if a woman couldn't live without being tied up to some battered hulk and left to flounder through the storms. Just let me tell you that we old maids are not so anxious to marry the last man living, as you pretend to think we are. We haven't lived our three decades for nothing. Better talk of going West to some of those timid young fledgelings who have such a mortal horror of being old maids that they would take the crookedest specimen of manhood—cigars, fusil oil and all—rather than run the terrible risk.

Old maids have cut their wisdom teeth. It is easier to carry one stone up hill than to be so loaded with two that the getting up is impossible. You'd better look towards home, sir, and see whether the men are fit to go West or anywhere else.

If you had looked out of that window a few minutes ago you might have seen a specimen. The poor wretch tottered out of that saloon yonder, with a specimen on each side to keep him from sprawling headlong in the street. As they went down through the street you should have seen the head of this "promising young man" sink with shame, with a consciousness of degradation. You was saying something the other day about that fine young BRONSON, just returned from Montana.

Just you go somewhere within six feet of him and when he speaks, note the disgusting odors that come from his filthy mouth!

Then listen to his conversation and observe how much of delicacy, refinement and purity there is about him! By-the-way, would you believe by his looks and by the greasy mixture of odors seeming to emanate from his person, that he had ever been well washed since he left his mother's bath tub in infancy?

"Hm-m! Ugh! If we old maids have got to marry, do for heaven's sake wash away some of the impurities, physical and moral, from the miserable creatures you presume to advise us to marry. Make them fit to be loved, capable of supporting families, worthy to fill the places of husbands or fathers! It is easier for a woman to take care of herself than to support a worthless husband and half a dozen children.

The fathers of our children, sir, must be worthy of being called men! They must be such men as their children can honor. The genuine article is scarce. We shan't go West to find it, lest we be like those who sought the fabled fountain. UINO.

WHAT A YOUNG MOTHER SAYS.

THE noble words in regard to hearth and home that from time to time find expression in your columns meet a deep response in my heart. In these days when so many rights are loudly called for, I think no question deserves more earnest thought than that which relates to home and its attractions.

When I hear mothers saying that they wish their daughters to have only a common education, that beyond that the money can be better expended, and foster the idea that wealth and position are the main objects to be considered in marrying, I do not wonder that there are so many unhappy homes. I do not wonder that so many parents wish they had never had children, and hope their names may not be perpetuated by married sons and daughters—that so many ways are sought out to avoid that holiest relationship which exists between parent and child.

I confess that these evils are much easier seen than righted, and I sometimes tremble lest my hopes of a happy home, where the fire of love shall ever burn upon the altar of united hearts, may, after all, prove a myth. It is scarcely a three years' experiment as yet, and as I look into the eyes of my one treasure, our pet, and think of the possibilities there are in that undeveloped mind and heart for good or ill, and how a judicious hand may bring out what is beautiful and holy, and call forth such music from that soul that angels will pause to listen to, I ask myself, "Who is sufficient for these things?"

Surely "Our Father," who instituted the family, meant that it should be a glorious success.

If those who have happy homes and have succeeded in making lasting friends of their children, could in some way give their experience to help beginners, I know of one, at least, who would hail such revelation as a god-send. ROSE GUMAER.

DOMESTIC STORM.

IN nine cases out of ten, there is a very inadequate basis for domestic discord, whether conjugal, parental, or fraternal. The beginning and end is most often disappointment. A wise man will never let his wife know that he has fallen short of his ideal. The wise woman will never show that she does not think her husband a hero. They will exercise toward each other the same sort of hopeful forbearance that they exercise toward their friends and fellow-citizens in general. We often bear all kinds of grievances from the outer world with a good grace when half the amount of provocation would suffice to produce a very whirlwind at home. The laws of domestic storms are indeed simple enough when studied practically. Some unfortunate men and women spend their lives in devising how this or that squall is to be avoided. Like the Duke's daughter in Mr. Disraeli's amusing novel, who, if her husband cried for the moon, promised it to him immediately, they are always ready to say black is white for the sake of being agreeable. At night, if they say their prayers at all, they can't help wishing that they might, with propriety, include a thanksgiving for having kept the dreaded object of their affections in good temper for a day. But the sort of people who subject themselves to such a life of shifts, shams and petty little secrets know nothing of the tragedy of a great storm. They get battered about, and are always in dirty weather, but they do not go wholly to pieces.—*Pall Mall Gazette.*

THE KIND OF WIFE TO CHOOSE.

AFTER all, in looking out for a wife, a man must consider how she will show at the fireside, rather than at parties. You can learn so much of literary and æsthetic tastes, the favorite books that are always in hand, the music that is regularly studied and sung, the kind of associations, and the general order of tastes. It is by far the best way of getting up a flirtation, which is not unpleasantly done under parental eyes, when such eyes are kindly and benignant. Love-making is an uncommonly pleasant employment for the winter nights. You may talk of the perils of young men when they come up to town; but there is no better safeguard than giving such young fellows the associations of home and sweet woman. Parents make an immense mistake in taking too severely monetary a view of a young fellow's prospects. I never knew a young fellow under ever so dun a cloud, who, with purpose and ability, could not work out his way into the sunlight. Better even the long engagement, or the early marriage, than many other suppositions that might be put.—*London Society.*

THE TRUE NOBILITY OF EARTH.—The Legislature of Alabama agreed to pay three lawyers, employed in the Stanton railroad suit at Knoxville, $20,000. One of these, Gen. J. H. Clanton, was killed and left his family poor. The other two, Messrs. Stone and Clopton, transferred their interest in the fee of $20,000 to Gen. Clanton's widow. A deed like this, of two lawyers, neither rich, redeems an age and country. Selfishness and love of money blacken every page of current history.—*Memphis Appeal.*

AN exchange says that Anna Dickinson and Olive Logan are their own agents in the lecture business this year. But what in the world, then, is Wirt Sikes (who recently married Olive) good for?

MISS CHARLOTTE CUSHMAN is building a cottage at Newport, Rhode Island, which is to cost $20,000. It is so planned that all the rooms are octagonal,

Reading for the Young.

IN THE CAGE.

SQUIRREL, you're a miller,
In your coat of gray!
Why, you never rest an hour
Through the livelong day.
Nothing in your hoppers,
All your bins to fill;
Yet round, round, round
Goes the mill.

Can't you stop and tell me
How's your worthy dame?
How's your baby-boy, too,
Master "What's his name?"
Never a grain of wheat, sir,
Though you labor still,
And round, round, round
Goes the mill!

Miller, stay a moment!
See, your work is vain!
Such a fuss and flurry,
Not a peck of grain.
Slow and sure's the motto
While we climb the hill.
And round, round, round
Goes the mill. [*Geo. Cooper.*

GRANDMOTHER SILVERBUCKLE;
OR, KNITTING THE THREAD OF LIFE.

BY J. B. FULLER-WALKER.

[See Illustration on page 41, this No.]

ONE of the brightest spots in the memory of my youthful days is the time I spent in the little cottage with my grandmother. It was a queer, quaint sort of a house, but as cosy and warm as it could be; just the place for easy chairs, bright flowers in the window, sunshine on the floor, and tales of the past.

Grandmother SILVERBUCKLE had the softest blue eyes I ever saw; they had grown a little dim, so that she was in the habit of balancing a pair of gold-bowed spectacles on her nose, that she might see better to read the RURAL NEW-YORKER. Her hair was very white and fine and soft; as I think of it now, it reminds me of snow or swan's down. She used to comb it all back from her face, in the MARTHA WASHINGTON style—and then she caught it up behind in a sort a blue silk cap, which she fastened in a knot under her chin. She always dressed very plainly, in the fashion of her country—for Grandmother SILVERBUCKLE was born in Germany, on the banks of the beautiful Rhine. She left that land when a young girl, and after she had grown up to be a woman she married Grandfather SILVERBUCKLE, who would now be regarded, if he was alive, as an old school American gentleman.

In Germany all the girls are taught some useful employment. They know how to knit, how to hem-stitch, how to do all kinds of plain sewing, and most of them can cook. To make a light, snowy, sweet loaf of bread in Germany is as great an accomplishment as it is to play the piano in America. Grandmother SILVERBUCKLE never grew tired of telling me about her little cottage home, on the banks of the Rhine, surrounded by a vineyard. She often felt homesick in the New World, and longed for a cottage just such as she lived in when a girl.

"I want the low roof," she would say, "with the great window in it, opening like a door, and looking towards the rising sun. Then I want a floor of polished oak, such as my mother had when I was called little GRETCHEN."

So Grandfather said he would build a German addition to his American house, on purpose for Grandmother, and he would send over to Germany and get all the furniture for it, as near like the days of her childhood as possible. And that was how it happened that grandmother's room was such a cosy and quaint place. It was a favorite resort of my childhood days.

"If you come into my room," the good old lady would say, "you must be like a good little German girl, and learn to knit a stocking."

Then she would smooth down my hair and pin a little pink and white handkerchief about my neck, and call me to come and sit down by her side. I used to be as still as a mouse in grandmother's room, playing that I was in Germany. The carved back to her easy chair was so handsome, in my childish eyes, I never tired looking at it. Then the looking-glass which hung up over the bureau, had a carved frame covered with gilt. The bureau was always an object of admiration with me. It was made of red mahogany, and had a bow front like some of the fine houses in Boston. There were solid brass handles on the drawers, which were polished as bright as gold, and the key-holes had elaborate pieces of brass about them. A small oil painting of Grandfather SILVERBUCKLE hung up by the side of the glass, and under it was a picture of the Crucifixion.

In the picture you see me as I was when a little girl. Grandmother is teaching me how to narrow the stocking, so as to shape the foot. She holds the needles, while I hold the yarn and the leg of the stocking. In the basket on the floor, by her side, are several balls of yarn, and on the work-table there is a linen sheet she has been hemming. Many days, and even years, have flown away since my grandmother taught me how to knit. She was a practical woman, and gave me many useful lessons in my childhood, which have been of great benefit to me since. I am still knitting the thread of life, making stockings of comfort and charity, for friends and relatives, as well as for neighbors in need. There is something real and solid in doing good, which we can lay hold of, and which will give us more real happiness in life than anything besides.

During the war I knit more than a dozen pair of stockings for the soldiers who were fighting in the mountains of Virginia. Just for the fun of the thing, I sometimes knit a little red heart into the white top of the stocking, to tell the dear boys that my heart was with them. One of these very red heart stockings fell into the hands of my brother, and he was so pleased with the idea he cut it out and wore it in his vest pocket. After the war, as I was darning his jacket of blue, I found the red heart in his pocket! Wasn't that a surprise? It pleased me so I determined to tell the readers of the RURAL NEW-YORKER about it. So I shall ever thank my good old Grandmother for learning me to knit.

News of the Week.

GENERAL REVIEW.

NEW YEAR'S DAY was very generally observed in all parts of the country. The President's reception at Washington was brilliant and crowded. The absence of intoxicating liquors from New Year's tables in Washington was general. In New York business was suspended, and the day, a very mild one, given up to social enjoyments.

A serious riot took place in Rochester, N. Y., caused by an attempt to lynch a negro, who had committed an outrage. The military fired upon the crowd, killing two men and wounding three.

Brigham Young has been refused bail, in the sum of $500,000, on the charges of murder and polygamy, and is now a prisoner in one of his houses in Salt Lake city.

The Grand Duke Alexis passed New Year's in Chicago, and afterwards had a hearty reception at Milwaukee. He visits St. Louis and has decided to indulge in a grand Buffalo hunt with Gen. Sheridan and a band of Indians.

The New York Legislature organized on Tuesday, electing Republican officers. Mr. Tweed did not take his seat in the Senate. Gov. Hoffman sent in a very long message. The entire State debt is over twenty-nine millions of dollars; the State taxes yield over eleven millions; the new Capitol has thus far cost two millions; the decrease in the production of salt the past year has been 272,054 bushels; caution in relation to legislation for savings' banks is recommended; New York insurance companies lose twenty millions of dollars by the Chicago fire; the State prison system is not satisfactory; there has been an increase of 17,000 in the arrival of immigrants over last year; the canal revenues have been double those of last year; an end to hardships inflicted upon witnesses by detention in prisons, is recommended; the eight-hour law should be enforced; there should be a law in relation to street processions, securing equal rights to all; the purity of the elections must be maintained, and constitutional reform is advised.

The public debt was decreased $4,412,956.71 during December.

Mr. Valerien Shirkoff is now in charge of the Russian Legation in Washington, vice General Garloff.

DOMESTIC NEWS.

New York City and Vicinity.

MAYOR HALL gave no official reception on New Year's Day. The old Board of Assistant Aldermen, on that day, passed a resolution of impeachment against the Mayor, when he at once recognized the new Board of Assistant Aldermen, and they were sworn into office, after which they vetoed the impeachment resolution. Policemen guard the City Hall. The question of impeachment is to be tested.

The debt of the City of New York, according to the Governor's message, is less than $100,000,000, and the city is able to meet its engagements.

The new Judges of the Supreme and Superior Court took their seats on Tuesday.

Gen. Sigel is introducing reforms into the Register's office.

On New Year's Day Judge Barnard released ex-Controller Connolly from jail.

The ship Europa, from Glasgow to New York, has been lost at sea. The crew was saved.

The Senate Committee on Investigation and Retrenchment is looking into New York Custom House affairs.

The editors of the Tribune have been examined by the Custom House Investigating Committee.

The Bar Association of New York City has adopted a memorial to the Legislature against judicial corruption.

Fires.

DEC. 30, at Monroe, La., sixty buildings, were burned: loss, $589,000. Origin supposed to be accidental.

Dec. 28, a fire occurred at Little Rock, Ark.; loss, $100,000.

The Clifton Springs (N. Y.,) Hotel was burned on the 4th. Loss $120,000.

Political.

SENATOR SHERMAN is likely to be re-elected from Ohio.

Col. Alvah Crocker takes Gov. Washburne's place in the House, from Massachusetts.

Wm. Elliott is Speaker of the House in the Pennsylvania Legislature.

The message of the Governor of Rhode Island shows that State in a satisfactory condition.

It is expected that the courts and the Legislature will commence a new war against the Erie Railway management this month.

Olive Logan abandons the Women Suffrage party.

Pennsylvania Republicans hope to secure the National Convention in Philadelphia.

The Labor Reformers have held a State Convention in Bridgeport, Conn.

A bill has been introduced at Albany to legislate Mayor Hall out of office.

O'Donovan Rossa will contest Wm. M. Tweed's seat in the New York Senate.

The State Senate of New York ratified the Fifteenth Amendment, Jan. 3, 27 to 1.

The total debt of Pennsylvania is $29,000,000. The Governor recommends compulsory vaccination.

The Republicans of New Hampshire have renominated Gen. Grant. E. D. Straw of Manchester is the candidate for Governor.

The President is visiting in Philadelphia. No apprehension is felt by Secretary Fish of a war with Spain, on account of the Cuban difficulty.

A conflict has broken out in the Louisiana Legislature. There is a dead-lock in Legislative affairs, and Gov. Warmoth and his friends have been arrested on a charge of conspiracy. The Governor appeals to the President, and fears anarchy and bloodshed.

Crimes.

EIGHTEEN Ku-Klux have confessed their guilt in the court at Columbia, S. C.

A terrible tragedy took place in Little Rock, Ark., Jan. 2, in which two men, highly connected, and a woman, were shot.

A man and two women have been found murdered at Windsor Locks, Ct.

The remarkable Wharton trial is still in progress at Annapolis, Md. The defense is gaining strength.

A German named Bruck was shot in Williamsburg, New Year's night. It is thought he will die.

Dec. 28, a young man, Mr. Rufus Ripley, aged 24 1-2 years, committed suicide in New York, in a bank in which he was employed. A post mortem examination showed that needle-like projections of bone were pressing into his brain from the inside of the skull. These gave him an intolerable and incurable headache.

A man named Ross, of Elk Prairie, Ill., shot his wife, child and mother-in-law, and stabbed his brother a few days since. He then escaped.

Dec. 31, Mr. Robert J. Harvey, a New York merchant, was murdered in Brooklyn for his money. No clue to the murderers. On New Year's Eve, Mr. Robert Edwards of Brooklyn was garroted and robbed while on his way home. Wounds supposed to be fatal.

The negro Howard, who came so nearly being lynched in Rochester, has been sentenced to the Auburn State Prison for twenty years.

Ku-Klux outrages are reported from Frankfort, Ky.

January 4th, Dr. J. N. Thucker of Fort Wayne, Ind., shot Chief of Police, Patrick McGee, killing him instantly.

Accidents and Disasters.

THE boiler in the Chesapeake Molding and Mowing Works, Baltimore, exploded on the 29th, killing one man and wounding several.

Obituaries.

JAMES HENRY HACKETT, the veteran actor, died in Jamaica, N. Y., Dec. 28, in the seventy-second year of his age. He was the son of a Hollander, born in New York city, at No. 72 William street, March 15, 1800. He first appeared on the stage in London, in 1826. He was famous as a Shakspearean actor.

FOREIGN NEWS.

From Great Britain.

THE Prince of Wales continues to improve. There has been a riot in Limerick. The Queen has published a letter of thanks to her subjects for their recent sympathy. Minister Schenck has gone to Paris to meet Gen. Sherman and Lieut. Grant. A demonstration in favor of Sir Charles Dilke is proposed by his friends. During a trial in Kittyclopher, Ireland, the court-room floor gave way, wounding a large number and killing some.

The Irish of Liverpool have made a great demonstration in favor of home rule. The Alabama claims are being extensively discussed in English papers. A church has been struck by lightning and destroyed, in Manchester.

From France.

FRENCH troops have won brilliant success in Oran, Algiers. Gambetta has gone to Toulon. Victor Hugo has been nominated for the Assembly. The sale of photographs of the executed Communists has been prohibited. President Thiers received the Deputies on New Year's Day. Gambetta's presence at Marseilles created great disorder.

The murderers of Gens. Lecompte and Thomas will soon be executed.

From Germany.

HERR STOSCH is Minister of Marine in place of Gen. Von Roon.

Persia.

THE terrible famine still rages. Whole districts have been depopulated. The distress in the cities is terrible, and the Government can do nothing.

From Italy.

THE Pope was too "indisposed" to receive the King's congratulations on New Year's Day. A grand banquet has been given to the Telegraphic Conference. The next meeting will be held at St. Petersburg in 1875.

From Spain.

A SPEEDY peace with the South American Republics is predicted. There is another ministerial crisis.

There is great excitement in Spain over Cuban affairs. Four of the best iron-clads have been dispatched, and troops are being sent out.

From Russia.

THE Russian official organ expresses renewed satisfaction at the reception given the Grand Duke in this country.

Prince Gortschakoff, in a letter to Mr. Curtin, says he shall allow Mr. Catacazy to make his defense. The Prince hopes nothing will impair the old and cordial friendship between the United States and Russia. The Czar has decorated Mr. Albert Bierstadt with the cross of St. Stanislaus.

From Greece.

FOUR Greek brigs have been wrecked in the Black Sea. All on board perished.

From Cuba.

OUTRAGES continue to be perpetrated. The owner of the steamer Florida has informed the Navy Department of its seizure. Engagements have taken place between the Spanish troops and the rebels. Thirty Cubans were killed.

Mr. W. G. Dansoath—Dear Sir:—Watch No. 21075—bearing Trade Mark "Frederick Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., has been carried by me three (3) months; its total variation from mean time being only twenty-five (25) seconds in that time.—WM. H. HOWARD, Pittsburgh, Feb. 23, 1869.

Youth and Beauty is the envy of every lady, and delight of gentlemen. Ladies who are not blessed by nature can very much improve their beauty by using GEO. W. LAIRD'S "Bloom of Youth." It will remove all blemishes from the skin, leaving it perfectly beautiful. Sold at all druggists in the United States. Depot 5 Gold street, N. Y.

Another Lie Nailed.—The Hon. Thomas Murphy, ex-Collector, is not nor never has been a stockholder in our works. We supply the Government because our Scales are the best and cheapest. The JONES SCALE WORKS, Binghamton, N. Y.

SPECIAL NOTICES.

WHAT YOU ALL WANT

Is a Monthly Magazine, containing good, practical and useful as well as interesting and entertaining matter—not *merely* stories; and in this line you will find nothing so good as the ILLUSTRATED PHRENOLOGICAL JOURNAL. The articles it contains are of the highest value to all, tending to make men wiser and better. Only $3.00 a year; 30 cents a number; clubbed with all the leading periodicals at reduced rates. Specimen number sent for examination to any address, FREE, on receipt of two stamps. Address S. R. WELLS, 389 Broadway, N. Y.

GREAT OFFERS

Are made to New Subscribers to "OLD AND NEW," the popular Monthly Magazine, edited by EDWARD E. HALE. ☞ Specimen pages, giving Club Rates, etc., will be sent, free, on receipt of a 3-cent stamp, by addressing Geo. A. Coolidge, Bus. Agt., care of Roberts Bros., the Publishers, 145 Washington Street, Boston.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

Columbus Discovered America, but it has been found that the only economical Shoes for children are the celebrated SILVER TIPPED—never wear out at the toe, and are worth two pairs without tips. All dealers sell them.

STAMMERING CURED

by BATES' APPLIANCES. For description, address SIMPSON & CO., Box 5076, New York.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, January 6, 1872.

THERE is an improved general trade since the New Year. The Importers are paying large Duties at the Custom House preliminary to placing their Goods on the market, and the prospects for the Spring business throughout the country are deemed quite promising.

Financial and Money affairs are not so satisfactory as it would be desirable to have them on entering upon the New Year. Confidence has been shaken in several of our Savings Banks, and the system itself is brought under some partial distrust by the loose investments which the new concerns, competing with the long-established Banks, have to a greater or less extent fell into. But we apprehend the present trouble will pass over without serious consequences, and hope that the lesson will not be lost upon the Savings administrations generally. One or two millions of Greenbacks and National Currency have been withdrawn from Wall street to meet the run on the Third Avenue Savings Bank and to strengthen the tills of the other Savings Banks, whose half-yearly Dividends are payable in a few days. There is not much Currency going West or South, but the scare among the Banks from the recent failure of the Ocean and Eighth National, has induced extra caution, and the Money Market is very stringent this week, while the Stock Brokers, who had inaugurated a rapid rise in speculation, are larger borrowers than usual.

Gold is a fraction higher than on last report, though not active, at 109¾@109¾, and exchange on London is barely steady at 109¼ per cent.

The following are the comparative movements of City Banks for the past fortnight:

	Dec. 23.	Dec. 30.
Capital	$87,301,600	$87,301,600
Loans	271,363,500	270,534,000
Gold and Greenbacks	65,382,500	65,332,300
Deposits	199,346,700	200,400,800
Circulation	28,575,600	28,542,800

PRICE OF STOCKS AND BONDS.

Reduction in Funded Debt as above			253,959,450
Reduction of Treasury Circulation			27,635,407
Total payments on Debt			$2c1,624,857

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Jan. 6, 1872.

Receipts.—The receipts of the principal kinds of produce since January 1st embrace 15,810 bales of cotton, 259 pkgs. dried fruits, 1,745 bbls eggs, 20,856 bbls. flour, 27,340 bush. wheat, 136,[illegible]2 bush. corn, 55,050 bush. oats, 44,000 bush. barley, 7,895, sacks grass seed, 1,374 bbls. beans, 400 bbls. corn meal, 1,530 bags do., 583 bales hops, 2,012 pkgs. pork, 772 pkgs. beef, 8,407 pkgs. cut meat, 10,215 pkgs lard, 188 kegs do., 1,051 pkgs butter, 6,246 pkgs. cheese, 5,135 dressed hogs, 1,052 bags peanuts, 58 hhds. tobacco, 2,044 boxes and cases do., 2,707 bbls. whisky, 256 bales wool.

Beeswax.—The late fair shipping movement has relieved the market. The arrivals are small. Prices are firm. Sales of Southern at 35@35½c.

Beans and Peas.—The arrivals have been large and prices have been steadily declining. At the close the jobbing demand is much better and there is a more confident tone to the market. Prime mediums sell at $2.50@2.55; good do. $2.30@2.35; fair, $1.75@2; prime marrowfats, $2.85@3; good do. $2.70@2.85; prime kidney, $3@3.20; red kidney, $1.50@2.25. Green peas are selling moderately well; prime bring $2.10@2.15; Canada in barrels, $1.30; Southern, B. F., per two bushel bag, $2.40@2.50.

Broom Corn.—There is a very light outlet and prices are entirely nominal. For choice hurl, 10@11c.; new, medium, 8@9c.; old medium, 6@7c.; pale, 5@6c.

Butter.—The market continues quiet, not that there is no local inquiry but there is a great want of the usual cold weather call that should favor us with the opening of January, especially, as it follows nearly two weeks of dull holiday trade. Eastern buyers have made a moderate show latterly, taking Welsh tubs mostly at a range of 28@29c. New winter made butter has a poor appearance this season, and some of it is altogether rejected. The following are the quoted rates, but the extreme of range is seldom obtained. Receipts of butter from April, or the appearance of new butter, until Jan. 1, 387,[illegible] pkgs. Same time last year, 435,200 do. Receipts for year 1871, 760,000 pkgs. Do., 1870, 580,000 do. State, near by pails, good, 32@35c.; State pails, finest selections, 36@37c.; State dairies, fine, 29@31c., State dairies, fair to good, 25@28c.; State, half-tubs, good to fine, 32@32c.; State, do., common to fair, 20@25c.; State, firkins, fine yellow, 28@30c.; State Welsh, good dairies, 28@30c.; State do., common to Fair, 22@25c.; State do., fresh make, 30@32c.; State, fancy select tubs, 33@35c.; Ohio, good, 21@23c.; Ohio, Central and Southern, 19@17c.; Western, choice yellow, 23@25c., Western, store-packed, 8@13c.; rolls, good West, 22@25c.; rolls, common to fair, 13@18c.; grease butter, 9@9½c.

Cheese.—The market continues very dull. There is scarcely any call from shippers. The stock is fair and freely offered, with a disposition in some quarters to force business. It is difficult to obtain a bid of over 13c. for the best. The home trade buy cautiously and insist on easy figures. The shipments last week were 201,335 pounds; from January 1, 1871, 70,245,881 pounds, against same time in 1870, 51,710,435 pounds. The quotations are, for choice State factories, 13@14c.; common to fair State, 11½@12½c.; Western, 11@13c. Receipts, 1871, 1,057,700 boxes; do. 1870, 1,514,200 boxes.

Cotton.—The market has been quiet, but the high prices current for contracts give tone to the general market. The European markets are much better, but there is still too much disparity between the markets to admit of much business. Spinners seem disposed to purchase only sufficient to meet current wants.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	17⅝	17⅝	18⅛	18⅜
Good Ordinary	19⅜	19⅝	19⅝	19⅜
Low Middling	20	20⅛	20⅜	20⅞
Middling	20⅜	20⅜	21⅛	21⅝
Good Middling	21⅛	21⅛	22⅛	22⅝

For forward delivery there is an active trade at advanced and very irregular rates.

Latest sales are at 20⅝@20⅞c. for Jan., 21@21⅛c. for Feb., 21⅛@21⅜c. for March, 21⅛@21⅜c. for April and 21⅜@21⅝c. for May on the basis of low middling.

Dried Fruit.—Apples are quiet and tending lower. The German market abroad is well supplied, and there is no help to be looked for from that quarter. Peaches are in fair grocery demand at old figures. Small fruits nominal.

Apples—Old State, qrs., 7@8c.; Western, new, 8@8¾c.; Southern, new, qrs., 7@8c.; do. fine, sliced; 9½@11½c.; new State qrs., 8@9½c.; do., sliced fine, 11@13c. Peaches, peeled, new N. C., 17@18c.; do., do., do., 15@16½c.; do. E. Sh. Va., 15@16½c.; new unpeeled halves, 7½@8c.; do. qrs., 6@6½c. Plums, 25@27c. Cherries, new, ₰ lb, 28½@29c. Blackberries, 15c. Raspberries, 28@29c.

Eggs.—The arrivals are much lighter, and with a very fair trade for the season, prices are firm. Sales of fresh at 37@38c. for Jersey; 35@36c. for State and Penn.; 31@34½c. for Western, extra brands; 33½@34c. for Western, ordinary brands. Limed at 29@30c. for State, 28c. for Western.

Flax—In moderate demand, but nothing is bought ahead to any extent. We quote N. R., fair to prime, 15@18c.; Canada do., 15@16c. Tow, 25@30c.

Flour.—The market is improving. As was expected with the opening of the new year, orders from abroad are more liberal, and as the stocks here are not large and the arrivals very moderate, advanced prices are obtained. The quotations are at $5.80@6.15 for superfine State; $6.45@6.55 for common extra do.; $6.60@6.70 for good to choice do.; $6.75@7.15 for fancy do.; $5.80@6.15 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.30@6.70 for extra do.; $6.75@7.30 for choice extra do., including shipping brands of round hoop Ohio at $6.60@6.80, and trade brands of do. at $6.85@7.25; good to choice white wheat extras at $7.20@7.35; Minnesota, fair to very choice extra, at $7.00@8.40; St. Louis at $6.65@7.25 for common to fair extra, and $7.30@9.25 for good to choice. Southern bring better prices, quoted at $6.70@7.45 for extras and $7.50@9.25 for good to choice. Rye is quiet, at $4.50@5.25. Buckwheat flour selling at $3.30@3.80.

Fresh Fruits.—Apple dealers have been forced to drop prices as the recent figures tended to keep buyers who might be counted upon to reduce stock out of market. They are selling none too freely at the close and the recent thaw has been detrimental to the exposed lots. Cranberries are quiet as buyers stocked up pretty freely before the holidays. Soft stock is selling low. Grapes nominal. La., oranges $7@8 per bbl. Peanuts without speculation and easy.

Apples, Mich., &c., bbl. $3@3.50; do. State good, $4@4.25; do. selections, $1.25@4.50; grapes, common, ₰, 2½@3½c.; do. good, 4@5c.; cranberries, fine, bbl., $9@9.50; do. common to fair, $6.50@7.00; do. crates, fine, $3@3.25; do. do. common, $2@2.50; oranges, La., bbl., $7@8; peanuts, Wilmington, bush., $1.50@2; Virginia, new, $1.50@1.80; do. common, $1@1.25; chestnuts, $1.75@2; hickory nuts, $1.75@2; black walnuts, 75c.; pecan nuts, ₰ 6@9c.

Grain.—Wheat is held with more confidence. The export demand shows some improvement, but the chief feature working in favor of the market is the stronger tone, as the other side, influenced by the

fact that the stock there had been under estimated. We quote No. 2 spring in store $1.55@$1.57. Winter red Western, $1.54@$1.62; amber Western, $1.64@$1.68; white Western, $1.67@$1.75. Western rye is held at 90c., 92c. No business in barley, and it is impossible to give fair prices. Corn is higher. The export inquiry continues fair, and there is a very fair trade for home use. The arrivals are very fair for the winter, but they are easily handled at the improved prices. Sales at 78c.@79c., for new Western mixed, afloat, and 80½c. for old Western mixed, afloat. Oats are selling slowly; Western and Ohio in store and afloat, 54½c. to 57c.

Game.—All of the principal sorts are abundant, and, with advices of heavy shipments on the way, the market is very weak. Venison is particularly plenty. Ducks, teal and wigeon, 30@40c.; do. mallard and red, 70@75c.; do. canvas, $1.50. Venison, whole, ₱ lb., 7@8c.; do, long saddle, 10@11c.; do. short saddle, 12@14c.; do. Minn., 15@16c. Buffalo hind saddles, 6@8c.; do. calves, 6@8c. Quail, sound, ₱ doz., $1.75; do. soft and small, $1.25@1.50. Grouse, ₱ pair, 70@75c. Partridges, Eastern, 50@62c.; do. State and Western, 70@75c. Rabbits, 20@30c. Hares, 30@35c. Squirrels, gray, 8@10c.

Hay and Straw.—There is a light business but as stocks receive only small additions prices are steadily held. Sales of shipping at 1.35@1.40, prime for retailing, $1.45@1.70, salt 85c., Clover $1.20@1.30, long rye straw, $1.20@1.25, short rye do. $1@1.05, oat 90c.@$1, wheat, 80@85c.

Hops.—The market is without animation. A few small lots are being taken by brewers to meet current wants. There is little or no important call from shippers. Prices are held firmly but they are more or less nominal. We quote: New Yorks, growth 1871, 35@62c.; Eastern do. 1871, 35@55c.; Western do. 1871, 35@55c.; yearlings do. 1870, 20@30c.; olds do. 1869, 10@20c.; old olds do. 1868, 9@15c.; Californias do. 1870, 15@25c.; Californias do. 1869, 9@15c.; Bavarians, 65@75c.; English, 60@70c.; Belgians, 60@65c.

Provisions.—Pork is held a trifle higher on account of the improved value at the West. The shipping movement is moderate but the comparatively low prices bring a good consumptive demand. The arrivals are moderate—old mess $13, new, do., $14. For forward delivery, January quoted $11.25, March $11.50, April $11.75. New extra prime, for prompt delivery, $12.25. Old prime mess, $11.50; new, do., $11.50. Middles are offered freely at concessions. The arrivals are large. Sales of long clear, at 7½c.; Stretfords, 7½c., short clear, 8c. Dressed hogs are plenty, and offered freely at lower prices. Western, 5¾@5¾c.; city, 5¾@6¼c. Cut meats sell slowly; there is a fair amount of stock offering, and it is difficult to obtain our outside figures: hams in pickle 9@9½c.; in salt, 9c.; shoulders in salt, 5½@5¾c.; do., in pickle, 5c. Salted shoulders, 6c. Smoked meats are selling in lots at 11@13½c., for hams, and 6¾@7½c. for shoulders. Lard has been in good shipping demand, but as supplies are large no changes are made in prices. Western steam 9¾c. for prompt delivery, 9¾c. for March, City at 9¼@9¾c. Stearine is dull at 9¾@9¾c. Beef is marked off in small lots only, and late prices are barely sustained. Plain Western meat, $8@11; extra mess $11@13. Beef hams are held firmly at $24@25 for new Western. Tierce beef is dull at $16@18 for prime mess.; $19@20 for India mess. Stock of pork in yard, January 1, 40,973 bbls., 25,570 of which are old. Stock beef, 61,280 bbls., and 10,382 of which are old.

Poultry and Game.—The dressed poultry trade has been completely demoralized during the past week. Stock has arrived that was due a week ago, heavy receipts have been daily coming forward with most perilous weather for holding and expressing; added to these is the fact of the demand no way up to the average for the season. Ducks and chickens are too abundant. State lots of chickens and turkeys have sold at 5@8c. Turkeys, West, good, 11@15c.; do. Canada, frozen, 10@11c.; do. poor and frozen, 7@9c.; do. State, 11@15c.; do. Jersey, 9@17c.; Ducks, Western, 11@16c.; do. poor and frozen, 8@14c.; do. State and Jersey, 15@17c.; Geese, Western, 9@11c.; do. poor and frozen, 8@10c.; do. State and Jersey, 11@13c.; Fowls and Chickens—Western good, 10@12c.; do. Canada frozen, 9@10c.; do poor and frozen, 5@8c.; do. State, 10@12c.; do. Bucks Co. and Jersey, 12@13c.

Seed.—In clover the export business is liberal, and the large arrivals are taken up at late figures. Sales at 11¾@11¾c. for Michigan, 11¾@11½c. for Indiana, 10¾@10¾c. for Ohio, 12@12¼c. for State. Timothy is quoted nominally, $3.30@3.50.

Tobacco.—The movement is more restricted. Shippers have been in the market for a few lots of Kentucky, but outside of this the business is in small lots to the home trade. Prices are held steadily. The quotations are:

	Light Grades.	Heavy Grades.
Lugs	7¾@ 8 c.	7¾@ 8¾c.
Common to medium leaf	8¾@ 9¾	8¾@10
Good do	9¾@10¾	10¾@11

Bright-work, common and medium "	25	@30
" good and fine "	35	@35

Vegetables.—The market is largely supplied with potatoes, and quotations are unchanged. Our prices are for lots for consumption in bulk. Seed potatoes have the addition of double-headed barrels, cooperage and selection. Common onions are lower.

Potatoes, Rose, ₱ bbl., $1.75@2; Peach Blows, $1.75@2; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.25@1.50; Dyright, $1.25@1.75; sweet Del., $3.50@3.75. Onions, red & yellow, $1.50@1.75; white, $2.50@3; Conn., 100 strings, $2.50@3. Garlic, per 100 bunches, $20@22. Turnips, Russia, bbl., $1.25; flat, $1@1.25. Cabbages, per 100, $5@7. Hubbard squash, per bbl., $2@2.25; marrow, $1.50@1.75.

Wool.—The market the last few days has been rather quiet. Fleece and pulled are held with confidence. Dealers and manufacturers are in the market and the impression prevails that there will be a fair degree of animation in a few days. Texas and California stock selling slowly but held at full rates. Foreign sorts are held firmly without much business. Latest sales are at 44@45c. for unwashed fleeces, XX Ohio at 68c., super pulled 61@66c., extra pulled 60@63c. Western—Texas, 34c; spring clip California, 42@44c.; Montevideo, 42@43c.; Cape, 40@42½c.

Whisky—Is lower with large supplies. Sales of Western at 92@92½c.

ROCHESTER, N. Y., Jan. 4th.—The grain market is quite. Wheat shows a little more firmness, but prices are unchanged. Corn dull at 75c. Dressed hogs are 25c. higher, selling at $5.50@5.75 per cwt. Chickens, 12c.; turkeys, 15@16c.; geese, $1@1.25 each; butter plenty, 22@23c.; eggs lower, 31@31c. Apples are growing scarce. They do not keep well this year and are worth $1@1.25 per bush. for good. Potatoes 50@55c. per bush. Clover seed dull $5.75@6 per bush. Timothy seed $3, retailing at $3.25@3.50. Sheep skins have advanced to $1.75@2.50 each. Straw $10@11 per ton. Hay $17@24 per ton. Coal has declined 50c. per ton, chestnut selling at $5.75 and stove $6.40 per ton in the yard.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Jan. 6, 1872.

THERE has not been much doing at the Little Falls market for the week ending Jan. 6, the occurrence of the holidays having its influence in preventing deliveries. About 400 boxes have been received at the railroad depot, but we have no change to note in prices. Butter has come in sparingly, and sales have been made at 23@27c. for home trade.

We have advices abroad for the third week in Dec. Our London correspondent reports American cheese, extra fine, 65@68s.; fine, 62@63s.; good, 58@60s. The other descriptions of cheese sell as follows:—English Cheddar, 76@84s.; Wiltshire double, 56@63s.; Cheshire medium, 48@56s.; fine, 60@64s.; Scotch, 68@74s. Dutch cheese—Edams, 48@52s.; Gondas, 61@62s.; Derby shape, 56@60s. Normandy butter, extra, 116@120s.; Clonmells, 136s.; Canadian, 70@114s.

The corresponding prices last year for butter and cheese in London were: Clonmells butter, 140s.; American cheese, 80s.

LIVE STOCK MARKETS.

NEW YORK, Jan. 4, 1872.

THE markets have undergone some changes during the week. Cattle have come forward more freely and have a downward tendency at close. Sheep are very scarce and high, bringing nearly the best prices of the season. Hogs, too, are not so plenty and are firmer. But, to counteract this short run of live stock, we are getting a moderate amount of beef killed in Chicago, very many Western dressed hogs, large quantities of buffalo meat and venison, while heavy stocks of cheap holiday poultry still hold. Poultry has sold so low that it has taken the place of meat to quite an extent.

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	6,008	130	910	10,951	19,530
Last week	5,774	82	1,158	14,788	26,810
Correspond'g w'k '71	5,579	61	778	21,157	19,600
Average, '71	7,187	88	2,301	25,132	25,177

Beeves.—The total of 380,311 cattle during the past year was more than we had ever received in any previous year. The weekly average was 7,183, or 2,000 more than it was a few years ago. Illinois gave by far the largest supply, amounting to more than two-thirds of the whole, followed by Kentucky, then Ohio, and next Texas. Our own State comes sixth on the list. The early droves of Texans sold so poorly that feeders kept them back. We received more in 1870 than in 1871. Cattle declined in price during the entire year, averaging 12c, against 11c. the previous year. The largest supply at Communipaw, Weehawken coming next, and One Hundredth street last.

Beginning with the market of last Monday, when only 3,483 beeves were on sale—99 cars at Communipaw, 10 at One Hundredth street, and 18 cars at Weehawken—trade was somewhat lively, sellers and buyers wishing to get through and enjoy the holiday. Prices were about as firm as they were the previous Friday, good steers selling at 11½@12 cents, and the best cattle at 13 cents. Only quite thin steers went at 10 cents. The market ruled the strongest for months. Since then cattle have been coming in more freely—1,451 to-day—and they have fallen off nearly ½c. per lb., closing dull, with many unsold. There were quite a good many lots of State cattle sent in under the impression that the run of Western stock would be light. These, with several droves of Texans, gives a poor average quality.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Holiday beeves	— @ —	12½ @ 13
Choice bullocks, ₱ lb	— @ 12	12 @ 12½
Good to prime	11 @ 11½	11 @ 11¾
Medium	10½ @ 11	10½ @ 11
Ordinary	9½ @ 10	9¾ @ 10¼
Poorest grade	8 @ 9	8½ @ 9½
Average of all sales	10½ @ 10¾	11 @ —

Milch Cows.—There is no improvement in fresh cows, milk still ruling low on account of its abundance. Fine cows were sold at $80, which would have brought $100 early in the fall. Some very poor milkers went at $30@45. Trade is very dull.

Veal Calves.—Arrivals are quite light, and prices have been ruling higher. Some fine milk veals of 135 lbs. average were sold at 11c., but 10½c. is really the top of the regular market. A lot of fair State calves was sold at 9@10c. With an easier feeling in beef, calves are rather lower to-day. There is a large supply of hog-dressed, selling at 12@14c. for fair to good, and 8@10c. for fed calves.

Sheep.—These have been coming in less freely. In fact, the receipts are quite below the requirements of the market, and prices have advanced to 5½@7¾c., only thin lots selling below 6c. In their anxiety to get stock, butchers meet the lots on their arrival and bid against each other and the dealers here. Five cars over the Erie road to-day were all sold before they crossed the river, 1 car of State, 130 lbs., at 7¼c., 1 car of 96 lbs., 7½c., and 1 car 80½ lbs. at 7c. A car of Canadas, 135 lbs., brought 7¾c. The receipts of sheep for the past year were 1,403,878, or about 6,000 less than in 1870. They closed 1c. higher than they sold for at the opening of the year. Farmers are now taking the wool fever to perfection, and refuse to let their flocks come to market.

Hogs.—Total for the year recently closed, 1,331,492, or 415,000 more than in 1870. They declined 2c. during the year, closing 3½c. lower than they reached in Feb. Arrivals of live are rather light just now, but dressed are coming in freely—12,366 for the week. Prices advanced to 5¼@5½c. for live on Wednesday, but are quoted at 5¼@5¾c. to-day. Western dressed sell at 5¾@6¾c., with city slaughtered at 5¾@7¼c., having a wide range. Cutters are slow buyers, but retailers are in want of light pigs, hence their high price.

LATEST, Jan. 5, P. M.—Beeves.—Receipts to-day, 46 cars at Communipaw, 6 at One Hundredth street and 1 at Weehawken, making 865 head. Market slow, butchers holding back strong, hence there were comparatively few sales until late in the day. Prices about as yesterday. Six cars little Texans, 4½ cwt., sold at 8½c.

Sheep.—Arrivals to-day 5 cars at Forty-eighth St., 12 at Communipaw, and 5 at 40th street, making 4,172 head. The market continues very strong, 2 cars O., 96 lbs, selling at 7¾c.

Hogs.—There were 11 cars arrived to-day—6 at Communipaw and 5 at 40th St. None were sold alive. Dressed are unchanged, 1 car Western selling at 5¾c. Market pigs are scarce.

New Advertisements.

OFFICERS OF THE COMMISSIONERS
Of Immigration of the State of New York.

CASTLE GARDEN, NEW YORK CITY,
January 2nd, 1872.

THE Commissioners of Emigration desire to give notice to Railroad Companies, Contractors, Factories, Planters, Farmers, and others, that there is now in their establishments on Ward's Island, a large number of agricultural and skilled laborers, as also domestic servants, for whom they are desirous of obtaining employment.

Any and all information on the subject can be obtained, and arrangements made, by addressing the undersigned. BERNARD CASSERLY,
Superintendent.

HOW to Catch the Fox, Skunk, Coon, &c. Send for circular; sent free. Address DAVID B. WOOD, Morrisville, Lamoille Co., Vt.

POMEROY'S TRUSSES
Unrivaled for the relief and cure of Hernia or Rupture.
POMEROY & CO.,
711 Broadway, New York.

PLOWS AND PLOWING
is a little work on the foundation subject of agriculture. Is a common-sense discussion, containing valuable suggestions for every farmer. Gives a description of the new **Economical Plow**, which, it is claimed, will reduce the expense of Plows and Plowing at least one-half; do its work easier, faster and better than any other plow, and practically without human labor. It is adapted to either horse or steam power; to any condition of soil, or quality of surface; has a capacity of from one to ten acres per day; requires only one man to work it, and is warranted to satisfy every purchaser. If this machine supports its claims it will do for plowing what mowers and reapers have done for harvesting. But the book is worth many times its cost independent of this interesting item. Send for a copy. Price 25 cents; or, with "What I Know of Farming," by Horace Greeley ($1.50), for **$1.60.** *Address* THOS. M. NICHOL, 164 Nassau St., New York.

RURAL HOME.—A FAMILY SCHOOL for boys at Pownal, Vt. Rev. J. M. BACHELDOR, A. M., Principal and Proprietor. Room for four good boys. Send for a Circular.

ONLY $1 EACH FOR POST-PAID COLlections of Flower and Vegetable Seeds. Or send two-cent stamp for Catalogue, and select for yourself. SARAH H. MARTIN, Marblehead, Mass.

NOW READY!
THE 27TH EDITION OF THE
PRACTICAL SHEPHERD
A Complete Practical Treatise on the Breeding, Management and Diseases of Sheep.
By Hon. HENRY S. RANDALL, LL. D.,
Author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c., and Editor of the Sheep Husbandry Department of the Rural New-Yorker.

THIS excellent work (sold heretofore only by subscription) is now placed in the hands of the Trade, and may be obtained of all Booksellers. It is the most complete, critical and reliable book on American Sheep Husbandry ever published in this country, and should be in the library of every shepherd in the land. Price $2.

From the New York Tribune.

In this volume the author has exhausted the subject, and given all that is necessary for any farmer to know about selecting, breeding and general management of sheep, in health or sickness. We heartily commend this work to all who wish for a sound and thorough treatise on Sheep Husbandry.

From the Prairie Farmer.

THE Illustrations of sheep are by the best artists of New York, and well done. The letter press and paper are all that could be desired in a work of this description. It will undoubtedly meet with the large sale its merits demand.

No book like it has *ever been issued*. Agents Wanted. Sold by subscription. Send for terms to WM. B. EVANS & CO., 740 Sansom St., Philadelphia.

SPECIAL DISCOUNT on orders received in January. Send two cent stamp for Flower and Vegetable Seed Catalogue. SARAH H. MARTIN, Marblehead, Mass.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.
Patented June 27, 1871.

One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented! So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a lifetime. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and traveling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

A. W. WEBSTER & CO., 500 Broadway, N. Y.
Please state you saw this in RURAL NEW-YORKER.

NEEDLE THREADER.

THIS UNIQUE LITTLE INSTRUMENT will enable the old or weak-sighted to thread any needle from No. 4 to No. 12. Sent by mail to any address, free of postage, for 30 cents. Liberal terms to Agents. Address H. D. T. MOORE,

W. B. DIMON, Jr., & Co., Brooklyn, N. Y.

PERSONAL ITEMS.

LISZT has determined to produce the first part of his great oratorio of Christus, for the first time in Vienna.

SENATOR SUMNER has in his Washington home a painting by Mr. Duncanson, a colored artist of Cincinnati. The subject is a scene from Loch Katrine, Scotland, made famous in Scott's Lady of the Lake, and the picture is said to possess decided merit.

JOHN L. CLEM, "the drummer-boy of Shiloh," called on the President December 26th, to tender thanks for his appointment to the Second-Lieutenancy in the Twenty-fourth Infantry. In a letter to the President he says;—"With the help of God, I will try to render myself worthy of the position.

SIR WILLIAM JENNER, whose name was signed to the bulletins announcing the condition of the Prince of Wales, holds the appointment of Physician in Ordinary to both the Queen and the Prince of Wales. He is in his 56th year, and ranks high in his profession. He is a member of the Royal Society, and was created a baronet three years ago.

TENNYSON, a London gossiper writes, grows more and more popular among his old friends, and adds:—"For, much as it is to say, the man is better than his poetry. Plain as a Quaker in his garb, blunt but cordial in his speech, humorous and full of good stories, kindly and truthful, his annual sojourn in London—he is here now—is looked forward to as a literary and social festivity, and the sight of his long head and genial face, and his curious long cloak, is enough even to make one forget the fogs which just now are thick, and cold enough to increase the traffic in razors."

S. S. PACKARD has for some years held open a standing offer to educate gratuitously fifty women in his Business College. He states that the result has been two hundred applications, twenty trials, and two successes. The two who went through the course are now in excellent positions as bookkeepers, and earn good salaries. Mr. Packard sums up the general result of his experience in the statement that the trouble is not to find remunerative employment for competent women, but competent women for the remunerative employment that is ready for them, and will be while the world stands.

Agents Wanted.

5000 AGENTS WANTED.—Samples sent free by mail, with terms to clear from $5 to $10 per day. Two entirely new articles, salable as flour. Address N. H. WHITE, Newark, New Jersey.

Musical Instruments.

DUNHAM & SONS,

(ESTABLISHED IN 1834),

Manufacturers of

PIANO-FORTES.

Our Patent Hydro Carbonated Sounding Boards are applied to all Pianos we manufacture, which produce the only real Piano tone that has been discovered.

17 Union Square,
NEW YORK.

A PERFECT PIANO

The Patent Arion Piano, is constructed upon entirely different principles from any Piano now made. The Tone and Workmanship is superior and the instruments are more durable. We do not claim Equality, but we claim Superiority. We warrant every Piano we make for Five Years, and parties desiring to purchase a truly First Class Piano-Forte can purchase an "Arion" on trial. Write for our 60 page illustrated pamphlet which we mail free; it describes the construction of every Piano in the market and contrasts them with the "Arion"—Dont buy a Piano until you have read this book. When you write state where you saw this notice. Address, The Arion Piano-Forte Company, No. 534 Broadway, New-York City.

SAVE 20 DOLLARS.

NORTH

MISSOURI LANDS

FOR SALE

BY THE

Hannibal & St. Joseph R. R. Co.

About 120,000 Acres of the Finest Farming and Grazing Land in the United States, for sale at low prices and on very easy terms; thus enabling an industrious man with small capital to pay for his land with money earned from it.

Missouri is not too far West to be at a great distance from markets; its railroad facilities are great and constantly increasing; the climate is splendid, and good crops are almost a certainty; while the numerous thriving towns and cities springing up on every hand attest beyond doubt that the blight of slavery has been effectually dissipated, and that Eastern men and Eastern capital are doing their perfect work.

Our Lands Defy Competition.

Send for full Descriptive Circulars and Sectional Maps, inclosing 30 cents, and stating what paper you saw this in, to **Land Commissioner H. & St. J. R. R., Hannibal, Mo.**

1,500,000 ACRES
OF THE
RICHEST FARMING LANDS
IN THE WORLD,
For Sale to Actual Settlers.
NEOSHO VALLEY, KANSAS.
MISSOURI, KANSAS, AND TEXAS RAILWAY CO.
CARS NOW RUNNING 400 MILES.

The Lands offered by this Company are mainly within 20 miles of each side of the road, extending 170 miles along the NEOSHO VALLEY, the richest, finest and most inviting valley for settlement in the West. One-third of the labor required at the East in the culture of farms will insure here double the amount of crops.

PRICE OF LAND.—$2 to $8 per acre; credit of ten years' time.

TERMS OF SALE.—One-tenth down at the time of purchase. No payment the second year. One-tenth every year after until completion of payments, with annual interest. For further information, address ISAAC T. GOODNOW,

NEWS CONDENSER.

— The cholera has broken out in Alexandria, Egypt.

— Sojourner Truth is lecturing at Lawrence, Kansas.

— Syracuse thinks that warm street cars are delightful.

— A Georgia editor has a fearfully ear-ltating article on mules.

— A cigar maker of Canton, Ill., has just received the news that he is a German baron.

— An exchange says that boys between 12 and 14 years of age are the only men the Fiji Islanders eat.

— A Vermont pisciculturist has sold 2,000 pounds of trout of his own raising for 75 cents a pound.

— The Czar of Russia has been complimenting Emperor William of Germany in the highest terms of eulogy.

— Four hundred teams and about 2,000 men have gone into the pineries from Stillwater, Minn., this winter.

— One million of spawn of Otsego bass are being hatched out at Cooperstown to replenish the stock in Otsego lake.

— Loaded freight cars passed through Port Jervis, on the Erie railroad, one day last week, to the number of 18,000.

— The State Pomological Society of Michigan holds its meeting at Grand Rapids on the first Tuesday of each month.

— A peck, by measure, of silver coin was collected for missionary purposes at the Nova Scotia Free Will Baptist Convention.

— The statue of Schiller, which was recently erected in Berlin, is generally pronounced to be the finest monument in that city.

— Hot Springs, Ark., is the American Pool of Siloam. On laying in its waters, rheumatism, gout, and all that sort of thing is cured.

— The Great Pacific Hotel in Chicago is to be rebuilt at once. It has been ascertained that the foundations were not injured by the fire.

— The New York Central Railroad will lay a third track next summer, to facilitate the transportation of a constantly increasing amount of freight.

— There is much anxiety in Spain over the largely increased immigration to the United States, and the press recommends remedial measures.

— A collection of 1,500 beetles is for sale in Bloomington, Ill., being one made by Dr. Benj. Norris of Pike Co., from various parts of this country and Europe.

— The marble quarries of Vermont are literally mines of wealth. Over a thousand men are employed, and many of the mills are valued at one hundred thousand dollars.

Medicinal, Etc.

"Routed but not Conquered."
THE
Little Corporal

An Illustrated Magazine for Boys and Girls, and Older People who have Young Hearts.

The $500 Prize Story,

By HELEN C. WEEKS,
Will begin in the January Number
AND WILL CONTINUE THROUGH THE YEAR.

It is a charming story, full of incidents of real life, and will, no doubt, prove to be the most interesting serial we have ever published.

SPLENDID ATTRACTIONS!

In addition to the above serial, THE LITTLE CORPORAL will contain many shorter stories, poetry, articles on natural history, science, home amusements, puzzles, etc., from the most popular and entertaining writers in the land. It will also be

SUPERBLY ILLUSTRATED,

with choice original engravings, specially prepared for us at great expense. It is the aim of this Magazine to amuse and instruct the young, to cultivate a taste for reading good and useful books, and to make them happier, nobler and wiser.

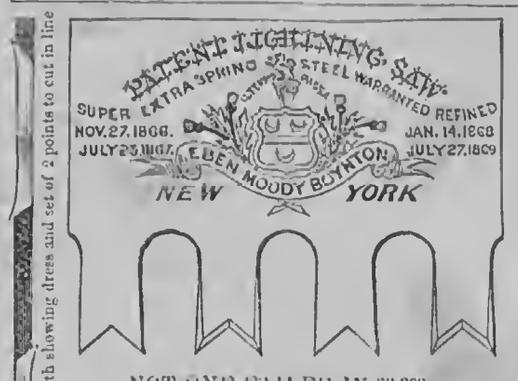
FOOT LATHES, best in the country. WOODMAN & PIKE, Lake Village, N. H. Circulars free.



NOT ONE FAILED IN 20,000.

THIS SAW possesses several great advantages over the ancient V tooth, which has hitherto been relied on, especially in cross-cut saws. The strength, stiffness and durability of these teeth, and their capacity for deep gumming, are so obvious that we will only name four other points of comparison, viz.: speed, ease, simplicity and perfect clearance.

Speed.—All are aware that an ordinary hand-saw cuts only one way; *i. e.*, the front cut is more effective than the back or retreating cut. These teeth, with their opposite cutting faces, IF CUTTING IN LINE, are equivalent to the front cut both ways of a hand-saw, in distinction to the two back cuts of the old V saw. Hence speed is inevitable.

Ease of Cutting.—It is easier to plow a groove in timber than to crush one out. The application of this principle is very perfect, all the teeth being of even length, double pointed, cut with outside vertical and projecting edges, and clear simultaneously with the saws.

Simplicity.—This is obvious, all the points being cutters like hand-saw teeth, viz., the same length. No hooks, or thick, raking teeth to be shortened; only one mill file is needed to keep them in order, and they are as easy for the unskilled laborer to sharpen as the old fashioned saw.

Perfect Clearance.—Continuously cutting and clearing, these opposite "cutting faces" not only cut, but clear, by lifting the fiber above the projecting blades, like a plow, which is the most perfect clearing implement.

NEW YORK, AMERICAN INSTITUTE FAIR BUILDING, Nov. 1, 1871.

E. M. BOYNTON, 78 Beekman St., New York—SIR: This certifies that I saw the Lightning Cross-Cut Saw, worked by hand, by two men, Nov. 2, at this Fair. Said men had saw cut off a sound 8x9 inch chestnut log in 35 seconds; and 16 cuts of same, *continuously*, in 2 minutes and 18 seconds, or at a rate of a cord of wood in less than nine minutes. I am satisfied that for all purposes of cross-cutting large and small timber, your cross-cuts and wood saws have no rival in speed, in ease, and in simplicity.

I believe their universal use would save a vast amount of money and time, and lighten the toil of millions of men. J. W. BLAKE,
Superintendent and Engineer
American Institute Fair.

N. B.—These extreme tests are quoted merely to prove what should be obvious—that direct cutting is better than the old V fashion process *used by all other saws*. The cutting of all saws depends much on the proper set, sharpening, and *skill* of the operator. I cannot furnish brains, and skill is attained only by practice. But no saw manufacturer dares to question the superiority of my latest improved saws, or to publicly test the matter.

I have reduced the retail price from $1.25 to $1 per foot, and the trade price proportionately, and solicit the patronage of the American public. Beware of worthless imitations and infringements, which will be prosecuted. Do not confound this 1871 pattern with my old 1867 pattern Clearing Tooth Saws, now out of market. All clearing teeth are complicated, as they require to be kept shorter than cutters and frequent re-adjustment. After much experience, I cannot recommend them. Each one of the new Lightning Cross-Cuts has my $500 challenge, and full directions for setting and sharpening any saw, engraved on it. Honest hardware men will procure the genuine for their customers, even if they are overstocked with inferior goods, but where they do not keep them, Agents are wanted. A six-foot Cross-Cut and Buck-Saw sent on receipt of $6. Express will cost from 40 cents to $1 to places this side of the Mississippi River by special contract.

N. B.—Millions of Axes are used for cutting wood; a Lightning Cross-Cut Saw, either for one man or for two, will cut five times as fast as an ax. Why not try them?

See that the name and warrant are on each saw.

Recent increase of business has compelled me to lease No. 80 Beekman St., adjoining No. 78, where I shall be happy to see Hardware Dealers and Customers.

E. M. BOYNTON,
Sole Proprietor and Manufacturer,
80 Beekman St., N. Y.

"FAMILY FAVORITE!"
THE
WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and unappreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WHOLE NO. 1147.

NEW YORK, AND ROCHESTER, N. Y., JAN. 20, 1872.

PRICE SIX CENTS.
$2.50 PER YEAR.

[Entered according to Act of Congress, in the year 1872, by D. D. T. MOORE, in the office of the Librarian of Congress, at Washington.]

Floricultural.

GIANT CACTUS—(Cereus Giganteus).

AMONG the many wonders in the vegetable kingdom there are few which have attracted more attention than the Mexican cacti. Some of the species are so small as to be scarcely noticed as they grow in the sand or crevices of rocks, while others assume the giant proportions of our largest forest trees, rising perpendicularly to the hight of fifty or sixty feet and of a form shown in the accompanying illustration, which is an exact representation of a view along the Gila River, as given in Vol. 2 of the Mexican Boundary Survey, a work published by our Government a few years since.

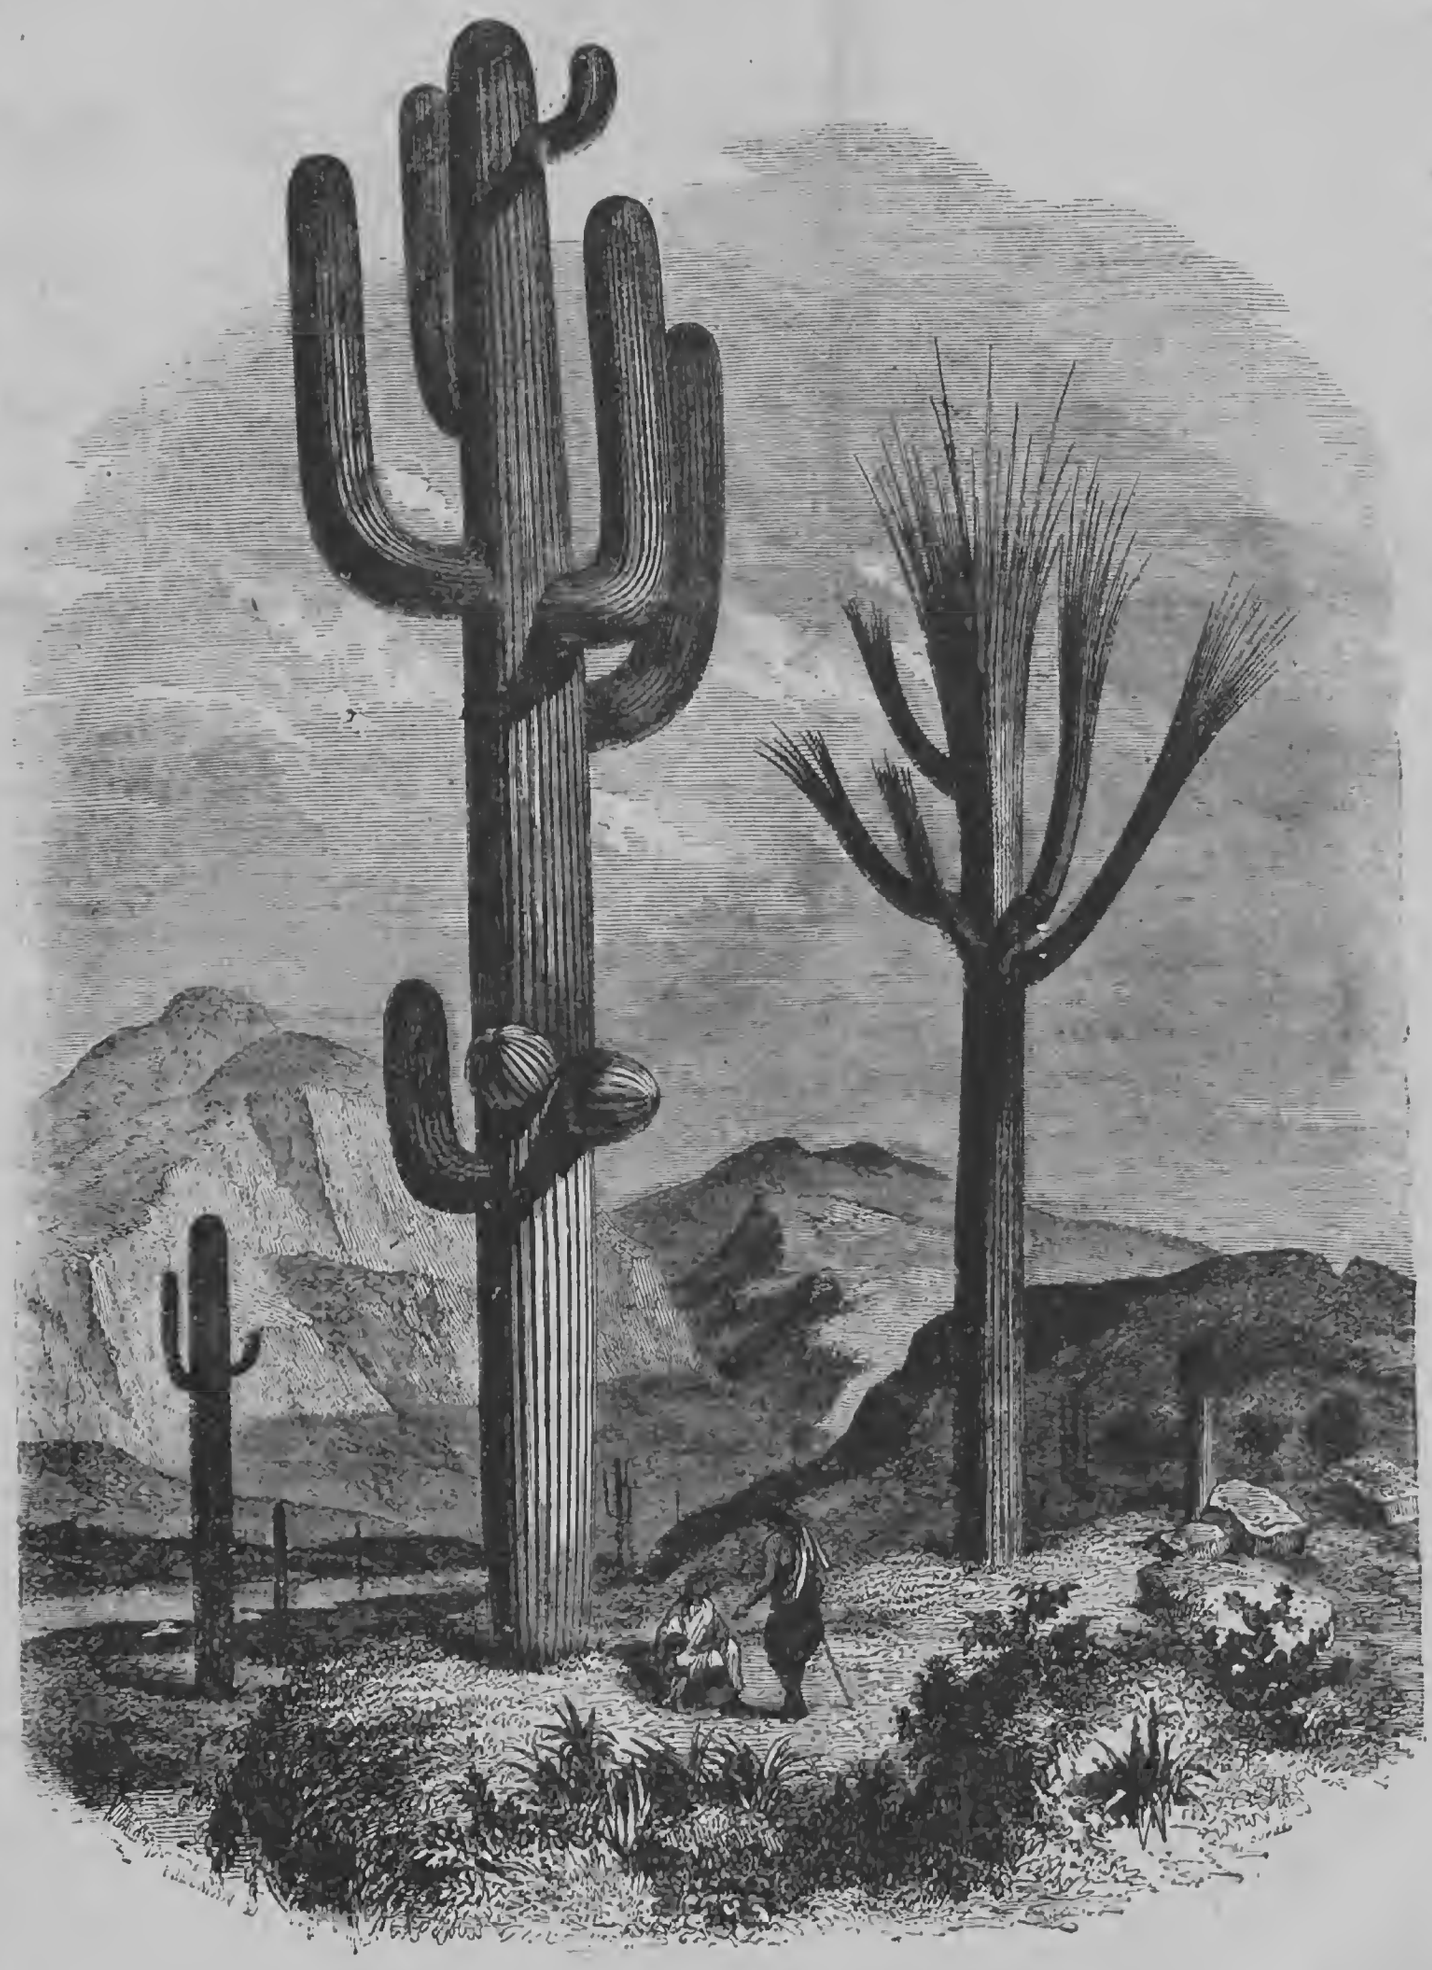
The largest specimens shown in the foreground, and those in the distance, are healthy and vigorous; while at the right an old and decaying one is seen, with the top of the main stem, as well as branches, splintered, showing their tough, fibrous texture.

The flowers are produced in great abundance near the summit, and are four or five inches long and nearly as broad. The sepals are greenish white, petals light cream color. The color of the fruit is green, slightly reddish at the upper end. The pulp is crimson and of a sweet, but rather insipid flavor.

The plants, when young, are globose in form, and retain this shape for many years, but eventually assume the columnar form as shown. This species of cactus probably lives to as great age as any of our forest trees, judging from the slow growth of the young plants raised from seed brought from Mexico.

In the RURAL NEW-YORKER of Dec. 16th, 1871, page 377, appeared a note from the Alta Californian in regard to this Gigantic Cactus, and although the statement there made might seem to some persons rather overdrawn, still it is probably true in every particular.

Prof. GEO. THURBER of New York City, brought from Mexico, a few years since, a large quantity of the seed of this cactus, which he distributed, and from it quite a number of plants were raised.



GIANT CACTUS—(Cereus Giganteus.)

RAISING SEEDLING PLANTS.

EVERY person who raises plants from seed stands a chance of producing something new and valuable. Whether it be pear, apple or any species of ornamental plant, the chances are in favor of a new variety, and it is this expectation of particular results which adds so much to the pleasure of the operation. The games of chance seem to have a peculiar attractiveness about them; no matter in what form they come, or among what kind of people they are found, all alike yield, and become devotees of the "Prince of luck."

The horticulturist, and all who love plant culture in any of its branches, exhibit their fondness for chance results, in trying experiments, usually in raising seedlings. There is certainly a peculiar, facinating kind of pleasure derived from knowing that we possess something, no matter how indifferent it may be, that no one else has the exact like. If a new variety of value is produced and propagated, another pleasure may be derived from a distribution of the same. We confess to be fond of this game of chance, even where there is no prospect of moneyed gain, and dislike to see seeds of any choice variety of fruit or flower thrown away.

A few fruit seeds planted in some corner of the garden may in time become trees of great value, for they grow old as we advance in years, and take nothing from our happiness even if they add nothing. We had much rather spend our time cultivating a bed of seedling Fuchsias, Geraniums, Roses, or any of the common ornamental plants, than have the pick of the very best collection of some other grower who has already skimmed the cream from the cup of pleasure in producing them. Should there be any reader of the RURAL NEW-YORKER who has never tried his or her hand at raising seedling plants, we hope they will not allow another season to pass without making at least one attempt in this direction. Try fruit seed as well as flower; in other words, let no seeds go to waste, but put them all into a proper position for growth, and take your chance in nature's great lottery.

LIQUID MANURE FOR HOUSE PLANTS.

IN the RURAL NEW-YORKER for Dec. 23d I notice liquid manure recommended for house plants. As that cannot always be had, especially in a village in winter, dirty suds in which clothing has been washed, I find, will answer as well. I have been using it once a week all winter and my plants never grew so fast or looked so well. I have a double Primrose, in a three-inch pot, on which I can count over a hundred blossoms; also some small bi-color and white Geraniums, started for spring planting, only three inches high, the leaves measuring four inches in diameter. My largest Cuila stands three feet two inches high; leaves, fifteen inches; also many other things, all of which I attribute to the use of my dirty suds once a week.

Last summer I watered all my roses with it, and the pillar roses with dish-water. The slugs scarcely troubled them and the blossoms were really wonderful, both in quantity and quality. I think my Baltimore Belle must have grown over thirty feet last season. I never have any slops wasted. Bed-room slops are just the kind to throw around the roots of young shade trees. I think that is what saved our Mountain Ash last year from the borers; at any rate it never does any harm to save all the slops for grape vines and hardy trees. MRS. S. J. HOWARD.

FUCHSIAS FROM SEED.

FUCHSIAS are readily grown from seed, and usually vary widely from the original stock. The seed pods should be allowed to remain on the plant until they fall off; then lay them aside for a few days, or until they begin to decay. The seed may then be washed from the pulp and spread upon paper to dry. They may be sown immediately, or kept for a few months in paper bags. Sow the seeds in fine, sifted soil composed of leaf mold and sand, covering not more than an eighth of an inch deep; sprinkle the soil with water, being careful not to wash away the seed; then place the pots or boxes containing them in a warm place, giving water as required. When the seedlings are large enough to handle, pot off singly into small thumb pots. As the plants become large and strong, shift into larger pots.

Farm Economy.

ECONOMY IN APPLYING MANURE.

PROF. GEORGE H. COOK of New Jersey has been talking to the Middlesex Farmer's Club upon the importance of so manuring land as to make it permanently better—that is, not applying fertilizers with a view to profit from one crop alone. We find in a Brunswick paper that he said that Mr. HOPE, in Scotland, for nineteen years cultivated a farm without any direct profit, because he returned to the soil, in the form of manure, all, or nearly all, that he gathered from it. He then renewed his lease and during the succeeding eighteen years he became wealthy, owning several farms, for one of which he paid twenty thousand pounds.

"Where marl or bone-dust has been applied to a field the grass will show it for years. The liberal application of fertilizers is the most profitable. This year, 1871, on the College farm, 2,680 bushels of beets were raised on five acres. The soil of the whole five acres was good, but on one-fourth of an acre an extra application was made, at the rate of twenty dollars worth to the acre, of a compost of hair, marl and manure. This quarter of an acre yielded 220 bushels, giving an increase per acre of one hundred dollars' worth of beets for twenty dollars worth extra of manure. This compost was also applied to the carrot field, which gave 2,050 bushels from two and a half acres. The wheat crop illustrated the same fact. For potatoes the ground was liberally manured, giving a good crop of potatoes, about 200 bushels per acre. The wheat was sowed after this, without any manure, and we harvested about thirty-two bushels per acre.

"A great mistake of our farmers is to attempt to farm with too small a capital. The working capital should equal that invested in the land. In regard to the kinds of fertillzers, the first and most indispensable is barn yard manure, and for this there is no substitute. This may be provided by buying, if near a town, or, which is the better way, by keeping all the stock possible. In England improvement has come entirely in this way, increasing the crops of turnips and by these increasing their stock of cattle. It would be a good question for farmers to consider and determine, how many tons of good barn yard manure can be made per acre? The second in importance is clover.

"The best crop of wheat ever grown in New Jersey was raised by Mr. H. K. HAY, who plowed in clover, spread lime on it, and harvested forty-three bushels per acre. In South Jersey some farmers sow clover among their corn after the third plowing, or perhaps in August, when it is not too dry. The clover makes a good growth the ensuing year, and late in May it is plowed under and corn is planted. In this way they grew forty to sixty bushels per acre. Sometimes, instead of planting corn, the clover is allowed to stand, the first crop is cut, the second growth plowed under and wheat sowed; thus making a shorter rotation, and dispensing with the oat crop, in which there is rarely much profit.

"The next fertilizer is Lime, which is the cheapest and one of the most useful. Plaster, for some reason not apparent, seems to be falling into disuse in this vicinity, although still used in Hunterdon County. It is said that a half bushel of plaster in a pile of strawy manure will cause it to rot down in a few days. If this be true, it is an important fact.

"The principal fertilizers we need, which are expensive, are phosphates, potash and ammonia, and these are high, but if genuine are worth all they will cost. Soluble phosphoric acid, as it occurs in superphosphate of lime, is worth from 12½ to 16 cents per pound. Insoluble phosphoric acid, in bones, is worth 4½ to 6 cents a pound; but insoluble phosphoric acid, contained in the mineral phosphates of South Carolina and Northern New York, are absolutely worthless. Some years since phosphate was brought from the west shore of Lake Champlain, and made into a superphosphate which proved to be without value. Ammonia is worth from 18 to 25 cents per pound. Fifty pounds of ammonia will sometimes increase a crop of wheat eight or ten bushels per acre, Potash is worth from 4 to 8 cents per pound.

"There is no doubt but that certain fertilizers are adapted to particular crops. If superphosphate of lime be applied to raw ground, destitute of vegetation, white clover will be sure to grow; but copperas, or sulphate of lime, applied to a similar piece will bring sorrel, while no clover will appear. If saltpetre, or nitric acid, is spread on grass the clover will disappear, but the narrow-leaved grass will grow better than before. Applied to turnips, ammonia will give a large growth of top and small roots, while superphosphate of lime will cause large bulbs with comparatively small tops. This effect is not seen where guano is used, because the guano contains a sufficient quantity of phosphate. Where shall we get the fertilizers we are are compelled to buy? Bone dust, honestly made, is one of the best, and invariably shows on wheat or grass. There are two kinds of bone dust, much used by our farmers, PETER COOPER'S is made from boiled bones, acts quickly in consequence, is honestly prepared, and gives good satisfaction. LISTER sells ground raw bone and has a good reputation. Having a little flesh on it, it should be better, if the grease on it, which retards its decay, does not counterbalance this. But superphosphate of lime, made from bones, would be better than bone dust, if we could get it pure."

The Herdsman.

STEAMING FOOD FOR STOCK.

IN the RURAL NEW-YORKER of Dec. 16, is some inquiry about steaming food. As to power, I use a six-horse power engine. With this I can do my threshing with an Emery's thresher and separator, which is all that I want, as my barn has basement, into which the wheat and chaff can run, and there be cleaned with one of GILBERT'S mills, thus blowing all dirt out of the chaff and leaving it clean for steaming. I have it so fixed that everything that can be saved for manure is secured and put on the land in the winter. By this process of cutting and steaming, no foul seeds get out of the barn alive, and the manure is just what a farmer wants, and where and when he wants it—on the land in the winter season, already spread with the least cost that it can be done at any time of year. I then plow it under in the spring. What is left is on the surface the following fall, for wheat, as a top dressing, together with what I can get time in the fall to put on in addition.

About the time of cooking food, is what I have been looking for; but as I have not seen anything about this, have been compelled to learn what I could. This winter I have drawn the steam right from the boiler, at a pressure of 40 pounds, and have steamed it from three-fourths to an hour, cutting, meantime, another can of the same for the next time of feeding. All that I can see about the cooking, is to steam until the mass is well heated through, boiling hot if possible; this extracts all that is valuable, I think.

In a barn built as it should be, there is no need of steaming or warming it, as 30 or 40 head will keep it warm enough so that it will not freeze. My barn is warm enough so that water will not freeze in the coldest weather; it is also well lighted and ventilated. But it is not expected that all will have everything just as it should be; and in case the barn is not tight, it might be well to warm a little; but I have not done it for the reason above stated; but judging from the actions of the cattle while it is steaming, seeing them stick up their noses to smell it,—for I assure you it smells good, especially when steaming Timothy hay and clover, as it is sweet, and perfumes the barn to a charm—it will pay to warm it.

I have not been in the habit of feeding much shorts and meal except to cows that are giving milk, the young cattle doing well on just the cut straw and stalks, or cut hay and straw. J. H. O'HARA.

Auburn, N. Y.

NOTES FOR HERDSMEN.

Cure for Black Leg.—Please tell "A Subscriber" when his calves begin to droop to give them half a teacupful of ground black pepper; mix with sufficient water to pour down the animal, turning it out where it can exercise for a short time. It is seldom necessary to repeat the dose, but if not successful, try again.—*.

A Good Heifer for Milk.—A subscriber, St. Lawrence Co., N. Y., tells the RURAL NEW-YORKER of a native 3-year old heifer weighing 400 pounds, that dropped her calf May 23. June 9 he commenced to weigh her milk and set it by itself for one week. Product 188 lbs. 1 ounce of milk which made 9 lbs. 4 ounces of butter of good quality.

Mr. L. F. Allen of Buffalo, has just received at his farm, six Short-Horns, imported by Capt. Pratt of Essex, Conn. They comprise two young bulls, red, and six heifers, two reds and four red roans.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Keeping a Diary.—*Jan. 1st, 1872.*—Many a man and woman will turn over a new leaf to-day and resolve to keep a better record of the future than of the past. I do not know of a better method of keeping one's self straight in the harness than by jotting down every day's transactions in a Diary. There are various questions that come up, from time to time during the year, which could be readily settled if a record of each day's work was strictly and faithfully kept. It will enable any one to avoid repeating many a mistake. Above all, if we keep a record of the money we spend, and what we spend it for, it will show us the foolish as well as the wise bargains made. Every person who can write, should keep a diary, as an educator, if for nothing else.

Wrong on the Labor Question.—*Jan. 2.*—A gentleman writes me that he has taken much pleasure in my Diary, as given in the RURAL NEW-YORKER, but objects to my note Dec. 30, headed "Nothing to Do," for he says it is not true. I should certainly regret saying anything that was not true, but am not convinced by his criticisms that I have. He says that he would like to go upon a farm, but cannot shovel; he is a good book-keeper, and, in fact, can do almost anything where writing and figures are concerned. Judging from the gentleman's letter he is a good penman, and perhaps book-keeper, but a very poor financier. More than this, he aspires to a situation far above the one he actually merits. This last is a far too general fault, and I believe that a majority of men in this country get better situations and pay than they deserve. I am frank to confess that I always have, even in my younger days, when working on a farm for thirty-six cents a day. But I have never seen the time that I had nothing to do, simply because I was ready to do anything that I was capable of doing, and for the pay that such labor commanded. If a man cannot find employment in one field let him fit himself for another where help is needed. We have too many MICAWBERS in our community who are waiting for something to turn up, instead of going to work and turning up the thing themselves.

Sea-Beach Sand for Cuttings.—*Jan. 3.*—Last fall, when preparing beds inside the green-house for cuttings, the question in regard to the best kind of sand for this purpose came up. I had known some kinds of bank sand to be unfit for this purpose, on account of some noxious ingredients which it contained, but having had no experience with that on my own place, I concluded to try an experiment, using it in one bed and sea-beach sand in another. The results have shown that the beach sand was entirely unfit for the purpose, nearly every cutting put into it having failed, while those in the common bank sand have all grown. White beach sand, from fresh water lakes and rivers, if rather coarse, is far better than either of the kinds named, but it is not to be had in every locality. Many a good gardener has received a discharge because he failed to make plants grow given into his charge, when he was really not at fault, circumstances over which he had no control causing the failure. If it was not the sand or soil used, it may have been unsuitable houses.

Camellias Dropping their Buds.—*Jan. 4.*—New Year's day the ladies of my household desired a number of choice camellias that I had in bloom to decorate the reception room, and of course they were indulged. The plants were placed in the room and carefully watered as often as seemed necessary, but within three days after being carried into the house, the buds commenced dropping. This showed that the atmosphere in our ordinary living-room was not at all suited to these plants, it being too hot and dry. Now the question arises, is such an atmosphere as healthy for human beings as one that is more moist and cool? As a rule I believe that our people live in a far too dry atmosphere; and if more moisture could be infused into it, better health would be the result. In the warm days of spring when the air is loaded with moisture, every one exclaims "how delightful!" "how exhilarating the weather!" and these are just the conditions which make all nature rejoice.

Painting Roofs.—*Jan. 5.*—To me there seems to be no doubt that it is economy to paint the roofs of all buildings. Five years ago I built a barn and a large ice-house, both standing in the shade of large trees. The ice-house roof I had painted as soon as finished; the barn was not, and a portion of the roof is covered with moss and the shingles nearly rotted through, while those on the ice-house seem to be as sound as when first put on. I have also tried the same experiments on buildings not shaded, and am convinced that a man cannot afford to allow any shingle roof to go unpainted, at least if he expects to own it many years. Having just finished a new barn, I have had my men painting the roof to-day, before the scaffolding was taken down, it being more convenient to do it before than after removal. I use for this purpose white lead and linseed oil, adding coloring, to give the shade desired.

Linden or Basswood Honey.—*Jan. 6.*—Years ago I advised apiarians to plant Basswood trees for the honey that the bees would gather from their flowers. Of late this subject seems to be attracting considerable attention, and to-day I received a letter from a gentleman in Ohio, who is preparing to plant several acres of these trees for a bee pasture. This letter led me to look up some of the old authors and see what, if anything, they had to say upon this subject. As COLUMELLA appears to have been pretty good authority on Rural subjects, eighteen hundred years ago, I turned to the chapter on Bee Pasture, and found, to my surprise, that the Linden was placed in the rejected list. After giving a long list of herbaceous plants, shrubs and cultivated trees that afforded excellent pasture for bees, he says:—"But, of Forest or Wild trees, the most suitable and convenient for them are the mast-bearing Red Oaks; also the Turpentine tree and Mastick tree, which is not unlike to this, (the last,) and the sweet smelling Cedar; but of all, the Lime or Linden alone are hurtful." How our old author came by the knowledge that the Linden was hurtful, we are uninformed. But here is a hint from past ages—perhaps like many other things from the same source,—untruthful.

The Apiarian.

BEE NOTES AND QUERIES.

Bee Hives.—In RURAL NEW-YORKER of Dec. 16th, I noticed an article on Hives. I have used hives similar to the one described (with exception of size, which I consider too large) for a number of years; but am not satisfied with the hive, and in giving my reasons why, will state what I consider are the requisites of a good hive.

1st. For the bees there should be ample room for brood, also for honey to winter a large swarm, be well ventilated, and protected from sudden changes of temperature. It should also be made so that the size of chamber can be adjusted to size of swarm when hived, and enlarged to standard size as it is filled with comb.

2d. For the keeper—The construction should be such, that the receptacles for surplus honey will form a part of or continuation of the chamber, but at the same time exclude the queen and drones from them. Also, so that it can be used either as a swarmer or non-swarmer, and give the most advantage for the use of the mel-extractor.

In the hive described, there is too much room in the chamber to meet all the wants of a large swarm, and not enough room in the right place, for surplus honey; and it does not afford sufficient protection against extremes of heat or cold.—J. E. M., *Rochester, Pa.*

"What Drones Do."—Concerning the article under this head in RURAL NEW-YORKER, Dec. 23, 1871, K. A. D. M., Pella, Iowa, writes:—"I always thought the reason honey became thicker after it was stored was by evaporation; and I am not convinced to the contrary yet, as I had some experience last season that makes it evident to my mind that drones do not rectify the honey. I had a number of stocks that never hatched a drone; the reason was, I did not wish black drones to fly, as I was rearing Italian Queens and had a few black stocks of bees from which I was careful to destroy all drone brood. I am sure I have stocks now in the cellar with a good supply of capped honey, that hatched no drones at all during the entire season; and I never have been able to detect the least difference in the honey taken from those stocks and that of stocks that had drones. If Mr. HEAD is correct, it will be wisdom to abandon the theories of some writers who recommend cutting out all drone comb to prevent too many consumers of honey in a stock of bees."

Where Foul Brood appears in a hive, bury honey, hive and bees, is the advice of E. DROOD, Mich.

Sheep Husbandry.

NATIONAL CONVENTION OF WOOL GROWERS AND WOOL MANUFACTURERS.

In our issue of January 6, we published a portion of the proceedings of this Convention at Syracuse. This body issued an Address to the President and Congress of the United States. It is so long we are unable to print it entire. The Address rehearses the action of the Convention of 1865, embraces the resolutions adopted thereby, the basis for the adjustment of old differences, and the history of the mutual effort to devise a scheme of legislation which should be consistent in all its details with the mutuality of interest and equality of protection proposed by the two interests. The history of this whole movement is familiar to the readers of the RURAL NEW-YORKER, in whose columns it has been recorded.

The Address shows the practical results of this action of the Convention of 1865, and of the conferences between the Committees of Wool Growers and Wool Manufacturers to have been the duties upon wools and woolens incorporated in the tariff of 1867, and which is still preserved in all its essential features. How this legislation, so carefully planned and prepared, has borne the test of experience, is the argument of the address. We must summarize the points of this argument as follows:

1. The New System of the Classification of Wool then inaugurated—that is, clothing, combing and carpet, and other similar wools, determined by samples—has been recognized as scientifically correct by European experts, the administrative means devised to apply this classification have proved most effective, and the system meets the approbation of the great body of growers and manufacturers.

2. The Income on Wools competing with those produced in the United States has increased since 1867, the general interests of agriculture have been promoted thereby, and the duties on competing wools since 1867 have saved the sheep husbandry of the United States from annihilation.

3. Three-Quarters of the Wool Manufactured in the United States is of home growth. Our fabrics are designed with reference to the peculiar qualities of our own fiber, and derive from them their soundness and durability. Our machinery is adapted for working our own wools, and our best skill, founded on experience of these characters, is exercised in manipulating them. Although we may import limited supplies of foreign wool, the ample domestic supply regulates the cost of such raw material as we may import. The failure of a domestic supply of wool would be as fatal to our mills as the drying up of the streams of water which move them. As a result of the economic law that no nation does or can continue to import more than one-tenth of all it consumes, we could not import and pay for all the raw material which our machinery is capable of working up. Neither could American consumers afford to import and pay for their present abundant supply of cheap and good clothing. The decline of the national sheep husbandry involves not only the arresting of emigration to new territory, the continued impoverishment of old lands, the diminution of healthful food, the stopping of mills and the dispersion of laborers, but it involves the abandonment or curtailment of the vast clothing establishments in our great cities, which are dependent upon American fabrics, and a less abundant provision of comfortable clothing for the great mass of our people.

4. The Cause for Depression in the wool trade and the reasons for asserting that but for duties on wools and woolens American sheep husbandry would be annihilated, are given in the shape of figures showing the extent of the wool production in the Southern hemisphere and the low cost thereof.

5. Mutton Sheep Husbandry and the production of combing wool have made equal progress The culture of the long wooled races has greatly extended in Vermont, Ohio, Kentucky, Virginia, Southern New York, Eastern Pennsylvania and New Jersey, and has been pursued with a profit so much exceeding that obtainable in any other branch of agriculture that the time is not distant when we shall no longer resort to Canada for the combing wools for our worsted manufacture. This progress—one of the most hopeful features of our agriculture, as it implies the pursuit of the most advanced arts of husbandry—is largely due to the protection afforded to our domestic combing wools by the tariff of 1867.

6. Pastoral Sheep Husbandry has made marked progress in the regions favored with facilities for winter grazing. The wool produce of the Pacific States is constantly and rapidly increasing. The exports and consumption of California amounted in 1868 to 15,539,417 lbs.; in 1869 to 17,253,370 lbs., and in 1870 to 23,557,871 lbs. In the pastoral regions of the far West 8,000,000 to 10,000,000 sheep are now profitably kept in place of scarcely 2,000,000 in the territories and Pacific States in 1860.

7. The Progress of Sheep Husbandry during the last decade is thus stated:—In 1850 our total wool production according to the returns of the census was 52,516,359 pounds. In 1860 under a free trade policy it had reached only 60,511,343 pounds. The estimates of a government statistician would place the production of 1865 at 115,000,000 pounds, an average of 85,000,000 pounds per annum for the first five years of the decade, and for the last five years of the decade at an average of 130,000,000 pounds per annum. A private statistician in the trade, of accepted reliability, estimates the total wool production of the United States for 1867 at 160,000,000 pounds; for 1868 at 177,000,000; for 1869 at 162,250,000; and for 1870 at 153,000,000 pounds. The total falling off from 1868 to 1870, so strenuously urged as a proof of the failure of the protective system, is but 15,000,000 pounds, less than one-ninth part of the increase in eight years preceding 1868. The whole decade, under the defensive influences of the war, of the Morrill tariff and its amendments, the tariff of 1867 and its amendments, has been with respect to the woolen industry, the most marked protective period of our history, and the progress of wool production and sheep husbandry is not the least convincing of the many examples which may be adduced of the wisdom of the economic policy which has distinguished this decade.

8. The Effect of the Tariff Act of 1867, upon the manufacturer's interests, by increasing his protection, was not generally advantageous, as in the majority of fabrics greater protection was given than under the Morrill tariff and its amendments. The practical inquiry then is, what has been the effect of the protective measures of the last decade as a whole upon the prosperity of the woolen manufacturer? This is to be determined by the increase of productive development of industry in new States, improvement of old and achievement of new fabrics, and the general sentiment among manufacturers at the present day with regard to the past and future.

9. Progress of Production is shown by the following table, in which the condition of our wool industry in 1868 is compared with that of the years 1850 and 1860:

Items.	1850.	1860.	1868.
Pounds of wool grown	52,516,359	60,511,343	177,000,000
Value of wool import'd	$1,681,691	$4,342,152	$3,915,262
Value of wool manufactures imported	17,151,509	37,937,190	32,109,759
Value of domestic wool manufactures	45,281,764	68,865,963	175,000,000

It appears by this statement that in 1860 the value of our domestic wool manufacture was $68,865,963. In 1868 it had risen to $175,000,000; an increase in eight years of $106,134,037. The production therefore had increased, under the protective system, in eight years, one hundred and fifty per cent., while our population had advanced only thirty per cent. Within this period a war has intervened, as in the decade of 1810 and 1820.

Before the war with Great Britain, in 1810, the value of woolen manufactures was $25,608,785. After it, 1820, it was but $4,413,065. Then there was no defense against foreign goods. The contrast in the condition of the industries, at the close of the two decades, can have no other explanation than the difference in the economic policy prevailing at the two periods.

An interesting illustration of progress is the extension of wool manufactories in the West. The number of factories there in 1860 was 259, with 294 sets, and $1,616,710 capital. In 1868 the number was 557, with 965 sets, employing a capital of $5,118,000. This does not include the California and Oregon factories, which manufacture several millions pounds annually into fabrics, some of which greatly surpass the best products of our oldest Eastern mills. The admitted result of this extension of wool manufacture at the West is a diminution of the cost of woolen clothing to consumers there of at least fifty per cent.

10. What our Manufacturers Furnish our people is thus stated;—We supply with cheap and sound clothing the great mass of the people, furnishing the greater proportion of the cassimeres, tricots and cheviots for business suits; the beavers, moscows and cloakings for outer garments, and supply the great bulk of the fabrics worked up in the vast ready-made clothing establishments in our cities, which employ quite as many operatives as our whole woolen manufacture. We furnish the great bulk of the knit goods for underclothing, and the flannels and blankets for bed coverings. We furnish all the lugrain carpets consumed here, which are produced from twice the number of looms there are in England, making the American workingman's parlor and home the most cheerful and attractive in which labor ever found repose. For the more luxurious we make half the Brussels, tapestry and a part of the Axminster carpets consumed here. We supply nearly all the delaines, the most extensively consumed of the cheaper fabrics for female attire, and are daily producing new fabrics for female wear, such as Coburgs, worsted poplins, serges, cloakings, printed cashmeres, alpaca, mohair listers and braids, as well as bastings for shoes, which have been produced with such success as to reduce in two years the price of the foreign article from $1.10 to 60 cents per yard. We contribute for furniture purposes all wool and union damasks and silk cotelines and reps of tasteful design and color, and finally have removed from our ships and ports the signal of our national dependence—a British bunting. Thus, if we have been recipients of national favors we have not wholly failed to discharge our obligations. Nearly all the fabrics above enumerated have been, as to this country, creations of the last ten years. Thus we have developed manufacturing instead of simply pursuing it. We have not been manufacturers simply, but creators of manufacturers, founders of industries which, if not allowed to decay through national indifference, will perpetually occupy our people and enrich the country.

11. Of the Condition of the Woolen Industry now, the Address says the concurrent testimony is that, as a whole, woolen manufacture is prosperous, although there are cases, as there always will be, of depression ensuing from other causes than a tariff policy, such as those resulting from over production, the change of styles to meet the demands of prescribing fashion, &c.

12. The Remedy for Over Production in certain of the other branches of manufacture, is the diversion of skill, machinery and capital to other articles of manufacture. The only obstacle to such diversion is the want of confidence in the continuance of our protective system. So long as foreign influence can make it doubtful whether our protective system will continue, American capital will refuse to enter into investments in new branches of manufacture. The bane of industrial enterprise is instability and agitation of our tariff policy. And the expenditure which stimulates this agitation is sufficiently accounted for in the purpose of our foreign rivals to deter capital here from entering into new manufacturing enterprises.

13. The Future Prosperity of woolen interests depends not only upon the adequacy of the defenses which shall be preserved, for both its branches against foreign aggression, and the confidence that these defenses shall be stable and permanent, but also upon the prosperity of domestic consumers, without which it is impossible that our own production should continue to be profitable. While the necessity of checking excessive importations is the most obvious necessity, a still more important one is the increase of the purchasing power of our whole people, and the firm establishment of that general national policy which shall secure to the working and great consuming class full employment and adequate reward for labor.

Speeches were made commending and endorsing the Address and the Resolutions in consonance with its spirit, by Hon. George Geddes, Onondaga Co., N. Y.; A. G. Percy, Wayne Co., N. Y.; Mr. Clark of Vermont; L. T. Hawley of New York; Hon. J. Wiley Edmonds, President of the National Association of Woolen Manufacturers; Mr. Stephens, President of the Wool Growers' Association of Ohio; Hiram K. Edwards, Onondaga Co., N. Y.; M. H. Lawrence, Yates Co., N. Y.; G. B. Stebbins, Detroit, Mich.; Eli Stilson, President Wisconsin State Wool Growers' Association; C. L. Harding, Boston, Mass.; Mr. Flint of California; Mr. Norton of Wisconsin, &c., &c.

The Naturalist.

REARING CANARIES.

In raising canaries, the first care is to select birds that mate well. Buy a pure golden-yellow and tapering male. This color shows long domestication, and the tapering form proves careful breeding. Notice, also, the singing of the bird, and select the best you can get. The color of the female should be as dark as possible, since this is sign of hardiness—a very essential quality in a mother bird. By blending these two colors one may secure all the fancy colors prized in these fine cage-birds.

Take a cage, not less than two feet long, one foot wide and the same in hight, and running a partition in the middle, place the seed and water box on this partition. Thus you have two cages combined, one for each bird. This arrangement saves you a great deal of trouble in case your pets are quarrelsome, and enables you to regulate their breeding season. Feed on canary seed, hemp and rape, keeping cuttlefish bone or a piece of mortar within reach of the birds. Give plenty of greens, vegetables or grass, and occasionally a small bit of fresh meat. I have successfully raised canaries on cornbread. The inhabitants of the Hartz Mountains raise many thousands of birds sent to this and other countries on boiled Irish potatoes. The greater the variety of food the healthier your birds. By going to the same box to feed and drink the most quarrelsome birds get accustomed to each other's presence, and soon commence all the fantastic capers of gallantry peculiar to their kind.

When the *logwood is blossoming*, remove the partition, fix the seed-box in one end and put in a nest in the other extremity. Nests, all ready for use, are sold in the stores, and a half cocoanut shell—the one with the monkey-face preferable—answers the purpose. Any boy or girl, reading the RURAL NEW-YORKER, may, by taxing his or her ingenuity a little, construct a suitable nest. Little bits of clean straw or hay may be thrown in, to line the nest. Avoid for this purpose cotton, strings or rags, for these, being entangled into the bird's feet, may empty the whole contents, eggs or young birds.

Some birds will quarrel; but after mating they cannot be separated on this account, unless you want to kill them of a broken heart. In this case, however, you may take out the eggs, as they are laid, restoring them into the nest when the female goes setting. It is needless to remark that the tiny eggs are very frail, therefore they must be handled very tenderly, and that grease on the shells unfits them for hatching, hence the fingers must be perfectly clean. During the laying season, one should give some hard-boiled eggs along with other food.

But breeding in small cages is very unsatisfactory. The narrow space often irritates the male, and violent fights ensue, particularly after the female is setting and is deaf to his gallantry. Some birds eat their eggs; others, in the desperation of their confinement, tease the young ones, by pecking them, pulling out their feathers, &c., &c. Hence, get as large a cage as you can.

The best way to raise canaries is in a room. The writer, for his children's sake, bought, fourteen years ago, four females and two males, and put them in his garret, where the lower sash was removed and replaced by wire gauze. Two nails were driven into the ceiling, and, by means of wires, a fishing pole was fixed for a perch, also a perch was made in front of the window. Cocoanut shells were nailed on the walls for nests, and on a swinging board was given their food and water. Every week a piece of sod was given them. By this arrangement no fighting, eating eggs, or abuse of the offspring was known, and the first year their number increased to twenty-three. In the second year cedar trees, planted in tubs, were introduced, to build their nests among the boughs; but the structures proved too heavy, and half of the young ones perished by falling out of the shallow nest. This season only doubled their number. In the third year, after selling and giving away fully one-half, removing the cedars and relying only on the cocoa shells for nests, they increased to ninety-six and represented all the colors of the canary. They were so tame as to light on the children and eat out of their hands, and such singing as they made! A. K.

Tullahoma, Tenn.

Crows and Men.—BEECHER says it is no wonder men despise crows, for they are much like men. Give men wings and reduce their smartness a little, and many of them would make very good crows, which, explained, means that the very traits which men despise in crows, they themselves possess.

The Swine-Herd.

THE BEST HOGS FOR TEXAS.

WE are trying to improve our stock of hogs in this section of the country, and if you could see our Texas hogs you would think there was a wide margin for improvement. We think the *black* hog will do best in this climate, on account of being less likely to get the mange. We are constant readers of the RURAL NEW-YORKER, but we have not seen anything in it that gives us the desired information. Of the Chester Whites, Berkshires, Essex, Neapolitan, Poland-China, &c., which will return the greatest amount of meat from the same amount of corn? Which is least likely to get the mange? If we could be satisfied upon these two points we would know what breed of hogs would be best for this climate. By giving us information in regard to these items, you will greatly oblige many readers of the RURAL. M. M. A.

Gonzales, Texas.

WE invite swine-herds having practical experience to furnish the information desired by our correspondent.

Iowa Pigs.—I notice that several persons have given you the weights of pigs either raised by themselves or by their neighbors, and, following their example, I send you the following:—WILLIAM ORR, Harris Grove, Harrison Co., purchased from B. Cox of the same vicinity fifteen pigs, the net weight of which was 8,625 pounds, or an average weight of 575 pounds to the pig. These pigs were three-fourths Chester White breed. The pigs were nearly eighteen months old. I call them pigs because "Walks and Talks on the Farm," in the American Agriculturist, says it takes "twenty-four months" for a Chester White pig to mature—*i. e.*, become a hog. How is that for Chester Whites?—LYSANDER W. BABBITT.

Black Teeth in Pigs.—A correspondent of the Kansas Farmer has pigs which partially chew their food and have black teeth. He proposes pulling them, whereupon the editor replies:—"Pulling the teeth will do no good. Bleeding in the third bar of the mouth is often resorted to, and sometimes gives temporary relief. A better treatment is, to give occasionally ashes, charcoal and sulphur, say once or twice a week, in boiled food." But, brother ANTHONY, we know that pulling the teeth *will* do good. We have tried it repeatedly as have scores of intelligent swine-herds. We know some people don't think so, but we can't help it.

The Horseman.

NOTES FOR HORSEMEN.

Slabbers in Horses.—G. W. advises a correspondent of the RURAL NEW-YORKER who has a slabbering mare to give her chestnut leaves. He presumes the bark would do as well, still he has never tried it.

Horse Chewing Leather.—Will some one inform me, through the RURAL NEW-YORKER, what will prevent a horse from chewing leather? My horse *will* chew his hitching strap.—M. W. M.

Quarter Crack.—I saw in the RURAL NEW-YORKER of Nov. 25, page 331, that one of your readers has a horse with a quarter crack in each fore foot. I had a mare with the same some months ago, and besides keeping it clean and applying the tincture of myrrh, I took a piece of a grain bag and made a bag large enough to cover her foot, filling it first partly full of fresh cow manure and putting her foot into it every evening. In the morning I took it out, cleansed the foot and applied a pledget of tow saturated in tincture of myrrh. The mare's foot is to-day as sound as ever. The tincture of myrrh, in my case, without the poultice, did, apparently, no good.—J. SPICE.

How Homœpathy Cures Curbs.—A fine bred and favorite Hambletonian colt which I am raising developed, some months ago, a curb of such size as seriously to lame him. Having exhausted effort to reduce it by hand-rubbing, blistering, rest upon a high heeled shoe, &c., without avail, I tried Lycopodium as recommended by the Homœpathists when a curb assumes the character of a hard, bony protuberance. At the end of two weeks administration of five drops daily of the tincture, improvement began to manifest itself by softening of the swelling, and in a few days more the animal was as well and sound as ever, and as capable of rapid motion over a hard road.—J. W. S.

Rural Architecture.

GARDEN COTTAGE.

ANYTHING in the shape of suggestion that will help the working people of America to more comforts and conveniences, and help to build up Houses, is always desirable. To this end we give an elevation—perspective view—of an English woman's cottage,—a Cottage Orne. It needs little explanation. The ground plan and elevation are given. The upper story—a plan of which is not given—consists of four bed-rooms and a bath-room. No specifications accompany the plan. It is a *fac simile* of a Cottage that exists. Those who build after the model will have to base their estimates upon the size they desire, the material of which it is to be built, and the character of the finish, inside and outside.

The lady who furnishes the sketch has some ideas about the interior, which it may be well to find space for. She says:—"I like small, square entries, like vestibules, for cottage ornes. They separate effectually the front and back of the house, so that the noises and other attendants of work do not invade the sitting-rooms. The lobby, as well as the porch, should be laid with mosaic or encaustic tiles, if not considered too expensive or too pretentious for the *petite* simplicity of the cottage. If economy, however, is to be strictly studied, choose an oil-cloth of a marquetrie pattern, (like gay inlaying,) or white India matting, with a colored border. For the side lights, obscured glass with colored borders, seem a desirable addition. Some may censure them as meritricious; but I own to a catholicity of taste, even in the smallest matters, that adopts a bit of color or relief wherever it can be seized.

"From the ordinary stair carpet, with dingy enameled cloth cover hiding the pattern, as deliver and forfend! Either you can afford to have a stair carpet and use it, or you can't have one at all. Cover the entire stair with one with a small-figured ingrain, moss-like pattern of crimson, green or drab, with large patent stair-rods—not the wretched little bits of brass wire that are too commonly seen. The advantage of these is that they are handsomer and last longer than the small brass rods, and the price is said to be not greatly in excess of the old-fashioned kind; but I don't see how this can be. They are, however, certainly worth more in every way.

"The lobby table is preferred to the hal stand in cottage ornes. It should unmistakably vary from other tables in being long, low and narrow. A square, plain glass must hang above it; for a lobby without this convenience, whereby a guest may arrange his appearance before entering the presence of his hostess, is inhospitably furnished. Below the glass, or on the opposite wall, should hang a wall-basket of carved wood or iron, of open pattern, to receive gloves, papers or parcels. An ornamental whisk-broom should hang near.

"About the furnishing of the rooms, I have some decisions which will scarcely be accepted at once. They come from noticing the French and Flemish country styles. The cloth-covered door is one of these ideas. This is a frame of plain deal, with broad cross-piece, on which the lock is fastened, the whole covered with baize or rep, stretched tight, and studded with gilt nails on the edge. Else it may be covered with jacquard linen, and covered by a curtain, like the French *portiere*. The advantage of these doors is, that they are lighter, more noiseless, and less expensive than wooden ones. When covered with woolen stuff, lined with several thicknesses of common paper, they are even warmer than wooden doors. They deaden sound effectually. For these reasons, I urge their adoption—at least between communicating rooms, if the doors opening into the entry are of wood. The question of expense lies between the upholstering and the price of three or four coats of paint and nice graining.

"If ordinary wooden doors are used, let them be well painted, and if really good graining is not to be thought of, in consequence of the expense, paint them in solid color. The dark Etruscan coloring, delicately lined with white, crimson, or black, is coming in vogue for town houses, and is in far truer taste than the imitations of walnut which show their shabby edges on the "genteel" squares and side streets This style is too heavy for cottages, which may have the doors treated in the *salon* fashion of some gay French houses, the panels painted with fruit and flowers on white or neutral ground. This effect may be given by cutting the figures from fine wall paper, glueing them on the panels, and coating the whole with clear varnish.

"Let the walls be tinted plain, with gay cornice and ceiling mouldings. Ornamental hinges, door-knobs, and key-holes if not obtrusive, are appropriate additions to prettiness in the style we are considering. The surbase must be narrow, and have a single bevel on the top. All mouldings to retain dust are nuisances in a room where the genius of sweetness and brilliant order should preside.

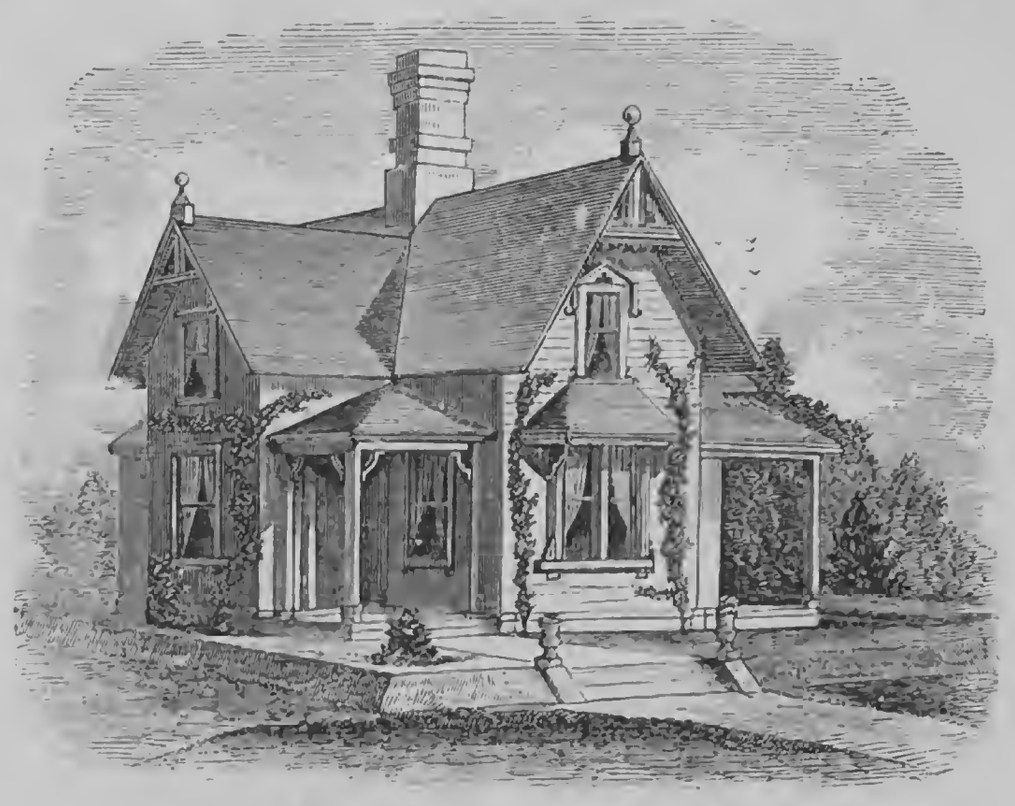


FIG. 1.—MY GARDEN COTTAGE—PERSPECTVIE VIEW.

"Bright brass fire-guards and brilliant steel implements render a fire-place attractive in the winter. The mantel, unless of marble or slate, should correspond with the rest of the wood-work, whether grained or plain. The mantel-shelf should be covered with Utrecht velvet or rep, with either fringed or scalloped pattern hanging down.

"The carpet should be of small figure, and the rules for choosing apply equally to Brussels or tapestry, as the patterns are repeated in both. I should say that a tapestry is in better taste for a simple house than a Brussels, just as muslin and cashmere suit a village lady better than moire and velvet. These carpets are fine, and wear nearly as long as Brussels. The effect, after a year's wear, is almost the same. The patterns fancied now are mottled crimson, green or drab, in three shades of the same color. These are monotonous, perhaps, in themselves; but a five-inch border of brilliant color is usually added, which gives a beautiful finish. Drab carpets are specially fancied now; small figures in oak yellow and oak brown, (marquetrie designs, quite different from the "oak" carpets formerly chosen for dining-rooms,) small flowers and leaves strewing the ground thickly, without any set grouping, are favorite styles. The floral oak patterns need no border. Rugs should be made of the mottled carpeting, with bright border.

"Stuffed chairs are preferred to common cane-seats. When the latter are used, a border of blue or crimson velvet should be placed round the canework. Ebonized wood is in request for the drawing-room suits of cottage ornes, beyond all other descriptions; and to lighten the effect a few chairs of scarlet or white lacquer are introduced.

"Muslin with fluted borders and chintz under-curtains are the appropriate style for cottages. If chintz is disdained, draperies of rep over full muslin curtains are used; but never long curtains of wool or silk materials. They are too heavy. Muslin, lined with colored Silesia, pink or blue, is pretty where a touch of color is wanting. Sofas and chairs should be of light, graceful form—ottomans of carpeting, for corners, make a room picturesque.

"The ornaments for a cottage must be unpretending, but choice. No gilding or inlaid ware should be seen. Porcelain clocks, vases of china or engraved crystal, pencil sketches, and chromo-lithographs *of the best*, in narrow, plain gilt frames are appropriate ornaments. A handsome lamp, of mathematical pattern, to swing over the table, gives a good effect in the absence of gas. These swinging lamps are a great improvement on the old standing lamps, which are so unpleasantly near the eyes. The lamp can be taken out to be filled, and, by a simple arrangement, can be elevated to any hight."

The Best Paint or Roofing Material.—What is the best paint or rooting material for a leaky tin roof?—D. F. CANNON.

WE do not know. Several of the mineral paints have been commended in these columns. White lead has been condemned. We shall be glad if so improbable an event happens." FOX & WILLIAMS, Buffalo, N. Y., are now turning five hundred bushels of corn into sugar, daily, at their sugar works in Buffalo. It can be clarified and made equal to the best beet root sugar of Europe. We have used the sirup, and find it as sweet, clear and pleasant-flavored as the best cane sirup. But it is most profitable to sell it to brewers in the unclarified state, and also to make into vinegar. It is found to be a great improvement to mall liquor, increasing the value of the beer materially.—S. W.

Effect of Cold on Iron and Steel.—For many years it has been almost an axiom among civil engineers, that great cold tended to produce a brittle condition of iron and steel, and that this hypothesis explained the alleged increase in the breakage of trees, axles and rails in railroad traffic. According to the recent experiments of JOULE and others, however, it would seem that iron and steel, instead of being weakened by freezing weather, are actually

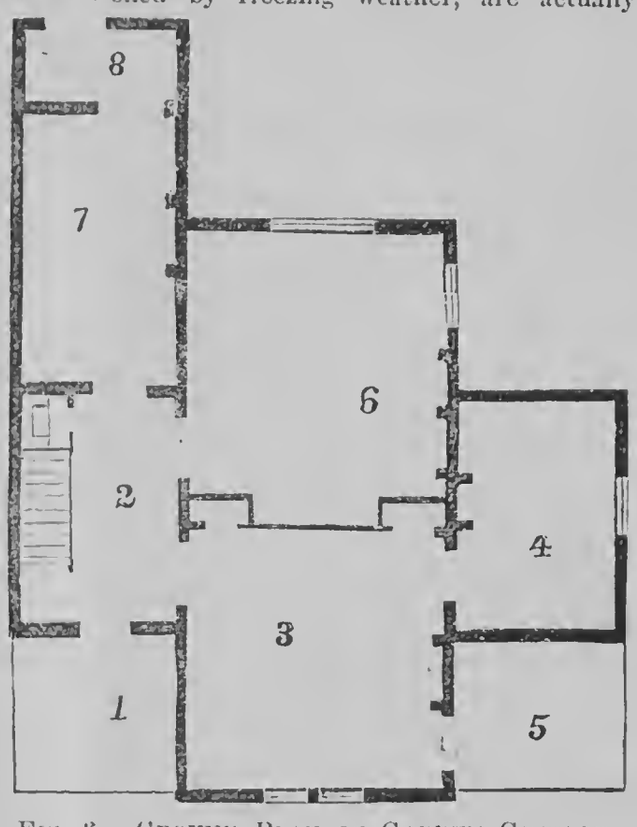

FIG. 2.—GROUND PLAN OF GARDEN COTTAGE.

DESCRIPTION.—1. Entrance Porch; 2. Lobby; 3. Drawing-Room; 4. Library or Boudoir; 5. Outside Porch; 6. Dining-Room; 7. Kitchen; 8. Scullery. NOTE.—No. 5 might be a Conservatory.

capable of resisting greater shocks than at a summer temperature. Dr. JOULE refers the greater frequency of railway accidents in winter to the increased hardness of the *ground* caused by freezing, by which the iron is subjected to a greater strain or shock than in summer.

Indian Mode of Preventing the Ravages of Moths.—The Journal of Chemistry says:—In India, both upholsterers and saddlers were badly troubled with moths in their work, especially in the rainy season; and the upholsterers in that country follow a series of simple rules by which they entirely avoid the ravages of these pests. They never put on a burlap or cotton covering without first steeping it in a solution of sulphate of copper, made by dissolving about one ounce in one gallon of boiling water, and then quickly drying the material in the sun or by a hot stove. For over coverings, especially if of wool, a solution of corrosive sublimate dissolved in patent colorless alcohol is frequently used with good effect. The boiling solution of sulphate of copper is often applied to a floor previous to laying a mat or carpet, and invariably under heavy articles of furniture.

Scientific and Useful.

USEFUL AND SCIENTIFIC NOTES.

Sugar from Corn.—Under this head, the RURAL NEW-YORKER of Dec. 30 says: "We confess we have little faith that many fortunes will be made, or much sugar put into the mouths of the American people, made from the saccharine matter in corn.

A Brick Filter.—W. A. M., Medina Co., O., asks if "a reliable filter can be obtained by building a brick partition through the middle of a cistern and allowing the water to enter one of the apartments, and to filter through the brick into the other." We have never seen any such experiment and cannot give an opinion upon which to base action. The nearest approach to it is that described in the RURAL NEW-YORKER of Sept. 9, 1871, page 155, which is in our judgment an excellent self-filtering cistern.

Nutrition in Charcoal.—Charcoal acts as a fertilizer only by absorbing the gases that would otherwise escape into the air, and delivering them slowly to the roots. It remains intact in the earth and does not itself feed the crops. It is only dissolved by melted iron, and it could not be digested by animals without being dissolved. For these reasons, which, I think are correct, it can only act to separate the particles of food, if it was of any benefit in feeding stock, which I doubt.—M.

Alligator Hide Boots, says the American Artisan, "are much believed in, and cost more money than can be cheerfully paid by any person unless he has cash in plenty and a passion for keeping his feet dry; yet ordinary leather is now stamped to resemble alligator skin."

Deodorizing Skunk-Perfumed Clothing.—C. C. writes the RURAL NEW-YORKER, he has found one or two thorough applications of spirits of turpentine to the perfumed garments a sure deodorizer.

Pomological.

POMOLOGICAL GOSSIP.

The Alligator Pear (Laurus Persea,) says the Pacific Rural Press, grows upon a tree about the size of a common apple tree. It is a native of the West Indies. The fruit, which is the size of a large pear, is considered the most delicious in the world—so say the inhabitants of the West Indies, and the best authorities in books on Tropical fruits; but allowance in these things must be made for different palates. *De gustibus non est disputandum*, is a common and true saying. The fruit contains a kernel, enclosed in a soft rind; and the yellow pulp, which is firm, has the delicate, rich flavor of the peach, but is said to be infinitely more grateful. This must be a nectar, then, for the gods, to use a strong term. It is sometimes called "vegetable marrow," and is eaten with pepper and salt. It appears that it is necessary, on account of the richness of the pulp, to apply some spice or acid; and thus lime-juice is also frequently added to it, mixed with sugar. Of the three kinds—the red, the purple, and the green—the latter is the best. The fruit is eaten with avidity, not only by man and beast, but by birds and also insects.

Cherries for California.—E. J. HOOPER, in the California Horticulturist, gives some notes on fruits worthy of cultivation in California. Among these he names, of cherries, Black Tartarian, which he says is admirably adapted to the dry climate of California. Early Rivers cherries are also named as worthy of trial in that State.

The Bartlett and Seckel Pear were the only varieties unanimously agreed upon as worthy to recommend for general cultivation by the American Pomological Society at Richmond.

Geer's Seedling Pear, is the name of a new Oregon pear grown by R. C. GEER. It is said to resemble the Winter Nellis in flavor, and ripens about the first of October.

The New Seedling Peaches seen at Fairs during 1871, by F. R. ELLIOTT—none of them, he says, came up to the standard of Crawford's Late Free or Tippecanoe Cling.

Arboricultural.

THE DATE PALM.—(Phœnix Dactylifera.)

THIS plant is one of great value to mankind. The genus to which it belongs (*Phœnix*) is widely distributed over Northern Africa and tropical Asia. A few species are found in Southern Africa. All the species have long, beautiful, pinnate leaves, variable in size and form. Some have tall, stout stems; others are dwarfs, the leaves rising direct from the crowns of the roots. The plant which we show in the accompanying illustration belongs to the arborescent or tree-like section of the genus, and although there are many of similar growth, the Arabs have a distinct name for each.

The species under consideration is a tall, handsome tree, growing fifty to eighty feet high, bearing an immense quantity of nutritious fruit, which is almost indispensable to the Arabs and their domestic animals. While the plants remain small, they are beautiful ornaments for small conservatories, and it is no mean one for decorating the dinner table. The plants are readily and easily grown in any warm room, and no more elegant object could be desired for a deep bay window. When the plant becomes too large for this purpose, it can be placed in a hall or in a lofty room, and in summer plunged into the border of the garden, among other tropical plants. A large specimen makes a most excellent center for a group of ornamental leaved plants; in fact, it is never out of place, wherever it may be grown. It thrives best in a peaty soil, intermixed with white sand.

A few such plants are worth scores of the more common sorts. Our florists are beginning to be encouraged in their attempts to introduce such rarities from the tropics, and we hail the sign as a good omen for the future of American arboriculture and floriculture.

AMERICAN BEECH (Fagus ferruginea).

THE Beech is not generally considered a profitable tree to cultivate for its timber. It is a vigorous, but not a rapid grower; still, in a good, fertile soil, one would not have to wait many years to obtain trees of fair size, and we would advise those who are endeavoring to rear trees on the Western prairies not to overlook the beech in their search for valuable trees. It certainly has many merits, among which we will mention a few of the most prominent. It is extremely hardy, therefore especially suited to the Northwest. It grows freely on thin, stony soils, such as hillsides and bleak, exposed situations. When planted thickly together it forms a dense mass of fine spray, clothed with leaves, and is, therefore, suitable for windbreaks and screens. When planted in masses the stems grow very straight and produce excellent timber for building purposes where not exposed to the weather. For fuel there are few kinds of wood that excel the beech, and young branches of not more than an inch or two in diameter are almost equal to that of the main stem, provided they are cut when green and stored in a dry place.

If a man had a belt about his place, or a grove of thickly planted beech trees, the annual trimmings and prunings which it might be necessary, or at least advisable to make, would in themselves be worth, for fuel, all that the trees originally cost. Of course we are supposing that the trees were grown on the prairies or in a sparsely wooded country.

The trees are easily propagated from seed, which can be obtained in almost any of our Northern forests; or the seedlings can be had in any quantities from the same source. On account of the great number of long roots which the beech produces, it is very difficult to transplant trees of large size; but the young, one or two year old seedlings, may be removed as readily as those of the apple or pear, and with as little loss.

ARBORICULTURAL NOTES.

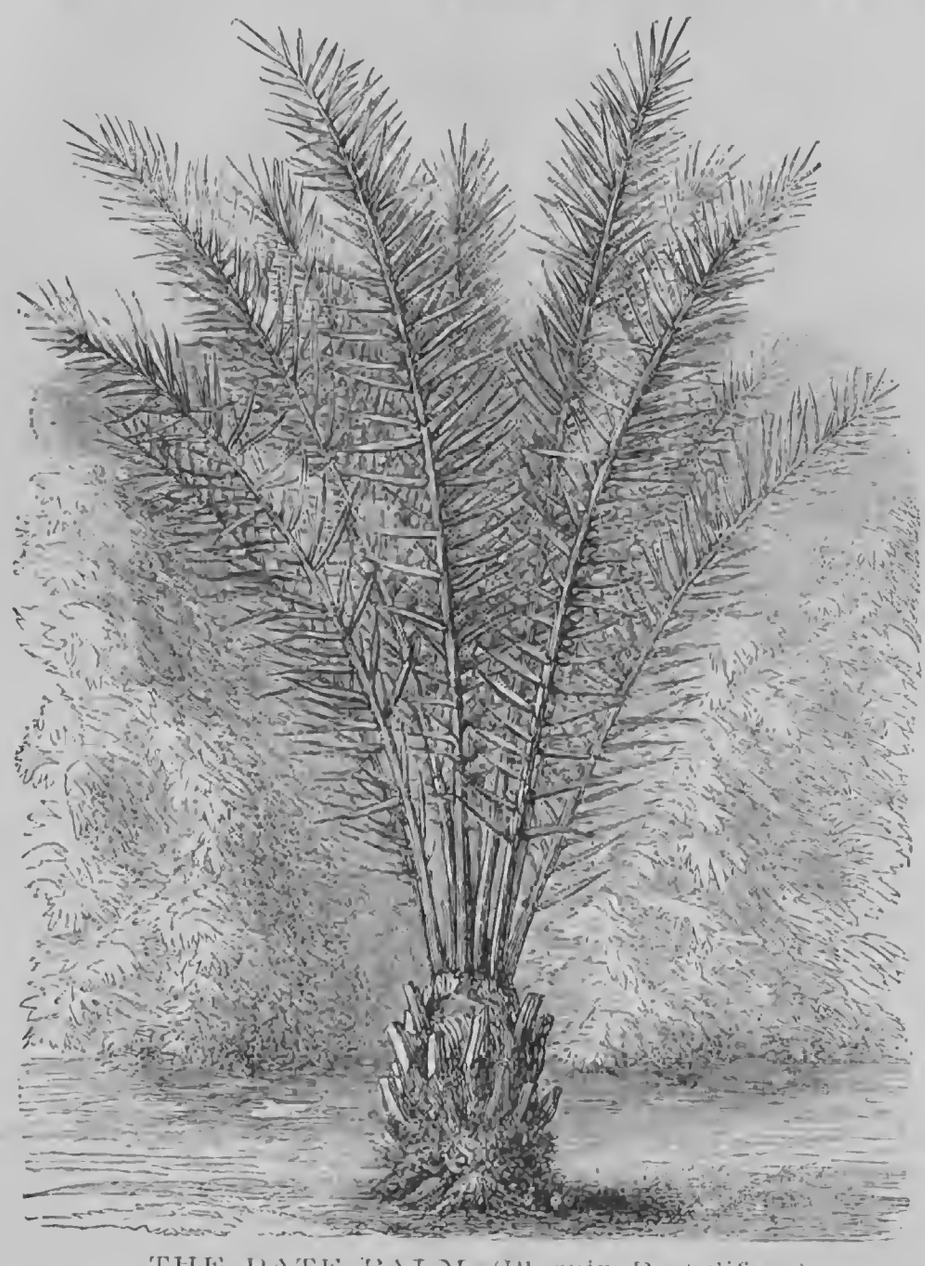
Replacing the Old Trees of Paris.—Parisian horticulturists are attempting to restore the pleasant groves of Champs Elysee to their original beauty by transplanting thereto full grown trees. The experiment is watched with great interest by European arboriculturists.

Fruit Trees From Cuttings.—Please inform me if cuttings of cherry, plum, pear and apple will strike root, planted in hot-beds and covered with glass painted some light color, to partially exclude the light and hot sun.—R. WILSON.

WE have never grown the trees you name from cuttings in a hot-bed, but have succeeded partially in the open air, by taking strong young wood with a small heel of two year old wood attached to the base of each cutting. Plums will grow from cuttings quite readily, but pears are more difficult, and cherries still more so, the latter seldom succeeding.

Goats and Apple Trees.—Will you or any of your numerous readers tell me what to apply to apple trees to prevent goats skinning them, that will do no injury to the trees? I thought of coal tar paint, but fear it will injure the trees.—W. F. BASON.

WRAP the trees with old cloth or mats



THE DATE PALM.—(Phœnix Dactylifera.)

and on this spread the coal tar paint. We should try to get rid of the goats, but presume this is impossible in a community where every owner of such a brute has a vote, but no land upon which to keep an animal that is a public nuisance in almost every city and village in America.

Too Old to Plant Trees.—There are many farmers who think they are too old to plant trees; but a correspondent of the Iowa Homestead tells a good story of DAVID CUTLER, of Franklville, Winneshiek Co., Iowa, who in 1863, when eighty-one years old, bought a lot of apple trees of a nurseryman; in 1869, when eighty-seven years of age, he bought another lot, handling the trees himself, and driving the team that drew them, and in 1871, when eighty-nine years old, exhibited at his county fair one hundred and nine varieties of apples—including specimens grown on trees of his last planting—and fifteen varieties of grapes, including many new and rare sorts.

Standard Pear Trees in Missouri.—J. S., Ridgely, Mo., writes the RURAL NEW-YORKER that he is going to plant 1,000 pear trees, and would like some one to give a list of the most profitable pears to plant, in the RURAL, by the first of February. We advise our correspondent to write for the information desired to Col. NORMAN J. COLMAN, Editor Rural World, St. Louis, Mo., who is a nurseryman and orchardist of large experience in Missouri, and who can doubtless advise him wisely as to varieties suitable to Platte county.

Trimming Cedar Trees.—Which is the best month in the year to trim cedar trees? Will old cedar trees that have been neglected be injured by close trimming?—G. W. F.

IF you wish to increase the growth of evergreens, trim in autumn, before cold weather. Hedges are usually pruned twice a year—once early in spring then again in September or October. No, it will not injure cedar trees to trim pretty severely, although we would not advise cutting off large branches.

The Chestnut, we see it asserted, has proved a failure in Kansas. We do not believe it. Who can tell us?

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

Footsoreness in the British Army.—The London Lancet states that the Inspector-General has directed that every man suffering from feet blistered by marching is to be taken at evening parade to the medical officer, who should cause him to wash his feet, and then to pass a needle with a worsted thread through each blister, cutting off the thread a little distance outside the blister at each side, and leaving a portion in it. The part is then to be rubbed with common soap, the sock put on and wetted over all prominent points, and the soap again rubbed over them freely. When properly attended to, no man should be unable to march the following day on account of blistered feet, unless the cuticle has actually been removed, leaving a raw surface exposed.

Bleeding at the Lungs.—"Stormy Cliff," Philadelphia, Pa., writes:—"I will give you a very simple remedy for bleeding at the lungs, prescribed by a physician many years since: Five drops of the oil of Fire Weed — *Erechthites hieracifolia* — upon sugar, or mixed with molasses; the dose to be repeated once an hour until the bleeding ceases. The bleeding of wounds, where veins are severed, may be stopped by applying a cloth saturated with the oil. It is, in fact, a specific in every case, either taken inwardly or rubbed upon the affected part where stoppage of blood is increasing. In no case within our knowledge has it ever failed to cure bloody flux, dangerous wounds or hemorrhage of the lungs." And, we will add, one of the best medicines for sore throat. Essence of fire weed is an old sore throat and quinsey remedy among country people.

White Pine Remedy.—A very valuable remedy for most of the diseases to which the people of the pine-tree regions are subject: Make a tea of the bark and drink one or two cupsful once or twice a day, with milk and sugar, or without, as may suit your taste. Chew the young pine bark as you would tobacco—a very good substitute for tobacco. Or, mix one quart alcohol with one-quarter pound white pine pitch and half-pound sugar—take one teaspoon-ful in a cup of coffee or tea or water once or twice a day. Self and ancestors have used the white pine, as above, beneficially for more than a hundred years.—P. B. PUBLICO.

To Purify the Blood.—A well known physician says that he considers the following prescription for purifying the blood as the best he has ever used:—One ounce yellow dock, one half ounce horseradish, one quart hard cider. Dose, one wine glassful four times a day.

Industrial Societies.

MEETINGS, ELECTION OF OFFICERS, &c.

Ohio Agricultural Convention.—The annual meeting of the Ohio State Board of Agriculture took place at Columbus, on the third day of January. All the members of the State Board, and an unusually large number of delegates from County Societies, were in attendance.

Written papers were read during the day, by the retiring President, Hon. Wm. Lang of Seneca Co., taking a general view of affairs; by Prof. Orton of the State Geological Corps, on the Relations of Geology to Agriculture; by G. S. Innis of Columbus, on the Game Laws of Ohio; by Col. S. D. Harris of the RURAL NEW-YORKER, on the Mission of the Agricultural Press; by D. C. Richmond of Sandusky, on the Deterioration of Soils; and by Dr. John A. Warder, on the Culture of Forest Trees.

An excited discussion was had on a proposition to permanently locate the State Fairs at Columbus. Both sides of the question were stoutly contested, and on putting the question to a vote, there was a very small majority opposed to the location.

A resolution appealing to Congress not to change the existing tariff laws relating to wool and woolens, was unanimously adopted.

It was stated that the State Board is not recognized as legally entitled to rooms in the State House, and a resolution was offered looking towards the establishment of an Agricultural Bureau as one of the State Departments. This was modified so as to ask that the forthcoming Constitutional Convention shall provide for a full recognition of the State Board.

The vacancies on the State Board, occasioned by the five out-going members, were filled by the re-election of L. G. Delano of Ross Co.; R. P. Cannon of Portage Co.; J. B. Jamison of Harrison Co.; and by the election, as new members, of W. S. Hickox of Richland Co., and B. W. Carlisle of Fairfield Co.

The members of the Board holding over are James Buckingham of Muskingum; Simpson Harbaugh of Tuscarawas; D. C. Richmond of Erie; J. A. Warder of Hamilton, and L. B. Sprague of Clarke.

The new Board elected JAMES BUCKINGHAM for President and S. Harbaugh for Treasurer. H. S. Babbitt was re-elected as Recording Secretary, and John H. Klippart, Corresponding Secretary.—S. D. H.

Central N.Y. Farmers' Club.—This Club, whose headquarters are at Utica, has elected the following officers for 1872: *Pres.* Hon. S. CAMPBELL, New York Mills. *Vice-Pres'ts*—M. Butler, New Hartford; Hon. H. Lewis, Frankfort; M. Quinby, St. Johnsville; O. B. Goldby, Dennsville; D. Batchelor, Utica; L. Rouse, Clinton; S. Greene, Rome; J. V. H. Scoville, Paris. *Sec.*—T. D. Curtis, Utica. *Treas.*—Dr. L. L. Wight, Whitestown. *Directors*—J. Shull, A. B. Tuttle, Whitestown; S. Bonfoy, Winfield.

New Hampshire State Ag. Soc.—Officers for 1872: *Pres.*—NATT HEAD, Hooksett. *Sec.*—A. Young, Portsmouth. *Treas.*—Geo. W. Riddle, Manchester. *Directors*—W. F. Daniell, Franklin; P. W. Jones, Amherst; J. W. Cogswell, Gilmanton; S. S. Chick, Somersworth; C. H. Hayes, Portsmouth; R. Elwell, Langdon; N. Hubbard, Tamworth; N. W. Hardy, Nelson; N. R. Perkins, Jefferson; J. J. Hanson, Dover.

Deerfield Valley, Mass., Ag. Soc.—Officers for 1872: *Pres.*—R. H. LEAVITT, Charlemont. *Vice-Pres.'ts.* Daniel Gale, Heath; Dr. Josiah Trow, Buckland; Willis Vincent, Hawley; Cyrus Hallon, Rowe. *Sec.*—W. E. Mansfield, Hawley. *Treas.*—J. H. Searl, Charlemont. *Trustees.*—E. C. Hawks, Chas. B. Meyhew, Charlemont; Willis Vincent, Hawley. *Auditors.*—E. C. Hawks, Charlemont; Wm. Bassit, Heath; Chas. Dumons, Rowe.

Rural Club of New York.—January 9th, at the annual meeting of the Club, the following officers were elected for 1872: *Pres't*—HORACE GREELEY. *Vice-Pres'ts*—N. C. Ely, Fred. L. Olmstead, S. B. Parsons. *Rec. Sec'y*—J. B. Lyman. *Cor. Sec'y*—A. B. Crandell. *Treasurer*—H. T. Williams. *Ex. Com.*—F. M. Hexamer, P. T. Quinn, Frank D. Curtis, Charles D. Bragdon.

Hampshire, Franklin and Hampden Ag. Soc.—Officers elect for 1872: *Pres.*—A. P. PECK. *Vice-Pres.'ts*—E. H. Sawyer, East Hampton; Asa Wright, Northampton; Francis Edson, Hayley; John Stebbins, Deerfield. *Sec.*—Lemuel C. Ferry. *Treas.*—H. K. Starkweather. *Auditor.*—Oscar Edwards.

The National Union Inventor's Ass'n. is holding its second exhibition at Cleveland, O. About 2,000 entries are reported which embrace the novelties among inventions. It will be an interesting place to examine illustrations of the inventive progress of the American people.

Story Co., Iowa, Farmers' Institute is a permanent organization, with the following officers: *Pres.*—D. W. GAGE. *Vice-Pres't's.*—Woodward and T. J. Ross. *Sec.*—S. F. Ballicott. *Treas.*—Wm. McGuire. *Ex. Com.*—J. W. Cessna, Daniel McCarthy and —— Bisshee.

Marshall Co., Iowa, Ag. Soc.—Officers for 1872: *Pres.*—GEO. GLICK. *Vice-Pres.*—H. F. Kirby, *Sec.*—Benjamin Webster. *Treas.*—D. T. Smith. *Directors.*—John Turner, D. W. Cunningham, Geo. Westlake, N. S. Ketchen and S. P. Knessely.

The Pataskala, O., Ag. Soc., has elected for 1872: *Pres.*—G. C. HARRISON. *Vice-Pres.*—J. W. Bishop. *Sec.*—G. N. Bowling. *Treas.*—W. C. Elliott. The District of the above named society embraces the counties of Licking, Fairfield and Franklin.

Missouri State Board of Ag.—Officers for 1872: *Pres.*—H. T. MUDD. *Vice-Pres.*—J. W. Harris, Boone Co. *Treas.*—W. T. Essex, Kirkwood. *Rec. Sec.*—J. H. Tice, Cheltenham. *Cor. Sec.*—J. F. Wellandy, Cole Co.

Southeastern Dist. (Mo.) Ag. Soc.—Officers for 1872: *Pres.*—M. M. KIMMEL. *Directors*—John Beardslee, G. G. Kimmel, Wm. C. Rumney, Wm. Cross, G. Scimers, H. Bruihl, H. Bader. Headquarters of the Society, Cape Girardeau, Mo.

The Southern Peninsula, Del., Fruit Grower's Ass'n., is the name of an organization recently formed. *Pres.*—HUGH MARTIN. *Sec.*—G. W. S. Nicholson.

The Grand Chute, Wis., Hort. Soc. was organized Dec. 16. Officers elect: *Pres.*—A. TOLMAN. *Vice-Pres.*—W. H. P. Bogan. *Treas.*—H. Jones. *Sec.*—D. Huntley.

The New England Poultry Club holds an exhibition at Worcester, Mass., March 5-7. D. B. HADWEN, Worcester, Sec'y.

Sauk Co., Wis., Hort. Soc.—Officers elect: *Pres.*—H. H. POTTER. *Sec.*—J. J. Gattiker, Baraboo, Wis.

The Wisconsin State Hort. Soc. meets at Madison, Wis., Feb. 6, 7 and 8.

The Elgin, Ill., Ag. Soc., has decided to hold its next annual fair Sept. 24-27 inclusive.

Dairy Husbandry.

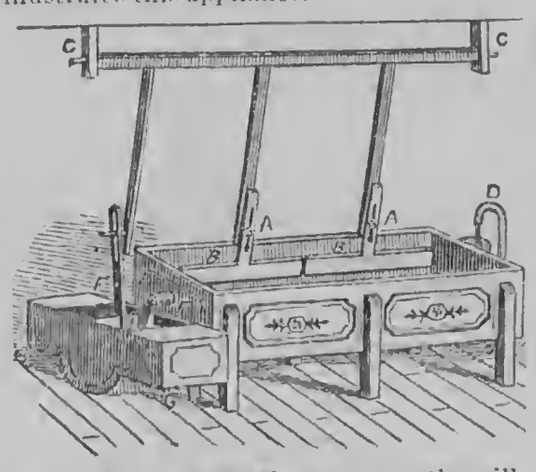
AGITATING MILK.

A CORRESPONDENT inquires concerning the most simple way of using the waste water from cheese vats for moving an agitator in the milk during the night, and whether such appliance is regarded as useful in preventing the cream from rising, and at the same time preserving the milk in good order.

The cheese factory agitator is, without doubt, a very useful appliance. It has been very thoroughly tested, and in no instance have we heard of any objections to its use, while, on the contrary, the results from its operation are very highly commended.

When the night's mess of milk comes to the factory in a warm condition it must be properly cooled and stirred or it will not keep in good order during the night. The usual plan pursued before agitators came into use was to introduce cold water between the vats and to stir the milk by hand until the mass was reduced to a temperature of about 60°, when it could be left for the night with fair prospect of its keeping in good order until the time for cheese making on the following morning. Where large quantities of milk were to be cared for, the stirring of the milk at night was an onerous task, not unfrequently being carried far into the night, thus encroaching upon the hours of sleep, and often bearing hard upon the labors of the overtasked hands. Then, again, there were no means to prevent the cream from rising upon the milk in the vats. It had to be removed in the morning and incorporated again in the milk as best it could. To obviate all these difficulties an agitator was devised for stirring the milk during the night, and worked by the waste water of the vats.

The first form employed was simply a small overshot water wheel. After this a box was arranged at the end of the vat which gave the power for moving the floats at intervals in the milk. The subjoined cut illustrates this appliance.



B, B, are the floats that move on the milk. The arms to which they are attached move up and down at A, A, according to the quantity of milk in the vat. G, is the box at the end of the vat. It has a partition in the center and rests on a circular bottom so that a weight at one end of the box will carry it down. There is an orifice at each end of the box, for discharging water. The water from the fountain enters the space between the vats at D, and is discharged at the other end of the vat into one of the partitions of the box. It accumulates here sufficient to carry the box down, which moves the float across the milk in the vat. Then, while the water is being discharged from the box, the waste water from the vat is flowing into the other partition and accumulates in sufficient quantity to carry that end of the box down, and thus alternately the floats are kept moving from time to time in the milk.

We regard these agitators as very useful. They not only keep the cream from rising on the milk, but by stirring the milk and exposing its particles to the air the odors pass off and the milk is kept in good order during the night. We do not know but there are other simple devices for stirring the milk at factories during the night, but if there be any they have not come under our observation.

SELLING MILK BY MEASURE.

A CORRESPONDENT writes us as follows: "What is the difference between a wine gallon and a beer gallon of milk, by measure and by weight? Is it usual to sell milk by the beer measure, and is that the measure by which milk is sold to city consumers in New York? I am told that when milk is sold at the cheese and butter factories by measure, it must be taken at beer measure. Please answer through the RURAL NEW YORKER."

A gallon of milk, wine measure, contains 231 cubic inches, while a beer gallon contains 282 cubic inches. Milk varies in weight according to its quality, but a wine gallon, at a temperature of about 70°, if the milk is of average good quality, will weigh from 8 lbs. 9 ounces, to 8 lbs. 12 ounces. The usual weight taken for a wine gallon of milk is the latter figure, 8 3-4 lbs.

From a recent report in the London Milk Journal of the weight of nineteen samples of milk furnished by different parties to the Crew Cheese Factory, Cheshire, England, it appears that an ale gallon of milk varied in weight from 10 pounds 2 1-2 ounces to 10 pounds 5 ounces. The milk was weighed at a temperature of 70° Fah., and thirteen out of the nineteen samples weighed at the rate of ten pounds four ounces to the gallon, and two of the thirteen reaching one ounce more. A gallon of water at the same time weighed 10 pounds 1-2 ounce. From these figures it would seem that 10 1-4 pounds may be taken as a gallon of milk, beer measure.

At the New York cheese factories milk is nearly always weighed; but at the butter factories it is generally received by measure, the wine gallon being used.

In the commencement of the cheese factory system, milk was not unfrequently taken in at the factory by measure, the beer gallon being used, on account, we suppose, of more readily determining the quantity of cheese which a given quantity of milk would make. A beer gallon of milk, about ten pounds by weight, it was found would make a pound of cheese and so the beer gallon was adopted as a matter of convenience. But the measuring system soon gave way to weighing, and we know of no cheese factory where measuring the milk is practiced. Milk is sold to village and city consumers by wine measure. Indeed we have no knowledge of any place where milk is bought or sold by beer measure, except, perhaps, in exceptional cases, where a sharp contractor engages milk from a farmer who is not posted as to the difference between wine and beer measure.

The Cream Dipper.—GEORGE W. HASS writes:—"In the RURAL NEW-YORKER of Dec. 9, 1871, I see you claim the cream from deep setting of milk must be dipped off with a properly shaped vessel. Please let us know what that is."

THE vessel used is a funnel-shaped cup with a long handle. In removing the cream the cup is simply pressed down into the milk until the cream flows into and fills the cup, when it is withdrawn and the cream emptied. The accompanying cut illustrates the form of this "skimmer," or, more properly, "cream dipper." It will be seen from the form of the dipper that it can be used without agitating the cream or milk very much, and as the lower stratum of cream in "deep settings" is always quite thin, it is removed by the cup without difficulty.

By pushing the vessel gently down in the liquid and allowing only the cream to flow into the cup, and thus repeating the operation until the blue milk becomes visible, all the cream is readily removed without being stirred up and mingled again with the milk. It is a very useful implement that any handy tinsmith can make, and there is no patent upon it.

A Make of Cheese.—MRS. ALVIN MIDDAUGH, of Scio, Allegany County, N. Y., made, Nov. 27 and Dec. 4, from 1,340 pounds of milk, 198 pounds of pressed cheese, after taking 40 pounds of butter from the same milk, and the cheese sold a cent higher than the others on the same shelves.—JOSEPH G. ACKERMAN.

The Poultry-Yard.

COST OF FOOD FOR HENS.

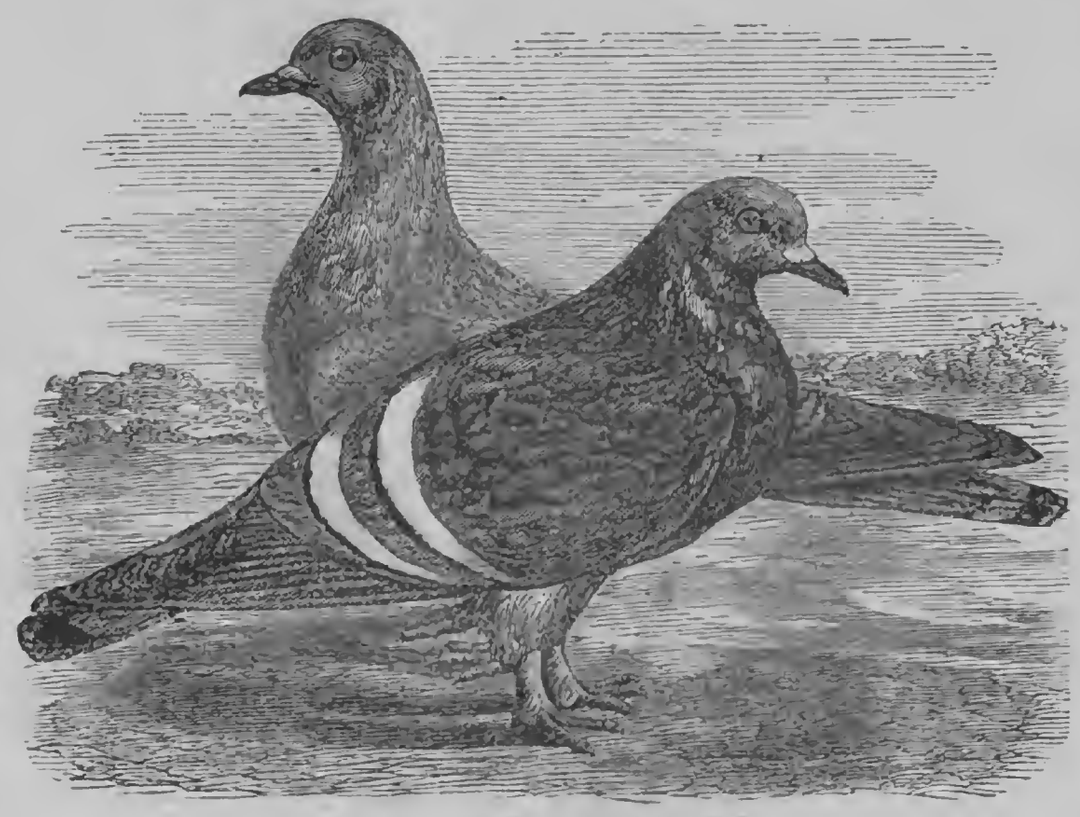
WE have been asked the question repeatedly, "What does it cost for food for one fowl per year?" Never having kept a record of the same, we find the following given in the Buffalo Live Stock Journal, as an experiment gone into by the editor thereof, and give it as we find it, for the information of our correspondents, who can, if they desire, approximate what it costs per year to keep poultry running at large or in confinement. Any of our readers having *facts* that they can give, from practical experiments upon this subject, we should be glad to print for the information of breeders generally. The article referred to reads as follows:

"Repeated experiments by ourselves and others, show that one bushel of corn per year is sufficient to keep one fowl, which runs at large, in addition to the insects and other things obtained by foraging. Hens that are shut up should be allowed no more grain than those at free range, but they should be given grass in summer, mowed often so as to be kept short and tender, and in the winter raw cabbages, or boiled potatoes, or fresh vegetables of some kind. Also as an equivalent to the insects they are deprived of by confinement, give a small, daily ration of animal food, such as sheep's lights and livers, either raw or cooked, finely minced; or, which are the cheapest and come ready cooked, chandlers' scraps, crushed. The value of a year's proper allowance of vegetables and meat, per head, will be just about equal to one half a bushel of corn. It will generally be found that at times, or in parts of the country, when or where corn is remarkably cheap or dear, the price of potatoes, &c., and of animal food, also, will be correspondingly high or low, so that the above estimate is of wide application.

"Therefore, the price of one bushel of corn represents the keeping of a fowl running at large, and fifty per cent. added to this is the cost in the case of confinement. We are speaking of a breed of average size and appetite. It is not to be expected that a Cochin and a Bantam will prove equal in feeding capacity. A great yield of eggs is accompanied by a great consumption of food; hence, fowls of prolific breeds may, though of small size, eat more than large hens that lay sparingly. Also, a breed which, like the Brahmas, tend to fatten, will, if given all they will eat, consume more in proportion to their size, when not laying, than a less plump variety like the Spanish will under the same circumstances."

POULTRY NOTES AND QUERIES.

Ice Pigeons.—We herewith give an illustration of another pair of German Toy Pigeons, known among fanciers as Ice Pigeons, which we deem of sufficient note and novelty to transfer to our columns, for the benefit of those engaged in, or who may desire to procure new and fancy varieties. These birds are largely represented in England at the pigeon shows, having been recently introduced in that country from Germany. They are making a great *furore*, and are much sought after by fanciers in England and France. We are not advised as to whether they have as yet been introduced into this country, not having seen them on exhibition at any of our shows.



PAIR OF ICE PIGEONS.

These pigeons are described as being generally of a silver or pale blue color, and of the ordinary dove-house form. The wing-bars are white, and beautifully edged with a black circle, as shown in the illustration, which has a tendency to set them off to good advantage; their legs are well feathered, showing them also slightly hocked. Many of them have checkered wings, with the tip of their tails margined with black. They are said to be, like the Letz Toy Pigeons, perfectly hardy.

Northern Ohio Poultry Show.—A well-known correspondent of the Cleveland Herald, after speaking of the grand success of the recent show, gives the following as his experience with poultry and the conclusions he draws therefrom. He says he has "had, for nearly twenty years, some practical knowledge of such matters, at that time paying eighty dollars for a pair of White Brahmas, and breeding one season eleven varieties of fowls, and for some five years thereafter breeding more or less of breeds, and studying each, looking to its legitimate use, viz:—that the fowl must be studied relative to its hardihood, production of eggs, size and quality of flesh; and we to-day fail to see wherein any advance has been made over the Speckled Dorking for general use. We acknowledge extra size in the Brahma, as in the Cochin, but with it is stringiness of fiber and a want of richness and delicacy of flavor. Again, no bird of Brahma or Cochin will at four months present the size, form, perfection of flesh, etc., that comes from the Dorking. If eggs, or beauty of fowls, with hardihood, are alone wanted, as is perhaps most profitable, and especially to those who live near a city market, then there is none superior to the Bolton Gray or Creoles. If chickens alone are to be grown for profit, then the Brahma hen crossed with the Dorking cock makes the best and earliest returns. If winter layers alone are wanted, and to be kept in a city yard, then the Brahma is the bird; but if eggs, flesh, form, etc., are all counted in, then our experience since 1846 is in favor of Speckled Dorkings, and we feel to-day, as we write, that we have a half dozen birds of that breed which we should be unwilling to exchange for any shown at the recent exhibition."

Catarrh in Fowls.—J. D. W., New Brunswick, N. J.—From the description given of the disease of your fowls we should say they have the catarrh; if it is not speedily checked it will run into that scourge of the poultry yard—roup. The disease acts on fowls the same as it does on human beings. Place the birds affected with it by themselves, in a warm, dry pen, protected from the cold, bleak winter winds, (a southern exposure is the best,) and feed plenty of nutritious and stimulating food. Cooked corn meal and mashed potatoes, well mixed with cayenne or black pepper can be used to good advantage, if fed warm.

Acknowledgements.—Thanks are due S. J. BESTOR of Hartford, Conn.; GEO. H. WARNER, New York Mills, N. Y., and E. S. RALPH, Secretary of the Western New York Poultry Society, Buffalo, N. Y.; the former gentlemen for their circulars and price lists of fancy fowls for 1872, and the latter for Prize List and Rules of the Western New York Poultry Society, whose exhibition is to be held at Buffalo, Jan. 18-23, 1872.

Choice Fowls.—E. B. PHILLIPS of Kansas gives, in the Lawrence Journal, his experience with Brahma fowls, which, like all experiments with this and other choice breeds, shows a large profit from a small investment. For general use, the Brahmas are probably the best fowl to raise. They are very quiet; they lay well if well fed, and they grow from eight to twelve pounds.

Fowls Wanted.—JAS. ANDREWS, Wyoming Co., N. Y.—The fowls you desire can be purchased of almost any breeder. Turn to the advertisements under the head of "Stock and Poultry," in the RURAL NEW-YORKER, you will there see the breed advertised you desire, and then send for a circular and you will undoubtedly get the requisite information as to price, &c.

Inquiries and Answers.—J. N. BALTHIS—Musk and Brazilian Ducks are known among breeders as one and the same thing. —E. R. wishes some one to inform him how to tell a male from a female dove; also, why his dove's eggs do not hatch. —R. M., Oswego Co., N. Y.—We are of opinion you can make it profitable to rear ducks for market. Any of the poultry advertisers in the RURAL will furnish you the information you desire by addressing them.

Domestic Economy.

FARMERS' KITCHENS.

HAVE you room for the complaint of another troubled "farmerine" who, after much hesitation, has determined to ask you to give expression, through your valuable paper, to what she believes to be one of the greatest wants of many of her working sisters, among farmers' wives and daughters; and as it is a want easily supplied by the exercise of a little thought and trouble on the part of heads of families, I trust some of them at least will "take thought" and do better in future.

I do not complain of the mud clinging to the great boots till they are in the middle of my best carpet or clean floor, and then coming off in such delightful "chunks," nor of any one of the many provokingly careless habits usually attributed to "those men," for I think such little shortcomings can best be corrected by the judicious exercise of "feminine tact." Or, failing in that, we must meekly sweep and scrub, and patiently endure what we cannot remedy, trusting that our reward will come "by-and-by."

But my rebellious thoughts, to-day, were suggested by several hours' hard work in a room which ungratefully repays all my cleaning and mopping by looking, as my little girl said, "just as bad as it did before." And this room is my kitchen—the exact counterpart, in respect to cheerlessness, of many others attached to substantial farm houses, in which often delicate and nervous women spend so large a part of their lives. It is surprising to observe the indifference with which most people regard the situation and construction of this room—really the most important one in the house; for it is here the farmer's wife, if she be prudent and helpful, must spend a very large portion of her time. Situated, usually, on the coldest, darkest side of the house, often so surrounded by sheds and outside buildings that no ray of sunshine can ever penetrate the inside gloom, the kitchen presents about as dismal an appearance as can well be imagined. And the inside arrangements are seldom better; abounding in little, dark, useless closets; regular "dirt traps" occupying the space which should be devoted to windows, and the diminutive windows themselves placed in corners or remote parts of the room. Then the woodwork is all covered with the dingiest paint to be found in the shop, or no paint at all. Then the farmer considers his duty done in that direction; and perhaps in after years, when his wife appears at the dinner table, after five or six hours' work in a room which *won't* look clean, with a frown or discontented look, he wonders "what did change MARY so: she used to be such a cheerful girl."

If he could change places with "MARY" for a while and spend from five to ten hours each day, in that dirt-colored room, I wonder if the shadows would not sometimes follow him to the dinner table and reflect on the rest of the family! There would be clouds instead of shadows!

After ten years' practice of the very necessary art of cooking, I shame to say I *detest* it; and yet I am not to blame. I trace this unreasonable aversion to the cold, comfortless kitchen, (lighted by *one* window,) attached to my kind father's comfortable house. The gloom of that nightmare room *would* cling to me when I entered the bright parlor, although I strove to leave it outside. And papa grieved that his dear daughters were indolent; "*did not like to work.*" Bless his dear heart! the kitchen was so dark he could not see what was the matter. Even at this distance, that great room looms before my memory, unsoftened by the halo of early association and the cherished memories of my early home!

What wonder that our girls grow up with such a settled antipathy to kitchen work, and such a fondness for fancy work and pleasant parlors, rendering them unfit for farmer's wives! No wonder the work is put on "mother." Why, the very thought of the dainties smoking on the table is connected with visions of a room so disagreeable to a girl of any refinement of feeling, that it is simply impossible for her to resist the impulse of keeping within a more genial atmosphere. The thought of entering such a room for life, has driven many a girl to the fatal step of "marrying for money."

Will farmers never understand that the surest way to stop the tide of young men and women rushing toward the cities, there to swell the throngs of poverty and too often of vice, is to make the country homes so attractive that the boys and girls will love the country, and never long for the false pleasures and excitement of city life? The reform should be commenced in the kitchen; for the girls must have employment—*will* have it, good or bad—and our first efforts should be to keep them pure and womanly.

Choose bright-tinted paper for the walls; hang pretty pictures over that; paint the floor some cheerful shade; make the kitchen as bright and attractive as any part of the house, and your wives and daughters will learn to love their cooking; the table will be constantly supplied with well-prepared food, contributing to the health and pleasure of all; your girls will never long for a change, and the family be spared many a "shadow" from the grave-like room yonder, only waiting till the hasty, tasteless meal is swallowed, to engulf—strength, cheerfulness and all—the tired, disheartened woman who sits so listlessly at the head of your table, longing and yet unable to take an honest pride in her housekeeping.

Danville, Cal. LINDA.

ODDS AND ENDS.

Keeping Eggs.—The lady reader who gave in the RURAL NEW-YORKER, Dec. 30, the recipe for putting down eggs for long keeping, has given one which can be relied upon at all seasons of the year. I have used it for many years and never found it to fail preserving them good and fresh for any desirable time, if the eggs are fresh and sound at the time of putting down. It is one thing to state results and quite another thing to give the reason for them. The philosophy of their keeping with the little end down is on account of the yolk being lighter than the other part. The round end of the egg has a film enclosing a small vacuum, or air cell; this prevents the yolk from coming in contact with the shell, which takes place soon after the eggs are laid if the weather be hot; this fact is readily demonstrated by the examination of bad eggs.

Coffee Pots, patented and unpatented, now before the public, are almost as numerous as churns and washing machines, nine-tenths of which, I venture to say, are simply worthless. All coffee pots that claim any improvement in making good coffee, culminate in the one principle of retaining the aroma, or condensing principle, during the process of leaching or boiling. Of these various ways of producing a good article I have found none so simple and good as in the use of the old-fashioned coffee pot, which will secure all the aroma, or condensing principle, necessary for the very best coffee that can be made, by simply placing a cup of cold milk or water on the top of the coffee pot.—H. N. L., *Rochester, N. Y.*, 1872.

Cleaning Tinware.—In one of the late RURAL NEW-YORKER'S some neat (?) housewife proposes that on washing day all the housekeepers collect their burned, smoked and blackened tinware, and when the clothes are taken from the boiler, replace them with these kitchen utensils; said tinware to be boiled a short time, when it will be found bright as new. Permit me to ask what produces this brightness? Is it not the soap? Then why not take clean water and add soap, and give the dishes a boil, instead of using the dirty suds? All physicians claim that the dirt which clings to soiled clothing is not only dead, filthy matter, but that it is actually poisonous; hence the necessity of thoroughly boiling clothes, and in cases of carelessness in regard to personal bathing, living animalculæ are also found with this dead matter, by microscopic examination. Yet we are advised to boil our tinware in this mass of filth and corruption to *make it clean!*

A really good housekeeper has no need to practice such "uncanny" arts, as a little rubbing of blackened tinware, with a cloth dipped in common baking soda, will make these kitchen utensils shine like burnished silver. This method has, at least, the recommendation of cleanliness.—STORMY CLIFF.

Ginger Snaps.—Here is a good recipe for ginger snaps;—2 cups of molasses, 1 cup of sugar, 1 cup of hot water, 1 cup of butter; one large spoonful of saleratus and one of ginger. Roll thin.—E. A. C., *Chautauqua Co., N. Y.*

Turkey Red on Cotton, Etc.—A lady correspondent asks some one to give a recipe for coloring Turkey red on cotton; also for the best arrangement of colors to be used in making a fancy rag carpet.

To Restore the Color of a faded Linen dress is what ELIZABETH A. CROSBY asks some RURAL reader to tell her how to do.

To Expel Ants.—LILLIE I. ROBBINS, a little girl, writes the RURAL NEW-YORKER:—"Mamma says strong alum water will scare away ants."

The Literary World.

NEW PUBLICATIONS.

Fireside Science.—A series of Popular Scientific Essays upon subjects connected with Every-Day Life. By JAMES R. NICHOLS, A. M., M. D. New York: Published by Hurd & Houghton.

A WORK of more than common interest and value to farmers, as well as the general reader. Science is now-a-days as fascinating as romance, and Dr. NICHOLS has the happy faculty of writing in a genial, ready style, easy to be comprehended. This book is intended for the family group, and discusses a number of topics, among which are the chemistry of a hens egg, of a cigar, of a pint of kerosene, of a lump of sugar, of the human body, etc. Water-pipes, the relations of water to agriculture, air furnaces, the food of plants, and many other subjects are written about in a delightful manner.

Chemical Manures.—Agricultural Lecture delivered at the Experimental farm, at Vincennes, in the year 1857, by GEORGE VILLE. Translated by Miss E. L. HOWARD. Atlanta, Ga.: Plantation Publishing Co.

M. VILLE is well known in France, and among agriculturists, as having done much to promote this science. This work has been admirably translated, and all advanced farmers who are interested in the subject of which it treats, will be glad to get a copy. It is full of valuable information, and is worthy of a wide circulation.

The Music Lesson of Confucius, and other Poems. By CHARLES GODFREY LELAND. Boston: Jas. R. Osgood & Co.

A MODEST little volume of true and rare poems, from one of the best writers in the English language. Mr. LELAND is known as the author of "Sunshine in Thought," and other works. His poems are gems, and these will please all who read them. Such verses as "The Origin of Wheat," "The Legends of the Birds," and "The Poems of Perfumes," will please rural readers of taste.

Water and Land.—By JACOB ABBOTT. New York: Harper & Brothers.

THIS book is one of a series of "Science for the Young." It is profusely illustrated with handsome pictures, giving representations of numerous water-falls, rivers, mines, rocks, etc. A much better book to put into the hands of boys and girls than any romance ever written.

Bibliopolist.—J. SABIN & SONS, New York.

THE January number of this unique publication is of more than usual interest. It is a monthly catalogue of old and new books, and a repository of notes and queries. All bookworms will be anxious to see the Bibliopolist.

LITERARY ITEMS.

THE Queen of England has given a copy of her books to the Chicago Library.

REV. WASHINGTON GLADDEN of the Independent is on a successful lecturing tour West.

MANSFIELD TRACY WALWORTH is writing up the lives of the Chancellors of New York State.

JARED SPARKS' library will be sold in Boston, next month. It contains but a few rare works.

THE Kansas Magazine has appeared, and is said to be very good for a far-Western literary venture.

MRS. JENNY JUNE CROLY is making a collection of portraits of famous women in all ages of the world.

GEORGE WILLIAM CURTIS is not an "Old Bachelor," although he so writes himself in Harper's Bazar.

BAYARD TAYLOR is spending the winter in New York. He is very stout and healthy, and talks German fluently.

ROBERT BONNER of the Ledger has given $5,000 to Princeton College, towards increasing the salaries of the Professors.

NEW YORK has a new magazine, called The City. There was once a daily paper with the same name published in New York.

JUDGE GEORGE occupies Idlewild, the old home of N. P. Willis. During the summer, as many as three hundred visitors a day go to look at the home of the poet.

MARY L. BOOTH of Harper's Bazar, is a middle-aged lady, with black eyes, a pleasing manner, and exceedingly agreeable in conversation. She is a very industrious worker.

SOME of the Salt Lake papers are scolding Geo. Alfred Townsend roundly for the letters he has recently published about the Mormons. If ever he visits that city again, they threaten to duck him in Jordan.

MR. DORSEY GARDNER has a lengthy and readable article in the January North American Review, on "Oratory and Journalism." He was once editor of the Round Table, but resides at present on his orange plantation in Florida.

THE American News Company have published, in book form, the celebrated speech of Gen. THOS. F. BURKE, delivered May 1, 1867, in the Court House, Dublin, on being asked by Lord Chief Justice WHITESIDE why sentence of death should not be pronounced against him.

WE have in "Picture Poems," written by MARION DOUGLAS, and published by J. R. Osgood & Co., Boston, a collection of beautiful poetical productions for the young folks. They are dedicated to HANS ANDERSEN, the "delight of the writer's childhood," and inclosed in a setting of blue and gold. The illustrations might be improved in another edition of the poems.

where a complete stock of all publications may be found.

THE GREAT REPUBLIC.

By Jas. D. McCabe, Jr. The handsomest and most valuable book, to an *American*, ever published. Has 1,120 large 8vo. pages, 234 superb illustrations on wood and steel. No book like it has *ever been issued*. Agents Wanted. Sold by subscription. Send for terms to WM. B. EVANS & CO., 740 Sansom St., Philadelphia.

CHICAGO ON FIRE.—An elegant, highly colored engraving, suitable for framing, 18x18 inches. Shows the entire city by night, and *one-half of it in flames*, shipping, buildings, &c. Also CHICAGO AS IT WAS; a fine colored engraving, showing the city before the fire; a fine picture. Above engravings only 15 cents each; ten for $1; fifty for $4.50 prepaid. "THE GREAT CHICAGO FIRE." A neat illustrative history of this great conflagration, complete map, &c. Near 100 pages, only 25 cents; five for $1; ten for $2; any of above prepaid for price. Order only of Hunter & Co., Hinsdale, N. H.

OUR Descriptive Catalogues and Price-lists of Choice Garden, Field, and Flower Seeds, Small Fruits, Seed Potatoes, Vegetable Plants, etc., free to all on application. D. H. BROWN & SONS, Cherry Lawn Farm, New Brunswick, N. J.

Genuine Wethersfield Onion Seed,
GARDEN, VEGETABLE AND FARM SEEDS, &c.

R. D. HAWLEY'S Annual Retail Catalogue of the above seeds for 1872, containing a complete selection of Vegetable and Agricultural Seeds of superior quality to meet the requirements of Market Gardeners and others, is just published and will be sent free to all applicants. Address
R. D. HAWLEY,
492 and 498 Main St., Hartford, Conn.

PLOWS AND PLOWING

is a little work on the foundation subject of agriculture. Is a common-sense discussion, containing valuable suggestions for every farmer. Gives a description of the new **Economical Plow**, which, it is claimed, will reduce the expense of Plows and Plowing at least one-half; do its work easier, faster and better than any other plow, and practically without human labor. It is adapted to either horse or steam power; to any condition of soil, or quality of surface; has a capacity of from one to ten acres per day; requires only one man to work it, and is warranted to satisfy every purchaser. If this machine supports its claims it will do for plowing what mowers and reapers have done for harvesting. But the book is worth many times its cost independent of this interesting item. Send for a copy. Price 25 cents; or, with "What I Know of Farming," by Horace Greeley ($1.50), for $1.60. *Address* THOS. M. NICHOL, 164 Nassau St., New York.

MONEY IN THE GARDEN;
A VEGETABLE MANUAL.
By P. T. QUINN.

This Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is now ready.

It is an able, practical and well illustrated 12mo, of 268 pages, sent by mail, post-paid, for $1.50. Published by D. D. T. MOORE,
New York City, or Rochester, N. Y.

THE TROTTING
HORSE OF AMERICA;
With Full Directions How to Train and Drive the Horse; and Reminiscences of the Trotting Turf.
By HIRAM WOODRUFF.

This is a valuable work, and should be in the hands of every horseman in the country. It contains 412 pages of interesting and instructive reading, and is for sale at the office of the RURAL NEW-YORKER. Price $2.25. Address
D. D. T. MOORE,
New York City, or Rochester, N. Y.

"PROGRESS AND IMPROVEMENT."

MOORE'S RURAL NEW-YORKER.

RURAL, LITERARY AND FAMILY NEWSPAPER.

D. D. T. MOORE,

Conducting Editor and Proprietor.

PUBLICATION OFFICES:

No 5 Beekman Street, New York City, and No. 82 Buffalo Street, Rochester, N. Y.

WESTERN BRANCH OFFICE:

No. 75 North Side of Park, Cleveland, Ohio.

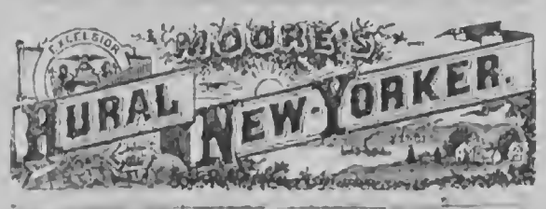
☞ Subscriptions Advertisements, &c., received,—and Specimens, Show-Bills, Prospectuses, &c., delivered,—at either of the above offices of this Journal.

TERMS, IN ADVANCE:

Subscription.—Single Copy, $2.50 per Year. To Clubs:—Five Copies, and one copy free to Agent or getter up of Club, for $12.50: Seven Copies, and one free, for $16; Ten Copies, and one free, $20—only $2 per copy. As we are obliged to pre-pay the American postage on papers mailed to foreign countries, Twenty Cents should be added to above rates for each yearly copy mailed to Canada, and One Dollar per copy to Europe. Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk. ☞ Liberal Premiums to all Club Agents who do not take free copies. Specimen Numbers, Show-Bills, &c., sent free.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS COMPANY, No. 119-121 Nassau St., New York.

Advertising.—Inside, 75 cents per line, Agate space; Outside, $1 per line, each insertion. For Extra Display and Cuts, a price and a-half. Special and Business Notices, $1.50 and $2 a line. No advertisement inserted for less than $3.



SATURDAY, JANUARY 20, 1872.

RETRIBUTIVE JUSTICE.

WHEN men who have led immoral and unscrupulous lives suffer or die, people are apt to call their sufferings the action of retributive justice. The members of the Tammany Ring have been taking from the people, living in palaces, clothing themselves in purple and fine linen, and have enjoyed the good things of life. Now they are being compelled by justice to retribute or pay back to the people. JAMES FISK, Jr., has filled the public eye much to the public's discomfort and disgust, and attracted public thought by the forcible and impudent manner in which he has operated to thwart what seemed to be the ends of justice regardless of all the principles of equity. He is dead—fell by the hand of an assassin. Do we regret it? No. Do we justify the act of the cowardly assassin? No. But is not this paying back—retribute? And is it not the natural pay which such a life as his earns?

In his way, and perhaps in full accord with his early education, FISK exhibited many noble and generous impulses. In many respects he was better than others who will sanctimoniously judge him. He was at least no hypocrite. He was bold in his unscrupulousness and in his disregard for conventional law and doctrine; but he was most vicious in his influence upon the young men of the country, because of the inducements his apparent success gave them to imitate him. His boldness attracted their attention, and its success and the gloss it gave him, commanded their admiration. It is, therefore, well that FISK is dead, and that he should die as he did hence we call it retributive justice and hold up as a warning to young men, such an end of such a career.

But what of STOKES? He is now paying and must pay for his "good things." He belongs to a class of young men who have not the plea of ignorance nor of the influence of early vicious association and education to bring as excuse for the character of the lives they lead. He belongs to a type distinct from that to which FISK belonged—to just the class whom the success of FISK would fascinate and bewilder. STOKES was drawn into the circle and swiftly carried to the vortex, and will disappear with FISK—the murdered and the murderer together!

These contemporaneous events—the breaking up of the powers which have held the honest and virtuous men of New York in thrall, and staggered their faith in the existence of justice and equity—the sweeping from power such men as TWEED, FISK, HALL, CONNOLLY, &c., &c.,—will do more to aid in the regeneration of the business principles of the nation, and to give a right definition to the word "Success," than two thousand sermons. It will impress the idea of retributive justice upon many who have ignored it—that all evils, sooner or later, work their own cure, and that, in the curing, the rotten, pestiferous, loathsome ulcers in the body politic are swept away, leaving nothing behind but a memory of the loathing they provoked.

The Members of the Tammany and Erie Rings have for years enjoyed the *Fruition of Fraud*,—but of late their Pride and Pleasure have brought them to (or near) Perdition.

RURAL NOTES AND QUERIES.

The People and the Press—Are cordially welcoming and commending the New-Style RURAL NEW-YORKER, to whom and for which we bend low in grateful acknowledgment. For example, a prominent gentleman in Central New York (one who has held high official positions, and has, moreover, had much experience in Journalism,) writes us in this wise:—"You have made a splendid change in the form and get up of the RURAL. It's a beauty! I never saw so handsome an Agricultural paper, by a long odds, as your first number for 1872. Our P. M. told me to-day that about 120 copies of the RURAL for 1872 had already been ordered from this office—more than five times the number ordered for any other Agricultural paper. I hope this is a 'specimen brick' of your subscription list generally." Many places have done still better.

And here comes a cheering note of congratulation from a brother Editor in Western New York—a man of taste and judgment, and who knows what is what in regard to newspapers: "I wonder what next! The RURAL *again* improved! I thought it had reached the acme of perfection before, but it seems it had not. I supposed you had reached the summit of your ambition, and would now leave the RURAL to achieve its own destiny; but in your irrepressible zeal to stand at the head of your profession, you have pushed it upon decidedly advanced ground. I shall henceforth be prepared to witness any improvement, believing that with D. D. T. MOORE all things in the Agricultural and Family Newspaper line are possible. I heartily congratulate you."

—We have scores of cordial and congratulatory letters from the People, and the Press is equally complimentary—while our receipts on subscription far exceed anticipations. Thanks, good friends! We shall strive to make the RURAL NEW-YORKER worthy of your good words and generous efforts in its behalf.

Dr. Parry vs. Judge Watts.—We have received from some one of Dr. PARRY'S friends a pamphlet embracing the correspondence relating to the dismissal of Dr. PARRY as Botanist of the Department of Agriculture. This correspondence is published at the instance of Dr. ASA GRAY, and includes a letter from Drs. GRAY, TORREY and others to the Commissioner, asking him to consider the propriety of re-appointing Dr. PARRY to the position of Botanist; Commissioner WATTS' reply declining to do so; Dr. GRAY'S letter asking the reasons in detail for Dr. PARRY'S dismissal and Commissioner WATTS' response. An impartial and dispassionate review of the whole correspondence compels us to say that we think Judge WATTS entirely justified in the course he has pursued, and we respect him therefor. If he would pursue a similar course with a view to rendering other Scientific Divisions of the Department useful to the country, he would merit the commendation of all who respect scientific men *for what they do*.

Advertising in the Rural New-Yorker.—During the past year we have received many letters speaking of the value of this Journal as an Advertising Medium, and here is one from the shrewd and enterprising Publishers of The Day-Book which explains itself:

NEW YORK, Jan. 12, 1872.

D. D. T. MOORE, Esq.—*Dear Sir:* We have advertised during the year 1871 in your Journal, and also in over *fifteen hundred* (1,500) other newspapers, North and South. In the letters we have received asking for specimen copies, we find allusion oftener made to our advertisement "in MOORE'S RURAL NEW-YORKER" than to *all* of the fifteen hundred alluded to, combined. We send this unsolicited, and entirely unexpected by you, simply as a compliment to enterprising Journalism, resulting in a capital Agricultural paper. Very truly yours,

VAN EVRIE, HORTON & CO.

What is the Business of this Congress?—An impartial observer would say it is to determine who shall be the next President. Is there any legislation demanded by the people? If so, why not do it and go home? The investigations going on indicate that the people need protection, but are plundered by those they employ to do their will. If Congress will attend to these plunderers and make examples of them, all right; but if this dirty linen business is only conducted with a view to establish the vices of the "ins" the virtues of the "outs," and to reverse the situation of these factions, the only good that we can see can come of it is that which always results when two rogues fall out—retributive justice reaches both.

Dana Bickford's Improved Knitting Machine.—Our readers have probably noticed an advertisement in a late number of the RURAL NEW-YORKER, containing a vague warning against selling or using DANA BICKFORD'S New Improved Knitting Machine. As this machine is one of our Premiums, we concluded to look into the matter. We do not find that the contract alluded to in the "caution" named was ever completed, the Company issuing the Caution failing to keep their part of the agreement, and delaying for more than two years to do so, though often urged. Mr. BICKFORD has shown us the acknowledgment of the Company that they had not fulfilled the conditions of the inchoate contract, and promising to do so in ten days, or submit to forfeiture. This memorandum is duly recorded. We think, from the statements made and documents submitted to us, that Mr. DANA BICKFORD'S title to the business is clear and perfect, and have no suspicion that any purchaser will or can be disturbed in quiet possession and use of the machine. How long Mr. DANA BICKFORD will consent to have customers cautioned against buying his machines, we do not know; it may be that its ineffectiveness—shown by the great and increasing sales of the Improved Machine, spite of the Caution—has as yet awakened only pity for this "weak invention of the enemy." We believe the DANA BICKFORD machine is a good one, and that neither purchasers nor our Agents who receive it as a premium will ever be interfered with by the rival Company. Mr. BICKFORD will defend all suits, if any are brought.

"The Great French Willow."—CHARLES ROBERTS: We know nothing about this *Salix salamon*; never heard of such a willow. It is probably not its name, and is only used to induce people to pay three or four or more times as much as they ought to for something that is doubtless no better than the White or Yellow Willows, Lombardy Poplar, Silverleaf Maple, and a score of rapid growing trees. Indeed, it is probably a very common willow, and the interest of the man who is putting it on the market under this name is doubtless to swindle those who buy of him.

Joseph W. Gregory—Obituary.—We announce with regret the death of this gentleman, who is well known as a regular attendant at and participant in the discussions of the Farmers' Club of the American Institute. He was a genial, practical, critical member, highly esteemed and respected. He was radical in all his views, and, though three score and ten years old, no one's spirit in that body seemed more buoyant and youthful. He will be sadly missed by the *habitues* of the Club.

The Dairy Meeting.—We have received from Mr. WILLARD a long report of the proceedings of the first annual meeting of the New York Dairymens' Association; and as we write, the American Dairymens' Association is in session at Utica. We shall publish such portion of these proceedings as we may be able to find room for, and as speedily as possible, without overlooking the interests of our correspondents.

The Committee on Agriculture, in the New York Assembly, consists of Messrs. YEOMANS, MURDOCK, SWAIN, GREGORY, DYKEMAN, BUELL, RAY.

THE SEASON.

Union, Harding Co., Iowa, Dec. 28.—Weather rather cold; about sixteen inches of snow in the timber; roads drifted full.—T. W.

Grand Ronde, Polk Co., Oregon, Dec. 12.—Winter, thus far, open; one little snow but no freezing weather; stock has required no attention. Grain of all kinds command high figures for this country. Wheat, $1.25; oats, 80c. to $1; hay, $10 to $40 per ton; potatoes, $1. J. W. C.

St. Lawrence Co., N. Y., Dec. 28.—Crops good along St. Lawrence River; back from it, more seriously injured by drouth and grasshoppers. Wheat, less than half a crop; corn, fair; potatoes, medium crop, of good quality; very dry since July 1. Great destruction of forests, fences and buildings, in October, by fire. Most of the wells and streams are dry.—A SUBSCRIBER.

South Trenton, N. Y.—December was ushered in with the mercury at zero. Thermometrical average for the month:—Average temperature at 7 A. M., 17° 8'; at 2 P. M., 25°; at 9 P. M., 22° 28'; for the month 28° 15'; amount of snow fallen, 22 inches; No. of days on which snow fell, 15; amount of rain and melted snow, 2 inches; depth of ground frozen, 19 inches; warmest day the 2d, 45°; coldest morning the 21st, 2° below zero; prevailing winds west; a rough boisterous month; water in wells very low. Many farmers have to drive their stock from home for water. Three inches of snow on the ground.—S. B.

North Chili, N. Y., Jan. 3. We have had only two or three days of good sleighing, on main traveled roads, thus far, this winter, but fine wheeling. Times very dull, both with laborer and farmer, as the stave-bolt and heading business is poor. The coldest day of this year was Dec. 21st—14° below zero in the morning. Fodder scarce and high. Hay, $16@25 per ton; straw, $8@10; white wheat, $1.50@1.65; red, $1.40@1.47; oats, 40@43c.; barley, 65@80c.; corn in the ear, by measure, 35c.; buckwheat, 75@80c.; eggs, 28@30c. per doz.; butter, 23@30c. per lb., according to quality. Farms, $80@175 per acre.—LEXINGTON

RURAL BREVITIES.

COTTON production in California is progressing, judging by the reports that reach us.

HERKIMER Co., N. Y., is reported to ship annually cheese and butter worth $4,500,000, market value.

A CONNECTICUT farmer says the Swedes, young men and women, make the best farm help he can find.

THREE hundred gallons of prepared mustard are finished in the mills of J. WOLFF & Co., New York City, daily.

A BARREL of buckwheat flour recently exploded in Scott Co., Iowa. The flour was wet, and generated a vapor.

WE acknowledge the receipt of a complimentary ticket to the Delaware State Poultry Soc.'s Show at Wilmington, Del.

SIX THOUSAND acres of tobacco, it is estimated, were grown within 15 miles of Edgerton, Rock Co., Wis., the past season.

AT the Poultry and Pigeon Show, Wilds Co., England, recently, white geese were exhibited weighing thirty pounds each.

G. W. F., asks if any readers of the RURAL NEW-YORKER have had experience raising Russian swine, and if they make good pork.

JAMES STUBBS asks where he can get Japanese Bantam fowls, and at what price. Who will answer through our advertising columns?

TWO of the seven gold medals offered in California for the most meritorious exhibitions at the State Fair, were awarded to silk industry.

CHICORY is said to have advanced eighty per cent. in value, in its crude state, in Europe, in consequence of the advance in the price of coffee.

A GREAT International Fruit and Flower Show is to be held at Glasgow, Scotland, the second week in September, 1872. £1,000 are to be offered as prizes.

NINE hundred and twenty-eight tobacco factories in the United States have given bonds in compliance with law. The bonds aggregate $8,000,000.

WE have received list of premiums (and rules) to be awarded by the Michigan State Poultry Association at its first annual exhibition at Detroit, Jan. 25-30.

THE hay crop of Maine is estimated by the Maine Farmer as follows for the years named: 1868, 1,000,000 tons; 1869, 800,000; 1870, 750,000, and 1871, 487,000 tons.

THE Rock Island, Ill., Argus claims for L. W. CLEMONS, Pleasant Valley, Ill., the greatest corn crop of the year 1871, to wit:—154 bushels and 3 pecks of shelled corn to the acre.

FARMER KENNEDY, within 27 miles of Eureka, Cal., has raised a large quantity of potatoes that weigh two pounds each, turnips that go ten and cabbage heads averaging twelve lbs.

THE Technologist has become the Industrial Monthly, and is a very complete, handsome, practical work. Our old friend Prof. J. PHIN is one of the editors. It is published at 176 Broadway, N. Y. City.

OHIO has 183,424 dogs, which have maimed and killed, within a year, 23,985 sheep, damaging sheep herds to the amount (estimated) of $143,-000.89. Including the cost of keeping them, it is estimated that dogs cost Ohio $5,000,000 annually.

The Publisher's Desk.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied.

Notice to Everybody.—Now is the time to form Clubs for the New-Style RURAL NEW-YORKER. It is the most Popular Paper in the land, and everybody can get up Clubs and secure Premiums. Thousands of our subscribers can do this if they will, for hosts of people only need an invitation to take the paper. If the four or five thousand persons who get their papers in wrappers (at post-offices where only one copy is taken) will make a little effort, each can form a Club, secure a Premium, benefit his neighbors, and also receive his own paper earlier—as Club packages are not delayed in the mail like single papers. Almost everybody can make it pay to help circulate the RURAL. Try it, friends, and see if it is not profitable.

Bound Volumes of the Rural New-Yorker.—Back volumes of the RURAL, handsomely bound, are constantly kept on hand at its Publication offices. Vol. XX. for 1869, containing 828 pages and over 800 Illustrations, $4. The Semi-annual Volumes, issued *since* Jan. 1, 1870, $2.50 each. The volumes being too heavy for the mail, are usually sent by Express or as Freight, subject to charges.

Our Premiums Approved.—We are in receipt of many letters from recipients of Premiums, praising the articles they have secured—such as the U. S. Watch Co.'s Watches, Reed & Barton's Plated Ware, Weed's Sewing Machine, the Continental Washer, (very strongly approved,) Universal and Novelty Wringers, &c., &c.

Premiums Sent Promptly.—We send all Premiums as promptly as possible. Most articles are sent, or ordered sent, within twenty-four hours of receipt of request. Those not receiving their Premiums in a reasonable time should advise us of the fact.

How to Help the Rural.—There are numerous ways in which its friends can aid in circulating the RURAL. First, show the paper, or talk to your friends about it, or both. Get up a club, or aid some friend to do so—or induce your P. M. to act as agent.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Our Premiums.—Agents entitled to Premiums are requested to designate what they prefer and notify us *how* and *where* to send—whether by Freight or Express, if articles are not mailable.

No Traveling Agents are employed by us, but any person so disposed can act as Local Agent, on his or her own authority, and secure premiums, etc.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

Do not Hesitate to use the *White Pine Compound* when troubled with Weak Lungs, Affections of the Throat, or any Pulmonary or Kidney Complaint; as it will not harm, but on the contrary be of great benefit to you.

To Cure Asthma.—Whitcomb's Remedy acts more directly than any other known panacea.

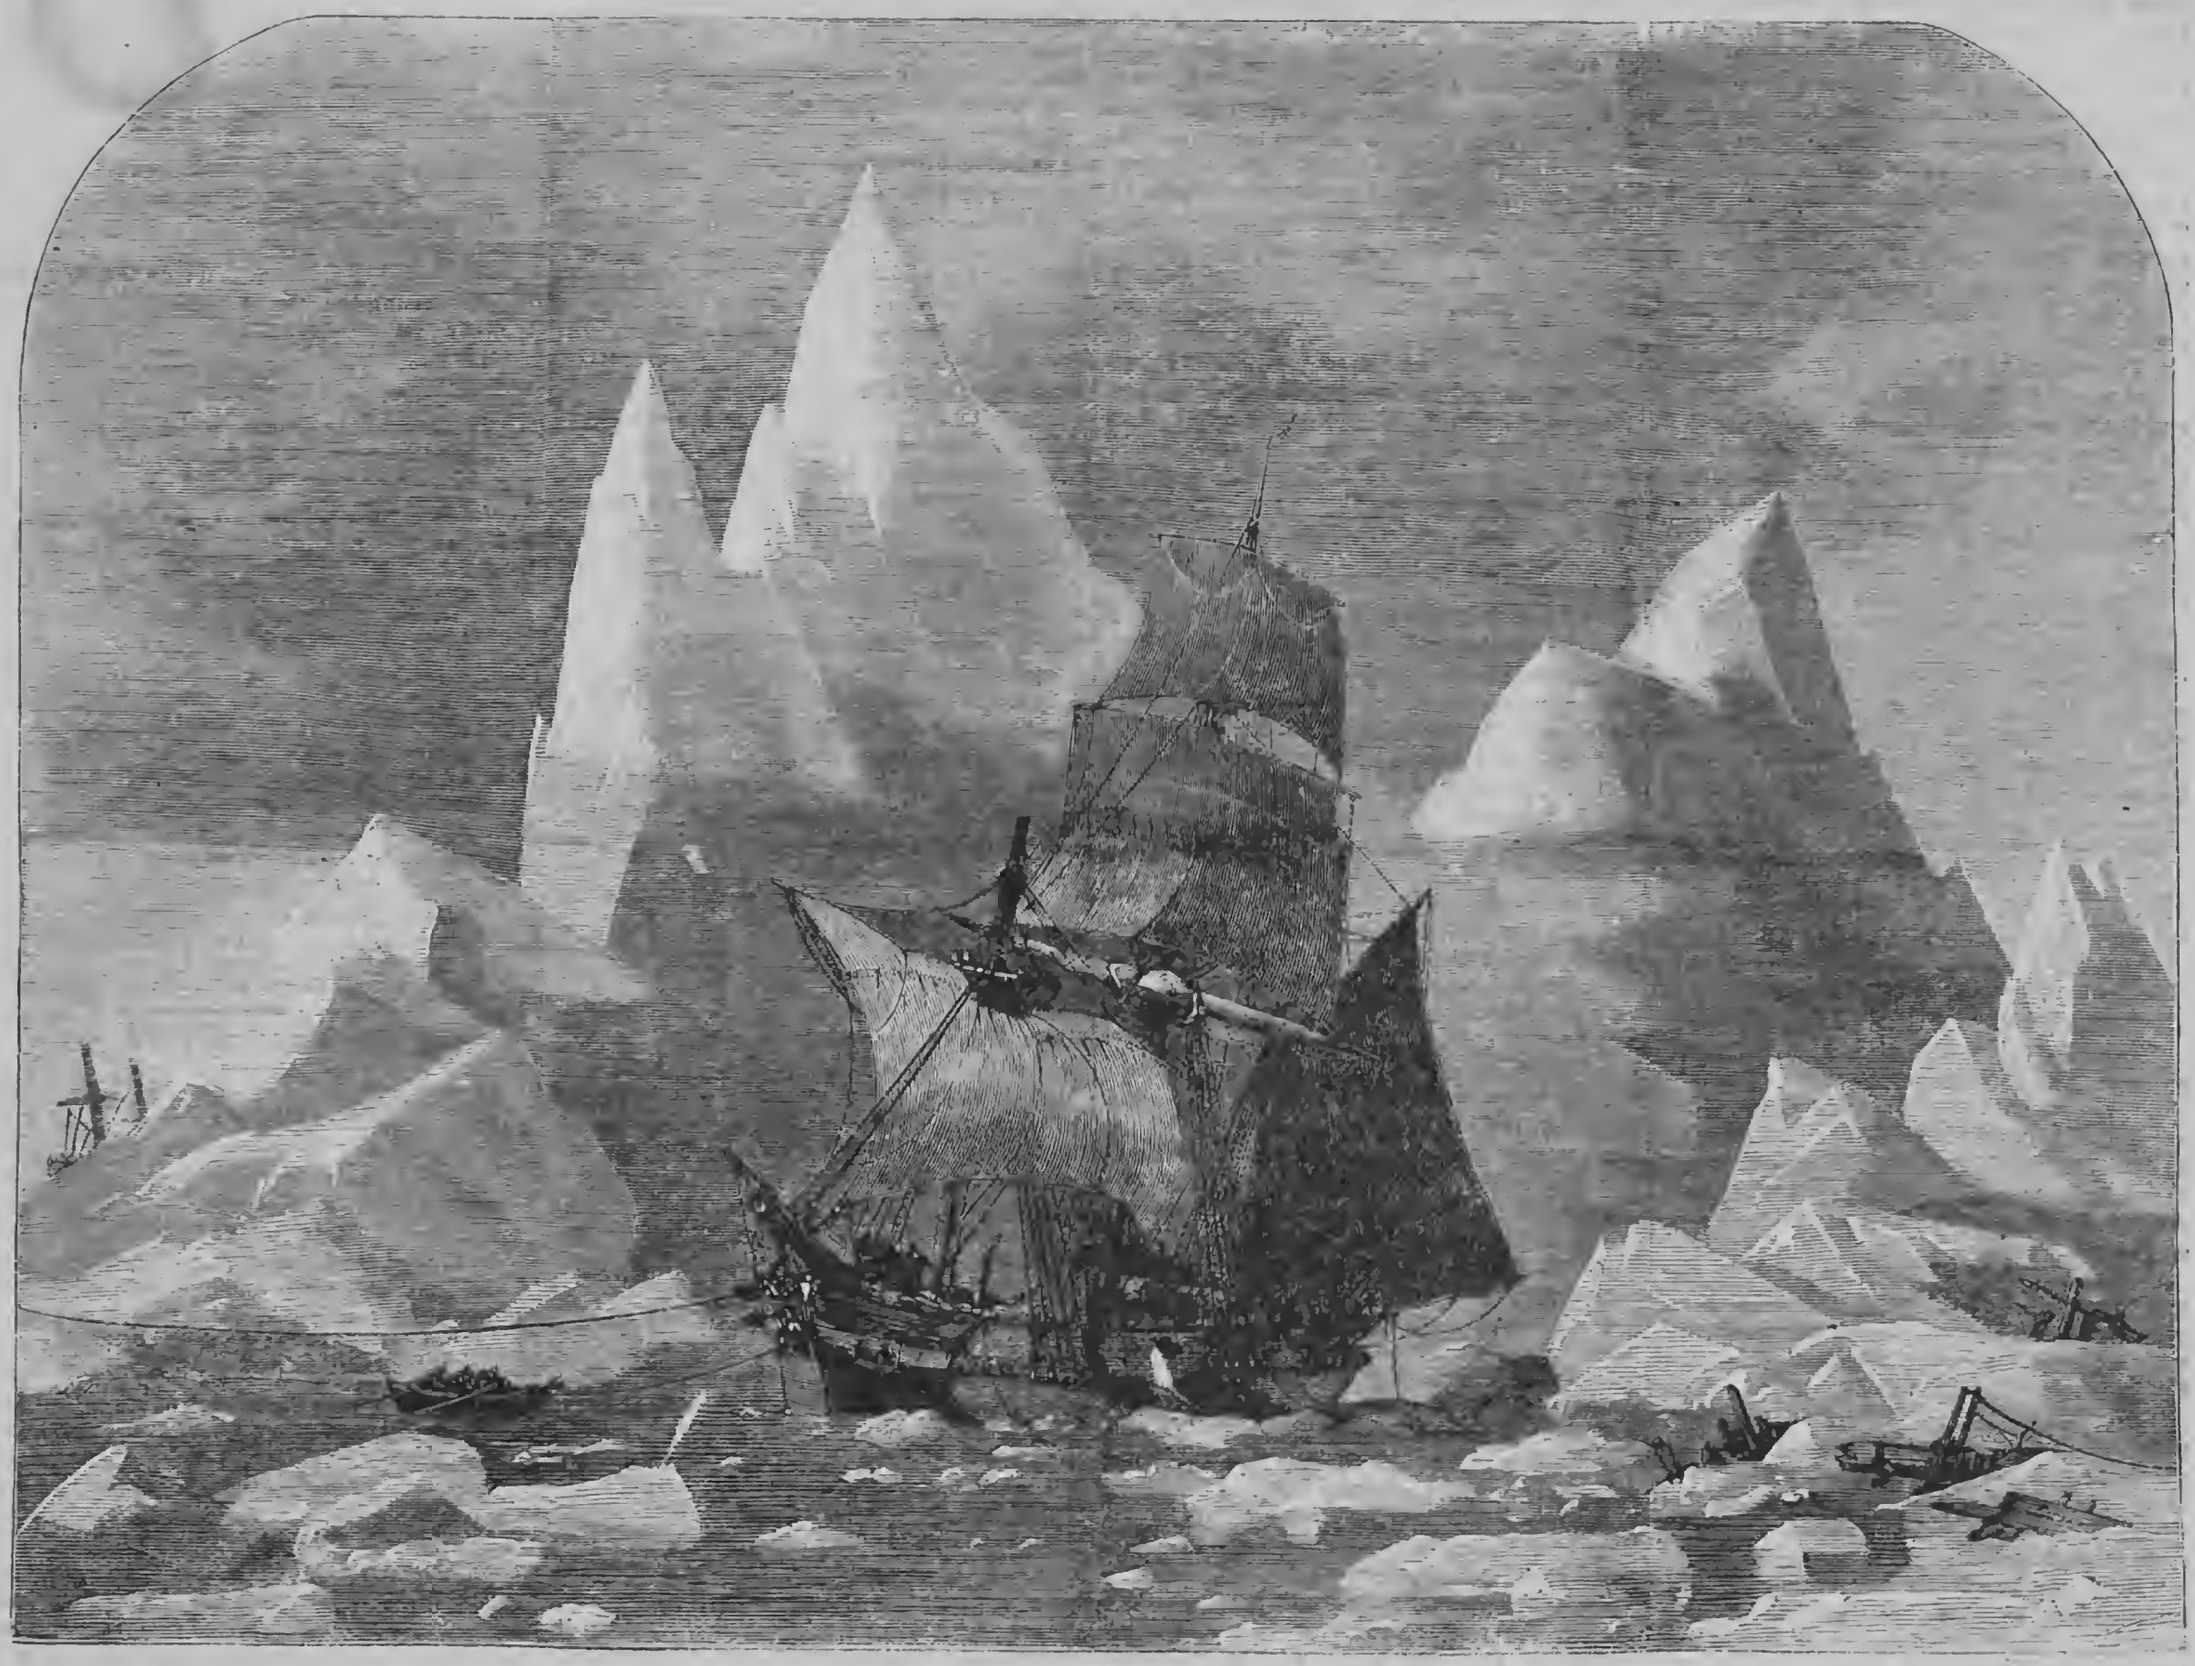
Social Topics.

SOMETHING ABOUT ICEBERGS.

THE growth and origin of Icebergs forms a very interesting study. They are originally formed on the land; at present in those desolate regions which surround the poles of the earth. There was a time, according to geologists, when a good share of the North American continent was covered with a layer of ice of a fabulous depth, which, like a slow-moving river, flowed toward the equator. Those who have studied this matter claim that the tops of the White Mountains, in New Hampshire, give evidence of having been scratched by huge cakes of ice and boulders which floated on the top of the frozen river. Hills, rocks and mountains in the West, which face towards the North, show similar signs. Happily for us, the earth has undergone changes since that day, and the vast ice river, which once crept over the land, has here melted away, and is now confined to the regions of perpetual snow.

The interior of Greenland is covered with ice and snow to a great depth, hundreds, if not thousands of feet, the result of years of storms which have fallen, so far as we know, ever since the clouds showered down snow and rain. The light snow falls on the top while that lower down gradually turns into ice. This vast mass is constantly moving towards the water, and when it reaches the edge of the land it tumbles over into the sea, breaking off in immense fragments, which form the beautiful icebergs of the illustration in this number of the RURAL NEW-YORKER. Usually about one-third of an iceberg appears above the water, so that if there are one hundred feet in the air, two hundred feet sink in the sea. After having broken off from the ice river on the land, the icebergs are moved about in the water by the winds and currents. Our illustration represents a ship in danger of being crushed by the icebergs. An attempt is being made by the men in the rowboats to tow it out to open water. A few months ago the whaling fleet from New England was caught by the ice in the North Pacific Ocean, and some thirty odd vessels were lost. The fleet, owing to the mild weather which prevailed, had sailed too far North. A change took place in the currents of air and water and the ice closed in about the vessels.

The beauty and wonders of the iceberg region are magnificent and marvelous. The ice assumes many fantastic shapes, and at times presents all the colors of the rainbow. Sometimes a white bear floats out to sea on an iceberg, and sometimes a passing vessel will fire a cannon ball into one which has been almost honey-combed by the sun, when it falls to pieces with a tremendous crash. This is often done by order of the captains of ocean steamers, for the amusement of their passengers. Ships which take the Northern passage to Europe from New York, frequently pass icebergs which have floated down from the Arctic Ocean. It is seldom an iceberg gets so far south as the coast of the United States.



ESCAPING FROM THE ICEBERGS.

SERPENT SKINS UTILIZED.

PRESCOTT tells us that the Aztecs made their war-drums of serpent skin; but we were not aware, until very recently, that any of our modern leather had such a snaky origin. An exchange states that a single establishment in Boston, last year, tanned fifty anaconda skins for boot leather. The boots are valued at fifty dollars a pair. The largest of these skins was forty feet in length. The tanning processes were similar to those in the manufacture of alligator leather, the product being a very beautiful and highly finished quality of leather, glossy, mottled, pliable, and exceedingly durable.

FRANKNESS.—Be frank with the world. Frankness is the child of honesty and courage. If a friend asks you a favor you should grant it, if it is reasonable; if it is not, tell him plainly why you cannot. You will wrong him and wrong yourself by equivocation of any kind. Never do a wrong thing to make a friend or keep one. The man who requires you to do so is dearly purchased and at a sacrifice. Deal kindly and firmly with all men, and you will find it the policy which wears best.

Our Story-Teller.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker, BY TWO WELL-KNOWN AUTHORS.

[Continued from page 42, last No.]

II.—Sunshine and Sorrow.

"WHAT are you doing here, HANNIBAL?" said MARGARET, suddenly reining in her horse, as she caught sight of her old favorite.

"Just waiting for missus," he replied, his ebony face breaking up into the rarest of smiles.

"For *me*, HANNIBAL?" queried MARGARET.

"For old HANNIBAL'S Sunshine!" said the faithful man, catching her dexterously as she attempted to slip from her seat on the horse's back. "And where is de flower going so early in de day? Why, bress her heart! she is as pale as a lily."

"What made you think I should come down here this morning?" inquired the young lady, so interested for the moment in the analytical and metaphysical part of the business that she lost sight entirely of poor JAKE.

"Didn't I know JAKE was bound for a licking?"

"Well?" smiled MARGARET, the truth flashing over her at once.

"Well, didn't HANNIBAL know Sunshine no stand that, any how?"

"But I might not have heard of it; what then?"

"HANNIBAL'S faith equal to that emergency, bress de Lord! But where is de chile bound to?"

"Down to HASKELL'S, to tell him that father has concluded not to have JAKE punished."

"Needn't go step farther! Here's the order; HANNIBAL neber deliver noting of this kind in a hurry. Kitch him!"

"Was there ever such a dear old darling as you are?" said MARGARET, seizing the tiny piece of paper and tearing it into bits! And then tenderly pressing the ebony hand of her companion; "Whatever should I do without you, HANNIBAL?"

"Dunno, Sunshine; 'spec have berry lonesome time! But 'member this, honey; when you gets to thinking on such subjects, they aint in no way profitable. Death come like tief in the night; but he no tief, he best of friends, and there's no kind o' use keeping wake all night to watch which way de old fellow get in. 'Most ebery body disremembers dis—dat the fruit of de spirit is joy. Christians have a right to joy; and dey aint no Christians widout de joy; and when folks strain der eyes to look far away in de future, to spy out de troubles and de separations that are scattered round in ebery body's path, den joy is jes as much out ob de case as summer would be widout de green leaves and de posies."

"And you mean by this, HANNIBAL, that all my worry about the future, all my nervousness in regard to the condition of the country, and the hundred other things that tend to make me low-spirited, and anxious, are not only unreasonable and foolish, but actually unchristian."

"Dat am spressed most buful, little Sunshine, and hit de nail on de head ebery time! About de only ting dat eber troubles HANNIBAL, of any count, is the wonderment in his own mind whether or no after de Lord hab called him to his udder home he won't be too old to learn much. A hundred tousand tings come into dis old head ebery day, dat HANNIBAL could no more put into shape dan he could make his old wool brack as it used to be. One ting, 'tho, HANNIBAL has made his mind up to, and dat is, dar is nuffin made to waste, and de man dat hab de thots, be he brack or be he white, must have dem ideas, what you call it Sunshine, dem ideas?"

"Educated?"—suggested MARGARET.

"Dats it;" laughed HANNIBAL. "Sunshine knows how to spress everyting; so she'll have de more time for singing psalms when she lands on de tother side."

MARGARET laughed a bright, rollicking, joyous laugh, in which HANNIBAL joined with remarkable gusto.

"Nobody understan' HANNIBAL, 'cept

Sunshine," said the old negro, his face beaming with delight.

"And nobody understands Sunshine, save HANNIBAL," replied the satisfied girl, humoring her companion by using the third person.

"Reckon dats de case," he answered, dreamily; and then, in the same far-away tone, his countenance gradually changing from gay to grave, said softly:—"How is SUSAN dese times? Habn't hardly seen the light of her countenance for two, free days."

"SUSAN is a strange woman, Uncle HANNIBAL. Let me see? She has been with us now over two years, and I don't know any more about her than I did the day she came. She has a face like an angel, and I love her, hut you know, you old darling, that it is impossible to get on to advantage with a person one doesn't understand."

"Bery well spressed, again, Sunshine; but dis much old HANNIBAL say, and not another word on the subjec:—It is the duty of Sunshine to make a business of trying to see what der is inside of dat gal, and what she need do mos. When HANNIBAL say duty, dat is the bery ting he mean, and noting else."

"This isn't the first time you have talked to me about SUSAN, in this very same way," and MARGARET nestled both her little hands in the big palms of the negro, and looked beseechingly up into his face. "Is SUSAN any of your relation, HANNIBAL?"

"Bress de LORD! No! HANNIBAL hopes not, with dat white skin!" and a comical look overspread the expressive countenance, but quickly faded, as MARGARET insisted upon being told more about SUSAN. "Dar's noting more in the least to be spoke on dis subjec, at this time," said the negro, with great dignity and decision. "All dar is about it, jus now, is dis—dat SUSAN need Sunshine, and hab a right to Sunshine; and if the little deary lub her old Uncle HANNIBAL, den dar's enuff said."

"All right," replied MARGARET, confidingly. "But when HANNIBAL thinks it is time for his little girl to know all there is to know, he'll tell her, will he not?"

"Zacly! Now what you spose bring massa TRAVERSE back so early in de morning?"

"To bring the Northern papers to father, so he said; and that reminds me, HANNIBAL, you must see to it that the negroes are quiet at night. I love dearly to hear you all sing, and last night I lay awake listening to the weird strains till I fancied myself in the realms of the blest, and all my friends free and happy."

"What dat you say, honey?—what dat you say?" and the honest old eyes filled with tears, and the stalwart frame trembled with emotion. "Is it de freedom of de slave dat you hab reference to?"

"Yes, HANNIBAL, the liberty of every creature under the sun," replied his companion, stroking the ebony hand affectionately, and with a little sob in the voice, which HANNIBAL'S tears had made it impossible to keep back.

"Bress de Lord! Bress de Lord! Dat freedom may come, or dat freedom may not come,—it make precious little difference now dat dis brack old nigger come to de knowledge dat his Snushine all his own in eberyting. Jus tink of dat! Sound clar through, not only in de heart, but in de spirit! Oh, Lord God!"—and HANNIBAL uncovered his white head, and clasped his hands devoutly—"keep thy brack servant from being puffed up on dis account. Don't let vanity come in and turn his old skull. Keep him straight up and down, but widout being 'fensive to nobody. Oh, Lord God! HANNIBAL so glad, so thankful for what he jus 'scovered. Be bery careful of dy little hand-maiden, now dat she hab got all de graces—glory to GOD!—ebery single one ob em! Jus see to it dat she hab common sense to 'nable her to keep her own counsel, and 'press upon her mind de 'portance ob all dese tings. Gib her strength and de hull power ob de spirit. Amen! Bressed be GOD!"

There was silence for a few moments, and then MARGARET said softly, "I must go back now, Uncle HANNIBAL. Remember me every time you pray, because I shall need all the strength I can get, and because GOD hears your prayers. Now put me on my horse; I haven't had breakfast yet."

Clasping the slender waist with his huge, black hands, HANNIBAL lifted the little figure to the saddle, and then with a whispered "GOD bless you," MARGARET rode hastily away, throwing back kiss after kiss, as long as the old negro remained in sight.

"O, MARGARET! MARGARET! how can you do so? Here it is eleven o'clock and FANNY says you havn't eaten a mouthful of breakfast yet."

"Don't fret, mamma, I'm not hungry; I'll eat breakfast now, here with you, ma. FANNY, go and bring me a fresh egg, and some toast and coffee. SAM, take Mr. TRAVERSE'S horse to the stable."

"My child, you will wear me out with these freaks of yours. The idea of leaving HARRY without a word, to go and look after that scapegrace, JAKE. He deserved twenty lashes instead of ten. How can your father expect any obedience, or order, if you interfere with his discipline in this way? And as for HARRY, I wonder that he has any patience with you."

"And I wonder what would happen if he didn't have any patience, mother dear?"

"It's useless to talk in that way, MARGARET. You expect to marry HARRY, and all this coquetting is very undignified, and very unworthy my daughter." Here Mrs. HEATHERSTONE straightened herself up, and looked the personification of the pride of all her aristocratic ancestors.

"I'm no coquette. I can't always be one way, like a big doll. I know I don't always treat HARRY right, but, mamma, who wants a man forever falling down and kissing the ground one walks on? I really believe I should like him better if he wasn't so devoted."

"You talk like a simpleton, MARGARET. You are like all other girls, and don't know when you are well off. I hope you will take care of your health any way, and not neglect your regular meals. It's enough for me to be breaking down."

"Don't talk of breaking down, in that discouraged way. Don't you feel well this morning?"

"I never feel well now-a-days, MARGARET. And excitement is very bad for me. I wish you could make up your mind to let the slaves alone, and treat HARRY decently. Now eat your breakfast. FANNY, bring me my salts, and arrange the pillows. My poor head! Nobody remembers my nerves or my headaches. My own child cares more for a scamp of a negro than for her mother's comfort."

MARGARET made no answer to this reproach, but quietly nibbled at her dry toast and sipped her coffee, looking now and then with wistful eyes toward the peaceful river and the old oaks standing solitary and serene in the sweet October light.

"I've finished the work, missus." These words were uttered in a voice strangely sweet, in which lingered a tender minor, inexpressibly pathetic. It was a voice that, being heard once, could never be forgotten. The speaker had glided into the room so quietly that no one was aware of her presence till she called attention by her softly murmured sentence.

"Well SUE," said the mistress, "I'm not able to attend to any more cutting out at present. My head is too bad. You may hem these handkerchiefs, and then I will see what is to be done next."

"Very well, missus," and the Octoroon went out as quietly as she came in.

SUSAN would have attracted attention in any drawing-room in the country. She was tall, slender, perfectly graceful, with a voluptuousness of figure and carriage that was toned and refined by an unchanging sadness. She was JUNO, with a vulture's beak in her breast. Her hair was like rippling silk, her eyes large and soft, her nose delicately cut, her lips full, and curved with patrician haughtiness. She wore large hoops of gold in her ears, and a scarlet scarf, knotted over her breast, relieved her otherwise sombre attire. SUSAN was as unvarying as a statue. She performed her duties with absolute fidelity, but with no more apparent interest than if she were a machine. She had never unbent in the slightest degree to anybody in the house. Even MARGARET had not been able to win a kinder look from her than she gave to the most idiotic negro on the plantation. She was kind indeed to all, but it was the kindness of moonlight gleaming upon the smooth surface of a frozen lake. She was the most valuable of the house servants, her skill and taste making her services as seamstress inestimable. She couldn't touch even the coarsest garment without giving to it a sort of picturesque grace, and MARGARET declared that she would rather have SUSAN make her dresses than the best modiste in Paris.—[To be continued.

MONEY.—Remember that money is of a prolific, generating nature. Money can beget money, and its offspring can beget more, and so on. Five shillings turned is six; turned again it is seven and three-pence; and so on till it becomes a hundred pounds. The more there is of it, the more it produces every turning, so that the profits rise quicker and quicker. He that kills a breeding sow, destroys all her offspring to the thousandth generation. He that murders a crown, destroys all that it might have produced, even scores of pounds.—*Franklin.*

A LIFE ROMANCE.

Two persons lately sailed from New York for Europe, whose history is so strange that, but for proof not to be gainsaid, it might even be thought incredible. No wild romance devised by the most cunning weaver of sensational plots can surpass this history for triumph over time, space, and the ordinary rules of probability. Again premising that the story is well authenticated, we proceed to tell it.

Nearly twenty years back there lived in Rio Janeiro an English merchant whose life seemed entirely devoted to the pursuit of fortune. He had come to Brazil poor, and by resolute work and some luck, acquired a competency. This done, after many vicissitudes, he went home for a visit. While at home he met a beautiful orphan girl. She was lovely in mind as in person, and the compassion wrought by her forlorn situation in life ripened in our merchant's breast to a warmer feeling.

In brief, as the story writers say, the pair were married, and returned together to Brazil. Two children were born to them, and life glided on for a space like a single summer's holiday. Worldly prosperity, too, still attended the merchant, who from time to time repeated his visit to England. On one of these occasions strange rumors came to his ears, prejudicial to his wife. They were little heeded at first, but like the poison of Iago soon "burned like the mines of sulphur." By degrees, suspicion became jealous fury and the wife was directly accused by her lord of infidelity. The lady being proud and sensitive to a fault, indignantly denied the charge, challenged her accuser to produce evidence, and withdrew as much as possible from his society. The tender affection of former days now gave place to indifference and almost aversion. No guilt could be fixed on the wife but some efforts for reconciliation were coolly received. In time their mutual relations became unbearable to both. A separation was agreed upon, an annuity was settled on the wife, and the day of wedded love that had opened so brightly ended in darkness and sorrow.

Heartsick and weary of all associations, the merchant wound up his affairs in Brazil and came to North America. Wandering vaguely about in the West he fell in with a party of Red River traders and subsequently did a good deal of business in and about St. Paul. In that town he made many friends, while avoiding close intimacies, and was notable for his grave taciturnity and the strict honor of all his dealings. He refused invariably to mingle in any social pleasures whatever, and impressed all who came in contact with him as a man who labored under ineradicable suffering. Thus years rolled on, and the wife had married again—the terms of separation under Brazilian law allowing that step. She, however, forfeited her annuity by it, which proved in the end a serious misfortune. Her second husband was poor, although an educated gentleman, fell into bad health, and died a year or two after the marriage.

This left the wife and her two children in destitute circumstances, and she scarcely knew where to turn. She, then, like her first husband, became an uneasy wanderer up and down the earth. Led by some mysterious influence she, too, was in St. Paul. It is a surprising statement to make, but there is no doubt of the fact, that the couple had met once more, that the old feeling revived, that the lady conclusively established her innocence in the mind of her husband, that they were married again, and have lived in the utmost felicity together ever since. Rochefoucauld says that a love *rechauffé* is of no value, but here is a direct case to the contrary, defying all likelihood and exploding cynical epigrams. With an ample fortune, and, we may hope, both wiser for their painful experience, the twice-wedded pair have once more started across the sea to settle down for the remainder of life in their old home.

A GUILTY CONSCIENCE.—The eccentric Lorenzo Dow was once approaching a place where he had an appointment to preach, when a stranger complained to him that his watch was stolen from under his pillow the night before. Dow assured the victim that the watch would be restored, and picking up a boulder that weighed a pound or so, hid it under his cloak and entered the pulpit. After preaching zealously for half an hour or so, he suddenly exclaimed:—"A man's watch was stolen in this neighborhood last night, and the thief is now in this house. I shall hit him with this stone!" He made a feint of throwing it, and one of the audience ducked his head. He was instantly seized, searched, and the stolen watch found in his pocket.

Sabbath Reading.

SUNDAY MUSINGS.

I.

COME hither, friends! Come hither, friends!
So great the joy Our Father sends,
I want to share with you.
For He hath made the blind receive
New sight! Come, help me to believe
The miracle is true.

"O what the joy? and whence the beam,
That lights your look as with the gleam
Of waters in the waste?"
Come kneel by me, on bended knee;
Ye must stoop low if ye would see,—
Lower, if ye would taste!

Sweet friends, ye know the little grave
To which my heart would crawl, and crave,
As 'twere a worm o' the dust?
I writhed so low, it rose so high,
The mound that shut out all the sky
So broken was my trust.

This morn I sought it!—hardly one
Of all my unshed tears would run:
Instead—from out the sod—
A spring had gushed through dust and weeds,
And in the light of God it feeds
My life, direct from God.

II.

We are not only where we seem,
But, lighted by some mystic gleam,
Live also in a world of dream!

Some heavenward Window opes above
The shut-up soul, to lean out of,
Or let in waiting wings of love.

And thence we pass out of our night
A little nearer to the light,
Transfigured in the eternal sight.

And oft when darkness fills the place,
I kneel with dawn upon my face:
I feel the infinite embrace.

Beyond the clouds 'tis golden day,
Soft airs of heaven about me play,
They waft all weariness away.

Dear friends I see no longer here
Are with me; I can feel them near;
So tenderly they come to cheer!

And there in secret life is fed,
Till full in flower it lifts the head,
With all its leaves to heaven outspread.

And by the peace within my breast,
All stormy passions rocked to rest,
I know that God hath been my guest.

[*Gerald Massey, in the Sunday Magazine.*

THE BIBLE GROWS WITH ONE.

IF you come to Holy Scripture with growth in grace, and with aspirations for yet higher attainments, the book grows with you, grows upon you. It is ever beyond you, and cheerily cries:—"Higher yet, Excelsior!" Many books in my library are now behind and beneath me; I read them years ago, and with considerable pleasure; I have read them since with disappointment; I shall never read them again, for they are of no service to me. They were good in their way once, and so were the clothes I wore when I was ten years old; but I have outgrown them—I know more than these books know, and know wherein they are faulty. Nobody ever outgrows Scripture; the book widens and deepens with our years. It is true, it cannot really grow, for it is perfect; but it does so to our apprehension. The deeper you dig into the Scripture, the more you find that it is a great abyss of truth. The beginner learns four or five points of orthodoxy, and says: "I understand the gospel, I have grasped all the Bible." Wait a bit, and when his soul grows and knows more of Christ, he will confess:—"Thy commandment is exceeding broad—I have only begun to understand it."—*Spurgeon.*

POWER IN THE HEART.

THE zeal that God excites within us is often the means of effecting the purpose which we desire. After all, God does not give conversions to eloquence, but to heart. The power in the hand of God's Spirit for conversions is heart coming into contact with heart. Truth from the heart goes to the heart. This is God's battle-ax and weapon of war in his crusade. He is pleased to use the yearnings, longings and sympathies of Christian men as the means of compelling the careless to think, constraining the hardened to feel, and driving the unbelieving to consider. I have little confidence in elaborate speech and polished sentences as the means of reaching men's hearts, but I have great faith in that simple-minded, Christian woman who must have souls converted, or she will weep her eyes out over them, and in that humble Christian who prays day and night in secret, and then avails himself of every opportunity to address a loving word to sinners. The emotion we feel and the affection we bear are the most powerful implements of soul-winning. God the Holy Ghost usually breaks hard hearts by tender sympathy.—*Spurgeon.*

Ladies' Port-Folio.

A FANCY.

BY D. M. J.

SOMETHING came to my soul to-day,
Out of the misty past,
As the spar from a wrecked and sunken ship
May float to the shore at last,—
A vague and shadowy vision
That vanished as soon as it came,
For memory could not grasp it
Or give it a place and name.

It seemed like a dim remembrance
Of life in another sphere,
And left me in silent wonder,
Waiting, as if to hear
A voice I had long forgotten,
With message of welcome sound—
Lifting me nearer heaven,
As vapors rise from the ground.

There may be times when the spirit
Escapes from the house of clay
And flies to its native heaven,
As a child goes out to play—
And the glimpses that fill so dimly
At times across memory's track,
Are something our angel brought from heaven
That we are to carry back.

THE DAY-KING.

BLEST power of sunshine! genial day,
What balm, what life is in thy ray!
To feel thee is such real bliss,
That had the world no joy but this,
To sit in sunshine calm and sweet,
It were a world too exquisite
For man to leave it for the gloom,
The deep, cold shadow of the tomb. [*Moore.*

A MOTTO FOR EVERY-DAY LIFE.

A SCOTCH essayist of facile pen thinks there is an overlooked source of happiness. He recommends tidiness as a cure for the blues. Let one of depressed spirits find a place where disorder and confusion reign, and, forgetful of all else set about it with a will to put things in order—proceeding thoroughly, until the ideal of taste and neatness is fully gratified—and the tone of feeling will rise with the process until cheerfulness rules.

Some such rigid motto as "*in statu quo*," or "leave no tracks," rigidly adhered to, is the only cure for the peace-destroying evil of disorder.

It is no small undertaking for a woman of decidedly opposite habits to go at 11 o'clock to her kitchen, prepare her dinner and welcome her husband to the dining-room at a quarter past 12, leaving scarce a perceptible track. The shavings-basket is so likely to cuddle down by the stove; the potato peelings like to get into a pan of dirty water on the table; the dish cloth, the nutmeg grater, the meat rinds, the potato masher, a little flour, sundry knives and forks, the salt bag and butter dish do so much like to have a social reunion. And the heat-loving cronies, pans, spiders and pots, want to have a little interview over the slowly dying fire. If the wash dish can get into a chair, and a little water spilled can give the mop excuse to come out and lean against the wall, there will be a culinary carnival, into which the dirty dinner dishes will shortly be welcomed to celebrate "high mass." It is needless to describe how farm implements, mechanics' tools, sewing materials, and books and stationery are all capable of like antics.

A barn, a farm-yard, or a shop in order once a month, or even once a week, is not an orderly place. A house with everything in its place once a day may yet be a most disorderly home. Nothing can secure that wonderfully satisfied state of the mind which a sense of order brings but an unflinching adherence to the motto, "*In statu quo*." Some farm-yard or domestic operation may bring into service a half-dozen of implements. Haste to accomplish the thing in hand may seem a good reason for allowing them to lie, for the present, just where they were used,—but the motto requires that with the utmost exactness they each go to what the mind is satisfied is the right place.

One seems almost justified when coming home cold, or with news to tell, in throwing aside the furs, the coat, the hat, the gloves and parcels where they can be picked up at some future time, but the rule will not admit of it. No tracks must be left. The ax, the hammer, the hoe, pail and brush—the broom, needle and spool—even the shred or fragment must travel straight to its abiding place, or by-and-by there will be a clog in the wheels of domestic life and the perturbed temper will have a temptation to overcome. It may seem to some a very hard thing to do—as though stopping to be so particular would never accomplish anything. But the process is like removing obstacles from a water course; and after a time a current is formed that bears one on.

To establish this orderly habit requires almost constant thought, but very soon the thinking powers will successfully "ship the drudgery of familiar labor on to the senses and muscles, and wander at will in pursuit of their own pleasure." It is only thus that labor becomes restful, and that work has music and poetry in it. If the thought must often be brought abruptly home by some unexpected thing out of its place and lying in the way, or a vexatious half hour be spent in hunting after some wandering thing, labor is a weariness and the confusion without brings sad unrest to the heart within.

L.

Park Ridge, Ill., 1872.

"TOO GOOD COMPANY FOR ME."

THE lady alluded to in the following paragraph is a contributor to the RURAL NEW-YORKER, and as plucky and independent as here represented:

One evening this summer, a lady who belongs on the editorial staff of one of the leading dailies of New York, had been detained by office duties until rather a late hour. Living on the Heights in Brooklyn, but a short distance from Fulton Ferry, it was not much of a venture to go home without an escort, so she started. On the boat, standing outside enjoying the refreshing breeze after the day's toil, she perceived a gentleman (?) in rather close proximity to where she was leaning over the guards, but said nothing. "Are you alone?" "No, sir," said the lady, and without further interruption, when the boat touched, stepped off. "I thought you said that you were not alone," said the fellow, stepping to her side again. "I am not," replied the lady. "Why I don't see any one; who is with you?" "God Almighty and the angels, sir—I am never alone." "You keep too good company for me, madam; good night," and he shot for a Fulton avenue car, then nearly a block away. The heroic woman was permitted to "keep to the right as the law directs," and enjoy that full measure of quiet satisfaction one always feels from keeping good company.

SEVERAL ladies of Troy, married and single, are talking about getting up a society to oppose the organization of any more "lodges" of any kind in that city. They claim there are too many attractions at the lodges every night in the week to suit them.

AN Edinburgh woman, whose case had been thrown up by her counsel, conducted it herself with so much ability that although she was defeated the Judge complimented her on the great skill she had displayed.

THE light-colored tortoise shell is becoming all the rage, and every style of ornament is made of it. Some very pretty fans have alternate sticks of dark and light color, which are very unique and pretty.

A MAN'S wife is his best lawyer, his best counsel, his best judge, his best adviser, and also the cheapest and most reasonable.

Reading for the Young.

GRACE, THE GLEANER.

ONE of the sweetest stories in the Old Testament is that of RUTH gleaning in the fields of BOAZ. The custom of allowing poor people to glean in the harvest fields, is much more universal in Europe than in this land of plenty, where poor as well as rich have as much corn and wheat as they need. And the gleaning of to-day is just as beautiful and simple an operation as it was in Bible times. Our illustration represents an apple-cheeked English girl, little GRACE, "with sunny locks and sunny face," who has been as busy as a bee in the harvest fields. There is a little ballad about her, which says:

GRACE, THE GLEANER.

"She gleans that she may swell the share
Of yonder aged dame,
Whose failing steps, with toilsome care,
Can scarce support her frame.

. . . . . .

Not all can glean amid the corn—
But all who *try* can find,
Some way to cheer a heart forlorn,
Some way of being kind!"

While plucking the wheat, she has pulled flowers also, uniting the bread by which we live, with the beauties which please the eye and gratify the love for the beautiful.

OUR LETTERS FROM BOYS AND GIRLS.

A Smart Girl Agent.—The Girls and Boys are really waking up and sending us clubs by every mail. Among those who have reported during the past week, we copy the letter of a little girl living in Huron Co., Ohio, who didn't mind the laughter of foolish folk, but got up a club for the RURAL and secured a valuable Premium. Here is her letter:

MR. EDITOR:—Although I am a little girl only ten years old, I like to read your paper very much, and have been trying to get up a club. I have twenty-six subscribers, and send you fifty-two dollars. Some of the folks laughed at me for working so hard to get up a club for a farmer's paper, but they did not scare me out of it, and I want to get something nice to show them I did not work for nothing. I would like you to send me a Silver-Plated Cake Basket, price in the Premium List fifteen dollars. I wanted an Organ real bad, but could not get names enough. My mother thinks I cannot write well enough to send letters to the Editor, for you cannot read it, but next year I mean to try again, if you will excuse the mistakes this time.—FLORA L. SILLIMAN.

[FLORA's mother is mistaken, for the letter is well written. The Premium desired has been sent, and also an extra one.—ED.]

Helping Her Father.—JENNY LIND B. of St. Lawrence Co., N. Y., says:—"I never wrote for a paper before, but I thought I would try and write, for I see some of the boys and girls are writing. I am twelve years old. I live on a farm with my father and mother. The most of the girls that write are from the West or South, I notice, and some can boast either their pets or horsemanship. I cannot of either, unless it is my one-year-old sister. But, perhaps, I can do as well in school as any of you. I do not miss a day, for I want to learn to teach school, so as to help my folks, for we are trying to pay for the farm. I have persuaded pa to sign for your paper, and if you don't get weary of my letter I will write again. Uncle STEPHEN says I can write good enough, and that you will appreciate all such letters from little girls."

How to Make Zephyr Flowers.—M. A. R. writes from Boonville, N. Y.:—"I noticed in the RURAL NEW-YORKER of Nov. 11, a letter from a little girl, with the request that some one would tell her how to make zephyr flowers. I have not seen an answer to her request, and thought I would write one. Get the finest wire you can find at the hardware store; take a piece and wind it close around a pin, or large needle; then slip it off and stretch it out and form a leaf the shape of those in the flower you wish to make; then split your zephyr, and take one thread, beginning at the stem, close to the leaf, and wind through the center around the wire. Make a number of leaves. If you wish to make a full flower, and tie them together, one by one, with thread. For the center of the flower, take stamens or a little of the zephyr, white or yellow, place a row of leaves around that, making the leaves larger in each row. To make the green leaves, shape your wire in the form of a leaf, and wind the zephyr across the leaf until you get to the end, and then bring it across the center of the leaf back to the place of commencement."

A Little Worker.—AMANDA A. writes from Otisco, N. Y.:—"We take a good many papers, but the RURAL is read first and thought the most of. I live with my aunt. She has four cows, and in the summer we make butter and lots of cheese. I can make good cake, pies and bread. I can knit, and have pieced two bed-quilts and am now piecing another."

A Calf in Harness.—FRED. E. JOHNSON of Sullivan Co., Ohio, writes:—"I am a farmer's boy, nine years old. I have a calf that my father gave me till he is one year old. I have trained him to work in a harness that I made for him. I can drive him where I please. His name is Berry. Father takes the RURAL and I cut out the pictures and paste in a scrap book."

[PERHAPS your father will give you the calf for your own, after it is a year old. Instead of cutting the pictures out of the RURAL, we suggest that you preserve the paper, as it is now in better style for filing and binding than ever before.—ED.]

A Young Telegrapher.—E. C. DODGE writes from Erie Co., Pa.:—"I am not a farmer's boy, which I sometimes wish I was, but work at telegraphing. My father is the Railroad Agent, and my older brother is the day operator. I like my business very much. I used to work at brackets some. I had a little shop which father gave me, but I have packed my tools all up in my little chest, and try and tend strictly to my business. I get pretty sleepy nights, setting here all alone, but I try and keep awake."

City Attractions.—GEORGE D., ten years old, writes from Syracuse:—"As my brother takes the RURAL NEW-YORKER, I thought I would like to write a letter too. I live in Syracuse, where there are many attractions, such as Salt Works and two corn mills. One has a steam engine of 250 horse-power. There are many other manufactures which it would be interesting to tell about."

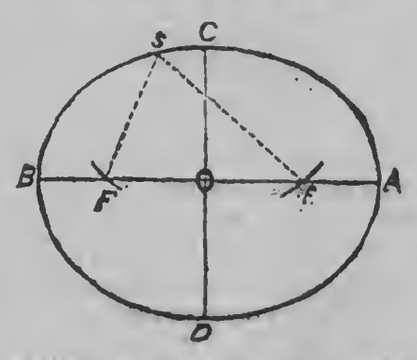
TO CONSTRUCT AN ELLIPSIS.



I GIVE "F" a method of constructing an ellipsis; it is as follows:—To describe an ellipsis, the transverse and conjugate diameters being given. Construction.—1, Draw the transverse and conjugate diameters, *A*, *B*, *C*, *D*, bisecting each other perpendicularly in the center *O*. 2, With the radius *A*, *O*, and center *C*, describe an arc cutting *A*, *B*, in *F F*, and these two points will be the foci of the ellipse. Having found the foci *F F*, take a thread of the length of the transverse diameter, and fasten its ends with pins or tacks in the points *F F*: then stretch the thread *F*, *S*, *F*, to its greatest extent, and it will reach to the point *S*, in the curve; and by moving a pencil round within the thread, keeping it always stretched, it will trace out the curve required.—SUBSCRIBER.

News of the Week.

GENERAL REVIEW.

REV. GEORGE H. HEPWORTH, pastor of the Church of the Messiah in New York, renounced Unitarianism last Sunday, and embraced Orthodoxy. This action has caused a great sensation in religious circles.

The Custom House investigation continues in New York, and excites wide-spread interest. Mr. A. T. Stewart. David Ogden, Whitelaw Reid, Gen. Palmer, and others have given important testimony in reference to th "general order" business and removals for political causes. The proceedings are reported in full in the papers, and prove very interesting.

Our relations with Spain are of a very delicate nature, and the Government appears to be actively preparing for the possible contingency of hostilities. War ships are being put in commission, and rumor says the Southern coast is to be put in a state of complete defense.

DOMESTIC NEWS.

New York City and Vicinity.

JAN. 6th, John J. Bradley, City Chamberlain, resigned. Mr. Francis A. Palmer was appointed to his place.

The Russians in New York held their Christmas festivals on Jan. 6th.

A FINE statue of Benjamin Franklin was unveiled in Printing House Square on the 17th. It is a gift to the city from Capt. Albert De Grool.

Mr. Henry Bergh has been successful in breaking up pigeon shooting matches in New York and vicinity.

The Third Avenue Savings Bank has sustained a seven days' run, during which $1,480,000 were withdrawn.

Mayor Hall has temporarily withdrawn from the duties of his position. Gen. John Cochrane is acting as Mayor.

The coroner's inquest in the case of Edward S. Stokes, who shot James Fisk, Jr., have found a verdict against him.

The house of Sprague, Calhoun & Co., cotton and woolen goods, suspended on the 9th. Liabilities $1,000,000.

Political.

AN interesting session of the New Jersey Legislature has commenced. Among the questions to be considered are compulsory education, repeal of Erie legislation, a local option temperance law, etc.

There is a spirited contest for U. S. Senator in Iowa, with the chances in favor of Mr. Harlan.

Vice-President Colfax will obey the voice of the people, and accept a re-nomination, if offered one.

It is supposed the great fight against the President in Congress will turn on the one-term amendment to the Constitution.

The Republicans have secured all the offices in the New Jersey Legislature.

Hon. John Sherman has been re-elected to the Senate from Ohio.

Senator Brownlow strongly endorses the Administration.

Hon. Charles Hale of Massachusetts, editor of the Boston Advertiser, is the new Assistant Secretary of State in place of J. C. Bancroft Davis, resigned.

The Republican National Convention will be held in June, in Philadelphia.

There is a bill before Congress to admit six Japanese young men to the Military Academy at West Point. The Japanese Charge d' Affairs is anxious for its passage.

Jan. 10.—The wrangle which broke out in the Louisiana Legislature on New Year's has continued, both parties claiming to represent the State. The streets of New Orleans have been filled with mobs, armed policemen and Federal troops, some of which were sent from Louisville. Numerous arrests have been made, and proclamations issued. At a mass meeting of 5,000 citizens, martial law was asked for. Gov. Warmouth proposes to arrest the members of the opposing factions of the Legislature, and will break up their meetings.

Harper's Weekly and the New York Times favor Mr. Colfax for the next Vice-President.

Gov. Hoffman has signed the bill for the relief of the financial condition of New York City.

Frank Blair is in favor of the "passive movement," and calls the "new departure" a fraud.

Fires.

TWENTY buildings in the heart of Titusville, Pa., were destroyed Jan. 7. Loss. $100,000.

The Thorndike Manufacturing Co.'s works in Lowell, Mass., were destroyed on the 8th. Loss, $45,000. The mill employed 75 hands on suspenders and elastic fabrics.

The Seaside House, at Rye Beach, N. H., has been burned. Loss, $10,000.

The Pacific House, at Council Bluffs, Iowa, has been damaged $25,000 by fire.

Crimes.

JAN. 6, at 4 P. M., Edward S. Stokes shot Jas. Fisk, Jr., at the Grand Central Hotel in New York city. He lingered until shortly after 11 o'clock Sunday morning, when he died. Stokes was arrested, and is now confined in the Tombs. The funeral took place on Monday, from the Grand Opera House, and was a showy pageant. The remains were taken to Brattleboro, Vt., the place of his nativity, for burial. The horrible assassination of a man so well known, caused a profound sensation in New York. The quarrel which led to the deed is supposed to have been about a Mrs. Mansfield, a woman living in New York.

Buckhout, who murdered his wife and Alfred Randall, near Tarrytown, on the Hudson, Jan. 1, 1870, has been sentenced to be hanged Feb. 16th.

Crime is rapidly on the increase in Salt Lake City, and murders and garrotings are reported.

Dr. Merriman, late of Baltimore, aged 73, was found brutally murdered in his office on the 6th.

Walter Wheyland, a member of the Louisiana House, was shot and killed on the 8th.

Obituaries.

JOS. GILLOT, maker of steel pens, recently died in England.

Jan. 5, Sir Francis Crossley of Halifax, England, died, aged 55. He was the most successful carpet manufacturer in the world.

The oldest man in the world, Harvey Thacker, a son-in-law of Daniel Boone, aged 128 years, died a few days ago in California.

Dr. Henry D. Bulkley, a well known New York city physician, aged 68, died on the 4th. In 1869-70 he was President of the New York Academy of Medicine.

Gen. Andrew Porter died in Paris on the 6th. He served in the Mexican war with credit, and in the civil war won the rank of Brigadier-General.

Maj. Gen. Henry W. Halleck died in Louisville, Ky., on the 9th. He was born near Utica, N. Y., in 1816. He fought in the Mexican war, and during the rebellion. July 11, 1862, he became General-in-Chief of all the land forces of the United States. He was the author of several books.

Miscellaneous News.

THE Germans of Hong Kong, China, have sent $825 to Chicago.

There are 65 women in the University of Michigan.

A Jewish Rabbi opened the House with prayer at Washington one day last week.

Rhode Island, through her Senators, has presented the statue of Roger Williams to Congress.

The Military Division of the South has been abolished in consequence of the death of Major-Gen. Halleck. There are now but three Major-Generals in the Army.

The National Female Suffrage Convention met in Washington last week.

The Grand Duke, after a magnificent reception at St. Louis and Jefferson City, went to Fort Kearny, Kansas, on a grand buffalo hunt. He is to make the tour of the South.

Many passengers were injured near Halifax, N. S., by the upsetting of a train on the 11th.

FOREIGN NEWS.

From Great Britain.

A TERRIFIC hail storm has visited Portsmouth. British sovereignty has been proclaimed over the African diamond fields. The Liverpool Chamber of Commerce is in favor of having the U. S. mails restored to the Cunard line of steamships. Demonstrations in favor of home rule continue to be made in Ireland. The Queen with her family has gone to Osborne. The London Times thinks the spirit of which James Fisk, Jr., was the representative, still lives in New York. A Republican Club has been organized in Glasgow.

Jan. 10th a terrible explosion occurred in the Oakwood colliery, Wales. Eleven men were taken out dead, when the flames broke out. Many are missing. The representative of Great Britian has given to the Emperor, of Germany the papers relative to the San Juan boundary question. Mr. Millbank, M. P., has denounced Sir Charles Dilke. Admiral Inglefield has sailed for New York.

From France.

VICTOR HUGO has been defeated for the French Assembly. Petitions for the restoration of the monarchy have caused a great uproar in the Assembly. The Assembly has again decided not to return to Paris. The rinderpest has appeared in several departments of France.

Paris manufacturers are protesting against an increase of duty on cotton and silk. The German Ambassador has been civilly received by President Thiers. The French Ambassador at Berlin had a flattering reception from Prince Bismarck. The Journal of Paris praises the people of the United States for their liberality during the war. The Czar of Russia has sent an affectionate greeting to M. Thiers.

From Spain.

ADMIRAL PALO is the new Minister to the United States. Don Jose Concha is the new Captain-General of Cuba. The Cortes meets on the 22d inst. A funeral in honor of Marshal Prim was celebrated at Madrid on the 5th. The King attended. Gen. Sherman and Lieut. Grant have been presented to King Amadeus, who showed them special attention. A State dinner followed, at which the Cabinet was present, when the most cordial and friendly feelings towards the United States were expressed. This looks favorable to peace.

From Austria.

THE Upper House of the Reichsrath calls the attention of the Emperor to the increasing discontent, arising from misgovernment.

From Germany.

THE German Government wishes to restore former friendly relations with France.

From Italy.

THE Pope will soon send an *ultimatum* to such Bishops as have not accepted the dogma of infallibility.

From Switzerland.

THE Geneva Conference concerning the Washington Treaty, has adjourned until the 17th of April next.

From Belgium.

LABORERS in various parts of the country are on strike, and the military have been called out.

From Mexico.

GEN. DIAZ is reported to be fleeing before the Government forces.

From Cuba.

HAVANA journals assert that New York papers are paid to advocate Cuban independence.

A Most Desirable Security.—The confidence of investors in the absolute safety of the Bonds of the Northern Pacific Railroad is fully justified for the reason that every $1,000 bond issued is doubly secured, not only by a First Mortgage on the entire road and its equipments, but by five hundred acres of the richest land in the world. The guarantee that such a basis offers for the entire safety of the loan is superior to that offered in mining or other investments dependent upon labor or skill, because the soil is a bank that never dishonors drafts. Every farm that a railroad approaches is surely increased in value, and public land sold at $1.25 per acre, or pre-empted on a nominal payment, will improve ten-fold in value as soon as the first lot is cleared. Hence Land Bonds are the most certain means of appreciating the value of a railroad, just as the railroad enterprise itself raises the prospective value of all land in its vicinity. This element of wealth gives a daily increasing value to the First Mortgage 7-30 Gold Bonds of the Northern Pacific Railroad, and these Bonds, if bought with 5-20s gives the holders an immediate profit of 14 per cent., with an increased annual income of 38 per cent., while their security remains of the same undoubted character.—*New York Com. Advertiser.*

Watch No., 12006, Stem Winder—bearing Trade Mark "United States Watch Co., Marion, N. J.," —manufactured by United States Watch Co., has been carried by me three months; its total variation from mean time being only two-thirds of a second per day.—Judge CHARLES H. VOORHIS, Hackensack, N. J., May 8, 1869.

Dr. Louis A. Sayre, one of the most eminent physicians in the city of New York, has carefully examined the analysis made by the Board of Health, of Geo. W. Laird's "Bloom of Youth," pronounced it entirely free from any material injurious to health, for beautifying the skin, and removing all blemishes. It is the best preparation in the world. Dept, 5 Gold St., N. Y.

SPECIAL NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,
Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

RUPTURE CAN BE CURED
without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

Columbus Discovered America, but it has been found that the only economical Shoes for children are the celebrated SILVER TIPPED—never wear out at the toe, and are worth two pairs without tips. All dealers sell them.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, January 13, 1872.

FINANCIAL affairs look better than last week. The dear rates for Money continued up to Thursday of the present week, but the influences to improve the market were quietly at work, and it looks, now, as though the Brokers will be able to borrow at simple interest for some time to come. Mercantile paper, when not accommodated at Bank, is taken at dear rates, 8 to 12 per cent per annum, on the street. A heavy failure in the Domestic Commission line has had an unfavorable effect, as the house leaves over a million of indebtedness.

The Messrs. ROTHSCHILD have intimated their readiness to join Messrs. COOKE in placing about $60,000,000 of the New Loan abroad, but with the proviso that the Interest on the 4½ and 4 per cents be made payable in London. It is doubtful whether this authority will be granted by Congress.

General trade continues to look well for a large spring business in Foreign Goods and in Domestic Cotton Goods. The receipts of Cotton are liberal, but the speculation in the trade at home is greatly impeding Exports. The price here is about two cents above Liverpool,

It transpires that 6,000 miles of new Railways were opened last year, raising the American system of Roads to 62,000 miles. Thirteen of the old Western lines (including the Central and Union Pacifics) show an average increase of 8 per cent. over 1870, or $62,081,000 against $57,769,000.

No further difficulties are reported among the Savings Banks, although the withdrawals from the Third Avenue continue, and the concern will probably be induced to wind up under present damaged credit.

The First Mortgage Bonds of the Central and Union Pacific Roads have increased in favor as well at home as on the Continent of Europe, and the advance of the week is nearly equal to the 3 per cent. Dividend paid on the first of January.

The Southern State Bonds are much out of favor, owing to recklessness and frauds in South Carolina and bad faith in Virginia. The refusal of the latter to pay the January Interest on the refunded Bonds of 1871, as pledged, seems utterly inexcusable.

The following are the comparative movements of the City Banks for the past fortnight:

	Dec. 30.	Jan. 6.
Capital	$87,301,600	$87,301,600
Loans	270,534,000	272,704,400

The changes in Gold since last report have been 109¼@108⅜@108¾ per cent. The 5-20 Stocks of the United States, dealt in abroad, are ¼@1 per cent. lower. The Railroads are nearly all higher by 1½ to 3 per cent. Erie went up to 37 on the death of FISK, but has fallen back to 34¾ per cent. The future control of the Road is uncertain. Efforts are making to displace the JAY GOULD Administration, but the "law's delay" and the want of concert among the English and American holders of the Stock will lead to a prolonged and perhaps, unsuccessful struggle. It is a crying shame, of course, that bad and desperate men continue their grasp upon this great property, rendering it unprofitable to the Stockholders, but the way out of the scramble has not yet been developed. Perhaps the new Attorney-General, with the help of the Legislature, may be able to dislodge the present control.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Jan. 12, 1872.

Receipts.—The receipts of the principal kinds of produce since January 8th embrace 20,179 bales of cotton, 455 pkgs. dried fruits, 3,236 bbls. eggs, 41,095 bbls. flour, 11,750 bush. wheat, 217,880 bush. corn, 102,582 bush. oats, 41,000 bush. barley, 8,002 sacks grass seed, 1,511 bbls. bran, 525 bags do., 1,852 bbls. corn meal, 800 bags do., 142 bales hops, 4,000 pkgs. pork, 1,181 pkgs. beef, 15,505 pkgs. cut meats, 17,037 pkgs. lard, 65 kegs do., 10,187 pkgs butter, 5,179 pkgs. cheese, 6,453 dressed hogs, 2,587 bags peanuts, 105 hhds. tobacco, 1,022 boxes and cases do., 3,818 bbls. whisky, 518 bales wool.

Beans and Peas.—The low prices bring an increased trade from home consumers, and have started some shipping trade. Holders have more confidence. The arrivals are much lighter and the stock is decreasing. Prime mediums have been sold at $2.50, and this price is very rarely exceeded. The arrivals of peas are light and the stock is being steadily drawn upon, which gives a steadier feeling. The quotations are for prime mediums, $2.40@2.50, with fair lots selling as low as $2, and common, $1.25. Prime marrow fats, $2.85@3; common do. $2.25; pea, $2.50@2.60; kidney, $3.10@3.25; red kidney, prime, $2@3.25. Canada peas, in barrels, $1.20; green, $2.05@2.10; Southern, B. E., per two bush. bag, $2.55@2.75.

Broom Corn.—The long dull period has unsettled the market, and the only grade showing steadiness is choice hurl, at 9@10c., which is lower. There have been sales of considerable inferior stock at 3c.

Beeswax—is lower with a light business, and very fair arrivals, particularly of Southern. Sales at 34½c. for Southern.

Butter.—Receipts are less pressing, but the general trade is not thereby favored, as the market retains an undesirable similitude of its former sluggish movement. True, there is some increase of demand compared with last month, but there is not that stock reducing inquiry so essential this part of the year. Fine butter is used up almost as fast as it arrives; in fact there is almost enough hotel and first-class restaurant trade to absorb that grade. State butter now has a better direction of trade as Western is running light in quantity and poor in quality. Pails are barely quotable, and extra selections are very firm in consequence. There has been considerable export of low grade stock and there is a fair call from Eastern cities for fine Welsh tub. State, pails, good, 33@35c.; State pails, finest selections, 36@37c.; State dairies, fine, 29@31c.; State dairies, fair to good, 25@28c.; State, half-tubs, good to fine, 30@32c.; State, do., common to fair, 20@25c.; State, firkins, fine yellow, 28@30c.; State Welsh, good dairies, 28@30c.; State do., common to fair, 22@25c.; State do., fresh make, 30@32c.; State, fancy select tubs, 33@35c.; Ohio, good, 21@25c.; Ohio, Central and Southern, 11@21c.; Western, choice yellow, 23@25c.; Western, store-packed, 8@13c.; rolls, good West, 22@25c.; rolls, common to fair, 13@18c.; grease butter, 8@9½c.

Cheese.—There is, if anything, a little better feeling in the market. The export trade shows very little improvement. Holders here, however, begin to feel that the stock here is not excessive for winter use, and as the jobbing trade are working briskly are holding steadily into prices. The shipments are somewhat larger than last week but they have been composed for the most part of common stock that has been bought up at low prices. Shippers will not bid over 13½c. for prime, but this grade is being steadily put out to the home trade at 14c. The exports for the past week foot up 219,512 lbs. The quotations are 13½@14c. for fancy factory; 12c. for fair; 9½@10½c. for common; 11½@12½c. for farm dairy; 9@10c. for common; 11½@12½c. for Ohio factory; 9@11c. for common do.; English dairy, 11@13c.

Cotton.—The market the last few days has been under the control of speculators. The orders for contracts have been large, principally from the South and prices have been run up fully one cent per lb. At the advanced figures there was scarcely any business from other sources, as it placed our market far above that in Liverpool, and spinners were disinclined to purchase more than they actually needed. Holders have been cautious of offering their supplies owing to the uncertainty to the extent of the advance.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	18⅝	18¾	19¼	19⅝
Good Ordinary	20¼	20¾	20½	20⅝
Low Middling	20⅝	21½	21½	21⅝
Middling	21½	21¾	22	22½
Good Middling	22⅜	22½	23¼	23½

For forward delivery sales on the basis of low middling 21¾ for Jan.; 21¾ for Feb.; 22¼ for March; 22½ for April.

Dried Fruits.—There is only a fair local demand and in this way outside prices are sometimes a little above for new fruit are obtainable.

Apples—Old State, qrs., 7@8c.; Western, new, 8@8¾c.; Southern, new, qrs., 6@8c.; do. fine, sliced; 9¾@11½c.; new State qrs., 8@9½c.; do., sliced fine, 11@13c. Peaches, peeled, new N. C., 12@13c.; do., do., do., 15@16½c.; do. E. Sh. Va., 15@16½c.; new unpeeled halves, 7½@8c.; do. qrs., 6@6½c. Plums, 25@27c. Cherries, new, ₱ lb., 28@29c. Blackberries, 13@13½c. Raspberries, 28@29c.

Eggs.—Supplies are lighter and prices have been advanced. The price of fresh is very uniform. Sales generally making at 40c. for Western and State and 41@42c. for Jersey. Limed are somewhat irregular, State, 30@32c.; Western, 29@30c. The demand is very good for the season.

Flour.—The movement in shipping grades is very light, but with the position of stocks, both here and on the other side, holders have been steadily advancing prices, with quotations for the week about thirty cents higher. The dull trade at the close for prompt delivery creates some disposition to shade cash prices, but for delivery next month, with some speculative inquiry, full prices are insisted upon. For shipping brands, for Feb'y delivery, $7 is bid, and $7.25 asked. $6@6.30 for superfine State; $6.70@6.80 for common extra do.; $6.85@7 for good to choice do.; $7.05@7.40 for fancy do.; $6@6.30 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.60@6.90 for extra do.; $6.95@7.40 for choice extra do., including shipping brands of round hoop Ohio at $6.80@7, and trade brands of do.

at $7.05@7.50; good to choice white wheat extras at $7.40@7.65; Minnesota, fair to very choice extra, at $7.25@8; St. Louis at $6.80@7.50 for common to fair extra, and $7.55@9.20 for good to choice. Southern at $6.85@7.60 for extras and $7.65@8.50 for good to choice. Rye at $4.50@5.25. Buckwheat flour, $3.25@3.60.

Fresh Fruit.—Apples are unchanged, but dealers are not putting out really fine marks at the ruling prices. Cranberries are selling fairly at the prices. Peanuts begin to change hands freely and full prices are quotable. Two cars California pears has arrived during the week, one car frozen on the way, the other car in fine condition. It is unsafe to trust pears in the uncertainty of coming through at this season of the year. Better send earlier and have the fruit held here. The frozen car of 550 boxes, on which the freight was $325, is being sold at 50@70c. per box, on account of the railroad parties to whom they were consigned declining to pay freight on them. It is understood that there were other cars in the train sent to Boston, Philadelphia, &c. The sound pears are selling $3.50@5 for Easter Beurre, and $3@4 for Glout Morceau and Winter Nells.

Apples, Mich., &c., bbl. $3@3.50; do. State good, $to@4.25; do. selections, $4.25@4.50; grapes, common, lb, 2½@3½c.; do. good, 4@5c.; cranberries, fine, bbl., $9@9.50; do. common to fair, $6.50@8.00; do. crates, fine, $3@3.25; do. do. common, $2½@2.50; oranges, Fla., bbl., $7@8; peanuts, Wilmington, bush., $1.90@2; Virginia, new, $1.85@2.00; do. common, $1@1.25, chestnuts, $1.75@2; hickory nuts, $1.75@2, black walnuts, 75c.; pecan nuts, 5@6c.

Grain.—For wheat, with lower ocean freights early in the week, prices advanced two and three cents per bush., with considerable quantities taken by shippers, but there is a reaction, and prices are back to about old figures. The quotations are $1.52@1.55 for spring in store. Winter red Western, $1.62@1.64; amber Western, $1.70@1.71; white Western, $1.70@1.75. Rye is quiet; Western 90@92c. Barley is dull, and rather in the buyer's favor; Sales at 85c. for Western. Canada West malt sold at $1.30. Oats have been rather weak with fair supplies and a light outlet. Sales at 54½@56½c. for Western and Ohio. The offerings of corn have been larger, and with less shipping demand prices are lower, closing weak. New Western mixed 74@76c.; new white Southern, 77c.

Game.—The market is crowded with stock, and as many items are running close to exclusion from market, on account of the expiration of the game laws, sellers are anxious to close out at the very moderate quotations annexed. Ducks, teal and wigeon, 30@40c.; do. mallard and red, 75c.; do. canvas $1.50. Venison, whole, ₮ lb., 6@9c.; do. long saddle, 10@11c.; do. short saddle, 11@12c.; do. Minn., 14@15c. Buffalo hind saddles, 3@5c.; do. calves, 3@5c. Quail, sound, ₮ doz., $1.10@1.50; do. soft and small, $1@1.25. Bronze, ₮ pair, 50@62c. Partridges, Eastern, 40@50c.; do. State and Western, 30@40c. Rabbits, 20@30c. Hares, 30@35c. Squirrels, gray, 8@10c.

Hay and Straw.—The arrivals have been unusually light, and notwithstanding trade is very dull, late prices are supported. Shipping $1.35@1.40, prime for retailing, $1.55@1.80, salt, 80@85c., clover, $1@1.20; long rye straw, $1.20@1.25, short rye do. $1@1.05, oat 90c@$1; wheat, 80@85c.

Hops.—Some failures among brewers creates a very unsettled feeling. The purchases are made from hand to mouth and with the dull trade there are some parties disposed to work off their supplies at lower prices. We quote:—New Yorks, growth 1871, 35@62c.; Eastern do. 1871, 35@55c.; Western do. 1871, 35@55c.; yearlings do. 1870, 20@30c.; olds do. 1869, 10@20c.; old olds do. 1868, 9@15c.; Californians do. 1870, 15@25c.; Californians do. 1869, 9@15c.; Bavarians, 65@75c.; English, 60@70c.; Belgians, 50@55c.

Poultry.—The market for dressed poultry rules a little easier, but there has been some severe sacrifices since our last, in order to trim the market, and even now there are no really strong prices.

Turkeys, Western, good, 10@13c.; do. Canada, frozen, 10@12c.; do. poor and frozen, 5@8c.; do. State, 12@14c.; do. Jersey, 15@17c.; Ducks, Western, 14@16c.; do. poor and frozen, 8@12c.; do. State and Jersey, 15@17c.; Geese, Western, 9@11c.; do. poor and frozen, 8@10c.; do. State and Jersey, 13@14c.; Fowls and Chickens—Western good, 10@12c.; do. Canada frozen, 8@10c.; do. poor and frozen, 5@8c.; do. State, 10@12c.; do. Bucks Co. and Jersey, 16@18c.

Provisions.—Pork is depressed. The outlet is moderate at the moment and with reports of increasing arrivals of hogs at the West there are more sellers. Old mess, $13.25; new at $11@11.12; extra prime, $12.25; old mess, $11.50; new, $11.50; sales for March, $11.50; April, $11.31. Dressed hogs are dull and in the buyers favor, quoted at 5¾@6c. for Western. Middles rule in the buyers favor with a moderate business. Sales of short clear 7 9-16c, short rib 7c. long cut hams, 8c.

Cut meats are selling slowly, with prices unsettled; hams in pickle, 9@9½c.; do. in salt, 9c. Shoulders in pickle, 5c.; do. in salt, 5½@6c. Smoked hams, 11@13½c.; do. shoulders, 6½@7½c.; clear rib, 8@8½c. Lard is lower, closing firm. Choice stock sells best, 9¼c. is quoted for best Western steam, and for March, 9¾c.; for April, 9¾c. City is quiet at 9¼c. for prime and 9c. for No. 1. Stearine is in fair demand at 9c. for hhds.

Beef is offered freely, with a limited sale. New plain Western mess, $8@10; extra mess, $11@13. Pierce beef is quiet at $15@18 for prime mess, and $19@21 for India mess. Beef hams are held at steady prices, with moderate supplies. Quoted at $23@25 for new Western.

Seeds.—Clover has been bought up very freely by shippers, and notwithstanding large arrivals the stock shows scarcely any accumulation. No change in prices has been made. Sales at 10¾@10¾c. for Ohio—the latter price for strictly choice samples; 11¾@11¾c. for Indiana and Michigan, and 12@12¼c. for State. Timothy dull and hard to sell. Prices are entirely nominal.

Tobacco.—There is a fair home trade in Kentucky leaf at steady prices. The shipping movement is very moderate. Seedleaf is selling slowly, with prices pretty much the same.

Vegetables.—Best potatoes are still offering at easy prices, while the addition of Nova Scotias will not tend to help medium qualities. There is a fair local and an active shipping demand.

Potatoes, Rose, ₮ bbl., $1.75@2; Peach Blows, $1.75@2; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.25@1.50; Dyright, $1.25@1.75; Nova Scotia, $1.75; sweet Del., $3.75@4.00. Onions, red & yellow, $1.50@1.75; white, $2.50@3; Conn., 100 strings $2.50@3. Garlic, per 100 bunches, $20@22. Turnips, Russia, bbl., $1.25; flat, $1@1.25. Cabbages, per 100, $5@7. Hubbard squash, per bbl., $2@2.25; marrow, $1.50@1.75.

Wool.—The market for fleeces shows very little life. Holders remain firm in their views on account of small stocks and the feeling that it will all be needed before the new clip comes to hand. Texas and California grades attract more attention than the indications are favorable to a good trade within a few days. Foreign quiet. Latest sales at 70c. for XX Ohio; 66½c. for medium; scoured, 75c.@$1.10; super pulled, 61½@67½c.; No. 1 pulled, 45c.; tubbed, 80c.; Mexican, 35@40c.; Texas, 40@43c.; A 2 California, 40c.; fall clip, 31@35c.; Cape at 42½c.; washed Smyrna, 43c.

Whisky—Is lower and dull, quoted at 92c.

ROCHESTER, N. Y., Jan. 11.—Wheat firmer; red winter $1.50; white, $1.55@1.65. Corn quiet, 75c. Oats, 45c. Barley dull; 60@85c. for two-rowed; 80c. for four-rowed. Dressed hogs 25c. higher—$5.50@6 per cwt. Poultry scarce. Chickens, 13c.; turkeys, 15c. Eggs, 32c. Butter, 22@25c. Wool firm and nominally higher; 55@60c. for medium fleece, and 60@65c. for combing. Potatoes, 55c. per bush. Seeds dull, at unchanged prices. Hay in better supply; $17@24 per ton.

LIVE STOCK MARKETS.

NEW YORK, Jan. 11, 1872.

THOUGH larger than last week in most of the varieties, yet the run of live stock continues light, and would cause a real scarcity but for the large quantities of dressed hogs, poultry and game sent in. Never before have we had anything like the quantity of venison and buffalo meat forwarded from the West, and selling low, it goes quite a way towards supplying the place of beef and mutton. Then there were heavy stocks of poultry left from the holidays, and sold at 3@5c. ₮ lb., which somebody ate, and while eating they saved just so much meat. Now, however, the markets are getting cleaned up, and most kinds of live stock are advancing.

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	5,753	135	719	19,123	28,389
Last week	6,068	139	910	10,951	19,530
Correspond'g w'k '71.	5,756	139	910	10,856	25,571
Average, '71	7,187	88	2,301	25,132	25,177

Beeves.—With still fewer cattle than the light run of one week ago, the market is steadily but surely improving. How long this will continue is uncertain. It is certain that drovers flushed with late success are buying up and hastening forward many droves, but it is doubtful about their reaching here in quantity sufficient to prevent at least one more strong market. Everything has now been used up so clean in the beef and mutton line, with scarcely any Chicago dressed beef arriving, that it will take a good many cattle to go around. 'Tis only the abundance of game, poultry and pork which prevents a further advance in beef and mutton.

The average quality of the cattle of the past week has not been good. There were a great many just medium and thinish droves, with very few Texans and not much State stock. The great bulk of these cattle were sold at about 11c. some old dry cows and bulls going at 8@9c. with Texans at 9c lbc. and good handling Western steers of 1,6@1,7½ cwt. at 11½@12c. The best on offer went at 12½c. and a few close upon 13c. though not extra fine. Really prime 8 cwt. cattle would sell quick at 13c.

The offerings last Monday were 101 car loads at Communipaw, 77 at One Hundredth-st., and only 16 at Weehawken, making 3,151 head, all told. They were quickly used up, leaving a set of hungry butchers for the 1,33 cattle which have arrived since. As fair samples of the closing rates, we quote 74 Cherokee cattle, at 5¾ cwt., at 10½c.; 36 Ohio, 7¼ cwt., at 11c.; a mixed lot of 5½60 cwt. Ohio dry cows, stags and bulls, at 8@10c.; 51 Illinois cattle, of 6¼@6½ cwt., at 11½@12c., and 97 Kentucky steers, 7,5@7,5 cwt., at 11½@12½c. The scarcity of sheep is calculated to improve the cattle market.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Choice bullocks, ₮ lb	12½ @ 13	— @ 12
Good to prime	11½ @ 12	11 @ 11½
Medium	11 @ 11½	10½ @ 11
Ordinary	10 @ 10½	9½ @ 10
Poorest grade	8 @ 9½	8 @ 9
Average of all sales	11¼ @ —	10½ @ 10¾

Milch Cows.—The abundance of milk, which is selling very low, is just about offset in the minds of milkmen, by the advance in beef and greater value of dry cows. This leaves the fresh cow trade where it was one week ago. One great trouble is the poor quality of the cows sent here for sale. They are not worth $50 per head. Some of them will not bring $40. It is costly feeding cows, and milkmen can't afford to keep poor ones. Fine cows, of unquestioned freshness, are worth $75@85.

Veal Calves.—It will be seen by the figures above that the run of live calves is very light. The principal trade at this season of the year is in dressed calves which can be sent from long distances, and much cheaper than alive. The finest of these hog-dressed calves are quoted at 14c., though a few extras really sold at 15c. Scarcely any go below 10c., even when raised on hay and other feed. Live range from 6 to 8c. for poor; 9@10c. for fair to good, and 10½c. for prime, with an occasional extra fine one at 11c. The sanitary police begin to find "bob calves" on sale. They go very quickly when found, without so much as saving the hide.

Sheep.—Though larger than last week the supply is still quite inadequate for the demand, and prices go on improving. The rates are now the highest of the season and will go still higher unless the arrivals are more free. Farmers appear to be divided between the wish to obtain these high figures, so much better than selling in the fall, and a desire to go extensively into wool growing, thus keeping their flocks. Buyers of store sheep find it impossible to secure stock at prices which they dare to pay. Very thin sheep sell at 5@6½c. with those below the average at 7c., fair lots at 7½c. and prime at 8@8½c. one extra lot, 132 lbs. Ky. selling at 8¾c. A car 81 lbs. fine wool O., sheep went at 7¾c.; a lot of 109 lbs. at 8c.; two cars 91 lbs. Mich. 8¾c. and 2 cars light 76½ lbs. O., at 7½c.

Hogs.—The larger receipts cause a slow market again and prices are on the decline. Live are quoted at 4¾@5¾c. at the close, city slaughtered selling at 5¾@7c. as extremes, those of 160@180 lbs. bringing 6¼@6½c. Western dressed are worth 5¾@5¾c. arrivals being 9,860 for the week.

New Advertisements.

THE AMERICAN ORGANS

Have met with an unparalleled success during the last year. The

New Styles

Especially, are pronounced beyond competition for the prices asked. All the SUBSTANTIAL excellence of the finest organs are combined in this beautiful series, which are sold at prices ranging from $200 downwards. The

Grand Organs for Churches

have been in constant demand, and the sale of

PARLOR INSTURMENTS

HAS BEEN ENORMOUS.

New efforts are now making to keep pace with this great increase of business.

The present high standard of excellence will be maintained.

The Manufacturers have noticed that organs are offered to the public with "solid panels," as though it were a new and improved feature. It is not new nor desirable. Twenty years ago the experiment was tried, both in organs and in furniture, of making fronts and sides in one solid piece, the shape of the panel being cut out by machinery; but it was quickly discarded, because it was found that such broad pieces of wood inevitably warp, check, or split. The mode adopted by the SMITH AMERICAN ORGAN CO., in all their instruments, is to form the fronts and ends of separate pieces solidly framed together. This is the only durable way.

Catalogues set free on application. Address

OFFICES OF THE COMMISSIONERS
Of Immigration of the State of New York.
CASTLE GARDEN, NEW YORK CITY.
January 2nd, 1872.

THE Commissioners of Emigration desire to give notice to Railroad Companies, Contractors, Factories, Planters, Farmers, and others, that there is now in their establishments on Ward's Island, a large number of agricultural and skilled laborers, as also domestic servants, for whom they are desirous of obtaining employment.

Any and all information on the subject can be obtained, and arrangements made, by addressing the undersigned. BERNARD CASSERLY,
Superintendent.

MAGIC LANTERNS
Stereopticons and Dissolving View apparatus of every description, and many thousand views for the same. A very PROFITABLE EMPLOYMENT for the long Winter Evenings. Priced and Illustrated Catalogues sent on application.
W. MITCHELL McALLISTER,
728 Chestnut St., Phila., Pa.

WEBSTER'S PATENT BUTTON-HOLE WORKER.
Patented June 27, 1871.
One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented!
So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a lifetime. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and traveling agents wanted everywhere.
Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address
A. W. WEBSTER & CO., 599 Broadway, N. Y.
Please state you saw this in RURAL NEW-YORKER.

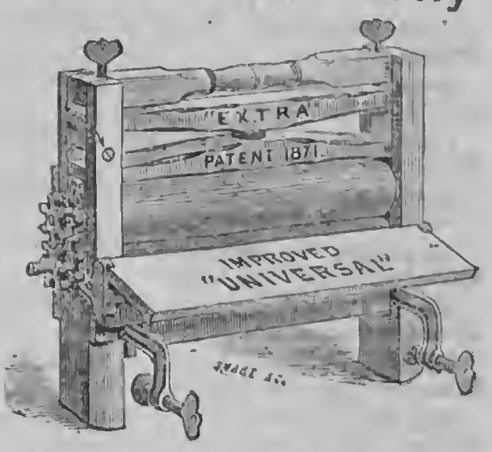
SITUATION WANTED.—By a young man thoroughly posted on the most improved modes of farming,—also the breeding and feeding of live stock. Salary no object. Highest recommendations. Address AGRICOLA, 313 Gold St., Brooklyn, N. Y.

10 Reasons Why



THE IMPROVED UNIVERSAL IS THE BEST WRINGER.

1st **REASON.**—It has ROWELL'S PATENT DOUBLE COGS on one end only of the shaft. These cogs have longer teeth, can play apart further without disconnecting, can never crowd together so as to bind, never work sidewise out of place; wear more evenly and turn easier than any cog-wheel ever invented.

2d **REASON.**—It has the **Patent Stop,** which keeps the Cogs from disconnecting and losing their power, yet allows the rolls to play apart far enough to wring the largest article easily.

3d **REASON.**—It has the **Malleable Iron Folding Clamp,** which cannot be broken, and fastens securely and easily to tubs of any curve, and fits washing machines or stationary tubs of fully two inches in thickness, which no *curved* or ordinary clamp can do, and it folds under out of the way when not in use and for convenience in packing.

4th **REASON.**—It has the **Folding Apron** or Guide, to conduct the clothes safely over the side of the tub, free from contact with the clamp or screws.

5th **REASON.**—It has the peculiar advantage of **Two Pressure Screws,** so arranged with patent wooden springs, that each screw presses on both ends of the roll alike, the same as if it was in the center, while the two together *give double the capacity for pressure.*

6th **REASON.**—**The Elastic Rubber** between the strong wooden springs relieves their rigidity, makes the machine turn easier, saves the rolls from strain, and causes the pressure to bear on both ends of the roll alike.

7th **REASON.**—All its IRON parts are WROUGHT or MALLEABLE, not liable to break, and carefully galvanized, to prevent rust.

8th **REASON.**—**The Handle or Crank** is not screwed on like other wringers, but BOLTED or RIVETED, and will turn clothes back ward or forward, or from one tub to another, without coming loose.

9th **REASON.**—Its folding lower shaft lifts down to any stationary tub or washing machine, and prevents water slopping over, as it will with ordinary wringers.

10th **REASON.**—**It is very light and portable,** yet built so substantially that the strongest person can not break it in wringing the largest garment.

With all these Advantages, its price is no greater than that of any inferior wringer with cogs.

Sold by the House Furnishing and Hardware Trade generally.

The celebrated

DOTY WASHING MACHINE

Manufactured and sold also by

Metropolitan Washing Machine Company,
R. C. BROWNING, President.
32 Cortlandt St., New York.

DOOLEY'S YEAST POWDER

Medicinal, Etc.

Pomeroy's Trusses.

These trusses are made under six different patents granted to us during the last six years, and embody the most important improvements ever made in this class of instruments. Our celebrated "Finger Pad," "Adjustable" and "Night" trusses are unrivaled for the support of hernia, combining the utmost security with a degree of comfort unattainable by any other means; and hence, as experience shows, are more likely to effect a radical cure than any other.

They are recommended by the very best surgical authorities, and have received the highest awards and most flattering reports at all the late Fairs of the American Institute.

No one should purchase a truss without first calling on or writing to us for information and advice.

NORTH
MISSOURI LANDS
FOR SALE
BY THE
Hannibal & St. Joseph R. R. Co.
About 120,000 Acres of the Finest Farming and Grazing Land in the United States, for sale at low prices and on very easy terms; thus enabling an industrious man with small capital to pay for his land with money earned from it.
Missouri is not too far West to be at a great distance from markets; its Railroad facilities are great and constantly increasing; the climate is splendid, and good crops are almost a certainty; while the numerous thriving towns and cities springing up on every hand attest beyond doubt that the blight of slavery has been effectually dissipated, and that Eastern men and Eastern capital are doing their perfect work.
Our Lands Defy Competition.
Send for full Descriptive Circulars and Sectional Maps, inclosing 30 cents, and stating what paper you saw this in, to Land Commissioner H. & St. J. R. R., Hannibal, Mo.

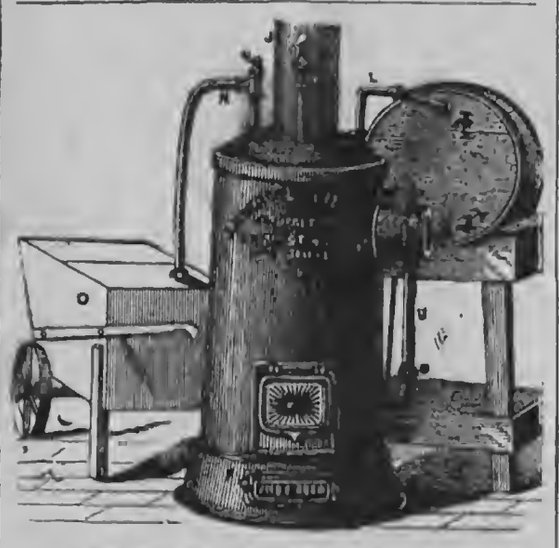
Implements, Machinery, Etc.

CARHART'S
PATENT TWO-HORSE
PULVERIZING CULTIVATOR

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the mowing machine better than any cultivator in use, and can be used for more purposes than any other implement on the farm.
Price, **$20.**
C. C. BRADLEY & SON, Manufacturers,
Syracuse, N. Y.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK: Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

NOT ONE FAILED IN 20,000.

All Saws warranted to Cut and Track alike.

Front view Meeth showing dress and set of 5 points to cut in line

THIS SAW possesses several great advantages over the ancient V tooth, which has hitherto been relied on, especially in cross-cut saws. The strength, stiffness and durability of these teeth, and their capacity for deep gumming, are so obvious that we will only name four other points of comparison, viz.: speed, ease, simplicity and perfect clearance.

Speed.—All are aware that an ordinary hand-saw cuts only one way; i. e., the front cut is more effective than the back or retreating cut. These teeth, with their opposite cutting faces, IN CUTTING IN LINE, are equivalent to the front cut both ways of a hand-saw, in distinction to the two back cuts of the old V saw. Hence speed is inevitable.

Ease of Cutting.—It is easier to plow a groove in timber than to crush one out. The application of this principle is very perfect, all the teeth being of even length, double pointed, cut with outside vertical and projecting edges, and clear simultaneously with the same.

Simplicity.—This is obvious, all the points being cutters like hand-saw teeth, viz., the same length. No hooks, or thick, raking teeth to be shortened; only one mill file is needed to keep them in order, and they are as easy for the unskilled laborer to sharpen as the old-fashioned saw.

Perfect Clearance.—Continuously cutting and clearing, these opposite "cutting faces" not only cut, but clear, by lifting the fiber above the projecting blades, like a plow, which is the most perfect clearing implement.

NEW YORK, AMERICAN INSTITUTE FAIR BUILDING, Nov. 4, 1871.

E. M. BOYNTON, 78 Beekman St., New York—SIR: This certifies that I saw the Lightning Cross-Cut Saw, worked by hand, by two men, Nov. 2, at this Fair. Said men and saw cut off a sound 8x9 inch chestnut log in 38 seconds; and 16 cuts of same, *continuously*, in 2 minutes and 18 seconds, or at a rate of a cord of wood in less than nine minutes. I am satisfied that for all purposes of cross-cutting large and small timber, your cross-cuts and wood saws have no rival in speed, in ease, and in simplicity.

I believe their universal use would save a vast amount of money and time, and lighten the toil of millions of men. J. W. BLAKE,
Superintendent and Engineer
American Institute Fair.

N. B.—These extreme tests are quoted merely to prove what should be obvious—that direct cutting is better than the old V fretting process *used by all other saws.* The cutting of all saws depends much on the proper set, sharpening, and *skill* of the operator. I cannot furnish brains, and skill is attained only by practice. But no saw manufacturer dares to question the superiority of my latest improved saws, or to publicly test the matter.

I have reduced the retail price from $1.25 to $1 per foot, and the trade price proportionately, and solicit the patronage of the American public. Beware of worthless imitations and infringements, which will be prosecuted. Do not confound this 1871 pattern with my old 1867 pattern Clearing Tooth Saws, now out of market. All clearing teeth are complicated, as they require to be kept shorter than cutters and frequent re-adjustment. After much experience, I cannot recommend them. Each one of the new Lightning Cross-Cuts has my $100 challenge, and full directions for setting and sharpening any saw, engraved on it. Honest hardware men will procure the genuine for their customers, even if they are overstocked with inferior goods, but where they do not keep them, Agents are wanted. A six-foot Cross-Cut and Buck-Saw sent on receipt of $6. Express will cost from 40 cents to $1 to places this side of the Mississippi River by special contract.

N. B.—Millions of Axes are used for cutting wood; a Lightning Cross-Cut Saw, either for one man or for two, will cut five times as fast as an ax. Why not try them?

See that the name and warrant are on each saw.

Recent increase of business has compelled me to lease No. 80 Beekman St., adjoining No. 78, where I shall be happy to see Hardware Dealers and Customers.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

IMPORTANT

TO FARMERS, HOLDERS OF FIVE-TWENTIES, AND INVESTORS.

GOLD 7-30 LOAN.

A PROFITABLE AND SECURE INVESTMENT.

The Northern Pacific Railroad Company offers to the public an investment security which combines the ready negotiability, the convenience, and the high credit of a first-class Railroad Bond, with the solidity and safety of a Real Estate Mortgage on Land worth at least twice the amount loaned.

Traffic.—As officially reported, the gross earnings of the present Pacific Railroad (Union and Central) for 1871, the second year of through business (December earnings estimated) reach Seventeen Millions and a Quarter. Of this, 65 per cent. is from Local business, and, it is stated, fully 55 per cent., or nearly Nine and a Half Millions, are net over operating expenses.

An equal traffic on the Northern Pacific Road will pay a dividend of more than 9¼ per cent. on its total cost. With its great and unquestioned advantages in distance, grades, climate and tributary fertile country, the Northern Pacific is assured of a vast and profitable business from the outset, with a large increase for the future.

The Value of Land Grants.—The average price at which the twenty-six leading Land-grant Railroads have thus far sold their lands, is $7.04 per acre—the highest average of any grant being $13.98, and the lowest $3.07. With few exceptions, *the average selling price has steadily increased from year to year.* The lands of the Northern Pacific Road are admitted, by all who have seen them, to be better and more salable than those of most other grants, but, sold at the general average of $7.01 per acre, they will yield more than $161,000 per mile of road—more than three times the possible cost of construction and equipment; or, at the lowest average of any grant ($3.07), they will produce more than $70,000 per mile. These facts regarding Pacific Railroad earnings, and the market value of Railroad Lands, as shown by the actual sales to settlers, show the three-fold security of Northern Pacific Railroad Bonds.

Construction.—The road is now completed across Minnesota (255 miles;) work is progressing westward through Dakota, and 65 miles are under construction on the Pacific coast. Including purchased lines, the Northern Pacific Company now has under its management 575 miles of finished track. Contracts are let for the construction of 635 miles more, to be finished before the close of 1872.

The 7-30 Gold Bonds.—The first mortgage bonds of this Company, *which, after full investigation, we strongly recommend as a reliable and unusually profitable investment, and which now stand among the solid and favorite securities of the country,* have the following leading features:

1. They are exempt from United States tax; the Principal and Interest are payable in gold—the principal in 30 years, and the interest semi-annually at the rate of 7 3-10 per cent. per annum. Denominations, from $100 to $10,000. Present selling price—par and accrued interest in currency.

2. The bonds are a first and only Mortgage on the Road, its Equipments and Earnings, and also on a Land Grant which on the completion of the Road will average 23,000 acres to each mile of track.

3. They are at all times receivable at 10 per cent. premium (1.10,) in payment or exchange for the Company's Land at market prices—a provision which practically gives the holder the power of foreclosure at will.

4. The proceeds of all sales of land are required to be devoted by the Trustees of the bondholders (Messrs. Jay Cooke and J. Edgar Thomson) as a Sinking Fund to the purchase and cancellation of the first mortgage bonds, or temporarily to the payment of interest thereon if necessary.

Exchanging 5-20s.—In view of the ability and fixed policy of the Government to call in its 5-20s and substitute a low-interest bond—$140,000,000 having been called in for cancellation since September 1st—many holders of 5-20s are exchanging them for Northern Pacifics, thus adding to their principal the present premium on Government Bonds, and increasing their yearly interest nearly one-third.

All marketable stocks and bonds will be received at current prices in exchange for Northern Pacific Seven-Thirties without expense to the investor.

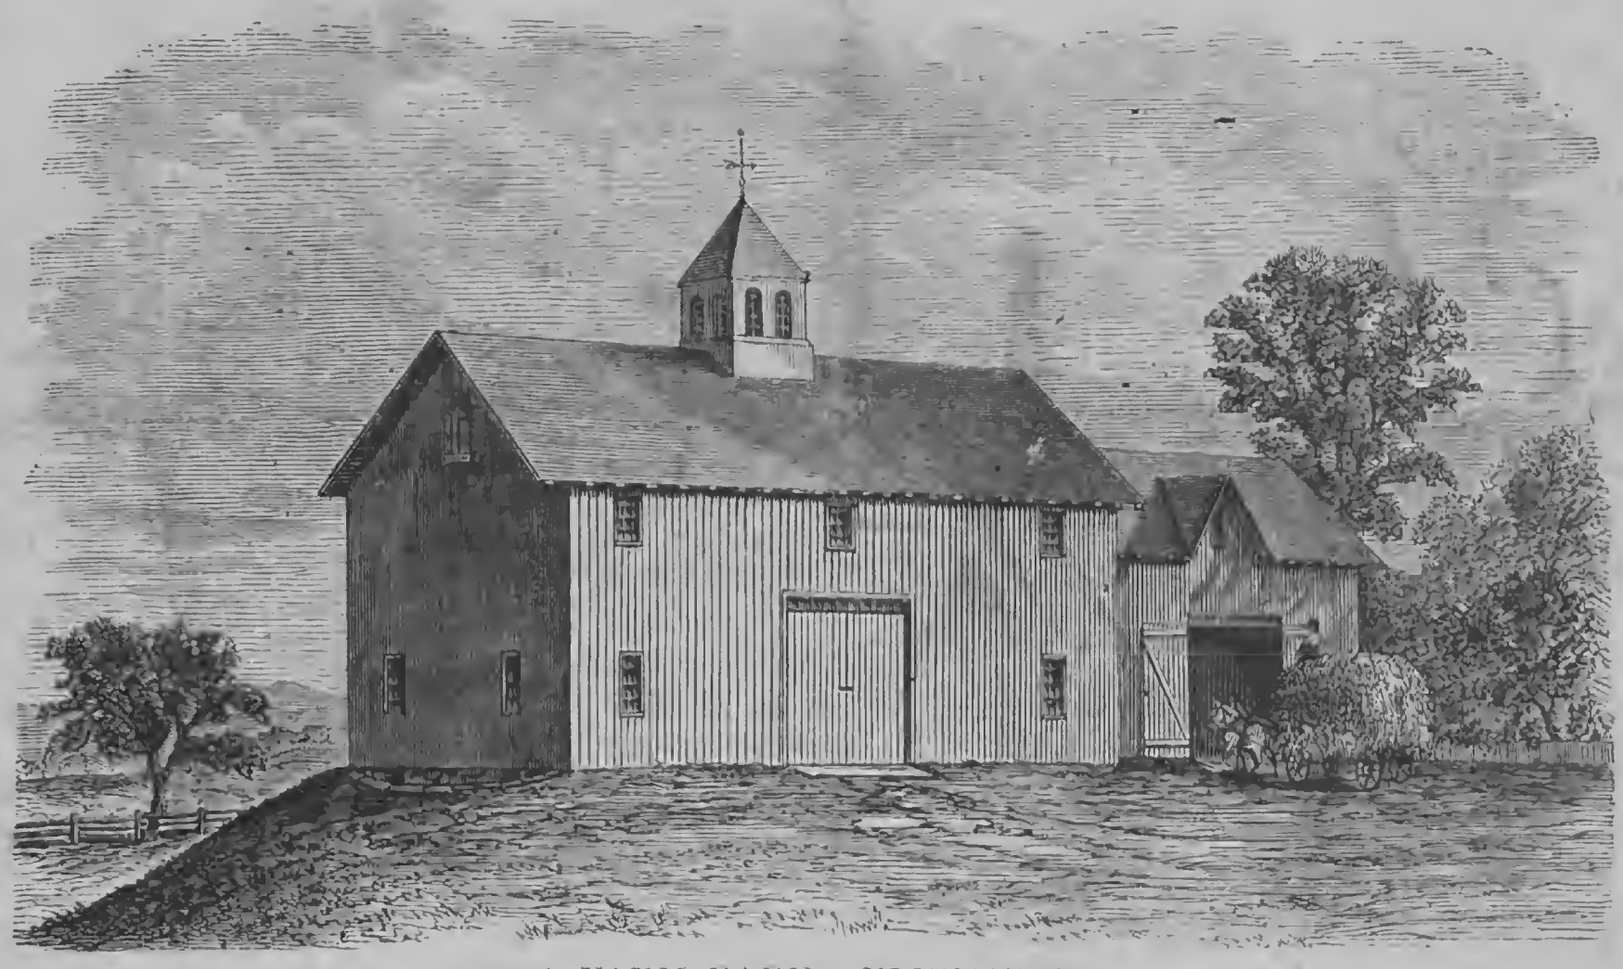
Rural Architecture.

A FARM BARN AND PLAN.

YOU will find inclosed a plan and description of a substantial and convenient farm barn, which, though a more extensive building than most farmers wish to be at the expense of erecting, is none too large for housing all the stock and storing all the hay, grain, &c., of a moderate sized farm. But those who may not wish so large a building may, by our plan as here illustrated, erect a barn of any size and cost they choose. It is much better, however, when a person is building, to put up a good-sized barn than a small one, which will only accommodate a portion of his stock, and furnish room for the storage of a small amount of feed.



A FARM BARN.—ELEVATION.

As seen in the Elevation, Fig. 1, the barn is built upon a side-hill which slopes to the east. There are three distinct floors. The entire structure consists of a main building fifty by eighty feet, and one wing, built at the south end, forty by forty feet, making a total length from north to south of a hundred and twenty feet.

Fig. 2 is the basement floor or ground plan, and is divided into several departments, each well finished for the purpose it is designed. The floor under the main building is separated into five divisions. The two at the north end, *A*, *A*, are neatly finished up for hogs, having strong, wooden troughs set upon wide, movable platforms, too heavy for the hogs to move; and if anything is spilled it is not wasted, but falling upon the platform is eaten up. *B*, is the manure pit, and the floor is so constructed that all the liquid manure, instead of sinking, as would be the case if the floor was dirt, is conveyed into a small cistern, *C*, from which it can be pumped out when wanted. *D*, is an immense root cellar, capable of holding a large quantity of this valuable food. *E*, is a pen for calves, and connects by a door with the large, roomy department, *F*, under the wing at the south end of the main building, which is fitted up with a number of roomy stalls for milch cows. Each of these departments have doors, *g*, *g*, *g*, *g*, opening to the stock yard on the east side of the building. The inclosed spaces next the building at both the north and south ends—one being shown in the elevation, Fig. 1—are areas to admit light through the windows, *H*, *H*, *H*, *H*, to the cow stables and hog pens.

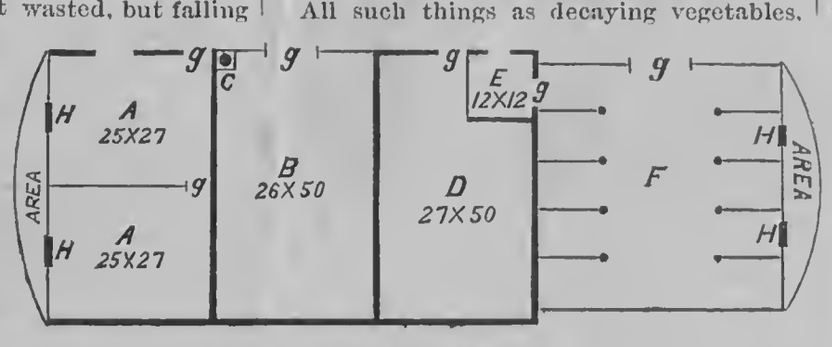


FIG 1.—PLAN OF BASEMENT FLOOR.

Fig. 3 is the floor used for horses and the storage of farm machinery, vehicles, &c., and is so arranged that a wagon or cart may be driven in at either of the large doors on the west side of the building (see dotted line), and pass out at the other. Along the whole length of the east side of this floor are horse stalls, thoroughly finished, and all provided with hay racks, *K*, *K*, *K*, *K*, *K*. *L*, *L*, are two well-finished rooms, which are used as harness room and work shop. *M*, is a large room for putting away all the machinery and tools used on the farm. *O*, is a loose horse box, and there is one also at *P*. *R*, is a stairway leading to the basement floor, and *S*, a stairway leading up to the third story, or hay and oats floor. *T*, is a trap door where the root crop is deposited in the cellar. *V*, is also a trap door, which is opened to throw the accumulations in the horse stalls into the manure pit.

All such things as decaying vegetables, muck leaves, &c., which serve to increase the amount of manure, may be easily carted and dumped through this opening. The manure heap is kept at he proper dampness by water led from the eaves. The cupola is to give light to the hay mows, while it adds no little to the beauty of the building. The entire structure is well supplied with windows, and is exceedingly light and comfortable for both men and beasts, at all seasons of the year.

W. A. GRAHAM.

Flemingsburg, Ky.

WE thank our correspondent for his contribution to this department.

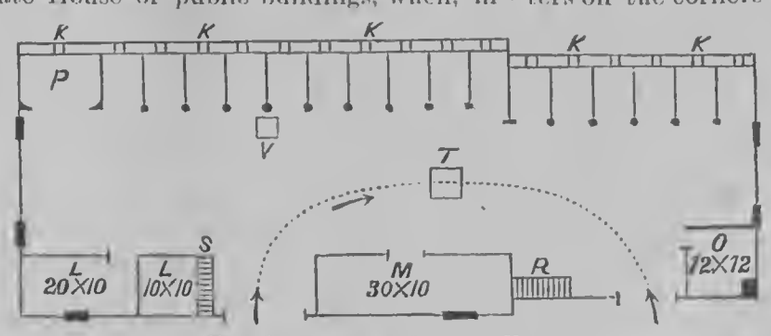

FIG. 2.—PLAN OF SECOND FLOOR.

BUILDING FOUNDATIONS.

I NOTICE in a letter to an English scientific paper the writer, in illustrating with what reluctance correct principles are accepted when at variance with common practice, uses the following quotations:—"Of the thousand architects, builders and workmen to whom I have explained and convinced that the true theory of building foundations consists in having the center of the foundation exactly under the weight sustained, and every part of the foundation of a width proportionate to the load, but one ever wholly adopted it, and he is dead."

Now, I believe no one will undertake to dispute the correctness of this principle, but it is next to impossible to get masons, carpenters or builders—yes, and even architects—to adopt it. They, for some unexplained reason, seem to think its no use trying to apply principles to anything short of a State House or public buildings, when, in fact, the principle is as applicable to the common dwelling or barn as to any building, costs nothing, and is of just this value: that foundations built in strict accordance with this principle are as enduring as the materials of which they are composed; whereas foundations as we see them under every house and barn we come to, are settling or constantly getting out of shape.

Now as builders will not change their old ways for the new there is no alternative but to educate the people who pay their money to demand that their foundations be set right. Let every farmer who reads this, and intends building the coming season, insist that his stone foundation wall be laid three inches or three and a-half inches larger outside than the sills; if his house is to be of wood—or the brick walls, if of brick—so as to bring the center of the stone work under the center of the sills or walls. Then protect the top of the stone work by a water-table which need only project two inches over the face of the wall.

If your builder says that that is of no use, tell him "he don't know what he is talking about," and ought to learn. If he or you think it will not look as well, it is because your taste is wrong and not the looks of the foundation. Was ever a really good building seen that did not have a visible and enlarged foundation? If the objection is made that it will cost more money, give me the conditions, and if I do not show how it need not cost a cent more, I will pay it out of my own pocket—*and that's backing an idea, ain't it, now?*

Any one desirous of satisfying himself of the advantage of a thin foundation, with the weight central, over a thick one with the weight all on one side, may easily do so by laying two blocks of wood of different sizes in the mud; let one be three or four inches square and the other eight or ten inches square. Now, by stepping on the small one exactly in the center and the same distance, say two inches, from the edge of the larger one, they will get a better idea through their feet than is possible to get through some people's heads by a volume of words or a lifetime of argument. As to the looks, nothing can look worse, or in fact more ridiculous, than to see a common wood dwelling with pilasters on the corners and bases complete, all projecting outside the foundations—a part that stands on nothing!—a part that supports nothing, and all sorts of structures, posts, doors, windows and complete buildings all cornice and no base! These are the most common and worst of all architectural blunders. S.

Syracuse, Jan., 1872.

The Clergyman's Cottage, an elevation and plan of which we published December 30, 1871, has attracted a great deal of attention and resulted in many inquiries. We gave all the specifications in our article that Mr. DOWNING did in his. The estimate of cost given by Mr. DOWNING was made many years ago, and, as we stated, could not be relied on now. But with the data given in our article and with the plan, measurements and character of materials decided upon, a builder can estimate the cost of such a house in each locality very accurately.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

The Rural's New Departure.—*Jan.* 8.—I am much pleased with the change in size and dress of the RURAL NEW-YORKER. I never did like the bed-blanket style of paper which some persons seem to think is a sign of great success. It is true that the RURAL has always been so modest in this direction that a copy could be opened and read in an ordinary room, or even in a railroad coach, which is more than can be said in favor of some more pretentious but far less valuable periodicals that might be named. But the RURAL has certainly progressed in this last change, for in its present form a bound volume will be of a convenient size, not only for reading, but preservation in one's library. I predict that there will be many thousands of volumes of the RURAL NEW-YORKER for this year preserved that would not have been if the size had remained unchanged. Every volume thus preserved, becomes a work of value to the possessor, and a perpetual advertisement for the publisher. Our daily and weekly papers, as a rule, are so large that a man cannot read them in any public conveyance without annoying his neighbor. When our publishers pay more attention to contents and less to display, the people will think more of their productions.

Sanchezia nobilis variegata.—*Jan.* 9.—The introduction of the many beautiful varieties of the *Coleus* has produced a wonderful change in the taste of our people in regard to the summer decoration of their gardens. Ornamental foliaged plants have been such a grand success there is little danger of a falling off in the demand. The *Sanchezia nobilis variegata* is a comparatively new plant, but it deserves to rank with the most beautiful of the Coleuses. Its leaves are ten to fifteen inches long, of a bright green color, with golden-yellow veins. It may be propagated with the same ease and rapidity as the Coleus, the leaves and stems being used for cuttings.

Storing Ice.—*Jan.* 10.—I have commenced to fill my ice-house to-day. The ice is about six inches thick, and clear as a crystal. I would prefer to have the ice about twelve inches thick, not only for convenient handling, but it will keep better than when of a less thickness. The main thing to be observed in storing ice in a small house, is to have it well packed. If there are large, open spaces among the cakes, it will soon melt away when warm weather comes. I have quite an expensive house, built of stone and lined inside with plank and sawdust. The building stands in the shade of several large trees, and all the circumstances are favorable for preservation of ice, and still some of my neighbors, with the cheapest kind of an ice-house, have better success, and have ice after mine has all melted away. A good, large heap of ice, carefully put together, and then covered with a foot in depth of sawdust, tan-bark or straw, will keep under almost any kind of a shed, provided the wind and sun do not have free access. Ice is a great luxury in summer, and I am surprised that so few people in the country ever think of laying in a supply at the proper time.

Plants Under the Drip of Trees.—*Jan.* 11.—A lady writes me to give in the RURAL NEW-YORKER a list of evergreen shrubs that will thrive under the drip of large trees. There is one precaution needed in attempting to plant shrubs under or near a large tree and that is arrange in some way to give them plenty of water the first season after planting. The roots of the large trees usually prevent a thorough preparation of the soil, beside taking up a large proportion of the moisture needed by the smaller plants. For evergreen shrubs that succeed well and require considerable shade in this climate I would select the following:—American Holly, (*Ilex opaca,*) Inkberry, (*Ilex glabra,*) *Mahonia Aquifolium, Mahonia Japonica, Buxus sempervirens* and its many varieties, *Ligustrum Japonicum, Taxus baccata, T. canadensis* and all the varieties of both species. *Kalmia latifolia* and *K. angustifolia* should also receive a high place in the list.

How to Send Insects by Mail.—*Jan.* 12.—E. F. of Kingston, Mass., writes to the Editor of the RURAL NEW-YORKER that he would collect a bottle of beetles for "Daily Rural Life," if he knew how to send them. Of course I should be pleased to receive all such contributions to my cabinet, and will therefore tell how they may be sent. First catch the beetles; next put them into alcohol kept in a bottle for the purpose. When enough have been collected to make a small package take them out of the alcohol and put into a small wooden or tin box, with sufficient fine sawdust to fill up all interstices between the beetles. It is very important that the beetles should be packed in some manner so as to prevent them from being shaken about in the box during transit, either by mail or express. I would be pleased to receive specimens of insects from all parts of the country, and acknowledge the receipt of the same in the columns of the RURAL NEW-YORKER.

Too warm for Ice.—*Jan.* 13.—The weather has become so warm that I have had to stop getting in ice. I think it is useless to store ice in thawing weather, for it is likely to be soft and spongy and soon melt. The colder the weather when the ice is put into the house the better, and then whenever the temperature outside goes below 29° above zero, open the house. Sometimes poor, soft ice can be greatly improved by watching our chances for giving it a severe freeze.

Industrial Topics.

GLEANINGS FROM LETTERS.

We have received many letters which contain suggestions of greater or less value and interest which we cannot print entire. From these we propose from time to time to segregate and comment upon them.

Fault is Found with Artists who attempt to draw or paint rural scenes, because they do not "stick to the original." "Woodman" complains of the falsity of these pictures. The artists' fences are too low; the gates too rickety; the bars torn down; stick fences around cosey dwellings; the well-house or curb in a state of dilapidation, &c., &c. He protests against this artist fancy and fiction, and asks, "Who will give us, through the RURAL NEW-YORKER a real live representation of a country landscape, with a good fence, neat surroundings, and just such scenes as would strike us as true to the original?" "Woodman's" "point" is well taken. And what he complains of is the result of an impression that most artists try to picture the world as they would have made it if their artistic taste and judgment had been consulted.

Treatment of Hired Men.—"An Every Day Laborer" in Livingston Co., N. Y., thinks something should be done for the "Hired men of Fulton Co., N. Y.," accepting "Reform's" statement of the state of things there as true. He knows of no instance where an industrious laborer has ever dreamed of lodging in a poor-house. "For the last two years farmers have paid $20 to $30 per month and board; in winter, day laborers have received $1.25 and $1.50 per day; in summer and fall, $2; in harvest, $2.50 to $3, with board. This is not regarded quite sufficient, considering the extreme price of grain and produce generally—wheat at $1.30 to $1.60; barley at 60 to 75c.; oats, 40c.; potatoes, 40c.; pork, $5 per cwt. Of course the farmer complains; but if he received specie instead of greenbacks, he certainly could not say but these would be round prices. The laborer gets greenbacks for his labor, not "truck." His manly spirits are not crushed out. If he misuse his stogies upon a horse and is remonstrated with, his reply is, "If you don't like my 'style,' fork over the 'stamps.' This is most likely to occur about the commencement of haying, with 'month' men." The tone of our correspondent's article indicates that he is not in sympathy with chronic grumblers.

Management of Hired Girls.—An Onondaga Co., N. Y., lady who is her only domestic, complains of the idea most prevalent among the upper classes that have the unpleasant necessity of employing domestics, is that they are merely fit for drudgery, are hardly human, and are treated accordingly; hence the necessity of employing Germans, Swedes and Chinese who can be induced to conform to such requirements when a proud-spirited American girl will not. She gives the following practical opinion:—"If those who endure hired help merely as a necessary evil, would bring the better part of their natures to bear upon the feelings of their domestics, would give them some stipulated time to devote to their own pleasure, and treat them as a class of humans, such employers would become their own 'MOSES' and would liberate themselves from bondage." Our correspondent takes care to concede that there are exceptions to all rules and in all classes, which it is always well to remember.

Entomological.

THE HORNED PASSALUS—(Passalus Cornutus, FABR.)

BY C. V. RILEY.

Two different correspondents have sent me this beetle, with the request to give some account of it in the RURAL NEW-YORKER, and tell them whether or not it is injurious. Many an one will doubtless recognize in the insect illustrated at *c*, the "bug" with which he, or she, as a child, was wont to play at "oxen"—the curved horn on the head forming such an inviting projection on which to hitch, by means of a thread, small chips and other diminutive objects, to be dragged by the rather awkward beast of burden. Every pioneer in the Western country, as he rolled over huge decayed logs, in the work of clearing his land to make it ready for the plow, must have become familiar with this highly polished, coal-black beetle. Every woodsman who has split or grubbed an old stump, will be likely to recognize in this horned "bug" an old acquaintance. Every entomologist who has dug into or pulled to pieces old rotting stumps, in search for other treasures, must, time and again, have seen this lazy, clumsy *Passalus* tumbling down with the loose and crumbling dust and excreta of its own making, and expressing its disproval of such summary disturbance in the plainest manner, by emitting a peculiar, half-hissing, half-creaking noise. And though met with at almost every step in his forest rambles,

"Where wild birds sing beneath the leafy bowers,"

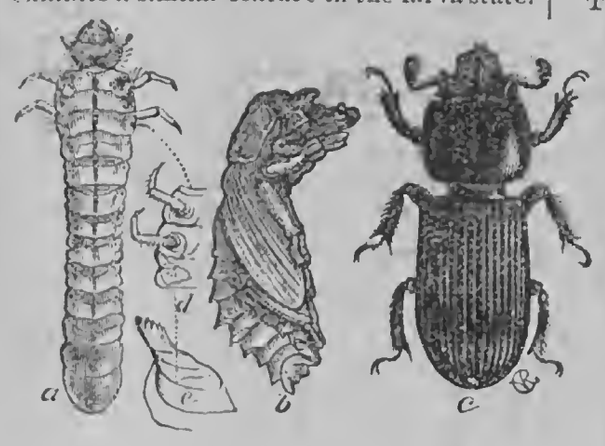
the inquisitive student has no doubt found himself repeatedly examining specimens not only to admire the elegance and beauty of form, but to ascertain the means by which the peculiar noise is produced. A sufficiently careful examination will end in the knowledge that it is caused by the rubbing of the rather horny terminal joints of the abdomen, known as the *pygidium*, against the inside of the hard wing-covers.

This insect cannot be considered anything else than beneficial. It is never found in sound or green wood, but invariably in that which is decaying, and it very materially assists and hastens the reduction of stumps which might otherwise remain treble the length of time to occupy valuable ground and serve as an eye-sore to the careful farmer in wooded countries.

Unseen and unheard, it carries on incessantly the good work of converting useless timber into mold which enriches the soil; and this has been its office in all the past ages of its existence. A decaying, moist condition of the wood is necessary to its development, and it will be found most common on low, moist ground, and in oak, hickory and sweet gum logs or stumps.

Common as is this beetle, its larva and pupa are rarely seen, and seem to be unknown even to most entomologists, while no good figures of them have been published.

The larva, Fig. *a*, is of a very exceptional character, being the only one in this country which possesses but four well developed legs; for though many butterflies in the imago state have the front pair functionally impotent, no other insect than our *Passalus* exhibits a similar feature in the larva state.



PASSALUS CORNUTUS.

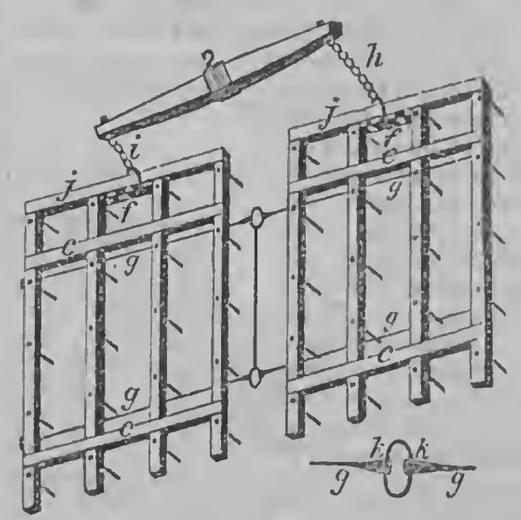
Indeed, the only other larvæ in the whole class of insects which are similarly characterized, are those belonging to the same genus in other parts of the world. The third pair of legs really exists, however, in a rudimentary state, as shown at *d*. This larva is of a bluish-white color, with the anterior joints broader and flatter than the rest. It transforms in the fall of the year, within the wood it inhabits, to a whitish pupa, *b*, in which the front pair of legs is thrown forward under the head, and the horns of the future beetle show plainly on its top. The pupa lasts but about a fortnight, when, throwing off its purple garb, it becomes a perfect beetle. At first the parts are all beautifully white and delicate; then the head, thorax, and limbs gradually become amber-brown, and lastly the wing-covers assume this color. The whole body then deepens very gradually, so that many days elapse before the coal-black color is acquired, and in the month of August the beetle is as often found brown or black. As larvæ only half grown are found in company with those that are full grown, they require at least two years to mature.

Texas Insects.—We have received from WM. H. WILLIAMS of Texas, a splendid collection of beetles, for which we return our thanks. It is seldom that we obtain such a choice lot from one locality and all in good order. We conclude that Mr. WILLIAMS is not a novice in such matters, for the collection sent shows that the minute species were not overlooked, as is usually the case with new and inexperienced collectors. We should be pleased to receive similar contributions from other localities.

Farm Implements.

A MONROE COUNTY HARROW.

During the past summer I have seen cuts of several different kinds of harrows in the RURAL NEW-YORKER, but among the number never saw the kind used to the greatest extent in this section—one with 40 teeth.



The accompanying drawing is a two-horse harrow; but for a large farmer, who has plenty of team and wishes to get over a great area of land in a day, 14 inches can be added to the length of each scantling; also, another tooth in each piece, making a harrow with 48 teeth in it, and to be drawn by three horses abreast. The dimensions for a two-horse harrow are as follows: Length of scantling 4 feet 7 inches; 3 by 3 inches; front end pieces, *f, f*, 3 feet 2 inches long; 2 by 3 inches; are morticed in the front piece of each part of the harrow. The cross pieces, *c, c*, 1 by 3 inches, pass through each scantling at an angle of about 10 degrees; the irons, *g, g*, at the point *k*, must be about 2 inches apart cross-wise, and 6 inches up and down; the irons, *f, f*, ¼ by 2 inches, with notches for a long link to slide back and forth, to regulate the running of the teeth, are bolted to the top of the center scantlings; the chain, *i*, must be 6 inches long, and *h*, one foot. Distance of teeth apart, 11 inches; made of ⅝ inch iron or steel. I prefer steel, as they are more durable, and the cost is but a trifle more.

The cost of such a harrow, well made and painted, in this section, is $22; but any farmer with a moderate amount of judgment, can get the scantling and make the wood-work himself during the winter. After it is ironed, be particular about painting it well, as an implement that is well painted will last almost, if not as long again as one that is not. I have seen and used several different kinds of harrows, but never saw one that would work on rough, uneven ground, and so thoroughly pulverize the soil for the amount of harrowing as this kind will. LEXINGTON.

Steam on Alabama Plantations.—I purchased a six-horse power engine from WOOD, TABER & MORSE, the past summer; have use it for crushing cane, ginning cotton, &c. It appears to be just the thing needed, leaving, the teams to plow instead of furnishing power to gin cotton.—JAS. M. MOSS, *Huntsville, Ala.*

To Fasten a Fanning Mill, to the barn floor, C. H. SWEET says, in the Country Gentleman:—"Take two pieces of steel one-eighth of an inch thick, three inches long and one inch wide—in one end file two notches, so as to leave three large saw teeth—bend the two outside teeth at right angles and the center one in the opposite direction; make a hole in the opposite end wherein to tie a cord for the purpose of hanging it to the side of the mill when not in use. Put one of these under each hind leg of the mill and turn away with the full hope that your mill will stay where you put it."

The Herdsman.

ABORTION AMONG COWS.

What is the Cause, and What is the Remedy?

I HAVE given this subject a great deal of earnest thought during the past few years, and my opinion differs from that of others who I have heard discuss this important subject. In driving our cows from the pasture, I have often seen some of them separate from the herd and start on the run to get to a quantity of bones that they knew of in the highway, in a fence corner. They would get one and chew it a long time. It caused me to think that there must be a deficiency of bone-making material in their pasture feed.

Now, I wish to digress indirectly from this subject, to quote from GEO. WARING'S "Elements of Agriculture." Speaking of phosphoric acid, under the head of manures, he says:—"One principal source from which this can be obtained is found in the bones of animals. These bones contain a large proportion of phosphate of lime. They are the receptacles which collect nearly all the phosphates in crops which are fed to animals, and are not returned in their excrements. For the grain, &c., sent out of the country, there is no way to be repaid, except by the importation of this material; but nearly all that is fed to animals may, if a proper use be made of their excrement and of their bones after death, be returned to the soil. Phosphoric acid forms about one-half the ashes of wheat, rye, corn, barley, peas, beans, buckwheat, oats and linseed; an important part of the ashes of potatoes and turnips, and one-quarter the ash of milk. The bones of animals often exist in the soil in the proportion of only one or two pounds in a thousand, and but a very small part, even of this amount, is in a condition to be taken up by roots. The cultivation of our whole country has been such as to take away the phosphoric acid from the soil, without returning it, except in very minute quantities. Every one hundred bushels of wheat sold contains (and removes permanently from the soil) about sixty pounds of phosphoric acid. Other grains, as well as root crops and grasses, remove likewise a large quantity of it.

"It has been said by a certain writer that for each cow kept on a pasture during the summer there is taken off in veal, butter and cheese not less than 50 lbs. of phosphate of lime (bone earth) on an average. This would be one thousand pounds for twenty cows. That this removal of one of the most valuable constituents of the soil has been the cause of more exhaustion of farms and more emigration in search of fertile districts, than any other single effect of injudicious farming is a fact which multiplied instances most clearly prove.

"It is stated that the Genesee and Mohawk Valleys, which once produced an average of thirty-five or forty bushels of wheat per acre, have since been reduced in their average production, to less than twenty bushels. Hundreds of similar cases might be stated; and in a large majority of these, could the cause of the impovishment be ascertained, it would be found to be the removal of the phosphoric acid from the soil. Many suppose that soils which produce good crops, year after year, are inexhaustable; but time invariably proves the contrary. They may possess a sufficiently large stock of phosphoric acid and other plant constituents to last a long time, but when that stock becomes so reduced that there is not enough left for the use of full crops, the productive power of the soil will yearly decrease, until it becomes worthless. It may last a long time—a century, or even more—but as long as the system is to *remove everything and return nothing* the fate of the most fertile soil is certain."

From the statements of Mr. WARING may we not accept as an established fact that our old dairy farms are becoming exhausted of this bone making substance in their grasses. We hear complaints from Herkimer county that their dairy product is gradually decreasing, when we know the reverse should be their record. Why is it? Widespread abortion among their cows is the principal cause, and as yet they have no remedy. Herkimer county is one of the oldest dairy districts in this country, and is not a lack of bone making material in their soil and grasses the *principal cause* of abortion among their cows? In localities where cows graze on land recently deprived of the forest, and are supplied with grass and hay that grows on a soil rich in phosphates, I never heard that abortion prevails.

The authorities of the New York State Agricultural Society have expended thousands of dollars during the past few years in investigating the cause of the extensive abortion of cows in many of the dairy districts of the State, and as yet it has not come to my knowledge that the Commissioners of Investigation have ever been able to render a satisfactory report of the true cause of this prevailing scourge. Did they not overlook entirely the important fact that cows during pregnancy require a great quantity of bone making material in their food? Consider for a moment what a large quantity of bone material a cow must collect from her food to develop such a frame as a perfect calf possesses at its birth. When every part of bone material in a cow's feed is appropriated to the development of the bones of the calf (and a large portion is removed in milk) and the supply fails to be equal to the requirement, the growth of the calf will be arrested, the development is incomplete and abortion is the result.

It appears from WARING, and other authorities, that grain growing and dairying are about the same in their results in exhausting the soil of phosphoric acid. Allowing their calculations to be correct, and one cow kept annually on five acres of cultivated land, which is a fair average in this locality, ten pounds of phosphoric acid per acre, is every year taken from our dairy lands. In the dairy sections of our country, could the great quantity of bones from the calves and other animals that are killed each year, be ground, or otherwise rendered available as food for plants, this evil of exhaustion of our soil and abortion of our cows could in a great measure (in my opinion) be remedied.

In the absence of any machinery adapted to a farmer's use for putting the bones lying around the premises of every dairy farm in an available condition, should we not purchase bone meal, bone flour or bone filings to apply to our dairy lands and feed to our dairy stock?

I hope to hear from others who have had the advantages of a greater field of observation and more practical experience on this most important subject.

S. S. GARDNER.

Watertown, N. Y., Jan., 1872.

NOTES FOR HERDSMEN.

A Preventive for Lice on Cattle.—If the readers of the RURAL NEW-YORKER will sow their stables and cattle with wood ashes every Ash Wednesday, (which occurs in February of each year,) they will not be troubled with lice on cattle. This I have practiced for twenty years with success.—H. S. B., *Catskill, N. Y.*

Cows Eating Wood.—I would like to ask, through the columns of your paper, if any one can tell me what is the matter with my cows? Mine, and also my neighbors' cows are constantly eating wood, sticks, boards, and everything of the kind they can get to. What is the cause and what is the remedy?—H. T. WESSELLS, *Denton, Md.*

Pumpkin Seeds and Milch Cows.—Tell your correspondent, WASHINGTON HILLS, Jr., of Long Island, (see RURAL NEW-YORKER, Nov. 25, page 330) to remove the seeds from his pumpkins before feeding the pumpkins to milch cows, and there will be no decrease in the flow of milk. The action of the seeds on the kidneys causes the disease.—G. W. C., *Parksville, Tenn.*

Cooking Food for Stock.—Your correspondent, W. H. WILCOX, makes inquiries in regard to the use of a steam engine for cooking feed, &c. Allow me to answer him, based upon my own experience:

1. A steam engine is too expensive in cost of purchase and the use of an engineer, except where there is other work to do than to cook feed. An ordinary farm hand cannot run it.

2. By the use of a Prindle Agricultural Boiler, I have cooked all kinds of food, including refuse hay, straw, salt hay and even to hard, crook necked squashes, corn stalks, butts and all, and everything has been eaten clean, and not a pound of waste in all winter.

3. All the stock on Beacon Farm has been fed with cooked feed by Mr. WM. CROZIER, amounting, in all, to over 300 head of cattle, horses and hogs, exclusive of the fowl creation there, with one Prindle Agricultural Boiler, and it was run by my ordinary farm hand. This shows the capacity of work that can be done; and added to the cooking of feed, there are many other useful things about the farm or factory that can be done with it. It will pay to use them, even with a small amount of stock, when hay is worth over eighty cents per 100 pounds. Try it. I think the economy in cooking feed is fully forty per cent., and stock in better condition at that.—J. C. BROWN.

Farm Economy.

TO EXTERMINATE WILD ONIONS.

WHAT method of cultivation will extirpate this pest and nuisance? The question is frequently asked, but I have never seen a satisfactory response. Nor do I believe it is within the range of human power to solve the problem by manual labor. Strip the sod completely from a lawn in which the "garlic" has once gained a footing, and despite your utmost care, a sufficient supply of almost infinitesimal "sets" to recrop the whole at an early day will sift their way into the remaining soil.

Having tried the experiment, I speak from sad experience. But, when all else had failed I inclosed a piece of lawn and turned a hungry litter of pigs in upon it and left there several days to root for a living. They made clean work of the garlic, in short order. Not a vestige of the highly flavored esculent escaped their detective and insinuating proboscis. True, they tear up the sod badly in their hunt, but a good subsequent harrowing, succeeded by a hand-raking, and a week or two of growing spring weather, restored the lawn to more than its original condition of thrift.

Why should not the remedy work as well on a large scale? Given a sufficient number of porcine laborers, confined within a certain limit until its onions are all rooted out and then transferred to a new field, is it not clear that the work of extirpation can be effected at slight cost. J. W. S.

ECONOMICAL NOTES.

Making a Manure Yard.—P. F. RICHTER writes the RURAL NEW-YORKER that he is about building a barn and asks if we would advise him to have the yard where the stock is to run dishing towards the center, so as to retain the soakings, or so locate it that these soakings may run off into a meadow? In reply, we would have as few "soakings" as possible. We would not allow the water from the eaves of the barn to flow into the yard. We would not have it so dishing it should not be dry; if it is dishing we would fill the dish with absorbents; muck, loam, straw, &c. There are great objections to a muddle in the center of the yard. There are no objections to a hollow provided it is filled up as we have suggested. And such a dish so filled is far preferable to allowing the yard to drain into a meadow or pasture.

To Deodorize Sinks and Out-House.—ALMUS BUTTERFIELD says use copperas. He does not say how. He should have been specific in the detail of the mode of using it.

Hygienic Information.

DYSPEPTIC WOMEN.

A ROUSED WOMAN'S REPLY TO I. V. W.

I HAPPENED to pick up the RURAL NEW-YORKER of July 22, and again reading the replies to the dyspeptic's inquiry, would like to say that I do not exactly coincide with the theory that dyspepsia comes only by over-eating. The article by I. V. W., notwithstanding his professed *gallantry*, has a vein of ill humor running through it. One would take him for a dyspeptic bachelor, or a man who had just quarreled with his wife. He says, "few people are inclined to overwork." Many people are so situated that it is not a question of inclination, but of necessity. How many farmer's wives, with families of children to care for, often do the work alone, or with such help as they can get? And just think of the amount of work such women perform before breakfast, then sit down to the table, and instead of resting a few moments and then eating a good meal, as they should do, pour tea or coffee for the rest, assist in waiting on table, prepare food on the children's plates, and swallow a few mouthfuls at intervals; they are not very apt to over-eat in this way. Many laboring women do not eat in all day as much food as the system would require at one meal, and when this is eaten the stomach is in a weak, tired state from overwork. This is the great cause of dyspepsia, as I look at it, from years of observation and experience, although most people declare it all comes from eating too much, and too fast. This talk always puts me in mind of the Irishman's horse; "just as he got him learnt to live without eating he up and died." A sensible man will feed a horse higher when hard at work. Why not keep him on straw?

Graham or bran bread may be good enough for an idle man if he likes it; but my advice to a laboring woman is—eat good, nourishing food, and plenty of it, before the stomach feels weak and tired. If the stomach will not bear a full meal, eat oftener,—beef and mutton, with potatoes and good bread, are none too hearty for a laborer; and rest while eating, or before, if possible. If the bowels are constipated, be very regular in your habits, and never slight the demands of nature. Ripe fruit, eaten after meals, is a good preventive, and I have known severe cases of this disease to be cured by the practice of eating apples after meals.

An old English lady of my acquaintance, takes one teaspoon of sugar, half a cup of hot water, fills the cup with milk, and drinks this soon after rising, that the stomach may be in a good state for breakfast. She says the women in England eat hearty food like the men, and that is why they are strong, and have such red cheeks, which Americans so much envy.

How many men will say, "Hmmph! what is a woman's work? It is very light compared with ours." I don't believe there is one man in ten who could endure what many women do, if they had to do the work in close rooms and on the food that a man thinks is hearty enough for a woman.

A. R. R.

A. R. R. is no doubt quite right about generous and abundant food, but labors under a mistake in regard to Graham bread, which is *preferred* by most people, especially in cities, on account of its being more wholesome and nutritious than bread made from bolted wheat. To eat when very tired is not only exceedingly unwholesome, but dangerous.

Field Crops.

FIELD NOTES AND QUERIES.

Preparing Seed Wheat.—ALMUS BUTTERFIELD writes the RURAL NEW-YORKER that washing seed wheat in a solution of blue vitriol will prevent smut; and washing it in lime water will destroy the eggs of parasites that prey on young plants.

Preparing Corn for Seed.—An Illinois correspondent of the RURAL NEW-YORKER says:—"Soak doubtful seed corn in chloride of lime and it will come. If you soak seed corn in tar water in which a little copperas has been dissolved, the gophers and crows will give it a wide berth."

Nitrogenous Substances and Salt for Wheat.—J. J. MECHI of Tiptree Farm, in England, supplements the manuring of his wheat field by sowing nitrogenous substances and salt between the rows of the growing wheat in the spring and hoeing it into the soil; thus he obtains thirty-five to sixty bushels of wheat to the acre.—S. W.

Rye for Summer Pasture.—I desire to know if any of your RURAL NEW-YORKER friends have ever tried rye sowed in the spring with timothy and clover for summer pasture. If so, what time should it be sowed, and in what proportions per acre? I am a dairyman, and I would like to prepare some pasture for the coming spring and summer on a place I have just come in possession of, and any information in regard to such pasture will be thankfully received by—T. P. L., *Sedalia, Mo.*

Peerless vs. Prolific Potatoes.—With us, Bresee's Prolific, like the Harison, sets too many tubers in the hill. With a rich soil and good cultivation we can get a prodigious yield; but, as in the majority of cases, when the season, soil and culture are not all favorable, the result is a large number of small potatoes. The Peerless, like the Garnet Chili, sets but few tubers in a hill, which attain to a good marketable size, even under unfavorable circumstances. The difference in labor in digging is great, also; for while the Prolific grows so scattered that we have to dig to find them, the Peerless lie so snug and close together that it is easy to find and fun to roll them out.—A. G. TILLINGHAST, *Wyoming Co., Pa.*

English Seed in France.—A British committee having in charge the French Peasant Farmers' Seed Fund, sent an agent to France this last fall to distribute the balance of it, and report upon the agricultural and economic effects of the spring distribution. He found that the English barley, oats, potatoes, vetches and garden seeds had generally produced more abundant crops than the native kinds, but that the English wheat had failed in most cases. This was partly due to the want of proper preparation of the land, to an unfavorable season and to the variety. The English seed that seemed most like the French variety, known as "Ble de Mars," succeeded best. What the name of that (English) variety is, we are not informed.

The Vineyard.

GRAPE GROWING

On the Borders of the Keuka, Seneca and Canandaigua Lakes.

THIS business, like the magicians bean, has sprung into existence and grown to vast proportions within a comparatively brief period, bounded since its first incipency, by the recollection of living witnesses, *then* of man's estate. Indeed, twenty years covers about the full period of efforts in vineyard culture.

In 1864 it was estimated that within the vicinity, and on the borders of the Keuka or "Crooked Lake," there would be near four hundred acres of vineyard in bearing, and producing a crop of six hundred tons of grapes; sufficient, as it was thought, to overwhelm all of the available resources for consumption of both city markets and the wine cellars; and, indeed, it did fairly overstock and glut them.

The year 1870 will long be noted for both the extent to which the production had grown in a period of six years and also for the perfection of the crops. Wines of that vintage doubtless will rarely be excelled from the same varieties of fruit.

The year 1871, however, has excelled any and all others in the vastness of the crop, though in quality considerably short of that of 1870, yet a great crop, and in quality a fair average.

The rapid increase of the production, and also of the sources of consumption, will be shown by the following estimates based upon good authority, and proving that the cultivation of the grape in this l ke region already is, and *is to be*, a very important interest.

The crop of 1871 may be set down as not varying much from--Keuka Lake and vicinity, 7,500 tons; Canandaigua Lake and vicinity, 2,000 tons; Seneca Lake (west side), 1,000 tons—total, 10,500 tons.

Of this, about one-third has been made into wine (the full capacity of our cellars), or will be distilled; and the balance, some seven thousand tons, has and must find consumption elsewhere, and mostly through the city fruit markets.

From the abundance of the crop, and also of most other fruits, the prices have netted low. Yet it is quite safe to say that the crop is worth to the producers one million of dollars, as the product of from seven to eight thousand acres of land, and much of it of a character forbidding the ordinary pursuits of agriculture.

There are two marked defects in the management and character of the vineyards of this locality.

1. That in management consists, as I think, in allowing an over-crop of fruit to remain on the vines for want of will and courage to thin down to a condition that it may perfect and ripen early in its season, instead of lingering into frosty nights and ungenial weather.

2. The character or condition of a large majority of the early vineyards, consists in their having been set almost entirely with the Catawba and Isabella, both late varieties, and now being superseded by more desirable and profitable kinds.

Now, as a large area of the land occupied as vineyard is stocked with roots, well established, of these varieties, there seems a block to progress, unless some system of engrafting can be found by which the fruit may be changed to better-paying varieties without waiting for the tardy and undesirable process of uprooting and re-setting. Therefore, "Is grape grafting a practical and reliable process?" has become an inquiry of interest.

D. S. WAGENER of Pultney, Steuben Co., N. Y., has invented instruments which he uses in grafting the vine (and all other fruits) with perfect success, as it is said; the principle being in fitting the cion perfectly to the cleft in the stock, which his instruments accomplish to a certainty, in the hands of any person of ordinary skill and judgment. His system seems very fully indorsed by the best vineyardists of Hammondsport, Seneca Lake, and other localities where it has been tried, and he invites the inspection of his own vineyard, where he has illustrations of his success for some years, and fruiting vines of the setting of 1870, showing, by careful test, an improvement instead of deterioration of the quality of the fruit.

With such ready means of changing the varieties of vineyards already grown, the promise to those in the grape growing interest is greatly enhanced, as it opens a new resort to such as have or may make mistakes, or who, for other cause, may desire to change the character of their production.

Can the RURAL NEW-YORKER, or any of its hundred thousand readers, cast any additional light upon this question of grafting the vine which has been so long a subject of experiment and desire, but without success at all satisfactory, by any of the old methods?

R. H. W.

Penn Yan, N. Y.

WE know that Mr. WAGENER'S instruments are useful, especially to a novice in grafting. But it is not true that no practical and successful system had been discovered previously. As long ago as 1858 or 1859, MOTTIER of Cincinnati exhibited at the Western Fairs splendid specimens of Delaware grapes, and wine made therefrom, that had been produced by grafting the Delaware on the Catawba; and FULLER (of the RURAL NEW-YORKER now) in his Grape Culturist, gave his method, many years ago, which has proved entirely successful by those who have faithfully followed his directions. We have seen indorsements of his method from CHARLES DOWNING and other culturists of equal eminence, who had not succeeded invariably, until they adopted it. We write this without Mr. FULLER'S knowledge, nor with any design to disparage Mr. WAGENER'S method, but simply to show that any one who can use a grafting knife, and will observe the conditions laid down in pages 66-68 of the Grape Culturist, may succeed without finding it necessary to buy the right to use a patent.

INTERIOR OF A FERN-HOUSE.

Floricultural.

FLORICULTURAL NOTES.

Interior of a Fern-House.—We give herewith a view of an interior of a fern-house, to illustrate the beautiful effect that may be produced with this class of plants when disposed of in a large Wardian Case

A BEAUTIFUL VASE.

(for the structure is nothing less) in a semi-natural way. In this instance other plants accompany the ferns. We do this because we believe it as important to educate the eye and the taste of people as to educate the hands and the understanding. As an illustration of what a realm of beauty may be created in a small space, and with a single class of plants, almost, our engraving is effective; and such is its mission in our columns—a suggestion to all Lovers of the Beautiful.

A Beautiful Vase.—We give an engraving of a beautiful vase which the Editor of The Garden, who saw it as shown, says contained in the center a good plant of *Epiphyllum truncatum* surrounded by a ring of large Houseleek (*Sempervivum tabulæforme*) alternated with common *Pteris serrulata*. Plants of the *Epiphyllum* trained as low pyramids are peculiarly suitable for vase decoration—indeed, it is doubtful if anything that blooms in summer would form so lovely a subject for a sitting-room or conservatory vase as, this, which blooms so freely in mid-winter.

Self-Acting Portable and Floral Fountain.—On the next page we give a very neat device we find in the English Mechanic. It will be a suggestion for Yankee ingenuity to act upon. It is a table and floral fountain. Self-acting, and calculated to play from one to four hours. It can be used wherever flowers and running water are desirable. The top part acts as a cistern and when the water has run out the jet is unscrewed and screwed into the cistern; then it is reversed, both top and bottom being alike. The whole operation can be performed in half a minute without spilling a drop of water. The flower vases are movable for reversing. It may be made a beautiful table or sitting-room ornament.

Separating Flower Seed.—Having raised some flower seeds during the past season, which I find it difficult to clean from the chaff, I would like to inquire how such seeds are cleaned. I have found Drummond's Phlox worse than anything else to clean, the chaff being so near the same size and weight as the seeds, that no sieve will separate them perfectly, nor will fanning blow out the chaff. I have tried every method that suggested itself, but have been unsuccessful. Any information in regard to the cleaning of these or any kind of garden seeds, will be very acceptable to one who is willing to impart any new facts he may learn, for the benefit of the readers of the RURAL NEW-YORKER.—INQUIRER, *Roanoke, L. I.*

WE cannot understand why you should have so much trouble with your Drummond's Phlox seed, as we consider it one of the very easiest to separate from the chaff. You must have waited until the seed had mostly dropped out before gathering, or cut it too early, and it has now shrunken in the pods; for the seed will naturally drop as soon as ripe, and separate itself from the chaff. The seed pods should be cut when fully grown, and just as they begin to turn yellow. Put into loose bags or boxes, and when dry the seeds will readily separate from the chaff.

The Marechal Neil Rose is highly commended as a green-house climber, worked on brier instead of Manetti stock.

Pomological.

FRUIT FOR EASTERN IOWA.

THE Eastern Iowa Horticultural Society at its Annual Meeting at Cedar Rapids Dec. 21, voted for and agreed upon the following fruit list:

Apples—For General Cultivation.—Tetofsky, Red Astrachan, Red June, Sweet June, Oldenburg, Benoni, Maiden Blush, Cole's Quince, Snow Lowell, Bailey Sweet, Striped Pippin, Porter, Jonathan, Dominie, Tallman, Winesap, Rawles' Janet, Ben Davis, Perry Russet, and Willow. For trial—Peach Pound Sweet, Clyde Beauty, Kentucky and Grimes' Golden.

Pears.—Bartlett, Seckel, Flemish Beauty, White Doyenne, Beurre de Dijon and Duchesse de Angouleme.

Strawberries.—For general cultivation, Metcalf's Early, Green Prolific, Wilson's Albany. For trial, Charles Downing and Colfax.

Raspberries.—Philadelphia, Purple Caul, Miami for general cultivation, and Lewis' Everbearing and Davidson's Thornless for further trial.

Grapes.—Concord, Clinton, Hartford Prolific, and Delaware for general cultivation. Ives' Seedling, Agawam, Martha and Salem for trial.

Blackberries.—The Kittatinny was the only one recommended.

POMOLOGICAL GOSSIP.

Naragansett Raspberry.—The New England Homestead says this "is a seedling from the Brinckle's Orange, is six years old from the seed, having been in bearing four years. It bears luxuriantly, the berries averaging much larger than any other variety. The fruit is cone-shaped, of an excellent flavor, the color bright crimson, bearing carriage better than any of the favorite market sorts. It belongs to the everbearing family, producing fruit on the new canes which come up in the spring, thus carrying the crop along until the last of October, or until the frost kills the foliage and green fruit. The canes are large, growing on good, rich ground, which they require, six or eight feet high. They are perfectly hardy, but it is better to mulch them in the fall with long stable manure, and lay them down, giving them some protection, such as will save them from the cutting winds, and yet not exclude the air. In the spring, after being taken up and tied to stakes, the ground should be thoroughly forked over, cleaned out, and kept clean throughout the season. This treatment is equally essential in the cultivation of any raspberry if an abundant crop and rich flavor are desired. This variety first appeared in the garden of Mr. JOHN F. JOLLS, of Providence, who is well known as one of our most constant and successful exhibitors at the horticultural exhibitions, and as a keen and active amateur gardener."

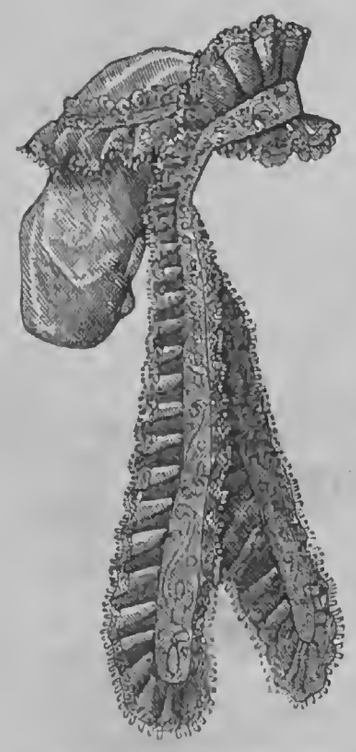
Lanier Apple.—This new seedling apple was exhibited at the Cotton States Fair in 1870, and again in 1871, and attracted much attention. Its principal merits are large size, fine appearance and good bearing qualities, as we were assured by the originator, Mr. THOMAS P. SHAW, of Edgefield, S. C. The tree is some fifteen years old, a very vigorous grower and of good habit. Fruit large to very large, oblate and always regular. Skin yellow, thickly streaked with carmine and with a purplish carmine cheek, a few green blotches near the base. Calyx small, open, in a shallow and regular basin. Stalk short, slender, set in a deep cavity. Flesh crisp, brittle, sugary, rather coarse grained. Quality good. Maturity end of October to end of November.

Florida Oranges, according to the Rural Carolinian, have lost the high character they held a few years ago in the Charleston market. The complaint is, they smell rusty and are liable to rapid decay; and while some good oranges are produced in Florida so many bad ones are received that the credit of the fruit is destroyed. This deterioration in the orange produce of Florida, the editor thinks, is due to the unsuitable soil on which many groves are planted and to neglect in properly cultivating and manuring the groves.

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

English Bombazine (to "Mourner") is softer than the French, but hardly so good in color. The latter may be had for $1.75 per yard. Yard wide English crape (the Courtland is the best) costs, in good quality, $3 per yard. It is rolled with the right side out, and should be made up with that side out. When a length of crape is before you, with the selvedge across you, if the right side is uppermost, the figure will run from left to right, upwards.



Cap for Elderly Woman.—Materials: White organdy or net inserting, lace and ribbon. The ribbon is placed beneath the inserting.

Shawls, Gloves and Hair.—FANNY: Shawls do not become broad-shouldered women. The cheap "kid" gloves are usually sheep skin. Light kid gloves stretch lighter, so that if an exact match is desired, select a shade darker. Two long plaits of hair down the back remain fashionable, and is exceedingly becoming to some styles; a bunch of curls usually depends at the back of the head, between the braids.

Pearl Rings (to JUNIUS) are said to be somewhat frail, but are generally chosen for engagement rings. A very handsome one may be purchased for $25. The most beautiful inscription I can suggest is one which has already been used:—"Each for the other and both for GOD."

Wedding Costumes.—GENEVINE is to be married the last of March; has $50 to spend on an outfit, is nineteen years old and asks for advice in regard to her dresses. (Nineteen is just six years too young for any girl to marry.) For the wedding dress, Japanese or French silk of neutral shades, gray and black for instance. The polonaise will probably be worn quite as much in the spring as now. Trim the dress with the same and fringe. For another dress get black merino or cashmere, including a round cape or talma of the same. This will do to wear all the spring for church and visiting. Trim this with fringe and jet passementerie or folds of black velours. Hat of black and gray kid gloves. Two new dresses of good material and well made are better than three of less excellence. You will need a set of Valenciennes laces for your wedding dress, and with gloves, ribbons, etc., you will find the purchase of one less dress very convenient. Trains are only for the house. Walking skirts just clear the ground. Instead of trimming your black dress with velveteen, make a velveteen jacket to wear with it. Choose no dress of a decided color, as blue or green. If your hair is thin and curls naturally, why not cut it somewhat short, and wear it frizzed or in its natural waves, but loosely, so as to make the most of it?

Fancy Work.—I have just seen a very simple and pretty design for trimming underclothing, or childrens' white dresses. White, warb net forms the basis; this is crossed with linen floss run in it, forming diamond squares, leaving four meshes in each square. A strip an inch wide serves as trimming for chemises. It is used as insertion. An edge of tatting matches well for an edge trimming. Why not make this department a bazar for pretty work, by readers sending us descriptions of the new and practical styles that come under their notice?

Dentifrice.—JULIA M. N.—Pumice stone and bath brick are too gritty substances for frequent use. Cuttle fish bone, burnt hartshorn, burnt bone, and shell-lac, are considered harmless if pulverized very finely. Charcoal, when recently burnt, acts both mechanically and chemically in cleansing, whitening, and deodorizing the teeth, and is probably superior to all other substances as a dentifrice. Powdered botany root, cinchona bark, quinine, catechu, alum, and some other astringents are added to dentifrices on account of their efficacy in foulness, tenderness, bleeding and sponginess of the gums. Myrrh and mastic are also employed on account of their presumed tonic, and power of fixing loose teeth. Borax is also good for tender or bleeding gums. A wide-mouthed, "dumpy" bottle is best to keep tooth cosmetics in. For a formula take this: Burnt hartshorn (or prepared chalk) three ounces; cuttle fish bone, two ounces; orris root, two ounces; oil of cloves, or essence of ambergris, or musk, fifteen to twenty drops. If tartar gathers on your teeth, use Castile soap occasionally. Brush your teeth after every meal and before retiring, slipping a thread between each one to remove what a brush cannot reach.

The Gardener.

GARDEN NOTES.

Sage, Savory and Ginseng.—Owning a few acres of land I thought I would commence growing sage, savory and ginseng, in a small way at first, and if it paid increase the business. I want to dry the sage and savory for winter use. How much ginseng can be grown on an acre that will produce forty bushels shelled corn? Will you be so good as to tell me how to start growing these plants and the modes of cultivating and curing for market.—J. VAN AUKEN, *Schenectady, N. Y.*

ALMOST any of the books on vegetable gardening will give you the requisite information in regard to cultivating sage and summer savory. But for cultivating ginseng you will find very little information in any of the modern or ancient works. We hope you will give this root a fair trial under cultivation and report the result. Begin by obtaining seed or fresh roots and plant in a loomy or moderately light soil. We certainly do not know as this plant will pay for cultivating, but would like to have the question settled by carefully conducted experiments, as it has often been talked of in our horticultural journals.

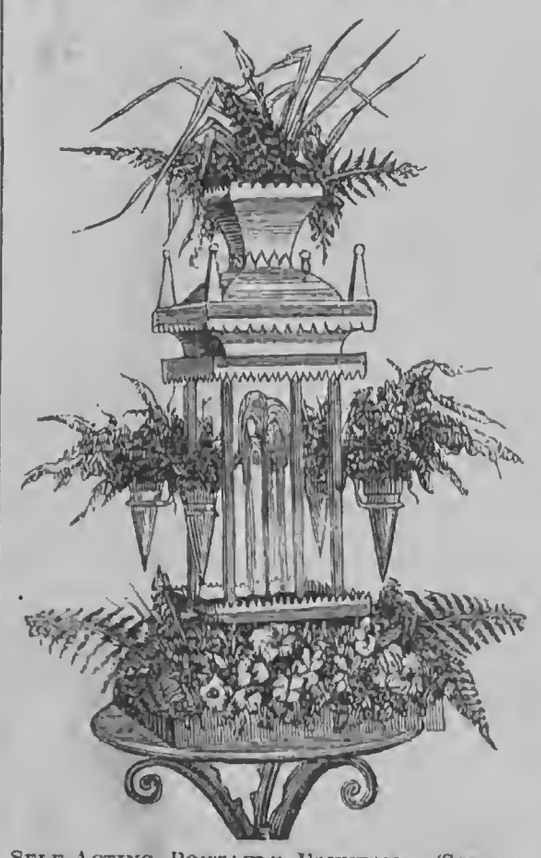
Carter's White Gem Pea is the name of a new English pea, which a Hamilton, Ont., gentleman describes as grown there, to be "a very early variety—not more than

four days later than CARTER'S First Crop; pods large and well filled, excellent flavor and very prolific. Hight fifteen to eighteen inches." It is an extra early wrinkled pea. We give, herewith, an illustration of it.

The Apiarian.

"WHAT DRONES DO."

IN the RURAL NEW-YORKER of Dec. 23d, I noticed an article on drones, in which the writer says, that in the absence of drones a "good solid article of honey cannot be made." Now lest this should induce some to increase, instead of diminishing the amount of drone comb, in hives from which they expect surplus honey, I will give my opinion. Drones are needed



SELF-ACTING PORTABLE FOUNTAIN.—(See preceding page.)

during the swarming season for fertilizing the young queens, and have about as much to do with making a "good solid article of honey," (as he calls it) with building comb, or gathering honey and pollen.

But to his proof. 1st. That when bees begin to gather more honey than they need for immediate use, drones are bred; but should the supply of honey be cut off, the drones are killed; and why? he says because there is no more honey to "rectify and refine." If the writer will examine the combs in a hive that has killed its drones under such circumstances, he will find all the queen cells torn open, and their contents destroyed; consequently there will be no queens to fertilize. This is the reason why they are destroyed, as they are not needed to eat up the honey stored. This can be proved in the following manner. As soon as natural supplies begin to fail, feed honey in quantity equal to what the natural supply has been, and swarming will not be abandoned, the drones will live and flourish even on the *best finished article of honey* "H. H." can furnish.

2nd. The stay-at-home drone, as a "refiner and purifier of honey for the use of man." I will go with you to the hive—say in July—that has swarmed, but is full of honey, and the bees filling glass boxes; lift off the cover—there, what a commotion there is in the boxes; bees running in all directions over the combs. Well, wait until the disturbance is over. Sure enough, the drones are filling themselves with honey; but look again, "friend HEAD," the workers seem determined to "rectify and refine" as they are filling with honey as fast as possible. Now put on the cover, go to the entrance of the hive, and wait until the drones you *saw in the boxes come out*, say in five or ten minutes. Catch one and you will find it filled with honey; catch one returning and you will find no honey. Now go back and raise one side of the cover gently, so as not to disturb the bees, and you will find the workers emptying the contents of the honey sac back into the cells.

What does all this amount to? Simply this: That when bees are alarmed, either by the sudden admission of light, smoke, or rapping on the hive, they fill themselves with honey. Instinct seems to prompt them to take or save all they can. This applies to the queen and drones as well as the workers.

3d. Take a small second swarm that will make only twelve or fourteen pounds of honey, but instead of taking it up, place the hive in a dry, warm cellar to winter. Examine the combs any time as long as the honey lasts, and see how much *sour* honey you can find.

From what has been written I do not wish to convey the idea that drones are to be banished from the hive altogether; but I do think a piece of drone comb three or four inches square, sufficient to rear all the drones needed. In the summer of 1870 I removed all the drone comb from a hive; the result was, the bees lengthened out cells on worker comb about three-sixteenths of an inch, and reared a few drones in spite of all efforts to the contrary. J. E. MOORE.

Rochester, Pa., 1872.

Arboricultural.

PYRAMIDAL TREES.

CAN you answer a few questions about *pruning*, or refer me to a good book or article on the subject? I want to train pear trees into the best low pyramidal form. I have both standard and dwarf. How near the ground should the main branches start? How many should there be, and how near together? Will the same directions apply to pear and cherry? Is January a good time to prune?—A SUBSCRIBER, *New York.*

THOMAS' Fruit Culturist is the book that you should consult for information in relation to training trees. We have it for sale at this office; see our Book List. We think that the lower branches should not be nearer than two feet from the ground; some prefer to have them lower; others higher. Peach and cherry trees may be trained in the same general form as pear trees, but the manner in which they produce fruit is somewhat different, and pruning should be varied accordingly. All these points are fully explained in the work named. January and February are good months in which to prune, but perhaps no better than some others.

Tobacco Stalks as a Mulch.—Please inform me whether tobacco stalks placed around young apple trees will be of advantage to the trees. I have a neighbor who believes the stalks will kill the trees.—W. B., *Mayville, Ky.*

THE tobacco stalks would certainly do no harm, but make an excellent mulch, and when decayed become a valuable fertilizer. They contain properties that no one who owns land can afford to waste, especially if he intends to cultivate this plant upon his ground for many years in succession. Instead of using tobacco stalks for a mulch we should endeavor to decompose and return them to the same field upon which they grew.

The Sportsman.

NOTES FOR SPORTSMEN.

Trapping Foxes.—H. H. SMITH is anxious that some sportsman should tell him a genuine way of trapping foxes.

Wants a Fox Hound.—H. G. W. W., Scott, N. Y., asks where he can get a fox hound pup. Let those who have them advertise.

To Clean Foul Guns.—A correspondent of the RURAL NEW-YORKER says:—"Pour a little vinegar into the barrel and wash with hot water."

How to Tan Deer Skins, with the hair on or off, is what a Wisconsin boy who is about "to try his hand at pioneer life" asks some experienced hunter to tell him through the RURAL NEW-YORKER.

Utilizing Rabbit Skins.—From a remark in the RURAL NEW-YORKER, I infer that rabbit skins may be utilized. We get great numbers of them, but have either thrown them away or plucked the hair off. Can the person who raises so many rabbits tell me how I can turn the skins to some useful purpose?—P. H. S., *Macon City, Mo.*

To Trap Mink and Wolves.—C. V. S., Leavenworth, Kan., asks some one to tell him how to trap mink and wolves, and how to tan skins and leave the fur on. If he will look on page 221, RURAL NEW-YORKER, Oct. 7, 1871, he will find in detail the way an old hunter traps wolves. On page 349 of RURAL of June 3, 1871, he may learn how to trap mink.

Dog for Rabbits and Birds.—I never knew any *one* dog to be good for birds and rabbits, "much less a breed." It spoils a good bird dog to hunt rabbits, and any amount of hunting will not make him hunt like a hound. I never knew a hound to care about birds. He is a dog of sight or scent, and the most intractable of all dogs. A bird dog is good in proportion to his tractability. I deem a cross of them worthless.—HUNTER, *Batavia, Ill.*

Dairy Husbandry.

NEW YORK DAIRYMEN.

First Annual Convention of the New York State Dairymen's Association and Board of Trade.

THE Convention of the New York State Dairymen's Association at Little Falls, Jan. 2d and 3d, was well attended, delegates being present from other States and from Canada. The Convention assembled in the morning of the first day for preliminary business, and at half-past two o'clock P. M. the President, Mr. X. A. WILLARD, gave the opening Address. After referring to the objects sought to be accomplished by the Association and those already obtained by similar organizations in this and other States, Mr. WILLARD combated the opinion, not unfrequently expressed, that the factory system had been a damage to the dairy business in old dairy districts. Our brief extracts are taken from the Address as printed in the Herkimer County Journal and Courier:

The Factory System and Dairy Business.—He said: I know it is sometimes said that this factory system, and these dairy conventions have been an injury to the dairy business in old dairy districts.

There are men who hold that were it not for the factory system and the spread of intelligence on this subject of cheese making, the business would have been confined to a few counties in this State and in Ohio, and dairymen here would have had things all their own way. There is nothing more illogical or illusory. Had it not been for the factory system and the spread of intelligence which has exerted such a power in the education of manufacturing, the dairymen of the State would long since have been ruined. Contrast the general product of cheese to-day with what it was so late back as 1860. In 1859, you remember, Samuel Perry contracted the great bulk of cheese made in this county and other parts of the State at 10 cents per pound. Much of this cheese was so poor, so utterly worthless as an article of food, it had to be thrown into the docks. We had no name abroad, and our cheese in England was only considered fit for paupers or people of the lowest class. Even this class took it only as a necessity, and because it could be had for a mere trifle. There were immense losses, every now and then, among persons who handled cheese, on account of its inferior quality and the difficulty of keeping it. Do you suppose that without the flood of intelligence that has been poured in upon us, the cheese of to-day would have been any better than the cheese of 1859? Why, my friends, we have revolutionized the feeling in England, and forced a nation to admit that American cheese is quite equal to the best English manufacture, while the bulk of our exports is regarded as superior to the bulk of English make. The English people find it more and more difficult to compete with us in quality, and are now turning their attention to the factory system as a means of solving this difficulty. But by the better character of our cheese we have created an immense home market, which could not have been secured on the old quality of cheese.

Do you suppose the great bulk of Herkimer county cheese, as it was made fifteen years ago—soft, slushy, liable to fall in pieces, easily tainted and not unfrequently alive with skippers, could make such a way in the home market as the "fancy cheese" of to-day? Could you or I be induced to buy and eat freely a poor and imperfect cheese at any cost? No, no—the people want a good thing—something that is attractive in flavor, and which gives pleasure in the eating.

Low Prices and Exports.—Referring to the exports of cheese and the cause of low prices, he said:—The exports of cheese during the past year have been the largest ever made. According to official returns of the Custom House, we exported from Jan. 1st to Dec. 24, 1871, 67,530,000 lbs., and for the same time in 1870, 61,451,500 lbs., showing an increase in 1871 over 1870 of 6,078,500 pounds. In 1870, we exported only 1,394,200 pounds of butter; last year, 1871, our exports were 8,519,700 pounds, an increase for the past year of 6,125,505 pounds.

You need not be told that the average price of cheese has been low. The fact, doubtless, has been forcibly impressed upon your minds at every sale of cheese during the past season, and under the present system of marketing I can see no prospect of better prices in the future. There are several circumstances that have conspired to bring about a weak state of the market, such as the general decline in the price of all farm products, especially the low rates of bacon and pork; but the chief cause of low prices is the stupid manner in which our cheese is brought forward in hot weather and forced upon the markets.

There is scarcely a factory within my knowledge that is provided with room sufficient to keep the hot weather cheese. The factories push forward immense quantities of cheese in July and August, not only from the fear that it will lose flavor at the factory, but because there is no room to hold it. The local dealer who buys is in a hurry to be rid of it, for fear of losses in hot weather. The shipper is also afraid of it, for the same reason, and every one who handles cheese in hot weather is in hot haste to shift responsibility and risk upon some other shoulders than his own.

I cannot see how it is possible to sustain prices under such a condition of things. It is a forced sale from beginning to end, and the law of forced sales is that real values cannot be realized. The remedy, it is obvious, lies in additional curing houses at the factory, so constructed that cheese may be held from time to time, as desired.

It is believed by many that the dairymen of the East are to get relief by the abandonment of dairying at the West, thereby reducing the general make of cheese. I do not think we can look for any permanent benefit in this direction. The business will be developed from year to year in new localities, where lands are adapted to the dairy. You cannot convince the West that more money is to be made in pork or grain raising than in dairying, even at present prices, because the facts are against any such assumption.

The cost of transportation eats out the profit on grain raising at the West. The cheese makers of Illinois are altogether better off this year than the grain raisers of that State, and so of Wisconsin and other States. We are not over-producing in dairy goods—that is not the matter; but we lack enterprise in opening up the home markets and in supplying the kinds and qualities of cheese desired by our people. And then again we persist in that miserable stupidity of forcing forward our goods when there is most risk in handling, and when they cannot be taken except at a heavy margin to cover prospective losses. The fact has become notorious that America furnishes no old cheese. There is a demand for good old cheese at high prices, but it cannot be had at any price.

The first paper laid before the Convention was from the pen of Mr. ABRAM DIEVENDORF of Montgomery Co., upon

Pork Making.—Mr. Dievendorf thought that, with proper management, pork can be produced cheaper than either beef or mutton. That a given quantity of corn meal will produce in a well bred pig more pounds of pork than can be produced of any other kind of meat, because a pig can eat more, digest more and assimilate more, over and above the amount of food necessary to sustain life, than any other domestic animal. He said the secret of success in pork making hinges not so much on any particular breed, although the breed has something to do with it, as it does on liberal and regular feeding. As to breeds, he preferred a cross between our common large hogs and some of the small breeds, such as the Essex or Suffolk, as well adapted to pork making among dairymen. By such a cross we get more constitution and a quicker growth. It is putting the great digestive powers of the large breed in the body of a small, refined and quick fattening pig. He thought the cheapest way to winter a shoat was in the pork barrel; hence he would fatten pigs rather than old hogs. In proportion to the food consumed, young pigs grow much more rapidly than older ones, and besides, if they are grades of some of the small breeds, they will be ready for market when four or five months old, and will always bring a fancy price.

His experiments with a litter of 11 grade Suffolk pigs, born Feb. 20, and another of 7, born March 10, 1870, was as follows:

1. On April 16, I weighed both litters. The oldest, 8 weeks old, weighed 357 lbs.; average weight, 32 lbs. The other litter, 5 weeks and 3 days old, weighed 126 lbs.; average weight, 18 lbs.

2. On April 30, two weeks later, I weighed both litters again. The first litter of 11, 10 weeks old, weighed 490 lbs.; average weight, 44½ lbs.; gain in two weeks, 133 lbs.; average gain, 12½ lbs. in 24 days. A gain of 37 per cent. The second litter, 7 weeks and 3 days old, weighed 185 lbs.; average weight, 27 lbs.; gain, 8½ lbs. in 14 days, a little more than 46 per cent. increase. The total gain of both litters during the time was 192 lbs.; the amount of food consumed during the same time was 300 lbs. of corn meal, which cost me $5.27, making the cost of one pound of pork 2.8 cents nearly. This gives 64 lbs. of pork for every 100 lbs. of meal. But, in addition to the meal, they had considerable buttermilk, but no very large quantity, the value of which I do not compute.

3. On May 14, two weeks later, the first litter of 11, 12 weeks old, weighed 590 lbs. Average weight, 53⅔ lbs. Gain in two weeks, 100 lbs. Average gain, 9 lbs., against 12½ two weeks previous, or an increase of 20 per cent. against 30 per cent. the two weeks before. On the same day, the second litter, 9 weeks and 5 days old, weighed 253 lbs. Average weight, 36 lbs. Gain in two weeks, 68 lbs. Average gain, 10 lbs., against 8½ lbs., or of 36 per cent. against 46 per cent. the two weeks previous. Total gain of both litters, 168 lbs., against 192 lbs. the two weeks previous. The amount fed was 100 lbs. corn meal and 150 lbs. barley meal. Cost, $4.39, making the cost of pork 2.6 cents per pound, against 2.8 cents on corn meal alone, and giving 67 lbs. of pork against 64 lbs. the two weeks previous. At this time I made a division by throwing out the two finest of the 11 to winter over, and giving the smallest to the other litter of 7, making both equal in numbers. On June 4, three weeks later, I weighed the oldest eight. Their age was 15 weeks, and weighed 690 lbs.; average weight, 75 lbs. Gain, 175 lbs.; average gain, 22 lbs. in 21 days.

On June 11, I weighed the same litter; age 16 weeks and weight 684 lbs.; average weight, 85½ lbs. Gain in one week, 84 lbs., and average gain, 10½ lbs., or 1½ lbs. per day, and during the last four weeks they increased 260 lbs., or an average of a little more than one pound per day for each pig from the time they were 12 weeks until they were 16 weeks old.

Two days after this I sold these eight pigs for $50. The amount consumed up to this this time by both litters was 1,683 lbs. of corn meal and 150 lbs. of barley meal, or in all, 1,833 lbs., which cost me $31.54. Taking one-half of this, which I think is a fair estimate, would make $15.77 as cost to fatten these eight pigs, and leaving a balance of $34.23.

This calculation does not include the value of whey, which was their chief drink since they were two months old, and clover, of which they had plenty—a small armful three times a day. These eight pigs must have weighed, allowing their usual increase, 708 lbs., the cost of which would be but $2.22 per 100 lbs., live weight, and allowing 20 per cent. shrinkage, it would make $2.78 per 100 lbs. dressed pork.

These eight pigs weighed, when they were eight weeks old, according to average, 256 lbs., which makes a gain, during the next 58 days, of 56 lbs; nearly one pound per day. I doubt if the same increase can be made with the same feed, and under similar circumstances, on pigs that are matured, say ten or twelve months old. On July 12th I weighed the other litter of pigs; they were four months and two days old, excepting one of the number, which was three weeks older. Their weight was 900 lbs. Average weight 112½. The last time this litter was weighed was May 14th, an interval of nearly two months, and for that time the increase was one pound per day. On July 23d their weight was 1,072 lbs. Average weight 134 lbs. Gain in eleven days 176 lbs., or per day, for each pig, two pounds. Which makes eighteen per cent. increase for the same time.

On August 8th their weight was 1,290 lbs.; average weight 161 lbs.; gain in sixteen days 214 lbs., or per day nearly 13¼ lbs.; age five months less two days. Soon after this I sold these pigs for eight cents per dressed pound.

On Aug. 31, I butchered the smallest two, six hours after feeding. Their gross weight was 340 lbs.; dressed weight, 64 lbs., or 18.8 per cent.

On September 8, I butchered two, three hours after feeding. Their gross weight was 400 lbs.; dressed weight, 375 lbs.; shrinkage, 75 lbs., or 19.25 per cent.

On Sept. 15, I butchered the third pair, twelve hours after feeding. Their gross weight was 450 lbs.; dressed weight, 375 lbs.; giving 75 lbs. shrinkage, or 16.60 per cent.

On September 19, I butchered the remaining two, immediately after full feeding. Their gross weight was 490 pounds, and dressed weight 381 pounds, making the shrinkage 109 pounds, or 22 per cent.

The aggregate live weight of the eight pigs was 1,680 lbs.; average weight, 210 lbs.; dressed weight, 1,355 lbs.; average dressed weight, 169 lbs.; shrinkage, 325 lbs.; or 19.3-10 per cent.

Their average age was six months, and the number of pounds of meal consumed was 3,158 pounds, at an average cost of $1.53 per 100 pounds, making $47.51, and deducting this from $108.40, the amount received, leaves a balance of $61.09. According to these figures the cost of 100 pounds of pork, live weight, is $2.80, and per 100 lbs., dressed weight, $3.49. Both litters consumed $63.08 worth of meal and made $158.40 worth of pork, leaving a balance of $95.32. This I do not consider the net profit, yet I think it is not far from it. Although I have not computed first cost of pigs, value of whey and clover, fuel and labor expenses, for the reason that I never expected that these experiments should ever be given to the public, or I should have made them more thorough and exact; and the only object I had in view was to satisfy myself on a few points, and the chief one of these was, whether a spring pig could be as profitably fattened as a hog 12 or 15 months old. I do not assume that 3,158 pounds of corn meal, well cooked as this was, did make 1,680 pounds of pork, live weight—that is, 1 pound of pork from 1 8-10 lbs. of meal, since 20 lbs. of pork to 100 lbs. of raw meal is considered a fair increase, and if well cooked will do one-third better, but that whey and clover were important agents in producing this growth.

Quite an animated discussion followed this paper, in which the question of whey as a sole feed for hogs was very thoroughly handled. Mr. Cole, from Michigan, stated that he had kept a large number of hogs the past summer upon whey alone and that the animals fattened rapidly and appeared to be in perfect health. Mr. Farrington of Canada had also been successful in fattening hogs upon whey. He said the whey contained all or nearly all the albumen of the milk and was richer in nitrogenous elements than was generally attributed to it. Hogs that had attained their growth could be kept upon whey, but pigs could not thrive upon it as a sole feed. S. B. Arnold of Tompkins Co., said he had made numerous examinations of whey fed hogs after they had been slaughtered and in every instance he found the animals more or less diseased.

How to Make Butter Come Easy.—I will give a recipe—according to my experience—which will obviate that difficulty, viz:—Take a pail two-thirds full of lukewarm water; add about two tablespoonfuls salt; two quarts or more wheat shorts; give this to the cow once or twice per day; follow this course, and I think the difficulty will be remedied. I noticed in your last number a correspondent recommends annotto as coloring matter for butter. Now, I claim that the orange carrot, grated, mixed with new milk, strained and added to the cream just before churning, is far superior and gives it a much better flavor. Please try it and send the results.—MARION.

The Poultry-Yard.

HENS AND HENNERY.

LAST year we built a new hennery. When the carpenter had finished it he declared, by way of self praise, that it was the finest one in the county. It had windows and doors, and a staircase leading up into the laying parlor, as nice as a lady's chamber. After some trouble, the hens were decoyed into their new home; but it was found as cold weather approached, that they did not lay as well as in their old home. We have been at work to make it warm; it is banked and battened, and after the floors are well cleaned, they will be littered with hay.

Holes will be cut through leading into the stables and hog-pens. Here opportunity will be had for the hens to scratch and pick up waste grain. The hog troughs will afford a daily supply of fresh sour milk. The feathered beauties will crow and cackle over this, and every day a few fresh eggs will be gathered into the pantry. Last winter it was a new house, with graveled walks, mixed with ice and snow, to scratch in.

It is folly to shut hens out of the stables and barn-yard. Nov. 15th all the hens were sold, except some of the finest-looking and best layers, together with some old hens having late broods of chickens. These will be sold when the chickens are full grown. They will be ready, and add to the fine flavor that hangs about the kitchen oven during the winter.

It is generally known that meat fed with grain to hens, especially in winter, will produce an increase in eggs. The scraps, rinds and gristles used in soap making form a very profitable food for hens. Now that soap is so cheap and eggs nearly always high priced, it is surprising that the complaining housewife, who chafes under the drudgery of soap making and other labors, will hoard the greasy mass, that so often becomes a prey to mice, mold and rust—a disgrace to pantry, store-room and cellar. Feed the scraps to the hens, and they will lay enough more eggs to buy the soap. L. H. O.

POULTRY NOTES AND QUERIES.

Brown Tinge not a Blemish to Dark Brahmas.—I would say to D. C. R., in RURAL NEW-YORKER of Dec. 2, that the brown tinge on the Dark Brahma cock's wing is not a blemish or disqualification, unless there is very much of it—the less the better for exhibition birds. WRIGHT, our standard authority in Brahmas, says that "brown on the wing of the cock is necessary where you want to breed dark pullets," and I can indorse that. Brown patches, or blotches, anywhere on the plumage of the pullet, is very undesirable.

Charcoal, powdered fine and mixed in soft food, I have used for years with my poultry, and am satisfied with my success.—WM. H. DOEL, *Toronto, Canada.*

Will it Pay to Keep Fancy Fowls?—Yes, it will, or if a person has an eye for beauty, and will consider the pleasure of looking at a fine lot of pure-bred fowls as a recompense for his labor, it will pay. In April, 1868, I commenced, as follows: Coops, fencing, etc., $99.66; eggs for setting, $33,37; hens for setting, $9.57; feed from April, 1868, to Jan., 1872, $245.39; total expense, $387,79. Hens sold, $204.38; eggs sold, $201.03; total receipts, $405,41—making a profit above all expense of $17,62. Fowls on hand, four Buff Cochins; fifteen Houdans; forty-three Light Brahmas—total, sixty-two. The market value of said fowls would amount to at least fifty dollars. The value as to pure blood and beauty cannot be estimated. I am satisfied with the investment.—R. H. H., *Yarmouth-Port, Mass.*

Early Chickens.—C. H. P., Elyria, O.—There is no danger of your losing your early chicks, if you keep them in a warm coop on the ground, on earthen floor, which should be covered with good, dry sand, coal or wood ashes. Feed chopped eggs, bread and milk, bread and ale, meat chopped fine, bread crumbs and cooked Indian meal. Feed often—especially early in the morning—and keep the coops well covered at night with old carpets or sacking, that will keep the warmth within the coop.

To Prevent Roup in Fowls.—Let those who have fowls sick with roup try as a preventive, dosing them with fresh dirt and green grass; and as a cure, two or three spoonfuls, at different times, of Carolina tar.

Golden Hamburgs.—W. R. H., you are right. By referring to the "Standard of Excellence," the tails of Golden Hamburgs should be *black.*

Domestic Economy.

ARCHES UPON DINNER TABLES.

W. T., in the Garden, furnishes the following sketch and explanation which we copy:—"The accompanying engraving is from some sketches of a very pretty arch, which was arranged in the following manner:—Upon the wire were fastened single blooms and pairs of blooms of *Lapageria rosea*, which had been previously mounted upon wires, so that they might stand out firmly, and hang as if they formed part of a growing plant. Three or four long branches of that beautiful climber, *Myrsiphyllum asparagoides*, were then twined over the arch from one end to the other, its bright apple-green leaves having a very cheerful effect; while they also concealed the iron-mongery of the arch and the *Lapagerias*. The finishing stroke was effected by very loosely intertwining some long fronds of the commonest, but, at the same time, the most elegant of all the climbing ferns, *Lygodium japonicum*, a species generally sold under the wrong name of *L. scandens*.

"In this case, the plants of these climbers were in flower-pots concealed under the table, and so also were the pots of the two plants of *Lomatia* which are seen rising from the bases of the arch. If it had not been practicable to put any pots through the table, those containing the two climbers could just as easily have been placed upon the table, and concealed with some common fern fronds; in which case the *Lomatias* could not have been used, unless by cutting them down, and sticking them into the pots of the climbers—though an equally good effect might be obtained by sticking in one or two small fronds of *Pteris tremula*, or large fronds of one of the many varieties of *Pteris serrulata*.

"The table upon which this arch was placed was oval-shaped, suitable for a party of twelve. The plant sunk in the middle of the table was *Yucca aloifolia variegata*, among the lower leaves of which were inserted some fronds of *Gleichenia speluncæ*."

ODDS AND ENDS.

To Exterminate Bedbugs, Ants and Cockroaches.—ALMUS BUTTERFIELD says, "apply the oil of sassafras to their abodes, and they will trouble you no more."

Russian Turnips.—It is said that sunshine on cooked Ruta Baga spoils the flavor. Let those who are so fortunate as to eat in sunny dining-rooms, test the matter.

Saving Lard.—Many housekeepers throw away the water in which they freshen salted meat. It should be poured into a pan to cool and the grease taken off for some future use.

Soup Recipe Wanted.—M. S. SMITH asks some one to inform her how to make a good, nice soup—such as they have at first class hotels. Let us have soup recipes adapted to farm life and farm resources.

Sausage Recipe.—G. D. M., Plainville, Conn., writes that his wife says the following is a better recipe than any which has heretofore appeared in the RURAL NEW-YORKER:—For 20 pounds of meat use 6 ounces pure salt; 1½ ounces black pepper; 2 teacups pulverized sage.

Head Lice.—School children will get lousy. A lady at our elbow says her mother used larkspur-seed-gin most satisfactorily. Gin is poured on larkspur seed, and the hair washed with it, which baptism kills the lice. It is a pleasanter and more effectual remedy than lard and the merciless trap of the fine tooth comb in a mother's vigorous hand.

Cold Dessert.—Some puddings are best cold. Such may be made on Saturday for the Sunday dinner; or in the morning on any day. Rice, tapioca, Chicago, corn starch, the queen of puddings, farmer's pudding, supper pudding, and a score of others are all better served cold. Fresh fruits are the finest dessert, canned and cooked fruits next, puddings and pastry "will do" when nothing else is available.

Industrial Societies.

MEETINGS, ELECTION OF OFFICERS, &c.

Hampden, Mass., Ag. Soc.—Officers for 1871-72: *Pres.*—PHINEAS STEDMAN, Chicopee. *Vice-Presits*—E. D. Allen, Agawam; W. E. Boise, Blandford; J. B. Brown, Brimfield; G. W. Holcomb, Chester; R. W. Bemis, Chicopee; R. H. Barlow, Granville; J. S. McElwain, Holyoke; C. S. Newell, Longmeadow; G. E. Fuller, Ludlow; Joel M. Tucker, Monson; James S. Loomis, Palmer; J. W. Gibbs, Russell; T. N. Fowler, Southwick; H. M. Sessions, So. Wilbraham; A. D. Briggs, Springfield; F. T. Moore, Tolland; N. T. Leonard, Westfield; N. T. Smith, West Springfield. *Directors.*—H. Alexander, Springfield; T. Henry, Springfield; L. J. Powers, Springfield; W. Pynchon, Springfield; C. L. Buell, Ludlow; W. R. Sessions, So. Wilbraham; Geo. W. Converse, East Longmeadow; D. J. Bartlett, Springfield; R. Brooks, West Springfield. *Treas.*—Jas. E. Russell, Springfield. *Sec.*—J. N. Bagg, West Springfield. *Delegate to State Board of Agriculture.*—Wm. Birnie, Springfield.

The Northwestern Hort. Soc. meets at Madison, Wis., Feb. 9. The horticulturists of Minnesota, Iowa, Illinois, Wisconsin and Michigan are invited to attend. Its officers are: *Pres.*—L. K. SCOFIELD, Freeport, Ill. *Vice-Pres'ts*—1st, O. S. Willey, Madison, Wis.; 2d, D. W. Adams, Winkon, Iowa; 3d, Col. J. F. Stevens, Minneapolis, Minn.; 4th, A. Bryant, Jr., Princeton, Ill. *Sec.* H. H. McAfee, Madison, Wis. *Treas.*—L. W. Woodward, Marengo, Ill.

Olmsted Co., Minn., Ag. Soc.—Officers for 1872: *Pres.*—I. M. Westfall. *Vice-Pres'ts*—J. W. Fulkerson, Marion; R. Waldron, Cascade; Z. Handerson, Salem; A. H. Gaskill, High Forest; G. W. Wirt, Oronoco; S. Greenwood, Farmington; E. A. Doty, Viola; J. T. Price, Eyota, and S. Case, Elmira. *Sec.*—S. Risker. *Treas.*—A. S. Grant. *Auditor*—W. P. Brooks. *Supt.*—J. Robinson. *Delegates to State Ag. Soc.*—B. F. Perry, A. H. Gaskill.

National Ass'n of Wool Manufacturers.—We have received the Bulletin of this organization, containing a report of its proceedings, Oct. 4, in New York City. Its executive officers are: *Pres.*—J. WILEY EDMANDS, Boston, Mass. *Vice-Pres'ts*—T. S. Faxton, Utica, N. Y., and Lucius P. Porter, N. Brunswick, N. J. *Treas.*—David B. Jewett, Boston, Mass. *Sec.*—John L. Hayes, Boston, Mass.

Piscataquis Central (Me.) Ag. and Hort. Soc.—Officers elected: *Pres.*—A. M. ROBINSON, Dover. *Vice-Pres'ts*—Mordecai Mitchell, Dover; Seth Lee, Atkinson; Leonard Robinson, Foxcroft; P. M. Jefferds, Foxcroft. *Trustees*—M. L. Robinson, Dover; Joseph Morrill, Sebec; Chas. Lorling, Guilford. *Sec.*—Luther Chamberlain, Atkinson. *Treas.*—Cyrus Hill, Foxcroft. *Hall Agent*—Wm. N. Thompson, Foxcroft.

Indiana State Board of Agriculture—The following are the officers: *Pres.*—J. SUTHERLAND, Laporte. *Vice-Pres.*—I. D. G. Nelson, Ft. Wayne. *Sec.*—A. Herron, Connersville. *Treas.*—C. Dickson, Indianapolis. The Board meets at Indianapolis, Feb. 20.

Hennepin Co., Minn., Ag. Soc.—Officers for 1872: *Pres.*—W. S. KING. *Vice-Pres.*—C. Hong. *Treas.*—R. J. Mendenhall. *Sec.*—W. S. Chowen. *Ex. Com.*—J. S. Walker, D. W. Albaugh, A. W. Hull, R. W. Cummings, E. R. Perkins. *Delegates to State Ag. Soc.*—J. H. Stevens, D. W. Albaugh.

Mississippi Valley Grape Growers' Ass'n.—Officers elect for 1872: *Pres.*—H. L. COE, Franklin Co., Mo. *Vice-Pres.*—Isador Bush, St. Louis. *Sec.*—E. A. Riehl, Alton, Ill. *Treas.*—J. H. Tice, St. Louis.

The Jefferson Co. Wis., Dairymen's Ass'n holds semi-monthly meetings at Jefferson, Wis. The meetings are held the first and third Saturdays in the month.

THE

WEEKLY EVENING MAIL.

Best Family Weekly in the World.

$2.50 a Year.

UNPRECEDENTED INDUCEMENTS TO SUBSCRIBERS.

On the first of January, 1872, the publication of a weekly edition of THE NEW YORK EVENING MAIL was begun under most encouraging auspices.

It has been a success from the start, because it possesses peculiar features that make it especially desirable as a newspaper for

FAMILY READING.

No other existing weekly contains such a variety of

Attractive and Original Correspondence

from all parts of the world, including letters from London by Justin McCarthy and F. W. Chesson; from Paris, by Francis S. Saltus; from Berlin, Vienna and Rome; from Washington, by Col. R. J. Hinton; from Boston, Philadelphia, Chicago and other places of importance.

In its

LITERARY AND ART DEPARTMENTS

it is stronger than any other family weekly.

A FIRST-CLASS SERIAL STORY

from advanced sheets furnished by the author of "A House of Cards" from England. This will be one of the most interesting stories published during the year. It is entitled "A Golden Sorrow."

Besides these features there will be contributions from such writers as "Howard Glyndon," "Sophie Sparkle," "Anchor," and other well known correspondents of THE DAILY EVENING MAIL.

There will also be a

FASHION DEPARTMENT

for the Ladies, and

An Agricultural Department.

REVIEWS of the events of the week—foreign and domestic, political and religious, artistic and literary, dramatic and musical, etc.—will be carefully prepared.

VERY LIBERAL PREMIUMS

are offered to subscribers, singly or in clubs. Each subscriber will receive one of Prang's Chromos

Worth Two Dollars,

or four-fifths of the subscription. To clubs of five will be sent one

OIL CHROMO,

and five WATER COLOR CHROMOS, worth $16. To clubs of ten will be sent Chromos worth $32.

Liberal Cash Premiums to Postmasters and others getting up Clubs.

Supplied by all News Dealers through the American News Company.

DAILY EVENING MAIL

Served by Carrier or sent by Post for 50c. a month.

Sample Copies of THE DAILY AND WEEKLY MAIL sent Free.

"Routed but not Conquered."

THE

Little Corporal

An Illustrated Magazine for Boys and Girls, and Older People who have Young Hearts.

The $500 Prize Story,

By HELEN C. WEEKS,

Will begin in the January Number

AND WILL CONTINUE THROUGH THE YEAR.

It is a charming story, full of incidents of real life, and will, no doubt, prove to be the most interesting serial we have ever published.

SPLENDID ATTRACTIONS!

In addition to the above serial, THE LITTLE CORPORAL will contain many shorter stories, poetry, articles on natural history, science, home amusements, puzzles, etc., from the most popular and entertaining writers in the land. It will also be

SUPERBLY ILLUSTRATED,

with choice original engravings, specially prepared for us at great expense. It is the aim of this Magazine to amuse and instruct the young, to cultivate a taste for reading good and useful books, and to make them happier, nobler and wiser.

Beautiful Premiums for Clubs.

Agents wanted to raise clubs. Send for sample number with list of premiums, and raise a club now. December number of this year sent free to all new subscribers for 1872.

TERMS:—$1.50 a year, single copy; in clubs of twenty, sent at one time, $1 each, and a premium to the one getting up the club.

THE GREAT REPUBLIC.

By Jas. D. McCabe, Jr. The handsomest and most valuable book, to an *American*, ever published. Has 1,120 large 8vo. pages, 234 superb illustrations on wood and steel. No book like it has *ever been issued*. Agents Wanted. Sold by subscription. Send for terms to WM. B. EVANS & CO., 740 Sansom St., Philadelphia.

PLOWS AND PLOWING

is a little work on the foundation subject of agriculture. It is common-sense discussion, containing valuable suggestions for every farmer. Gives a description of the new **Economical Plow**, which, it is claimed, will reduce the expense of Plows and Plowing at least one-half; do its work easier, faster and better than any other plow, and practically without human labor. It is adapted to either horse or steam power; to any condition of soil, or quality of surface; has a capacity of from one to ten acres per day; requires only one man to work it, and is warranted to satisfy every purchaser. If this machine supports its claims it will do for plowing what mowers and reapers have done for harvesting. But the book is worth many times its cost independent of this interesting item. Send for a copy. Price 25 cents; or, with "What I Know of Farming," by Horace Greeley ($1.50), for **$1.60**. *Address* THOS. M. NICHOL, 161 Nassau St., New York.

FREE!—SEND FOR A SPECIMEN.

A full Catalogue of our Standard, Miscellaneous and Illustrated Juvenile Books, or specimen numbers of Oliver Optic's Magazine, sent by mail free.

☞ Subscriptions Advertisements, &c., received,—and Specimens, Show-Bills, Prospectuses, &c., delivered,—at either of the above offices of this journal.

TERMS, IN ADVANCE:

Subscription.—Single Copy, $2.50 per Year. To Clubs:—Five Copies, and one copy free to Agent or getter up of Club, for $12.50; Seven Copies, and one free, for $15; Ten Copies, and one free, $20—only $2 per copy. As we are obliged to pre-pay the American postage on papers mailed to foreign countries, Twenty Cents should be added to above rates for each yearly copy mailed to Canada, and One Dollar per copy to Europe. Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk. ☞ Liberal Premiums to all Club Agents who do not take free copies. Specimen Numbers, Show-Bills, &c., sent free.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

Advertising.—Inside, 75 cents per line, Agate space; Outside, $1 per line, each insertion. For Extra Display and Cuts, a price and a-half. Special and Business Notices, $1.50 and $2 a line. No advertisement inserted for less than $3.

SATURDAY, JANUARY 27, 1872.

GOOD MEN GONE TO REST.

It becomes our painful duty to chronicle, this week, the death of three men of great moral worth and nobleness of character, who have been prominently identified with the cause of Rural Improvement.

The Hon. WILLIAM A. REYNOLDS, in many respects the foremost among the many good and prominent citizens of Rochester, departed this life on the evening of Jan. 12th, aged 61 years. Deceased was a man of noble and generous nature, ever first in good words and efforts to promote the welfare of his fellow citizens, the city, and country at large. Mr. REYNOLDS held many positions of trust, honor and responsibility, and discharged every duty with fidelity. He was a member of the last State Constitutional Convention, and at the time of his death was one of the Managers of the Western House of Refuge and also President of the Rochester Savings Bank. Mr. R., was one of the founders of the nursery business in Rochester, and did much to advance the cause of Agricultural Improvement generally. Messrs. ELLWANGER & BARRY of the celebrated Mt. Hope Nurseries (now the most extensive on this Continent) were both formerly in the employ of Mr. REYNOLDS. He was also among the pioneer seedsmen of Western New York—for we well remember that the seed firm of REYNOLDS & BATEHAM was doing business in Reynolds' Arcade, Rochester, over thirty years ago. A good, noble-hearted man—a Christian gentleman and true friend and patriot—has gone to his rest and reward.

The Hon. WILLIAM KELLY of Rhinebeck, N. Y., died on Sunday, Jan. 14th, at Torquay, England, whither he went some months since in quest of health. Mr. K. was a distinguished citizen of our State, widely known for his noble manliness and generosity, and also for his earnest efforts to enhance Rural Improvement. His fine estate—"Ellerslie" on the Hudson—exhibited his fine taste, for its flowers, shrubs, small domestic animals, and herds of splendid Short-Horn and other cattle were the admiration of every visitor. As has been well said by a contemporary, "Mr. KELLY was a retired New York merchant of large means, large heart, and large head—a man of spotless integrity and irreproachable character." Though a Democrat, he was in 1856 elected to the State Senate from Dutchess and Columbia, a Republican district, and served with distinction—was loved and honored for his courtesy, his integrity and high sense of moral obligations. In 1860, Mr. KELLY was the Democratic candidate for Governor, on the presidential ticket with STEPHEN A. DOUGLASS—but the division in the party made his defeat a foregone conclusion, though he ran largely ahead of his ticket. Mr. KELLY was long prominently connected with the N. Y. State Agricultural Society, once holding the office of President. As a breeder of improved stock, he was widely and favorably known. Deceased was an earnest Baptist, and did much by voice, presence and purse to sustain the churches and educational institutions of the denomination. He was elected President of the Board of Trustees of the University of Rochester in 1859, and held that position at the time of his death. Mr. KELLY was sixty-five years of age.

The Hon. MARTIN ROBERTS, a prominent and highly-esteemed citizen of Western New York, died at his residence in Henrietta, near Rochester, on the 10th instant, at the age of sixty-five. Mr. R. was a very successful farmer, and quite noted for rearing fine stock, and the judicious management of his estate. He was long prominently identified with the Monroe Co. Ag. Society, and we have pleasant recollections of him as a member of the Board of Managers. Mr. ROBERTS held many town and other offices—serving the public faithfully whenever his services were demanded—and was a member of the Legislature in 1861. In all the relations of life deceased was greatly esteemed—for he was a true friend, wise counsellor, and strictly conscientious. His death was caused by a serious accident on Christmas day, when his arm was drawn into a cutting machine which he was feeding.

STATUE OF FRANKLIN, IN PRINTING HOUSE SQUARE, NEW YORK.

THE FRANKLIN STATUE IN NEW YORK.

ON the anniversary of the birth of BENJAMIN FRANKLIN—Wednesday, the 17th inst.,—a large and beautiful statue in bronze, twelve feet in hight, representing the eminent Printer, Philosopher, Diplomat and Statesman at the age of seventy, in full court dress, was unveiled in Printing House Square, New York. It was a present to the Press and Printers of New York from Capt. ALBERT DE GROOT, who made the famous VANDERBILT bronzes. The ceremonies took place at mid-day, Prof. SAMUEL F. B. MORSE unveiling the statue amid the cheers of thousands, the roar of cannon and strains of music. HORACE GREELEY (not inaptly called the later FRANKLIN) made an able and characteristic speech, presenting the statue to the city. Mr. C. C. SAVAGE of the Typographical Society, replied, accepting the statue.

In the evening there was a grand banquet at DELMONICO'S in honor of the event, and the anniversary, attended by Mr. GREELEY, H. W. BEECHER, Dr. PRIME, Dr. CHAPIN, FRANK LESLIE, Mayor HALL, and many other prominent Journalists and Printers of New York. Many eloquent speeches were made at the feast. The statue is much admired for its beauty, and is doubtless the finest one in New York. It was modeled and cast in the city, and is, therefore, an American Work of Art.

RURAL NOTES AND QUERIES.

Free Libraries belong—and are not less important educational agencies—with free schools, free lectures, &c. The old Free School District Libraries of New York, poor as they were in the abstract, wrought much good among the youth. We would have free libraries for every thousand inhabitants, combined with free schools, free lectures upon scientific and literary topics, free theaters, free concerts, &c. The tendency of the people is toward educational co-operation. The stimulus to mental activity which results from association, is now recognized as a necessity. The toning down or toning up of the mind by contact and friction with other minds is most desirable, and begets a conservatism of thought that is not otherwise attained. We shall commend any wisely planned effort to furnish the people with the best and most instruction and pleasure, in the most economical way. Let legislatures take timely and wise action on this important subject.

The Vermont Dairymen's Association commenced its third annual session at Rutland, Jan. 18th. A dispatch says:—"The meeting is largely attended by the leading dairymen throughout New England. The Hon. HENRY CLARK delivered the address, reviewing the history of the Association. J. D. CURTIS of the Utica Herald, the Hon. CHAS. L. FLINT, Secretary of the Massachusetts Board of Agriculture, T. V. GOLD, Secretary of the Connecticut Board of Agriculture, ALEXANDER HYDE and M. H. BUCKHALL, Presidents of the University of Vermont and State Agricultural College, and the Hon. DAN'L NEEDHAM of Massachusetts have occupied the day. The Hon. HARRIS LEWIS of New York, Gov. STEWART and a large number of other distinguished persons are in attendance and will speak. Several leading agricultural editors are in attendance."

The Monroe Co. Ag. Society held its annual meeting in Rochester on the 10th inst. There was a large attendance and much interest manifested—the result of the recent Western New York Fair being very gratifying. It was resolved to invite the Presidents of the different Agricultrial Societies of Western New York, or their accredited delegates, to associate with the Directors as an Advisory Committee in the appointment of Superintendents, Judges, Committees, and in the general management of the Western New York Fair, to be held on the Society's grounds. Officers elected for 1872: *Pres.*—A. G. WHITCOMB, Rochester. *Vice-Pres'ts*—L. D. Mitchell, Pittsford; Thos. Brown, Jr., Wheatland; C. C. Davison. *Sec.*—J. R. Garretsee, Ogden. *Treas.*—L. M. Otis, Rochester. *Directors*—F. P. Root, Sweden, for Western District; Daniel Kingsley, Pittsford, for Eastern District.

The Western N. Y. Poultry Association opened its second Annual Exhibition at Buffalo on the 18th inst., under the most flattering auspices—(says a dispatch received while closing this paper for the press.) The collection of domestic fowls and other birds is admitted to be the finest exhibited in this section of the country. Over $2,500 in prizes are offered. The attendance is very large.

Briggs & Brother's Illustrated Catalogue of Flower and Vegetable Seeds, Bulbs and Plants, for 1872, is handed us while closing this paper for the press—and we can only say, this week, that it is a beauty. The colored and other illustrations must have cost more than the price of the Catalogue—25 cents. Further notice next week. Meantime it will be safe for every one interested in its contents to send for the Catalogue.

Good and Useful.—We have before us a neat little instrument, called the twine, thread and selvedge cutter, which is designed for ladies. It is very handsome, worn like a badge on the breast, and saves time, fingers and talk in the cutting of thread, twine, etc. All who use this little instrument are delighted with it. Messrs. T. B. DOOLITTLE & Co., of 593 Broadway, are the manufacturers. They deal extensively in light metallic goods for all purposes, having scores of articles which every housekeeper should possess. All interested should study their catalogue.

The Iowa Farming Lands, advertised in this paper by Mr. J. L. DREW, Land Commissioner of the Chicago, Rock Island and Pacific Railroad, are worthy the attention of those looking for good lands in desirable localities.

Southern Indiana Lands.—For answer to an inquiry of FRANK W. TYLER (in a late RURAL) about prices, etc., of these lands, see advertisement headed "Indiana Farms," in this paper.

RURAL BREVITIES.

MAINE is agitating the question of permanently locating her State Fair.

A SUBSCRIBER asks some of our correspondents to tell how "cracked wheat" is manufactured.

"A HUNTER" asks where he can get a good greyhound pup. Answer in our advertising columns.

OUR correspondent at Stockville, N. C., is informed that Eastman's Business College is at Poughkeepsie, N. Y.

CALIFORNIA sheep growers are losing many sheep from an affection of the lungs—most of those dying being yearlings.

THE New York State Grape Growers' Association is to hold its next annual meeting at the Court House in Rochester, Feb. 15.

W. G. K., Gilson, Ill., is informed that there is a sewing needle manufactory at Watertown, N. Y. See advertisement in RURAL, Jan. 6, page 30.

IN reply to C. S. W., we believe the Maine Agricultural College is free, so far as tuition is concerned, to all who pass the required examinations.

WE are indebted to J. N. BOGG, Secretary, for the 27th Annual Report of the Hampden Co., Mass., Ag. Soc.,—very complete, and indicating a live, thorough-going membership.

C. L. ALLEN & Co., 76 Fulton St., Brooklyn, N. Y., sends us a very complete and beautiful spring catalogue of vegetable and flower seeds, &c. They offer premiums for seed clubs.

THE Massachusetts Society for the Promotion of Agriculture will award, March 1, two prizes of $300 and $200 respectively to the best establishments in the State devoted to the culture of fishes for food.

OLLIE V. MERCER asks some one to give the best method of training a Shepherd Dog, through the RURAL NEW-YORKER. If our correspondent has the "Practical Shepherd" he will find an interesting chapter on sheep dogs in it.

BUSINESS NOTICES.

CONSOLIDATED U. S. 5s, 4½s AND 4s,
OR
CHESAPEAKE AND OHIO SIXES.

HOLDERS of Five-twenties and other maturing or high-priced securities can exchange them or re-invest their capital with great safety and advantages of profit and income by substituting in their place the CHESAPEAKE AND OHIO GOLD BONDS. Only one-eighth part of this loan remains unsold, which is being rapidly taken, with every prospect that the future demand will increase their market price far above the limit fixed by the Company, 94 and interest, for the remainder. Among the Directors of the Company are Messrs. C. P. Huntington, William H. Aspinwall, A. A. Low, David Stewart, Jonas G. Clark, and others, of New York City, whose personal attention to its affairs insures honorable and successful management.

We offer them with the same confidence with which we have recommended to our friends and customers the bonds of the Government and the Central Pacific Railroad Company, and we have no doubt that they will command a like confidence and price with the latter in home and foreign markets.

Principal payable in 1889; interest May and November. They are issued as registered or coupon bonds, in denominations of

$100, costing with accrued interest, to-day	$95 18
$500	$475 92
$1,000	$951 84

We buy and sell, as usual, GOVERNMENT and CENTRAL PACIFIC BONDS, and receive them in exchange for CHESAPEAKE AND OHIO BONDS.

Accounts of Banks and others received, on which we allow interest at the rate of four per cent.

Orders for Investment Stocks and Bonds executed at the Stock Exchange.

FISK & HATCH,
Bankers, &c., No. 5 Nassau street.

HARVEY FISK.
A. S. HATCH.

New York, Jan. 12, 1872.

DR. STRONG'S REMEDIAL INSTITUTE,

Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

Get Rid of a Cold at Once by using Dr. JAYNE'S EXPECTORANT, a certain cure for all Pulmonary and Bronchial affections.

For Irritation of the Scalp, apply Burnett's Cocoaine night and morning.

Social Topics.

"WAITING FOR THE SHOT."

THE last number of the London Illustrated News had a spirited picture, which we reproduce for the readers of the RURAL NEW-YORKER. It is from a painting by JAMES HARDY, Jr., and belongs to the "Dudley Gallery." The News says:—"To lovers of deer-stalking, this picture will probably have a stronger sporting than artistic interest. It indicates the supreme moment of suspense in one of the most exciting kinds of field sports. The game is sighted, but at the slightest sign it may vanish, and no chance of overtaking the same herd would, in all likelihood, be presented for many, weary miles. The stalkers must not betray their covert till the far-ranging rifle bullet has a chance of striking. The shot fired, then the dogs may be let loose, but not one moment before. If a hit, they may yet have far to run before they bring the stag to bay or pull him down. The pictorial merits of the picture should not be ignored. It is a capital study of character. The cowering old gillie, with his grizzled hair, weather-worn face, and sharp, gray eyes, seems to be almost of the same breed as the leash of shaggy deer hounds, with their sagacious alertness and their bright, keen eyes; and the characteristics, both human and canine, are rendered with very skillful and descriptive handling."

WHAT THE MICROSCOPE REVEALS.

LEWENBECK tells of an insect seen with the microscope, of which twenty-seven millions would only equal a mite. Insects of various kinds may be seen in the cavities of a grain of sand. Mould is a forest of beautiful trees with the branches, leaves and fruit. Butterflies are fully feathered. Hairs are hollow tubes.

The surface of our bodies is covered with scales like a fish; a single grain of sand would cover one hundred and fifty of these scales, and yet a scale covers five hundred pores. Through these narrow openings the sweat forces itself like water through a seive.

The mites make five hundred steps a second. Each drop of stagnant water contains a world of animated beings, swimming with as much liberty as whales in the sea.

Moral.—Have some care as to the air you breathe, the food you eat, and the water you drink.—*Home and Health.*

SUSAN B. ANTHONY says that more than 45,000 people have heard her lecture on the "Social Evil."

Our Story-Teller.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker, BY TWO WELL-KNOWN AUTHORS.

II.—Sunshine and Sorrow.

[Continued from page 58, last number.]

"Dear me; there comes that GEORGE!" sighed Mrs. HEATHERSTONE, as a quick, impetuous tread was heard approaching, "and those dreadful dogs, too! I wonder if that boy ever will find out that he is lacking in dignity."

"Well done, MAG! Just eating your breakfast? Sick or sulky, which? Neither, eh! Now that's wonderful! and how's mamma?" inquired the young gentleman, entering the room with his usual bound.

"Do put those dogs out, GEORGE!" as two enormous animals followed him in, and immediately surrounded MARGARET. "MARGARET, do you hear me—don't feed those dogs at the table! There isn't a particle of order in this house from one end to the other!" as the young lady amused herself with keeping the brutes standing on their hind legs, begging for the crumbs from her plate.

"Point, go over and say good morning to Mrs. HEATHERSTONE!" said the saucy GEORGE, so full of vim and mischief that he was unable to resist this golden opportunity of teasing his nervous mamma. "That is Mrs. HEATHERSTONE—there on the sofa!" continued the incorrigible, addressing the shaggy Newfoundland. "Go immediately and say good morning! I have just taught him this trick, MAGGIE."

Very slowly, but with evident knowledge of the business required of him, Point marched over to the sofa, seated himself very demurely, and with the utmost dignity, directly in front of the invalid, then raised his large paw and deliberately waited for the lady to shake it. But she took no notice.

"Point will sit there 'till the crack of doom if you don't shake hands with him, mamma," said GEORGE, evidently finding it difficult to keep from shouting.

Mrs. HEATHERSTONE drew her dainty cambric handkerchief from her pocket, wrapped it carefully round her delicate hand, and then extended it to the brute.

"Don't touch it Point," said his master sternly. The dog withdrew his paw, but still waited.

WAITING FOR THE SHOT.

"If you don't take that rag off Point will," continued the scape-grace. The handkerchief was instantly removed, and the patience of the canine rewarded by having his velvet paw grasped by the lily-white fingers.

"Is that all?" she inquired, in a tone expressive of the utmost resignation, but with a drawing of the shapely mouth, which showed plainly that, notwithstanding the dignified nervousness of the aristocratic lady, she was more amused than annoyed by her son's pertinacity.

"Oh, yes, there are plenty more things Point is up to. If you like, I'll put him through his drill. That reminds me, MAG—have you heard the news from the North this morning? HANNY and father are in a state of glorious excitement about it. There is a long-winded editorial in that abominable New York abolitionist paper, headed "Have the States a right to Seeede?" Of course it is a one-sided, partisan, intemperate article, and easily enough comprehended by everybody. The animus is plainly apparent in every word. I was for laughing at it, but when I found father was so completely wrought up, I concluded the wisest thing to do was to clear out, as long as I couldn't fire up as they did. If we've *got* to fight for our rights, and I reckon we have, I'm all ready—in fact, actually spoiling; but there isn't a particle of sense in wasting one's powder with unnecessary newspaper excitements."

"Your father is very foolish to allow himself to be put about by every wind that blows from the North," said Mrs. HEATHERSTONE, in her most languid manner. "Had he been at all like other men—as far-sighted and cool, I mean—he would have stopped fretting when the JOHN BROWN excitement died out. I told him that was all smoke, and this is precisely like it."

MARGARET wanted to say that it took some time for a little leaven to leaven the whole three measures of meal—that she had been conscious of the fermenting process for months, and that those who failed to observe the signs of the times must be both blind and deaf; but she wisely forbore, and GEORGE rattled on in his usual nonchalant and indifferent fashion.

"Don't look so down in the mouth, MAG Oh! by Jupiter! I forgot to tell you that HARRY wants you on the piazza."

"Let him want!" replied his sister, munching her dry toast vigorously.

"MARGARET!" came pleadingly from the sofa. "Oh, my head! my head! I believe every nerve in my body is completely shattered. Such willfulness and impoliteness are enough to break down the strongest constitution! I want to inquire, daughter, now we are on the subject, what poor HARRY has ever done to provoke the treatment he receives daily at your hands? What he has done, or what he has left undone?"

"Left undone!" repeated MARGARET, with a light, mocking laugh. "That's the trouble! If he would, once in a while, leave something undone—something to imagine—something to wish for—in other words, if he could just be persuaded to give me a little less of himself, I should be a very much happier girl. I have lived so long on sweetmeats that I actually long for a good, sensible piece of beef steak."

"Why, MARGARET, you might just as well have had some steak for your breakfast, as anything else. I'm not sure but your father had some. Send FAN into the kitchen to see if there's any brought up," said Mrs. HEATHERSTONE, in the most comically dispairing tones.

MARGARET laughed aloud—who could have helped it—and, strange to relate, with this laugh, every speck of her ill humor vanished. She was again the bright, sparkling, loving pet of the household—full of freaks and as true as the sun. "It was spiritual beef-steak I was talking about, dear ma," and the strange girl, whose nature so far had been understood, neither by her relatives nor by herself, tucked her head in her mother's neck and was quite for a full moment, then, suddenly remembering her lover, smoothed back her tumbled hair and stepped through the open window to the broad sunny piazza. "HARRY TRAVERSE," said she, with a light laugh, "HARRY TRAVERSE, is there nothing better on a bright October morning, than lounging in the sun? Ah, what tame days are these upon which we have fallen! No more knightly deeds; no more heroic valor. It were better to be a Yankee, and run a cotton-mill, than sit and dream dreams all day."

HARRY'S cheeks flushed. "I have been waiting patiently to see you MAGGIE, and now you taunt me with idleness."

"I don't want anybody to wait patiently to see me. I would rather my lover were away doing and daring. There, HARRY," as young TRAVERSE, thoroughly aroused by her thrusts, rose, and paced the piazza, "there HARRY, now sit down; I didn't mean anything."

"You say a great deal for a young lady who doesn't mean anything."

"But it's only your own little MAGGIE. He couldn't be cross with his own poor, saucy little MAGGIE, who has always said what she pleased ever since she said anything. Sit down. There! now we're all right, aren't we?" and the willful girl nestled her little white hand in her lover's and laid her soft cheek on his shoulder, in a beseeching way, not to be resisted by any of the sons of ADAM.

"Yes, we're all right now," said the poor fellow, putting his arm round the pretty waist, "but in two minutes, I suppose, we shall be all wrong again. I don't know why it is, MARGARET, that we never can have a quiet talk now-a-days. I sometimes think, MAGGIE, that you don't care so much for me as you used to."

"How does that thought affect you?" said the girl, growing saucy again.

"Affect me! You know very well how it affects me."

"Don't know anything about it. A knowledge of a young man's thoughts is something I never cultivated to any extent."

"You know it would break my heart if I thought you didn't love me, MAGGIE."

"Then I advise you by all means not to think so; for of all things, a broken heart must be the most disagreeable. So difficult to treat those internal organs, you know."

"But, MAGGIE, if it's so, I may as well think so."

"I don't know about that. Unpleasant truths are better ignored I think. But never mind, HARRY. What's the use of quarreling? I'm going to be MARGARET HEATHERSTONE. And if you don't like MARGARET HEATHERSTONE, why then—"

"I'll make her MARGARET TRAVERSE."

"May be so, sometime. But you have much to do before that day."

"What do you mean, MAGGIE?"

"I scarcely know, HARRY, what I mean. But I often feel as if these calm do-nothing days are almost over. I see action in the future, action for all of us."

"Yes, there may be action. The sky grows cloudy. What if we were forced to fight, MAGGIE?"

"Then I should expect you to go the field, and I should expect to hear that you were always in the front."

"And then you would love me more, MAGGIE, and you would watch eagerly for my letters, and droop a little if you failed to hear from me?"

"Perhaps; I don't know. I so seldom do as I'm naturally expected to, that under those circumstances my spirits might rise, instead of falling. I'm sorry, HARRY, that I can't play the role of affianced more to your satisfaction;" and the naughty child looked demurely out of the corner of her eye at her lover, and tapped her cunning little foot upon the floor.

"Never mind, darling; if you are suited I will try to be. How is mother, MAGGIE?"

"O, mother is much as usual,—worn out with me."

"Worn out with you?"

"Yes, of course. And father's worn out with me and so are you. I don't seem to suit anybody but old HANNIBAL. I wonder why I couldn't have been made so as to please you all. I interfere with the slaves, and I rush to the quarters in the morning without my breakfast, and I don't treat HARRY TRAVERSE well, and I'm a miserable sinner."

"Well, we all love miserable sinners then," said HARRY, giving the sinner a little squeeze.

"No you don't. You love saints. I wish you'd fall in love with one, and let me alone. Here, Point, dear old Point, let's have a tumble in the grass. We've had too much love. Point knows how to love. He isn't all the time fretting one about it. Come, Point. By-by, HARRY," and the two frolicsome creatures, one seemingly as irresponsible as the other, ran down the lawn pell-mell, and were soon out of sight, behind the shrubbery.

MARGARET had not a particle of fear in her nature, yet she was strangely excitable and impressible. With her, "coming events cast their shadows before." Without in the least realizing the value of the gift thus bestowed upon her at birth, she found herself at eighteen totally unable to analyze the emotions that swept over her, by night and by day, filling her waking hours with gloom, and her dreams with horrors indescribable. Had she been able to take, link by link, of the chain that bound her to the future, and followed them in thought to the deprivation, the desolation, the woe unutterable that was to come upon this glorious but mistaken people, she might have been strong enough to have guided her nearest and dearest to homes of peace and plenty. MARGARET'S spiritual vision was keen, but she was unable to form any adequate conception of the things she saw. Her father declared that her imagination was running away with her. Her mother constantly chided her for her foolish fancies. GEORGE made merry a dozen times a day at her expense, and ALFRED—her dear elder brother—felt called upon, whenever they met, now-a-days, to be more tender of her than ever. "Why do you call me 'poor child?' inquired she one day, after her brother had been unusually silent and thoughtful.

"I hardly know, pet," was the evasive reply.

"But you never used to call me so," she continued. "I used to be Rosebud, and Mignon, and Beauty, and Sweet Brier, and any quantity of other nice things. Now I am 'poor child' only."

ALFRED was compelled to laugh a little at the woe-begone expression, put on for the occasion, but the smile soon faded from his face, as drawing the bright head to his breast, he answered:—"You are everything that is sweet and dear, MAGGIE, but you are a poor child, nevertheless. Should we ever be separated," and the young man's tones grew strangely low and pathetic——

"Don't ALFRED, please don't, brother. You will break my heart," interrupted his companion, looking beseechingly up into his face.

"Just this, sister." Oh, how inexpressibly sweet sounded that little word sister, from those manly lips. "Just this. If we ever should be separated, and you should come to know the agony of heart-ache and privation, remember that whether in the land of the blest, with the loved ones gone before, or living to suffer and endure, your brother ALFRED loves you more than anything else on this beautiful earth,—more than himself; yes, MAGGIE, darling, a million times more than himself. And remember, too, it was that this prophetic out-look brought those obnoxious words 'poor child,' so often to his lips."

"Then you think there is great danger?" sobbed MARGARET.

"I fear, dear, that war is inevitable, but I feel better now that I have worried you with my forebodings. So cheer up, and I'll try not to say 'poor child' for a week."

A few evenings after this conversation MARGARET retired to her room more than usually excited with the news just received from different parts of the country. HARRY had just galloped away toward home, and, as usual, the evening had been anything but a harmonious one. The intelligence had elated one and depressed the other. TRAVERSE was for vengeance—quick, implacable, sanguinary vengeance. MARGARET argued peace at any terms, and the evening ended by the capricious girl's informing the gentleman to whom she had plighted her troth that she trusted he would not only see the necessity of returning home immediately, but of remaining there after he got there. It is unnecessary to say that Mr. HARRY TRAVERSE made a speedy exit! And it is probably unnecessary to say that when MARGARET sought her couch that, what with the stinging of conscience and the sad outlining of the future, there was no more unhappy girl in the Old Dominion. After an hour or two of restlessness and nervous tossing, she fell into an uneasy slumber, from which she was awakened by the sound of her name called clearly and distinctly—"MARGARET, MARGARET, MARGARET!" It was her brother ALFRED'S voice. She would have known it among a thousand. Hurriedly throwing on a wrapper, MARGARET sought her brother's room. She opened the door. Everything was as silent as the grave.

"ALFRED," said she softly. "ALFRED"—again. There was no answer to either call. Trembling with terror and apprehension, she tottered to the side of the bed. "ALFRED," came again from her almost benumbed lips. Not a word. Summoning all her courage to the front, she felt her way to the bureau—found a match, lit it—and then discovered that her brother was not in his bed! At that moment she remembered he had informed the family of his intention to remain that night with a friend—and more dead than alive she left the apartment.

"Are you sick, Miss MARGARET?" came in the sweetest of tones from across the the corridor.

"Oh, SUSAN! is that you?" whispered MARGARET. "May I come in a moment?" How strange that even in that time of supreme terror MARGARET could not approach this slave, this servant, this bond-woman, without inquiring, almost deferentially, if she might be allowed the liberty.

"Certainly," said SUSAN, in the same musical monotone. "But please be very quiet. You know your mother is easily awakened," and SUSAN carefully closed the door connecting the room of the mistress with that of the servant.

"Did you hear any one call me, SUSAN?" inquired MARGARET, eagerly.

"You were dreaming, perhaps," said the slave.

"I heard my brother ALFRED call me three times distinctly, so—'MARGARET—MARGARET—MARGARET,' and the last MARGARET was so plaintive, so full of love, and longing, and of great need, SUSAN, that I ran to his room expecting to find him ill, suffering, dying perhaps; and he wasn't there! What does it mean?" and the frightened girl threw herself on the floor beside her companion, and buried her head in her lap. Oh! the magnetic touch of that octoroon's hand! It fell upon MAGGIE'S hot head, like the refreshing dew—and tears once more relieved the excited brain.

"Oh, SUSAN, if you would only love me!" sobbed the child.

"Love you?" repeated SUSAN, mechanically continuing the passes over the beautiful brow. "Love you? Why do you want me to love *you*, Miss MARGARET?" and the tones were as clear, as flute-like and self-contained as ever.

"Because I love you, dear, and because I need your love, and because we could do each other good, and because, SUSAN, there is something about you that I feel as if I had a right to. You are reserved, of course, but you are not strange, SUSAN. I have a feeling for you, dear, very much like that I have for——"

The word remained unspoken.

"Do you hear those voices, Miss MARGARET?" and SUSAN tenderly lifted the tired head and threw back the window blind. The negroes were having another jubilee—this time in an entirely opposite direction from the scene of the other evening.

"I must go to them immediately," said MARGARET, rising hastily. "If pa hears this, I shall be powerless to keep them from being punished;" and the girl, once more fairly aroused, started for the door.

"I will accompany you," said SUSAN, throwing on a shawl.

The two women sliped cautiously out of the house. The night was intensely dark; clouds were heavily massed in the west, and the wind in the red cedars on the bluff sighed dolefully as they passed. They spoke not a word as they glided like ghosts along the broad avenue that led to the negro quarters, led by the melancholy music that seemed to fill the air with a sort of sweet sorrow. Suddenly SUSAN exclaimed: "MARGARET! Look, Miss MAGGIE!" MARGARET looked, and both stood still, fascinated by the scene. They had just made a sudden turn in the road and the negro quarters were before them. In one of the cabins were a dozen negroes, male and female, arrayed in all sorts of garments, and disposed in all sorts of picturesque attitudes. In the mud fireplace at the back of the cabin blazed an immense fire of pitch pine. The brilliant light threw the black faces into strong relief. The negroes were evidently laboring under high excitement, and as the grotesque words, set to the sweet, emotional melody, were pronounced by them, their features worked and their eyes rolled, making a picture that DANTE would have liked to describe. Clearly the song rung out as the silent listeners waited:

"O take your shoes from off your feet;
Let my people go.
And walk into de golden street;
Let my people go.
Go down, Moses;
Way down to Egypt's land;
Tell old PHARAOH
To let my people go."

It would be impossible for any singer, however skilled, to imitate the power and pathos with which these untutored children sung. In the notes were treasured the endurance, the faith, the love and the heart-break of generations. MARGARET listened till SUSAN'S sobs startled her to consciousness of her position, and then speaking gently to her companion, she hastened forward to fulfill her errand.—[To be continued.

MRS. COMMODORE BARNEY was reported to be the last surviving child of any of the signers of the Declaration of Independence. Two daughters, however, of Vice-President Elbridge Gerry, one of the signers, are still living in New Haven, and a third in Boston.

MONEY AND TIME are the heaviest burdens of Life, and the unhappiest of all mortals are those who have more of either than they know how to use.—*Johnson.*

Ladies' Port-Folio.

A HAPPY NEW YEAR.

BY KATE WOODLAND.

A HAPPY NEW YEAR for the children,
Who gladden our home and hearth!
A Happy New Year for the little ones,
All over the beautiful earth!
May the homes be freighted with pleasure,
And the moments filled with bliss,—
Until each little heart is ready to say,
"No year was ever like this."

A Happy New Year for the maiden—
The bride in her blushing bloom—
May love gild the days with sunshine
That leaves no shadow of gloom.
A Happy New Year for the youthful,
With hopes so buoyant and strong;
May the choicest and purest of blessings
Fall ever their pathway along.

A Happy New Year for the parents,
Who cherish with loving pride
The blossoms of household beauty
Which spring from the dear fireside;
May hopes that are fondest and purest,
And wishes the dearest and best,
Be realized freely and fully
In hours which the future makes blest.

A Happy New Year for the aged
Who are journeying down life's hill,
With hands that are weary with labor,
With feet that long to be still;
May hands that are tender and gentle,
And arms that are faithful and strong,
Make smooth every spot in their pathway—
Make glad the last strains of life's song.

A Happy New Year for the peaceful,
Who have entered this morn into rest—
For the soul that is weary with waiting,
The dawn of the new year is blest
Which opens to them the glad future,
And brings back the loved ones of yore,
In a land where no sorrow can enter,
And partings are known, nevermore.

Van Buren Co., Mich., Jan. 1, 1872.

WHAT CAN A WOMAN DO?

C. E. D., Hampton, Va., writes as follows: "Please tell me what I can do to earn something. I am a mother, with two little children—one three years and the other nine months old. My husband has all he can do to clothe and provide for us, as this is a poor country, and there are so many things that I want, such as a sewing machine, a small organ, and other things too numerous to mention. If I could only earn something I would be *so* glad! What can I do?"

You ask a very perplexing question; one that thousands of women all over the country are asking of themselves, if not of others. To keep house and care for two children properly, is quite enough for any one pair of hands to do. But with little or no society, leisure, a husband employing every facility to give a simple subsistence, how can a thoughtful, loving woman, and perhaps a laudably ambitious one, help asking "what can I do?"

There is nothing in the world so hard for people to cut loose from as *custom*, no matter how absurd it may be. It has been the custom for women to marry, and to expect, as a matter of course, that marriage was to be the comprehending, absorbing, satisfying condition of existence for them. Created for a helpmeet, the question *how* to be a helpmeet seems never to have been taken into consideration. I don't believe woman was ever designed for work, in its true sense. But the scales of society have become so unevenly balanced that in order to modify discrepancies, women find it necessary to be helpmeets in the actual prosaic, hard-working sense, instead of the poetic, spiritual, and moral sense alone. And so the question, "What can I do?" arises. The work must be something to be accomplished at home, in little chinks and remnants of hours. It can only be skilled labor, because women who marry are rarely trained mechanics or artisans.

In many large towns sewing machines are sold and work enough furnished to pay for the machine, or the machine may be purchased and paid for in installments, as one can earn the money. I have observed that colored people care very little for needlework, and usually hire their sewing done; and in Virginia, where the race counts a majority of the population, a seamstress might do much in that way. Can you not supply some market with flowers, or plants in bloom? Is there no market for fancy work, hand-knitting or embroidery? Such articles may sometimes be furnished to merchants upon application. If you understand cookery, why not establish a reputation for those abominable eatables known as "pies and cakes," in the Hampton market? Why not get enough subscribers for the RURAL NEW-YORKER to win you both a sewing machine and an organ?

MINTWOOD.

THE prettiest American lady now in Paris is said to hail from Savannah, Ga.

COUSIN HANNAH.

How I dreaded her coming! She was so neat in her housekeeping; had means to live in comfort, and was childless. She knew nothing of the tumult and care four healthy, romping children could make, and I imagined she would take little comfort while with us. Our house contained but two rooms—and their toys, mittens, shoes and hats, were frequently scattered over the floor. I was often discouraged trying to pick up after them, and I fancied Cousin HANNAH would have trained them to put things in their proper places when not in use—at least she would think it an easy matter, having never had the trial.

I tried to fix up and be ready. The little dresses and aprons were clean in the drawer—a change for each day, as long as cousin would remain—resolved they should be as neat as possible. The eldest, not quite five, was a quiet child, but the three-year-old and two-year-old were so full of fun and frolic I could not check their spirits, and sometimes "I will," and "I won't," were spoken very positively.

Thus tormented with a false pride, I anticipated but little pleasure from cousin's visit. How mistaken are our ideas of the happiness of others! She came, and a half-day convinced me she envied us our little children. With baby in her lap, and the rest in a group at her knee, her big heart seemed to cry out for such affection. Their little wants gave her employment, as instinctively they turned them all upon her. No need of coaxing acquaintance with any, so readily do children know their real friends.

How often during that week did I thank GOD and take courage. Before cousin went away I told her I had dreaded her coming because of my noisy, romping children. A tear sparkled in either eye as she answered: "I envy them to you more than your farm, or any earthly goods. These little toys, shoes, mittens and childish dresses—O, how suggestive of home and love! Little fat arms twining your neck, rosy lips lisping words of love, pattering feet making music on your kitchen floor! What more can you ask? Surely yours is a goodly heritage."

We parted well pleased, and months after, when discouraged, I would think of Cousin HANNAH'S lonely house and be grateful for the love of little children.

SALLY A. HUMES.

ABOUT CHILDREN.

DR. O. W. HOLMES, in the February Atlantic, thus discourses about children:—The Old Master, who is a bachelor, has a kindly feeling for this little monkey, and those of his kind.

"I like children," he said to me one day at table. "I like 'em, and I respect 'em. Pretty much all the honest truth-telling there is in the world is done by them. Do you know they play the part in the household which the king's jester, who very often had a mighty long head under his cap and bells, used to play for a monarch? There's no radical club like a nest of little folks in a nursery. Did you ever watch a baby's fingers? I have, often enough, though I never knew what it was to own one." The Master paused half a minute or so, sighed—perhaps at thinking what he had missed in life,—looked up at me a little vacantly. I saw what was the matter; he had lost the thread of his talk.

"Baby's fingers," I intercalated.

"Yes, yes; did you ever see how they will poke those wonderful little fingers of theirs into every fold and crack and crevice they can get at? That is their first education, feeling their way into the solid facts of the material world. When they begin to talk, it is the same thing over and over again in another shape. If there is a crack or a flaw in your answer to their confounded shoulder-hitting questions, they will poke and poke until they have got it gaping just as the baby's fingers have made a rent out of that atom of a hole in his pinafore that your old eyes never took notice of. Then they make such fools of us by copying on a small scale what we do in the grand manner."

A CONFIDING HUSBAND.

DURING the trial of a case in Louisville last week, a witness persisted in testifying to what his wife told him. To this of course the attorneys objected, and it was ruled out by the judge. He would proceed again to tell "shust how it vas," when the attorney would sing out, "How do you know that?" "My vife told me," was the answer. This was repeated several times. Presently the judge, becoming unable to contain himself longer, interrupted, "Suppose your wife were to tell you that the heavens had fallen, what would you think?" "Vell, I think dey was down."

Reading for the Young.

THE FOX AND THE CROW.

TRANSLATED FROM THE FRENCH OF LA FONTAINE.

MASTER Crow, that sly old thief,
Had stolen a piece of cheese
And retired to his family tree
To eat it at his ease,
When Master Fox, drawn by the smell,
Came sauntering that way,
And, in his sweetest accents,
Bade his friend, the Crow, good-day.

"How do you find yourself?" said he;
"Your health, I hope, is good,
For in my poor opinion
You're the phenix of the wood.
You are so beautiful, Sire Crow,
Like silk your feathers shine,
And your voice, I hear from all your friends,
Is equally as fine."

The vain old bird for singing
Stretched his great throat open wide,
The cheese fell from his beak
Close to Reynard's side.
Master Fox snapped up the cheese
And said to Master Crow:
"My honored sire, there's one thing
That you do not seem to know—
For all the flattery you receive
You'll surely have to pay.
This praise has cost you your cheese;
My silly bird, good-day."

Harrisburg, Pa., 1872. E. C. P.

CHARLIE:

A Story for Very Little Children.

BY M. L. BARBER.

WHEN I was quite a little girl I went to stay some time with an Aunt of mine. She had no children, but had a canary bird, "Charlie," which I thought most as good as any little play-mate. He was a pretty bird; bright yellow, and dark-brown. When I first came he did not seem to like me very well. I think he was really jealous, for if Auntie combed my hair, he would fly round her head, and scold, as well as a canary bird can scold—chirp as sharp and cross! But he soon got over that, and as I fed him and cleaned his cage every day, giving him fresh water and seed, and a lump of sugar, he learned to like me better than his mistress. I had some flax seed, which I never gave him, unless he would come and eat it in my lap. I used to sit down on the carpet and call "Charlie, come get some seed!" and he would answer me as quick as a bird could—flying down to the floor—and standing a little way off looking at me. I would keep calling softly:—"Come, Charlie, get some seed, Charlie," and he would answer me and hop a little nearer, and a little nearer, turning first one little eye up to me and then the other, till at last he was close to me, when he would fly up and light right in my lap, to pick up the seed. I used to be so pleased, I could hardly keep from laughing, and would call out very softly, "Oh, Auntie, see him! Do look quick!"

He would eat a few of the seeds, and then take one in his bill, and fly off to his cage to eat it there. Sometimes we could coax him on to the table while we were eating, but he never would come if there was a man at the table. Sometimes, when we were eating, we would drop a crumb on the floor, and say: "Charlie, go find it," and he would chirp in answer and down he would go and hop round till he found it, and then he would fly back to his cage with it. Once I found him perched on the plate of cookies standing on the tea-table, helping himself. Every morning I used to put fresh sand into his cage, but he seemed to like mud the best, for if we came into the room from out of doors, he would fly round us and tease in his plaintive little chirp till we sat down, when he would alight on our shoes and pick away at them. One day the minister called, and while the big folks were busy talking, I was deeply amused watching Charlie. The minister's boots were all muddy, and Charlie sadly wanted to get a pick at them, but was afraid to come near to a gentleman. He flew round him, lit on the floor, and looked at the mud; then flew off again, then back again a little nearer, till at last he hopped close to his boot, when the minister saw him, and not thinking what he was after, moved the point of his cane towards him. This frightened the little fellow so that he did not try for the mud any more. One day a big cat jumped up on the outside of the window, trying to get at him. He flew right straight to me, lit on my shoulder, and did not move till the cat went away.

But what used to amuse me the most was when he took his bath. Every morning I used to put a saucer of warm water on the floor, and then open his cage door. Out he would fly, and soon he would see the water and go to it. He would walk all around the edge of the dish, then dip in his bill, then step in and jump out, as if it was cold, but at last he would get in and give himself a good washing, spattering the shining drops all round; then he would hop out and light on the round of a chair to dry himself and fix his feathers—that is, dress himself, but I would say:—"Oh, Charlie, you are not half washed, go back again!" and back he would go and splash himself again, and then fly to the chair. But I would say:—"That isn't enough; go wash again, Charlie," and he would go right back, and so three or four times, till he was as wet as he could be: then he would get vexed, and when I said:—"Go in again," he would chirp sharply at me, and fly up to his cage to dress himself there. After a while, another Aunt came with her little baby. Charlie did not know what to make of that; he had never seen a baby before, and seemed to think that there was something wrong about it. He would fly round it, then light as near to it as he could, and stand and look at it, turning his little head first one side and then the other. Then he would grow jealous again, and sing, and try in every way to attract our attention from the baby to himself. Wasn't he a funny bird?

Shall I tell you what became of him? Why, one day when the baby was going away with her mamma—away over the sea—we were so sad and so busy, we forgot all about Charlie, and left the door of the room where the cage hung, open, and out he flew, and out of the open window. It was spring, and he seemed to enjoy being out among the green fresh leaves; but we knew he could not find his food, and would die of cold when night came, so we tried to coax him back into his cage, but though he stayed round the house all day, he would not come to his cage, and toward night we lost sight of him. I fear some old cat got hold of him. I cried sadly for my little pet, and I never have found another bird like "Charlie."

The Puzzler.

ILLUSTRATED REBUS.—No. 4.

☞ Answer in two weeks.

MISCELLANEOUS ENIGMA.—No. 2.

I AM composed of twenty-five letters.
My 23, 1, 11, 19, 13 is the largest species of deer.
My 9, 7, 3, 15, 13 is a ladies name.
My 23, 17, 4, 10 is a native of Africa.
My 3, 12, 8, 14, 3, 16, 6 is the highest mountain in the world.
My 17, 5, 18 is a preposition.
My 7, 24, 2, 22, 10 is to respect.
My 25, 20, 12, 3, 21 is anything unusual.
My whole is one of the proverbs of Solomon.
☞ Answer in two weeks. CHARLIE.

HIDDEN BIRDS.—No. 1.

1. How large your eyes are!
2. How render fit praise?
3. I see a gleam of light.
4. Be chief in charity.
5. Ope, wee window!
6. First, second or third?
7. Watch Eric—he winks.
8. Repel I cannot.
9. Rufus the Red started yesterday.
10. What a queer looking fisherman.

Forest City, Ill. FOURTEEN.

TRANSPOSITION OF LETTERS No. 1.—

Remember, friend, as you pass by.
As you are now, so once was I;
As I am now, so will you be—
Remember, friend, and pray for me.
Catholic Gravestone.

ANSWER TO REBUS IN SUPPLEMENT.—Never praise a bridge till you are over it.

News of the Week.

GENERAL REVIEW.

THE Catacazy affair is assuming importance, and a growing coldness between Russia and the United States is thus far the result. There is much gossip about the matter among diplomats in Europe.

The Grand Duke has had a fine buffalo hunt on the plains, with Gen. Sheridan and a large band of Indians. He shot several buffaloes.

Wm. M. Tweed is expected to resign his seat in the Senate at Albany.

The remarkable Wharton trial at Annapolis is drawing to a close. It looks as if Mrs. W. would be acquitted.

The Cuban difficulty appears to have blown over for the present.

Mr. Colfax is urged by many important papers and men for the next Vice-President.

The United States Supreme Court has approved the Constitutionality of the Legal Tender act.

A new Atlantic Cable is to be laid direct to New York, and a reduction of rates on the old ones is talked of.

Senator Frelinghuysen has made a speech in the Senate, expressing great confidence in the President.

Opposition to Civil Service Reform has appeared in Congress.

It is proposed to reserve the Yellowstone region for a National Park.

DOMESTIC NEWS.

New York City and Vicinity.

ON Sunday, the 14th, a $500,000 fire occurerd in some planing mills and a lumber yard at the foot of East Thirty-Second street. Fire caused by the furnace. A fire at 37 Wooster St., the same day, did damage to the amount of $90,000.

The Fisk-Mansfield love letters have been given to the public in the Herald.

Stokes, who murdered Fisk, will have his trial in February.

It is proposed to put the telegraph wires of the city in the sewers, under ground.

Stokes is expected to plead guilty.

Miss Matilda Heron has had a benefit, netting $4,342.

The Dolby concert troupe has returned to England.

The unveiling of the Franklin statue passed off with much *eclat* on the 17th. Prof. Morse pulled off the flag covering, and Horace Greeley made the speech. The city wore a holiday appearance. A grand banquet took place in the evening at Delmonico's, attended by H. W. Beecher, Greeley, Rev. Dr. Chapin and many others.

It is proposed to erect a statue to Horace Greeley on Printing House Square. Over $5,000 have been subscribed.

Mayor Hall has returned to his post.

The winter in New York, up to the 19th, has been mild and delightful.

Political.

A GRANT Club has been organized in Boston, with Hon. A. H. Rice as President.

Mr. Dawes thinks fifty millions of taxes can be taken off the people this session of Congress.

The suffrage women at Washington have had an interview with the Senate Committee on the Judiciary, and Senator Trumbull will look after them. Mrs. Hooker, Mrs. Stanton and Miss Anthony made speeches.

On Jan. 11th, Gov. Warmouth of Louisiana announced that the danger of a riot had passed, and troops could be withdrawn.

On the 12th, Mayor Flanders of New Orleans begged the President for martial law. This was refused. The political troubles continued, with no quorum in the Senate. By the 16th the troubles were considered at an end, the Warmouth faction having triumphed. Most of the Senators returned. The cost of the fifteen-days' struggle is estimated at $350,000. The Legislature asked the President for the use of the military forces of the United States, but they were refused.

The Senate of Missouri has voted to pay $400,000 on State bonds in currency instead of coin.

The one-term principle is being debated in the Wisconsin Legislature.

Gov. Smith of Georgia says that the State will pay all of her legal indebtedness.

A Constitutional Convention will be held in Utah, Feb. 10th.

Nebraska is to have a Constitutional Convention.

Illinois has passed a stringent license law.

Senator Sumner has made a great speech on his Civil Rights bill.

Hon. Freeman Clarke of New York has introduced a bill into the House for the resumption of specie payments.

The Tribune has recently spoken of the "sturdy good sense of Gen. Grant."

Speaker Blaine's paper in Maine supports Mr. Colfax for the next Vice-President.

Fires, Disasters, Etc.

THE oil cloth factory in Winthrop, Mass., was destroyed on the 14th. Loss $50,000.

A powder house at Rockland, Me., exploded on the 12th, killing one man and wounding several.

A paper-mill at Ypsilanti Mich., was burned on the 13th. Loss $100,000.

An oil refinery was burned at Wyoming, N. Y., on the 13th. Loss $20,000.

A satinet mill was destroyed in Worcester, Mass., on the 14th. Loss $10,000.

A packing and grain house was destroyed at Collingwood, Ont., on the 16th. Loss $10,000.

A fire at Cairo, Ill., on the 15th, burned three negro children to death.

Half a square of buildings on Fifth street, Reading, Pa., were destroyed on the 16th. Loss $250,000.

The round-house of the Lake Shore Railroad was burned at Toledo, Ohio, on the 16th. Loss $100,000.

Five persons were burned to death in Brantford, Ont., on the 14th.

Crimes.

WILLIAM BUTLER, aged 20, was shot at Grand Grove, Nova Scotia, on the 5th, by Alex. Lanford. Butler was to elope with Lanford's sister.

There are twelve murderers confined in the Tombs, in New York City.

The brig Jessie Lowe has been found abandoned, in good condition, near Calais, France. A mutiny is supposed to have taken place.

George W. Bassenett, aged 25, committed suicide on the 14th, in New York City, by shooting himself.

John Bever of St. Cloud, Minn., brutally murdered his wife on the 14th.

January 17th, a Mrs. McCarty of Albany, while in a street car in Utica, shot two men, Milton H. Thompson and H. H. Hall, killing the latter almost immediately. She intended to kill Mr. Thompson, with whom she had had a quarrel.

There was a small riot in Chicago on the 15th, which broke up a meeting of the Common Council.

Obituaries.

RT. REV. BISHOP JOHN MCGILL, for 21 years Bishop of the Roman Catholic diocese of Virginia, died at Richmond on the 14th, aged sixty-two years.

The Duke de Persigny is dead. He expired at Nice on the 12th. He was born in 1808, and held many important positions under the Empire.

Mayor Walker of Vicksburg, died on the 12th.

Maj. Thomas C. Bradford, aged 34, died at West Point on the 12th.

Rev. H. P. Bogue, a venerable and well known clergyman, died in Buffalo on the 15th, aged 76.

Mrs. George Wood, (Eliza Logan,) sister of Madame Olive Logan-Sikes, died in New York on the 15th.

FOREIGN NEWS.

From South America.

THERE has been been a slight revolt at Paraguay.

A Lady, returning to her home in the country after a sojourn of a few weeks in the city was hardly recognized by her friends; in place of a coarse, rustic, flushed face, she had a soft, clear, smooth and beautiful skin, and instead of thirty, which she was, she really appeared but eighteen. Upon inquiry as to the cause of so great a change, she frankly told them that she had been using Geo. W. Laird's "Bloom of Youth," and it was this invaluable acquisition to the toilet that made the wonderful change. Sold at all druggists. Depot, 5 Gold street, New York.

G. Dunseath—Dear Sir:—Watch No. 1244, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., has been carried by me nearly three months; it is now running at the rate of *five* seconds per month slow.—E. C. KEYS, Pittsburgh, Feb. 23, 1869.

SPECIAL NOTICES.

PERFECTION.

The nearest approach to perfection, in articles designed for kitchen use, is that of DOOLEY'S YEAST POWDER, now generally recognized as the most economical and reliable Baking Powder in the country. No housekeeper should be without it. To accomplish the same results, it requires but one-half or two-thirds the quantity that it is necessary to use of other Baking Powders, while uniform success in making rolls, bread, biscuits, pastry, &c., is guaranteed. Recommended solely on its merits. DOOLEY & BROTHER, Manufactures, 69 New St., New York. For sale by all Grocers.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

Columbus Discovered America, but it has been found that the only economical Shoes for children are the celebrated SILVER TIPPED—never wear out at the toe, and are worth two pairs without tips. All dealers sell them.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, January 20, 1872.

WALL STREET continues much excited by the upward speculation in the Stock Market. The transactions of the week in some of the Western Roads—notably the Union Pacific—and in Western Telegraph and Pacific Mail are enormous, and the advance in prices quite general. Mr. VANDERBILT'S Roads are in good favor also, and the demand continues for Philadelphia and Reading. There is said to be a sharp and determined fight going on among the Railroad giants for the control of the Union Pacific line, at the annual meeting in March, and rumor says that the rise in Western Telegraph and Pacific Mail is in some way connected with it.

The Stocks of the United States are steady in price, and in large demand. The Sinking Fund bought $850,000 of 5-20s on Thursday, at or within the price of Gold, the seller receiving the accrued gold interest.

The Pacific Railroad Mortgages and the old Mortgages of the Western Roads are in demand, mostly for investment. The subscriptions to the North Pacific 7.30 per cent. Loan are going on rapidly this month, both at home and in England, where the Loan has been successfully introduced.

The Express Shares are firm, after some depression in the United States Company, in which Mr. FISK'S estate is said to be interested, and the sales supposed to be for this account.

General trade is more active in the preparations for the Spring business. The arrivals of Foreign steamer cargoes this week are numerous, many of them having been kept back at sea by bad weather. The Customs Duties paid on these and other Goods, for the week, are over three and a-half millions.

Money at Bank is 7 per cent., and on the Street 7 per cent. on demand loan, and 8@10 per cent. on Merchant paper.

The following are the comparative movements of the City Banks for the past fortnight:

	Jan. 6.	Jan. 13.
Capital	$87,301,600	$87,301,600
Loans	272,704,400	275,253,200
Gold and Greenbacks	68,870,100	71,681,400
Deposits	205,828,200	211,824,000
Circulation	28,492,200	28,439,300

PRICE OF STOCKS AND BONDS.

American Gold	109	N. Y. Central Scrip	94¼
U. S. 5-20's of 1867	112⅝	Reading	113⅜
U. S. 6s of 1881	115¼	Rock Island	111⅜
U. S. 10-40s, 5 ₱ cts	110¾	N. West	74½
U. S. New Loan	110	Do. Preferred	93½
N. Y. Bounty Loan	106⅜	St. Paul	58¾
Tennessees	65¾	Do. Preferred	82¾
Virginias, new	52	Lake Shore	92¾
Missouri Bonds	97	Ohio and Mississippi	49¾
U. S. Currency 6s	115⅝	Toledo & Wabash	74¾
Central Pacifics	102¾	Erie	34¾
Union do	94⅛	Union Pacific Stock	37⅝
Western Telegraph	73¾	Adams Express	92
Pacific Mail	59¾	American Express	61
Lake Shore Scrip	89¾	United States Exp's	63
N. Y. Central Stock	98¾		

Our table marks an advance of ⅜ per cent. in U. S. 6s of 1867, and in the 5 per cent. 10-40s.; 2½ per cent. in Tennessee Bonds; 2 per cent. in Missouri Bonds; 2 per cent. in Union Pacific First Mortgage; 2⅛ in Western Telegraph; 4 per cent. in Pacific Mail; 2 per cent. in New York Central Stock and Scrip; 3 per cent. in Rock Island; 5 per cent. in North-west Common; 1¼ in Northwest Preferred, Wabash and Lake Shore; 5 per cent. in Adams Express, and United States Express 2 per cent. The Stock of the Erie Road fails to sympathise in the prevailing speculation.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Jan. 19, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 22,020 bales of cotton, 427 pkgs. dried fruits, 2,937 bbls. eggs, 49,487 bbls. flour, 18,280 bush. wheat, 288,300 bush. corn, 119,865 bush. oats, 45,450 bush. barley, 7,200 sacks grass seed, 970 bbls. beans, — bags do., 1,145 bbls. corn meal, 2,952 bags do., 293 bales hops, 3,765 pkgs. pork, 1,404 pkgs. beef, 18,610 pkgs. cut meats, 14,359 pkgs. lard, 1,311 kegs do., 9,399 pkgs. butter, 6,976 pkgs. cheese, 7,378 dressed hogs, 1,148 bags peanuts, 263 hhds. tobacco, 1,715 boxes and cases do., 4,708 bbls. whisky, 456 bales wool.

Beeswax.—The market is very quiet. Shippers are taking a few lots at 31@31½c. for Southern.

Beans and Peas.—Mediums have been coming in rather freely, but the low prices have induced considerable trade from home consumers, and prices are, if anything, a trifle firmer. Marrowfats are in less demand; a few small lots are being shipped. The supply is not large, and steady prices are quoted. Green peas are in fair demand, and with insufficient supplies prices are more in the seller's favor. The quotations are for prime medium beans, $2.40@2.50, the latter price obtainable only for small lots; good mediums, $2.20@2.35; poor, as low as $1.25; pea, $2.30@2.60; kidney, $3.10@3.25; red kidney, $1.25@2.25. Prime marrowfats, $2.85@2.95; fair do. $2.60@2.80; common lots as low as $2.25. Canada peas, in barrels, $1.20; green peas, $2@2.05; Southern, B. E., per two bush. bag, $2.35@2.75.

Butter.—There is a further falling off in the receipt of State, and with scarcely any Western arriving the market shows decidedly more strength. Fine butter is extremely firm, especially as there are no pails to compete with choice half tubs. One of the best features of the trade is the attention that is daily turning towards butter of passable quality. Since tops and extra short dairies have been used up; and although this grade is not strictly higher when taken in round lots, dealers are supported in demanding an advance when they are forced to thrust the trier for close sampling. We advance a few qualities and report market firm at close. State, pails, good, 32@35c.; State pails, finest selections, 36@37c.; State dairies, fine, 30@32c.; State dairies, fair to good, 28@31c.; State, half-tubs, good to fine, 31@33c.; State, do., common to fair, 26@28c.; State, firkins, fine yellow, 29@31c.; State Welsh, good dairies, 28@31c.; State do., common to fair, 22@26c.; State do., fresh made, 30@32c.; State, fancy, select tubs, 31@33c.; Ohio, good, 21@23c.; Ohio, Central and Southern, 14@17c.; Western, choice yellow, 23@25c.; Western, store-packed, 8@13c.; rolls, good West, 20@22c.; rolls, common to fair, 13@18c.; grease butter, 9@9½c.

Cheese.—The business the past week has been almost entirely from home consumers. Shippers are making bids on the best fine lots, but this class of stock is being steadily drawn upon by the home trade and as the supply is not burdensome, holders are not urging business. Other grades of stock show unimportant changes. The shipments the past week are only 80,277 pounds. The quotations are 13½@14c. for fancy factory; 12c. for fair; 9½@10½c. for common; 11½@12½c. for farm dairy; 9@10c. for common; 11½@12½c. for Ohio factory; 10@11c. for common do.; English dairy, 11@13c. Vermont factory, 12@13c.

Cotton.—The market has again been somewhat excited under light receipts and a strong speculative feeling in the South. Prices have been very irregular. Exporters have been buying more freely. At the close the annexed prices are steadily asked with a fair amount of stock offering.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	19	19¼	19¼	19¼
Good Ordinary	20⅛	20⅛	20⅜	21
Low Middling	21⅛	21⅛	21⅜	22⅛
Middling	21⅜	22⅛	23⅛	22⅞
Good Middling	22⅜	22⅞	23⅝	23⅝

For forward delivery the market is active and decidedly higher. Latest sales on the basis of low middling are as follows:—For Jan. 21 3-16; for Feb. 21⅝; for March 22¼; for April 22⅝; for May 22 19-32.

Dried Fruits.—There is no movement beyond the fair jobbing trade that has prevailed of late. Blackberries are firmer.

Apples—Old State, qrs., 7@8c.; Western, new, 8@8½c.; Southern, new, qrs., 7@8c.; do. fine, sliced; 9½@11½c.; new State qrs., 8@9½c.; do., sliced fine, 11@13c. Peaches, peeled, new N. C., 17@18c.; do., do., do., 15@16½c.; do. E. Sh. Va., 15@16½c.; new unpeeled halves, 7½@8c.; do. qrs., 6@6½c. Plums, 24@27c. Cherries, new, ₱ lb, 28½@29c. Blackberries, 13½@14c. for small and 15c. for large lots. Raspberries, 28@29c.

Eggs.—Small supplies have caused a decided advance in prices, but at the close the high prices have started increased shipments forward from the interior, and although no decided change is made in prices, still there is a less confident feeling. Sales of fresh Western at 42c. for extra brands; 40@41c. for Western ordinary brands; 42@43c. for State; 43@45c. for Pennsylvania, New Jersey and Long Island. Limed at 33@35c. for State, and 31@33c. for Western.

Flour.—The business has been very light, almost confined to the home trade. The arrivals are a little heavier and prices have been put down about 10c. per bbl. $5.90@6.25 for superfine State; $6.60@6.75 for common extra do.; $6.80@6.95 for good to choice do.; $7@7.40 for fancy do.; $5.90@6.25 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.50@6.85 for extra do.; $6.90@7.40 for choice extra do., including shipping brands of round hoop Ohio at $6.75@6.95, and trade brands of do. at $7.00@7.45; good to choice white wheat extras at $7.25@7.50; Minnesota, fair to very choice extra, at $7@5.75; St. Louis at $6.80@7.50 for common to fair extra, and $7.55@9.50 for good to choice. Southern at $6.80@7.40 for extras and $7.55@9.50 for good to choice. Rye at $4.25@5.25. Buckwheat flour is quiet and weak, quoted at $3.30@3.60. Corn meal selling slowly. Western white, $3.50@3.65; do. yellow, $3.70; do. Jersey, $3.75@3.85; do. Brandywine, $4.20; do. Marsh's caloric, $4.15@4.20; do. Southern, $4.10@4.30.

Grain.—Wheat has been hard to sell, with prices lower and weak. At the close with an easier freight market a few boat loads have been taken, but the market lacks animation. No. 2 spring in store at $1.52 @1.55; No. 1 spring in store at $1.50@1.58; Winter red Western, $1.60@1.64; amber Western, $1.62@1.70; and white Western at $1.68@1.75. Oats are inactive and in the buyer's favor. Sales at 51@52c. for Western and Ohio. Barley is quiet at $1.15@1.20 for Canadian. Corn is coming in freely—a good portion of the new received is in poor order and sells low. The market generally is weak as the export trade is lighter. Sales at 72@74½c. for Western mixed afloat; 76½c. for old and new Western mixed; 78c for old Western mixed.

Hops.—The market shows no improvement. Brewers are ready to purchase fine lots, but the supply of this class of stock is small. Other qualities are inactive. Holders are firm in their views. About 300 bales 1868 growth were sold on speculation at 7@11½c. New Yorks, growth 1871, 35@62c.; Eastern do. 1871, 35@55c.; Western do. 1871, 35@55c.; yearlings do. 1870, 20@30c.; olds do. 1869, 10@26c.; old olds do. 1868, 9@15c.; Californians do. 1870, 15@25c.; Californians do. 1868, 9@15c.; Bavarians, 65@75c.; English, 60@70c.; Belgians (nominal), 50@55c.

Fresh Fruits.—Apples are dull and lower. There is no large buying. Stock was very carelessly packed last season, dishonestly so some of the dealers think, and a good many lots that were sent to store for reserve are turning out miserably, and this feature of itself restricts the demand. Cranberries are selling at all prices. We quote good to prime only. Grapes not quotable. California pears in good demand as they ripen. Cases of Easter Beurre sell at $4.50@5. Hickory and pecan nuts have only a moderate call from the trade. Peanuts very active and firm.

Apples, Mich., &c., bbl. $3@3.50; do. State good, $4@4.25; do. selections, $4.25@4.50; cranberries, fine, bbl., $9@9.50; do. common to fair, $8.50@6.00; do. crates, fine, $3@3.25; do. do. common, $2@2.50; oranges, La., bbl., $7@8; peanuts, Wilmington, bush., $1.00@2; Virginia, new, $1.85@2.00; do. common, $1@1.25; chestnuts, $1.75@2; hickory nuts, $1.75@2; black walnuts, 75c.; pecan nuts, ₱ 6@9c.

Poultry.—Since stale stuff has been pushed out of the way, receipts have been less crowding, and the market is in better tone. Still, high prices are not obtainable or looked for. Game is abundant, and its cheapness draws off some poultry trade.

Turkeys, Western, good, 14@15c.; do. poor and frozen, 11@13c.; do. State, 14@18c.; do. Jersey, 16@17c; Ducks, Western, 14@16c.; do. poor and frozen, 12@14c.; do. State and Jersey, 16@18c.; Geese, Western, 10@12c.; do. poor and frozen, 8@10c.; do. State and Jersey, 12@14c; Fowls and Chickens—Western good, 12@14c.; do. poor and frozen, 8@12c.; do. State, 13@16c.; do. Bucks Co. and Jersey, 15@17c.

Game—Continues in full supply. Some items arriving faster than they can be handled. Buffalo has been a failure thus far; last year at this date it was selling at 12c.; to-day 4c. is an extreme figure. Grouse are abundant and but as they begin to find a larger outlet in the retail market, we can use them up at the prices. Quail firm. Venison salable but cheap. Ducks, teal and wigeon, 30@40c.; do. mallard and red, 75c.@$1; do. canvas, $1.50@2. Venison, whole, ₱ lb., 6@8c.; do. long saddle, 10@11c.; do. short saddle, 11@12c.; do. Minn., 13@15c. Buffalo hind saddles, 3@5c.; do. calves, 3@5c. Quail, sound, ₱ doz., $1.50@1.62; do. soft and small, $1@1.25. Grouse, ₱ pair, 60@65c. Partridges, Eastern, 40; do. State and Western, 50@60c. Rabbits, 20@25c. Hares, 25@35c. Squirrels, gray, 8@10c.

Miscellaneous.—Refined sugar at 10¼@11c. for soft yellow; 11¼@11¾c. for soft white; 12¾@12¾c. for crushed; 13¾@13¾c. for cut loaf. New Orleans molasses, 40@55c. for new crop. Ashton's salt, $2.80@3; Syracuse ground salt, $1.25; factory filled, $2.15@2.25, California rice, 8¼@8¾c. Linseed oil, 75c. Spirits turpentine, 50c. Leather at 24@27c. for light hemlock, 25@28c. for middle do., 25½@28c. for heavy. Laths, $3.50. No. 1 shore mackerel, $17.

Provisions.—The market for pork is hardly so firm. There is a moderate trade for dealers' use but full parcels sell slowly. There is a fair amount of stock offering but no important concessions are offered. The heavy receipts of hogs at the West is the main feature working against holders. Sales of old mess at $13.37 and new at $11.37; sales for March at $11.25@11.50; April at $11.50. New extra prime, $12.25. Old prime mess, $11.50, and new do. $14.50. Dressed hogs.—The market is quiet and weak; Western at 5¾@5¾c. and city at 5¼@6¼c. for heavy to light, and 6¼@7c. for pigs. Middles are offered freely at weak prices. Sales of long clear at 7¼c; short rib, 6¾c.; short clear, fancy, at 7¾c. We quote Western long clear 7¼c. and short do. 7¾@7¾c. Cut meats meet with a moderate shipping trade. Hams in pickle at 9@9½c.; in salt at 9c.; shoulders in pickle at 5c., and in salt at 5¼@5¾c. Lard has been selling freely at a slight advance in prices, but at the close exporters have been buying sparingly, and there is a weak feeling. Western steam 9¾c. Sales for Feb. at 9¼c.; for Jan., 9¾c.; for March, 9¾c.; for April, 9¾c. Prime city is selling at 9¾c. Stearine is steadily held, with a fair inquiry; sales of prime at 9¾c. Smoked meats are quiet at 11@13¾c. for hams, 6¾@7c. for shoulders, and 8@8¼c. for clear rib. Beef is selling slowly at $9@11 for plain Western mess; $11@13 for extra mess. Beef hams are inactive at $23@25. Tierce beef is unsettled, with prices rather in the buyer's favor. Sales at $15@18. India mess, $19@21. Tallow is firm at 9¼@9¾c.

Seeds.—Clover is worked off to shippers about as fast as received and prices are firm. Sales at 11¾@11¾c. for prime Indiana and Michigan; 10½@10¾c. for Ohio. Timothy is dull and entirely nominal, quoted at from $3.30 to $3.50

Tobacco.—The home trade are in the market for Kentucky leaf to a more liberal extent. Shippers are doing very little. Prices are held firmly. Seedleaf is in small demand at late prices. There are a number of small parcels of foreign selling at steady figures.

Vegetables.—Potatoes quiet for consumption, but active for shipment at unchanged prices.

Potatoes, Rose, ₱ bbl., $1.75@2; Peach Blows, $1.75@2; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.25@1.50; Dyright, $1.25@1.75; Nova Scotia, $1.75; sweet Del., $3.75@4.00. Onions, red & yellow, $1.50@1.75; white, $2.50@3; Conn., 100 strings, $2.50@3. Garlic, per 100 bunches, $20@22. Turnips, Russia, bbl., $1.25; flat, $1@1.25. Cabbages, per 100, $5@7. Hubbard squash, per bbl., $2@2.25; marrow, $1.50@1.75. Beets per 100, $1.25. Carrots per 100, $1.50.

Wool.—Fleece has met with considerable attention from manufacturers, and full prices have been obtained. The stock is disappearing fast, and a number of holders have advanced prices. Pulled have been in urgent demand, with purchases made for delivery some weeks ahead. Texas and California grades are selling freely to speculators at steady figures. Foreign is in moderate supply, and held firmly. Sales of scoured fleeces at $1@1.10; medium fleece at 80c.; XXX and picklock, 75c.; Ohio combing and delaine, 75c.; XX Ohio, 70c.; unwashed combing and delaine, 60c.; Georgia, 52c.; Texas, 41@48c.; Oregon, 57@58c.; fall clip California, 37½@40c.; spring clip, burry, do. 42c.; Cape, 43@45c.; Montevideo, 42½c.

Whisky—Is lower, but there is considerable inquiry at present figures, and at the close holders are rather firmer. Sales of Western at 90@91c.

ROCHESTER, N. Y., Jan. 18.—Wheat market quiet and unchanged. Corn lower, selling at 70c. Oats, firm, 45c. Barley, 66@70c. for two-rowed and 80@83c. for four-rowed. Beans, $1.50@2 for medium, $2@2.50 for marrows. Dressed hogs firmer, $5.75@6 per cwt. Mutton 1c. higher—4@7c. ₱ lb. Chickens, 14c. ₱ lb; turkeys, 16c. Butter dull, 23@24c. Eggs scarce, 30@35c. ₱ doz. Wool nominal, at 60c. Sheep skins, $2@2.50 each. Potatoes, 50@60c. per bush. Apples, $1@1.25 per bush. Hay, $16@23 per ton.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Jan. 20, 1872.

THERE is no change to note in the market at Little Falls for the week ending Jan. 20. Small lots from farm dairies continue to be brought in, and are sold to resident dealers and placed in store, prices ranging from 10 to 11c., according to quality. Good factories are worth about 12c., but we hear of no transactions from which any considerable quotations can be made. Butter comes in sparingly, and is sold from 23 to 25c. We have advices from abroad for the last week in December. Our London correspondent says extra fine American cheese is brisk at extreme rates, but secondary is neglected, though offered at low figures. We give quotations as follows:—American extra fine, 64@68s.; fine, 60@62s.; good, 50@58s. The other descriptions of cheese sell as follows:—New English Cheddar, 76@90s.; Wiltshire double, 56@68s.; Cheshire medium, 48@56s.; fine, 66@84s.; Scotch, 68@74c. Dutch cheese—Edams, 68@70s.; Gondas, 61@63s.; Derby shape, 56@60s. Foreign butter is more salable, and Irish brands are neglected. We give quotations as follows:—Cloonmells, 126@134s.; Corks, 132@137s.; Normandy extra, 140@150s.; Canadian, 60@116s.

The weather in Central New York is mild, with but little snow; the sledding, however, is excellent.

X. A. W.

LIVE STOCK MARKETS.

NEW YORK, Jan. 18, 1872.

AFTER a season of scarcity we are now having a greater supply of live stock, and prices of most kinds have a downward tendency. The demand for meat is moderate for our markets are still abundantly supplied with poultry and glutted with buffalo meat and venison. There is very little dressed beef or mutton sent in this winter. A scarcity of rolling stock on the railroads is still an obstacle in the way of sending live stock and dead meats. Western dressed hogs have fallen off largely in receipts. The weather continues favorable for handling live stock, and operators have generally done very well during the past week.

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	7,866	70	821	25,959	33,375
Last week	5,753	135	719	19,123	28,389
Corrnspond'g w'k '71	5,557	58	602	28,112	14,961
Average, '71	7,187	88	2,301	25,122	25,177

Beeves.—With 2,100 more cattle than we had one week ago, the tide is changing, the decline so far reaching about ½c., but is likely to be more very soon. The steady markets of last week continued up to Monday, when 3,633 cattle were offered for sale—124 car loads at Communipaw, 77 at One Hundredth-st., and 25 at Weehawken. The trade opened firm that day, and continued so until its close, high prices being the rule, and scarcely any exceptions. Thin little 4½ cwt. Texans sold at 10c.; just medium Illinois cattle, 11½c.; with good to extras at 12¾@13¼c. Some of the best reaching 14c., weighed 61 lbs. per cwt., but they were extra fine. The market was the strongest for months, and dealers made money. It was pretty evident, by the close, that the top round was reached, and that a turn must result, for drovers had written and telegraphed West to hasten cattle forward with all possible dispatch.

These instructions were so literally carried out that, had Henry Bergh been on the trains with the cattle, he would have protested against running them past the regular feeding stations without unloading for rest, water and food. The arrivals since Monday already reach more than 2,000 head, and more are expected to-morrow. Now it takes very good cattle to reach 12c., while some hard old State, dry cows and oxen went at 8@10c. Upon some kinds the decline is ¼c., and the stock is not all sold. The general average quality of late offerings has been quite fair. There is talk of raising the freights upon the railroads, and it is likely it will be done at an early day. The prices below are the same as given last week, having first advanced and then declined.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Choice bullocks, ₱ lb	12¾ @ 13	12¾ @ 13
Good to prime	11¾ @ 12	11¾ @ 12
Medium	11 @ 11¾	11 @ 11¾
Ordinary	10 @ 10¾	10 @ 10¾
Poorest grade	8 @ 10	8 @ 9¾
Average of all sales	— @ 11¾	11¾ @ —

Milch Cows.—The better ruling of beef during the past fortnight has had the effect to clear the milk stables of dry cows and make room for fresh ones, but milk is too abundant and cheap for those who keep large numbers of cows for producing it to increase their stock. Trade is still dull, but there is rather more inquiry for really fine milkers at about $5 advance, choice cows selling at $85@90 each, fair to good at $70@80, with poor at $40@50.

Veal Calves.—The scarcity of choice live calves has enabled sellers to advance the prices, a few selected State veals of 190 lbs. each selling at 12c., with other good calves at 11c.; and when sold in lots, as 160 Bucks Co., Pa., of 135 lbs. at 10¾c., with 40 grass calves at $8 each. Hog-dressed sell at 12@14c. for fair to prime, a few extras reaching 14½ and even 15c. Scarcely anything sells below 10c. now.

Sheep.—Arrivals are considerably larger and there is a weakness, but not much actual decline, only the prospect of higher freights when it will not pay as well to send trash, is giving us some miserably poor sheep. Some of these hard Ky. lots, 74 lbs. sold at 5½c. with a car 75 lbs., at 5¾c. Fair sheep of 72@80 lbs., are worth 7@7¼c.; good, 7¾c. and prime to extras 7¾@8¼c. lots amounting to 2,255, averaging $6.47 and 2,416 much better sheep, $7.70, with 7,369 about average quality at $7.13.

Hogs.—These are coming forward more freely alive, with 5,035 Western, dressed, for the week. There is a fair demand, prices ruling steady as last week, viz:—4¾@5¼c. for live, 5¾@6¾c. for city-dressed; few small pigs, 7c., and Western dressed at 5¾@5¾c.

The Publisher's Desk.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Notice to Everybody.—Now is the time to form Clubs for the New-Style RURAL NEW-YORKER. It is the most Popular Paper in the land, and everybody can get up Clubs and secure Premiums. Thousands of our subscribers can do this if they will, for hosts of people only need an invitation to take the paper. If the four or five thousand persons who get their papers in wrappers (at post-offices where only one copy is taken) will make a little effort, each can form a Club, secure a Premium, benefit his neighbors, and also receive his own paper earlier—as Club packages are not delayed in the mail like single papers. Almost everybody can make it pay to help circulate the RURAL. Try it, Reader, and see if it is not profitable.

Bound Volumes of the Rural New-Yorker.—Back volumes of the RURAL, handsomely bound, are constantly kept on hand at its Publication offices. Vol. XX, for 1869, containing 828 pages and over 800 illustrations, $4. The Semi-annual Volumes, issued since Jan. 1, 1870, $2.50 each. The volumes being too heavy for the mail, are usually sent by Express or as Freight, subject to charges.

Premiums Sent Promptly.—We send all Premiums as promptly as possible. Most articles are sent, or ordered sent, within twenty-four hours of receipt of request. Those not receiving their Premiums in a reasonable time should advise us of the fact.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

New Advertisements.

THE AMERICAN ORGANS

Have met with an unparalleled success during the last year. The

New Styles

Especially, are pronounced beyond competition for the prices asked. All the **SUBSTANTIAL** excellences of the finest organs are combined in this beautiful series, which are sold at prices ranging from $200 downwards. The

Grand Organs for Churches

have been in constant demand, and the sale of

PARLOR INSTURMENTS

HAS BEEN ENORMOUS.

New efforts are now making to keep pace with this great increase of business.

The present high standard of excellence will be maintained.

The Manufacturers have noticed that organs are offered to the public with "solid panels," as though it were a new and improved feature. It is not new nor desirable. Twenty years ago the experiment was tried, both in organs and in furniture, of making fronts and sides in one solid piece, the shape of the panel being cut out by machinery; but it was quickly discarded, because it was found that such broad pieces of wood inevitably warp, check, or split. The mode adopted by the SMITH AMERICAN ORGAN CO., in all their instruments, is to form the fronts and ends of separate pieces solidly framed together. This is the only durable way.

Catalogues set free on application. Address

The Smith American Organ Co.,
TREMONT ST., Opp. WALTHAM ST.,
BOSTON, MASS.

ANNUAL MEETING.

The New York State Grape Growers' Association will hold an Annual Meeting, at the Court House in Rochester, N. Y., Feb. 15, at 10 A. M., for the the purpose of electing its officers for the ensuing year, and the transaction of other business.

C. D. CHAMPLIN, President.

A FIRST-CLASS BOOK CANVASSER can hear of a permanent situation, either on salary or commission, on a work of undoubted success, by addressing P. O. Box 2793, Philadelphia. State capability, previous business and references.

INDIANA FARMS.—Improved, desirable, and at lower rates than in the extensively advertised far West. Address M. W. HELTON, Real Estate Agency, Bloomington, Indiana.

WHISKERS! One package of Prof. Hall's Magic Compound will force the beard to grow thick and heavy on the smoothest face (without injury) in 21 days, or money refunded; 25 cts. a package, post-paid, or 3 for 50 cts. Edgar Jones, Ashland, Mass.

EGGS FOR HATCHING.—Send stamp for new illustrated Catalogue. A. H. HOWARD, Omro, Wis.

FARM MILLS

DURABLE, EFFICIENT AND LOW PRICED.
Send for Circular. Agents wanted. LANE BROS., Manufacturers, Millbrook, N. Y.

$3 SAVED FROM $4

By using Wadsworth's Perfect Coffee. Thousands of families now using it. Costs one-fourth the price of common coffee. For full instructions to prepare it, send 50 cts. to C. WADSWORTH, Leavenworth, Kans.

SLEIGH SHOES.—WE MAKE SLEIGH Shoes, under cover of Patents, of any length, crook or size, of very hard cast iron, and cast therein a strong wrought iron rod the whole length of the shoe. Holes made wherever desired. Shoes ground smooth. A roll of manilla paper will be sent gratis to any address on which can be marked the shape of any shoe wanted. Orders can thus be made by mail, and we will warrant shoes to fit the mark sent. No charge for making patterns. Price very low. Send for descriptive circular. ANSON TITUS & SON, Iron Founders, Phelps, Ontario Co., N. Y.

OFFICES OF THE COMMISSIONERS
Of Immigration of the State of New York.

CASTLE GARDEN, NEW YORK CITY.
January 2nd, 1872.

THE Commissioners of Emigration desire to give notice to Railroad Companies, Contractors, Factories, Planters, Farmers, and others, that there is now in their establishments on Ward's Island, a large number of agricultural and skilled laborers, as also domestic servants, for whom they are desirous of obtaining employment.

Any and all information on the subject can be obtained, and arrangements made, by addressing the undersigned. BERNARD CASSERLY,
Superintendent.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.

Patented June 27, 1871.

One of the most important inventions of the age!
The most perfect Button-Hole Worker ever invented!

So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a lifetime. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and traveling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

A. W. WEBSTER & CO., 699 Broadway, N. Y.
Please state you saw this in RURAL NEW-YORKER.

NEW YORK, AMERICAN INSTITUTE } FAIR BUILDING, Nov. 4, 1871. }

E. M. BOYNTON, 78 Beekman St., New York—SIR:—This certifies that I saw the Lightning Cross-Cut Saw, worked by hand, by two men, Nov. 2, at this Fair. Said man and saw cut off a sound 8x9 inch chestnut log in 3¾ seconds; and 16 cents of same, *continuously*, in 2 minutes and 18 seconds, or at a rate of a cord of wood in less than nine minutes. I am satisfied that for all purposes of cross-cutting large and small timber, your cross-cuts and wood saws have no rival in speed, in ease, and in simplicity.

I believe their universal use would save a vast amount of money and time, and lighten the toil of millions of men.

J. W. BLAKE,
Superintendent and Engineer
American Institute Fair.

Lightning Ice Saws and one man saws, this Pattern suitable for general work, 4 feet long, sent on receipt of $5, with Buck Saw, free when by express. A six-foot Cross-Cut and Buck-Saw sent on receipt of $6. Express will cost from 40 cents to $1 to places this side of the Mississippi River by special contract.

N. B.—Millions of Axes are used for cutting wood; a Lightning Cross-Cut Saw, either for one man or for two, will cut five times as fast as an ax. Why not try them?

See that the name and warrant are on each saw.

Recent increase of business has compelled me to lease No. 80 Beekman St., adjoining No. 78, where I shall be happy to see Hardware Dealers and Customers.

E. M. BOYNTON,
Sole Proprietor and Manufacturer,
80 Beekman St., N. Y.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and completeness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,
HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

DUNHAM & SONS,

(ESTABLISHED IN 1834),

Manufacturers of

PIANO-FORTES.

Moore's Rural New-Yorker, of November 18, 1871, says:

"Having used one of their instruments in our family for twenty years, we can confidently commend them to our readers as being first-class in every respect. Both professional and amateur players on the piano pronounce our DUNHAM very superior in tone. An instrument that has retained its brilliancy and sweetness of tone for a score of years needs no further commendation."

17 Union Square,

NEW YORK.

A GREAT OFFER!!

Horace Waters, 481 Broadway, N. Y.,

will dispose of ONE HUNDRED PIANOS, MELODEONS, and ORGANS of six first-class makers, including Waters's, at EXTREMELY LOW PRICES FOR CASH, DURING THIS MONTH, or will take from $4 to $20 monthly until paid. NORTH

MISSOURI LANDS

FOR SALE

BY THE

Hannibal & St. Joseph R. R. Co.

About 120,000 Acres of the Finest Farming and Grazing Land in the United States, for sale at low prices and on very easy terms; thus enabling an industrious man with small capital to pay for his land with money earned from it.

Missouri is not too far West to bear a great distance from markets; its Railroad facilities are great and constantly increasing; the climate is splendid, and good crops are almost a certainty; while the numerous thriving towns and cities springing up on every hand attest beyond doubt that the blight of slavery has been effectually dissipated, and that Eastern men and Eastern capital are doing their perfect work.

Our Lands Defy Competition.

Send for full Descriptive Circulars and Sectional Maps, inclosing 30 cents, and stating what paper you saw this in, to Land Commissioner H. & St. J. R. R., Hannibal, Mo.

1,500,000 ACRES OF THE

RICHEST FARMING LANDS

IN THE WORLD,

For Sale to Actual Settlers,

NEOSHO VALLEY, KANSAS.
MISSOURI, KANSAS, AND TEXAS RAILWAY CO.

CARS NOW RUNNING 400 MILES.

The Lands offered by this Company are mainly within 20 miles of each side of the road, extending 170 miles along the NEOSHO VALLEY, the richest, finest and most inviting valley for settlement in the West. One-third of the labor required at the East in the culture of farms will insure here double the amount of crops.

PRICE OF LAND.—$2 to $8 per acre; credit of ten years' time.

TERMS OF SALE.—One-tenth down at the time of purchase. No payment the second year. One-tenth every year after until completion of payments, with annual interest. For further information, address ISAAC T. GOODNOW,
Land Commissioner, Neosho Falls, Kansas.

NORTH CAROLINA

LAND COMPANY,

(*Chartered by Special Act of the Legislature in 1869*)

Offers for sale 200,000 acres of best Farming Lands, near Railroads, Rivers and Towns, with good houses and Improvements. Prices, from $2 to $10 per acre. Also, 300,000 acres of Timbered and Grazing Lands. Prices from 50 cents to $2 per acre. Also, numerous Mineral and Mill Properties, Water Powers, &c., at various prices. The *President* of this Company has been appointed *Commissioner of Emigration* by the Legislature of North Carolina, and by virtue of his office is required to give all needful information to emigrants. No other Company or Agency has the *indorsement* and *sanction* of the State. Apply for information and Circulars.

GEO. LITTLE, President.

The Naturalist.

THE OCTOPUS VULGARIS.

OUR readers who have read VICTOR HUGO's "Toilers of the Sea," will not soon forget his description of the "Devil Fish;" nor will they regret to see in our columns a likeness of this "Polypus" of the ancients, or the "Pieuvre" of the Channel Islands, as it may now be seen in the Aquarium of the Crystal Palace, London. The drawings were made by Mr. T. W. WOOD, for the Field, and are reproduced by us for the benefit of our readers.

In the larger figure the octopus is represented at rest on the bed of the ocean; the eight lithe, fleshy arms, each armed with a double row of suckers, are coiled round about it; the head is raised, and of the two eyes only one is visible. Projecting from the side is the orifice of the funnel, through which the sea water required for respiration is expelled, after passing over the internal gills of the creature. The arms at their bases are connected together by a web, surrounding the mouth, which is armed with two horny jaws resembling strongly the beak of a parrot. The fleshy body (which as the animal respires resembles strongly a palpitating, half-flaccid bladder) is of a dusky tint, blotched and warty like that of a toad, with yellow, reddish and orange leprous spots. The suckers, with which it attaches itself to its prey, are numerous, exceeding 2,000 in a single animal.

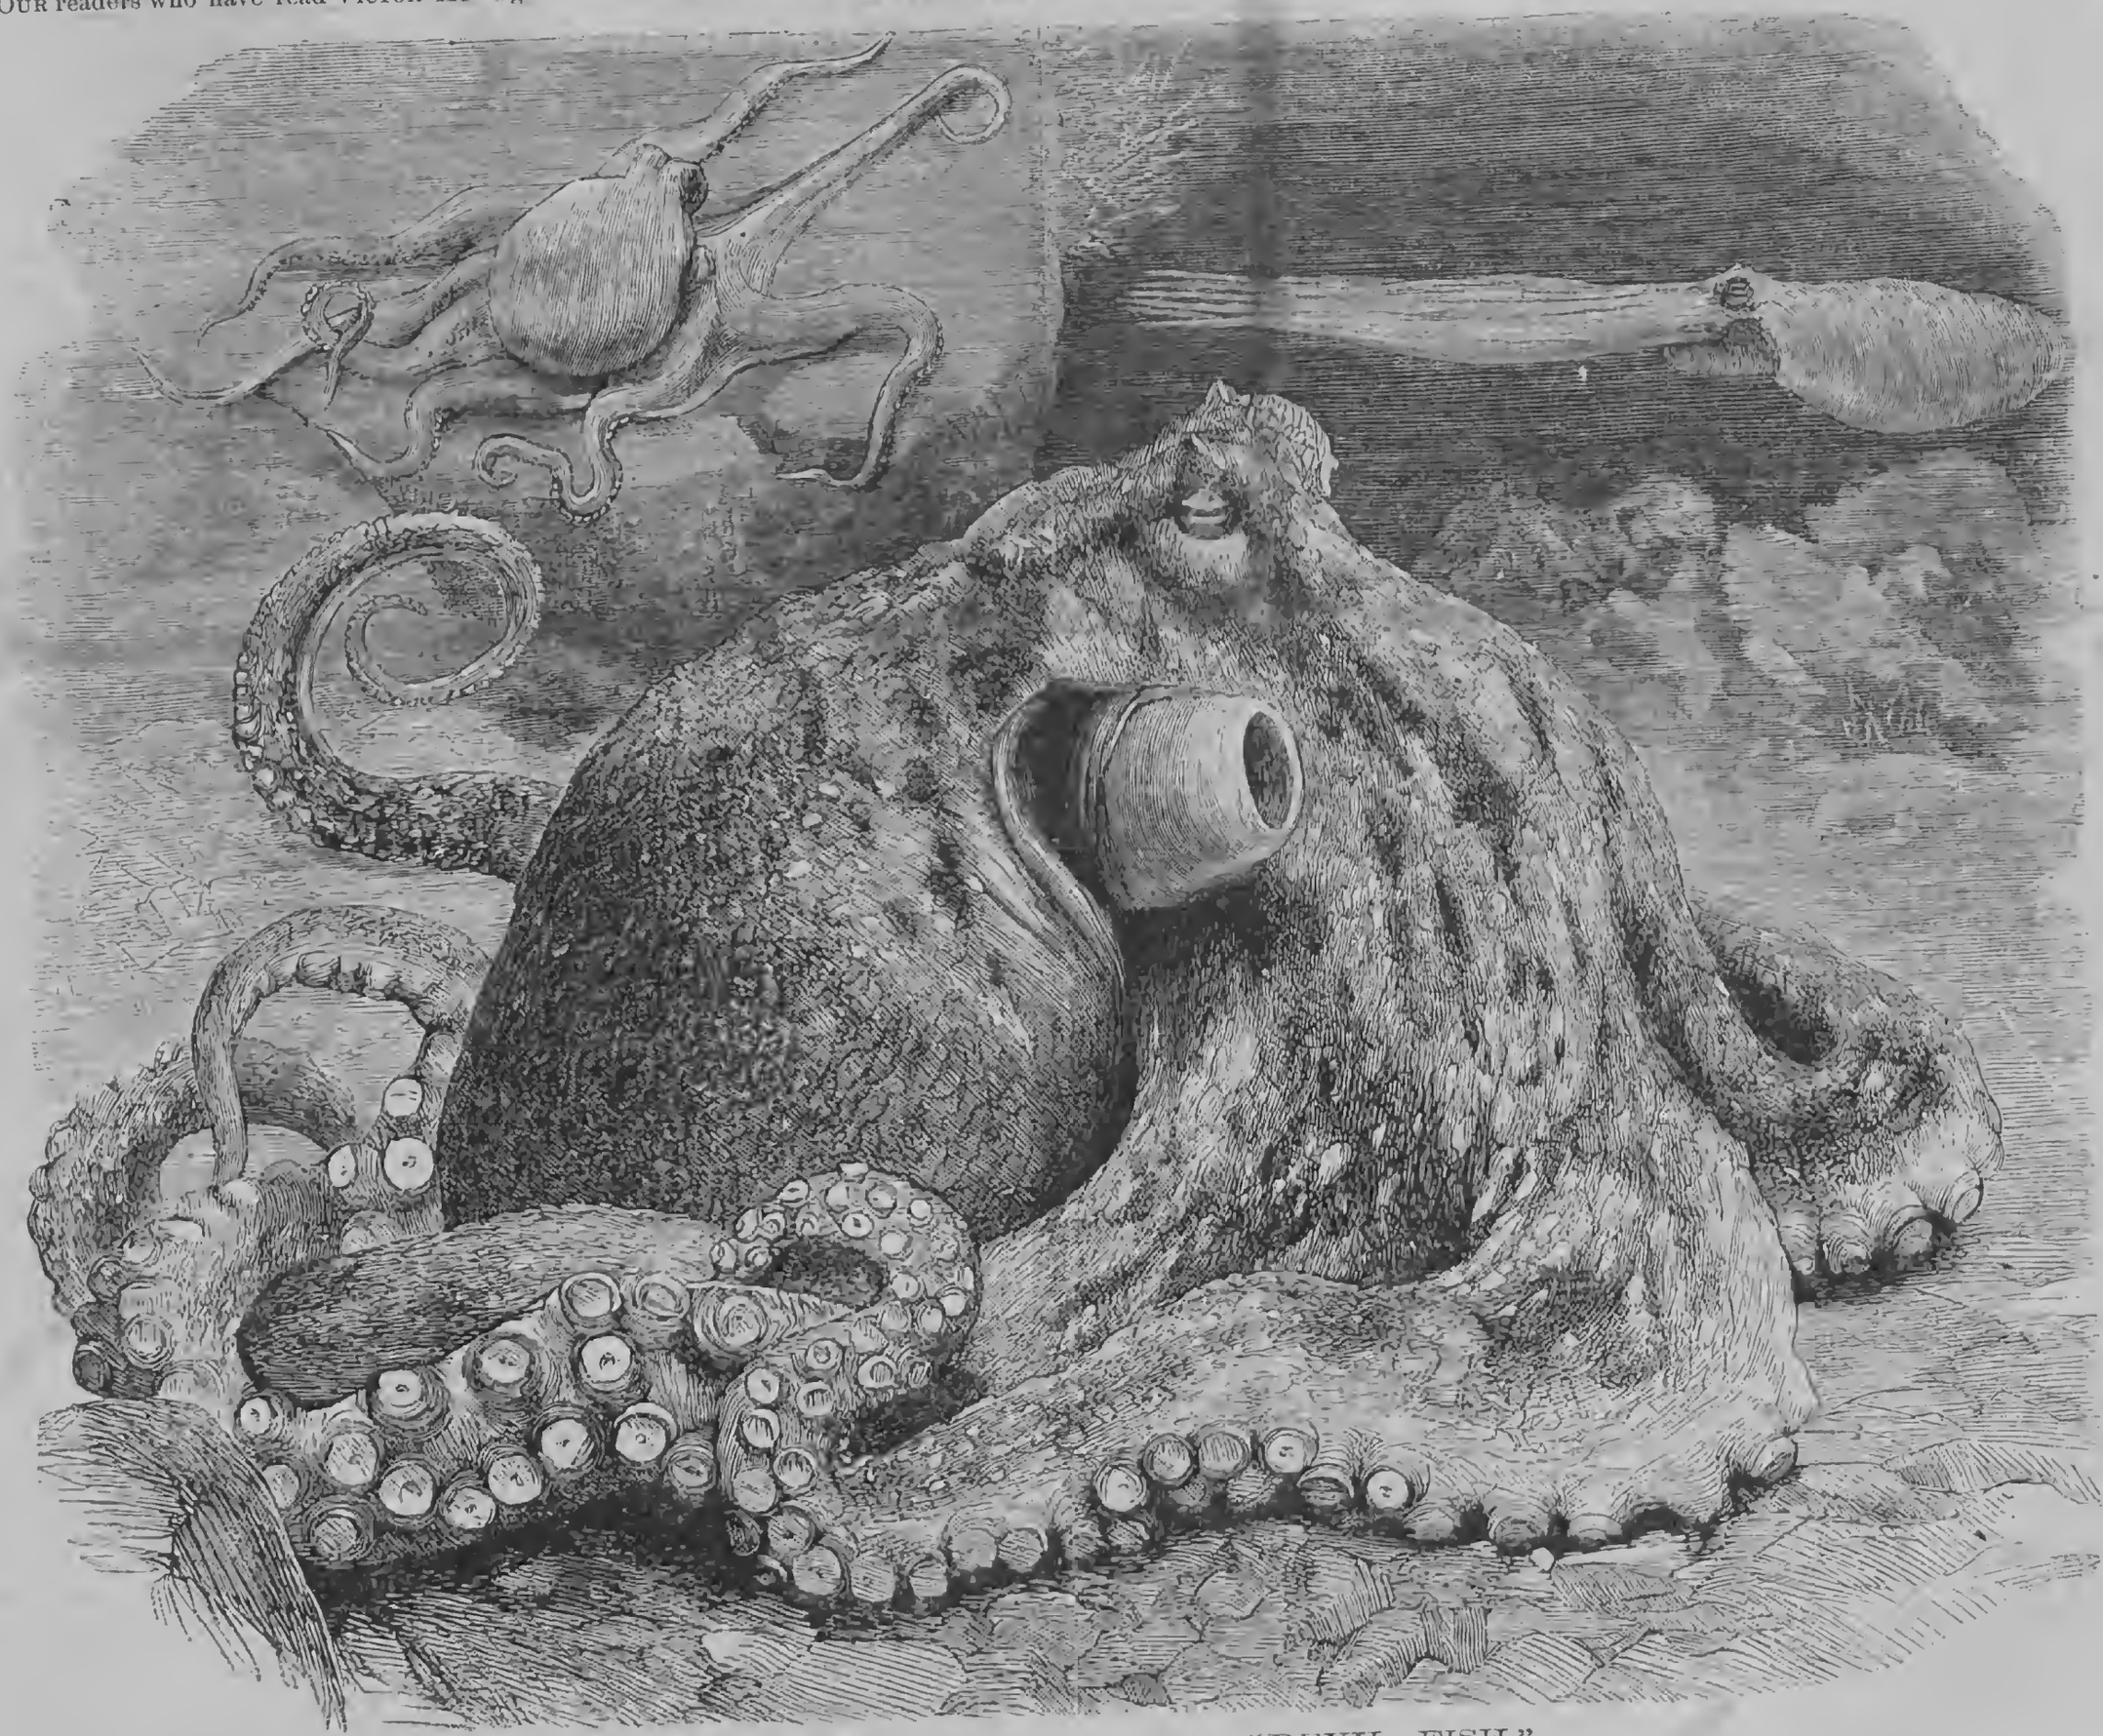
In the small upper right hand figure the octopus is seen shooting backwards like a spectre through the water. This singular movement is produced by a forcible ejection of fluid through the funnel, when the body is propelled violently in the opposite direction. The funnel is seen below the head, and the arms are straightened, so as to offer no resistence to the rapid passage of the animal.

On the left hand the octopus is shown using its tenacles in crawling at the bottom of the water, and the general form of the body and relative position of its various organs are well shown.

The history of this particular species is given with accuracy in Mr. J. GWIN JEFFREYS' admirable work on "British Conchology." He describes it as "patiently watching its prey with its cold, grey, merciless eyes and almost fiendish expression;" and confirms the observation of ARISTOTLE that these animals live chiefly on bivalves. The heaps of shells round their dens (which are uncovered during the recess of the spring tides at Herm) is enormous. In one of these heaps Mr. MARSHALL counted more than 2,000 shells.

On the coast of France the pieuvres are used as bait for conger eels, being caught in their turn with a piece of dog fish, or dragged out of their holes at low water with a pole hook.

The ancient writers were fairly acquainted with the history of this animal, and its suckers are used as a simile in the Odyssey. According to the old authors, it typified a flatterer, a miser, the devil, a bad woman, a cheat, an obstinate person and so on. Proverbs, epigrams and epithets were illustrated by its habits, and we are further informed by Mr. JEFFREYS that it was represented on



THE OCTOPUS VULGARIS, OR "DEVIL FISH."

the ancient coins of Syracuse and Tarentum. ARISTOTLE seems to have known all the principal kinds of cephalopods living in the eastern archipelago of the Mediterranean. Some of his successors dealt more in fabulous tales than in accurate and careful investigations. Thus, according to OPPIAN, the polypus is so voracious that when it keeps its den in the winter as a shelter from storms, and can procure no food, it devours its own arms, which soon grow again, so as to be always ready to appease its hunger; and sometimes, in the summer, it climbs olive trees to get at the fruit! ÆLIAN tells us that a polypus, which had grown to the size of a whale, crept up a sewer into the house of a merchant at Putcoli, and devoured his stock of salt fish. Not less credulous in modern times was DENYS DE MONTFORT, who represented a "poulpe colossal" in the act of scuttling a three-master. VICTOR HUGO'S sensational account of GILLIAT'S fight with the "pieuvre," *Octopus vulgaris*, in his "Travailleurs de la Mer," is more excusable, because he does not pretend to be a naturalist.

This species occasionally attains a large size. One, described in PAULSEN'S MSS., which was cast ashore on the Danish coast, measured three and a-half fathoms in the body, and the tentacles reached three fathoms, giving a total length of thirty-nine feet. Another was found at the Skag, in Jutland, which filled a large cart. Its parrot-like beak was nine inches long; the tentacles were sixteen feet long; the pedal arms about half that length; and the mantle sac seven feet; the suckers three-quarters of an inch in diameter. These suckers are strengthened by a horny ring around the margin of each. As Dr. JOHNSTON remarks, it must be a fearful thing for any living animal to come within its grasp; for, entangled in the serpentine folds of its arms, and held by the pressure of hundreds of suckers, escape is hopeless; and the struggles of the hapless victim, by bringing its body in contact with the fresh suckers, only accelerate its fate.

Sheep Husbandry.

NORTHERN RAMS FOR SOUTHERN AND SOUTHWESTERN FLOCKS.

A CORRESPONDENT at Edgerton, Colorado, writes us that a lot of rams procured by him in Michigan, last fall, (Oct 10), are doing poorly, and some of them have died. He suggests that this may be due to their change of situation so late in the season. This is too limited a statement of the facts to enable us to form any opinion of the disease or the proper treatment in these particular cases; but sheep, and especially rams, taken from Northern to Southern and Southwestern States do often become unthrifty, debilitated and finally die, from causes not, we think, universally understood by those who purchase them.

We know, from abundant opportunities to ascertain the facts directly, and through a long term of years, that Northern Merinos, possessing the full native hardiness of the breed unenervated, by pampering and non-exposure, will endure this change in climate and other circumstances without injury. But it is an entire mistake to suppose that sheep, in those warmer regions, do not require at least as strong constitutions and as hardy habits to withstand the unfavorable conditions peculiar to the climate, without artificial food and shelter, as they do to withstand the unfavorable conditions of Northern climates, *with* artificial food and shelter. A Texas "norther" does not often reduce the temperature below 30°—mild winter weather in the North—but it reduces it from a previous temperature of 70° or 75° with such astonishing rapidity, in some rare cases at the rate of a degree a minute for twenty consecutive minutes, that sheep exposed to its full fury undoubtedly suffer more acutely from its cold* than sheltered sheep do in any kind of storm or any extremity of cold ever known in the North. And these norther, usually milder, but occasionally violent, occur nearly once a week, through five months of the year!

To say nothing of protection from exposure, no such sudden and extreme changes of temperature—far more injurious to health than mere cold—are experienced in the North. The latter, too, is comparatively exempt from those scarcities of feed, arising from drouth and other causes, which sometimes severely test the endurance of sheep in regions where no artificial food is prepared for such emergencies. But we need not extend these comparisons, as probably the fact we have been illustrating will not be disputed among well informed persons.

It follows, then, that in the selection of rams for those regions, vigor of constitution and hardy habits are indispensable. They are indispensable not only to save the lives, health and consequent power of procreation of the animals themselves, under the change of circumstances which those brought from the North are required to undergo, but to enable them to transmit constitution and hardiness to their posterity. Stock rams should be descended from ancestors possessing these qualities; should naturally possess them themselves; and should have been so managed as to develop instead of impairing them.

This impairing of the constitution has been produced, in many instances, by too high keep, too careful non-exposure to the weather, want of exercise, and excessive sexual intercourse. During the war Merinos sold at enormous prices. In the sharp scramble to attract buyers, "fitting sheep for market" became a science. Lambs were dropped in close, warm stables, months in advance of the usual period, and forced by high keep into as premature a development of carcass and fleece as was possible; and they were afterwards pampered through life, to the utmost verge of safety, to give them that rotundity which hides so many defects, and to stimulate to the utmost the production of wool and yolk—for weight of *unwashed* fleece was the leading brag point, and it did not matter how much the yolk (i. e., "grease and gum") contributed to that weight. To preserve all the latter in the wool for that object, and also for the purpose of giving the fleece that dark external color which was also a high point of fashion, neither rain nor snow were allowed to wash any of it away. To prevent this, or the danger of it, the sheep were *confined* in their stables almost the entire winter, and at night and in rainy weather in summer; and when out to pasture in summer, they were usually placed in small fields contiguous to their stables so they could be run in more conveniently, and run in *immediately* in case of a sudden dash of rain. Thus kept in high condition and restricted from taking natural exercise, they became sluggish and inactive.

Sheared nearly two months in advance of the usual time, and often "stubble sheared"* at that, and fitted up in other respects as we have described, these artificial animals, at the usual sale time in fall and winter, no more resembled those of the same blood and quality, treated in the ordinary way, than as if they did not belong to the same breed; or, at least, as if the former were a quarter of a century in advance of the others in improvement. We have been told of the laughable case of a New York farmer who sold his ordinary sort of a ram for a song, and afterwards bought him well "fitted," from a sheep peddler, at a round price—not dreaming that he had ever seen him before! And we have repeatedly known instances of fitted sheep, as superior in appearance to the buyer's previous flock as described above, becoming incapable of being picked out from the latter by an outsider—after a year of the same treatment.

Had not the Merino possessed a superabundant hardiness and fixity of type, so sudden and extreme a change of management would have speedily destroyed its constitution and health. As it was, degeneration had more than commenced in the flocks where the enervating processes were carried to much extent—and it must be confessed such flocks were very numerous. The celebrated stock rams, fed to the extreme to stimulate their overtasked sexual powers, usually died early. The ewes did not continue to breed so long as formerly. Highly fleshy, wholly inactive and plethoric (we use the word in its medical sense) during pregnancy, they could not, in the natural course of things, be expected to bring forth normal, sound offspring. Congenital diseases, and others appearing soon after birth, in lambs—some of them of very rare previous occurrence and some previously unknown—became common, and in certain cases assumed the character of widely prevalent and destructive epizootics. And where great care, great skill and great "good luck" kept along some flocks of these artificial sheep free from apparent disease, none the less did they manifest their decay of constitution and hardiness, if put under ordinary treatment—the treatment under which the Merino vigorously flourished for half a century in our country. Subjected to this, these manufactured Merinos wilted like hot-house plants set out in the frost!

Such were the fruits of a mania, which carried a heritage of misfortune throughout the sheep-growing States of the Union. And such, in our judgment, have been the chief reasons why such a multitude of rams transported from the North to the South and Southwest have speedily perished, or survived to disappoint the expectations of their owners. Many of them doubtless have possessed improved points, and have been greatly superior to ordinary Merinos, apart from their artificial appearances. But the same improvements and excellencies are to be found in Merinos which possess the full native hardiness of the breed, unenervated by any of the practices we have held up to condemation. Such being the case, it would be unpardonable folly *knowingly* to purchase the former, or to purchase at all without definite information on this head, coming from sources known to be reliable.

We shall, on some future occasion, discuss the expediency of extensive wool growers, engaged in the pastoral system of sheep husbandry, depending upon professional "breeders" for their supply of stock rams.

* The cold is stated by Prof. FORSHEE of Texas to be far more severely felt from the peculiarly drying power of the wind—evaporation from the surface of the skin increasing the severity of the temperature.

* That is, nowhere clipped close, and left longer in places where there was any natural deficiency, or a show point could be improved.

Sheep for Combing Wool.—Will some of the readers or correspondents of the RURAL NEW-YORKER inform me, through its columns, what is the best cross or kind of sheep for growing a good quality of combing wool? And whether such sheep will thrive if kept in large flocks? An answer will oblige a subscriber.—J. W. H., *Pikeville, Tenn.*

The Swine-Herd.

CIRCULAR TO SWINE-HERDS.

THE following circular has fallen into our hands. It is being forwarded by the committee to prominent breeders throughout the country. We hope there will be prompt and full responses thereto.

DEAR SIR.—We, the undersigned, having been appointed, by a resolution of the New York Farmers' Club of the American Institute, a Committee to correspond and learn the opinions of those practically interested and engaged in breeding fine pigs, in regard to the feasibility and utility of attempting to prepare a "scale of points" for each breed that has well-defined characteristics, and is bred to a considerable extent in North America (esteeming any breed to be thorough-bred in proportion as the individuals of it will, if properly mated, reproduce their like with *accuracy*,) we beg to learn, at your earliest convenience, your views upon the following questions, viz.:

1. Would it be useful to breeders to have a scale of points for each breed of swine, made out accurately, in conformity with the views and practices of the best breeders, for the guidance of breeders, and of judges at Fairs?

2. Will you prepare, soon, and forward to us, a scale of points for the breed with which you are most familiar, or for more than one, giving a particular description of each "point," as in the scale of points for the various breeds of neat cattle?

3. After the views of different breeders, applied to as you now are, have been collected, would you be in favor of calling a convention of the more prominent breeders of each breed, for considering and settling these points authoritatively?

Hoping to receive a quick response, we have the honor of subscribing ourselves

Very truly yours,
F. D. CURTIS,
L. A. CHASE,
M. C. WELD,
} Committee.

N. B.—Please address answers to the Chairman, F. D. CURTIS, Grand Central Hotel, New York City.

PIG-PEN PAPERS.

Keeping Breeding Sows confined to a small pen is a very bad practice, AMOS KETCHUM, and no good and much injury comes of it. They need both freedom and exercise.

Thumps in Pigs.—Some of our shoats have what I call "thumps." In three days after the thumps appear, they die. They seem to be full of white worms. Can you give me a remedy?—M. P. B.

THIS is a disease we know nothing about. We should be glad if our correspondent will give us the symptoms in detail—how the hog acts from the outset until death.

Field Crops.

FIELD NOTES AND QUERIES.

Corn Culture.—There was an edifying talk at the Farmers' Club recently on corn culture. Should corn be hilled? Some said no; others yes. One member had found it profitable to furrow his corn field, plant in the furrow, cover lightly, and as the plants grew the cultivator would do all the necessary hilling. He had found that corn so planted resisted drouth better than that planted on the surface; and then in cultivating to keep down the weeds, the roots of the corn were not disturbed by the cultivator and the growth checked by breaking them. Another member indorsed this view, asserting that it is an injury to the crop to break the roots. But if the corn is planted on the surface, he would hill it; for with every hilling new roots were put out; and the more roots the better, because the more nutriment the plant receives.

Department of Agriculture Seeds.—A circular from the Commissioner of Agriculture announces that he is receiving for distribution, principally in the South, various kinds of seed, which he names, and that he has ordered oats and barley from Scotland and Germany, and has distributed wheat grown in Oregon to the Northwestern States and Territories. He also advertises a new early corn, which he has obtained from Ohio. Wherefore? We protest again, as we did in the RURAL NEW-YORKER of Dec. 23, 1871, against this gratuitous seed distribution. It is an unjust, and, practically, a swindling operation. If the Government is going to distribute any seeds at all, it should furnish all farmers with seeds. If it is going to keep up a Government seed store at the expense of the tax-payers, all tax-payers should be supplied.

Tearing up the Roots of Corn.—In a discussion on Corn Culture by the Blooming Grove Farmers' Club, two members announced themselves great friends of the shovel plow; "believed in working close up to corn; tearing the roots did not injure it." On strong soils where the growth is large, and when the plant is nearly full grown, is root pruning necessary or profitable to fruitfulness? This is a question which occurs to us.

Growing Potatoes Under Straw.—An Illinois correspondent of the RURAL NEW-YORKER asks if any of our readers have, the past year, produced a crop of potatoes by dropping the seed on the surface of meadow or pasture land—without plowing—and covering it with straw, giving it no cultivation? If so, with what result, and how deep was the seed covered, and when planted? We shall be glad to publish any such experience.

Broom Corn Culture.—An Iowa correspondent who wants to go into broom corn culture, asks if any of our Iowa readers can give him, from their own experience in that State, some idea of the profit of the crop as compared with corn, the kind of soil best adapted to its growth, the variety to plant, and when and how to plant it.

Tennessee Evergreen Broom Corn.—I saw a statement in one of the daily papers that this variety is grown exclusively in Illinois. Can any of your readers say anything of its merits as a variety for market compared with others?—S. W. F., *Cohocton.*

"Snow" or Hominy Corn, Mrs. R. W. ALLISON writes us can be obtained of ALFRED M. ERWIN, Marion, N. C.

Farm Economy.

DISSOLVING BONES.

W. H. W., Reading, Mass., in Horticulturist, says:—"My mode of doing this is very simple and very effective. I have a large water-tight hogshead standing out doors, near the kitchen. In the spring I cover the bottom about six inches deep with dry soil. On this I put a layer of bones of about the same depth, and cover them entirely with unleached ashes. On these another layer of bones, then ashes, and so on till the hogshead is full. I leave it then exposed to the rains all summer and winter, until the next spring. Then, on removing the contents of the hogshead, I find nearly all the bones so soft that they will crumble to powder under a very slight pressure, and mixed with the ashes and the soil, they give me a nice little pile of most valuable manure, ready for immediate use. Any of the bones not sufficiently subdued, I return to the hogshead again for another twelve month's slumber. In this way I have had no difficulty in transforming all the bones I can get into bone meal. I buy them directly from the butcher at a dollar a hundred pounds, for the purpose of turning them thus into manure, and consider them the cheapest fertilizer I can obtain."

ECONOMICAL NOTES.

Soft Wood Ashes.—A correspondent asked the Farmers' Club something about the value of soft wood ashes. It was replied that while soft wood ashes are not as valuable to apply to soils as hard wood ashes, they are always worth saving and using. In connection Mr. WELD said that at large saw mills, where there are large accumulations of saw dust, it is often burned to get rid of it; and the ashes are valuable—especially when, as is often the case, the saw dust is not consumed but converted into charcoal, which is always a most excellent application to soils and lasting in its influence, acting as a continuous absorbent of gases which it yields up to growing plants. This is an important practical suggestion; for it will pay farmers to buy the saw dust, if necessary, at least haul it away and char it by burning for just this use. Where steam mills are run, most of the saw dust is now consumed in the furnaces; but the ashes—where the draft is not so great as to prevent accumulation—are well worth securing.

Leached Ashes.—L. BURBANK: We do not think leached ashes a *cheap* manure, at twenty cents per bushel, for vegetables and grass lands. We should regard unleached at forty cents much cheaper. Their relative value must depend upon the kind of soil to which they are to be applied, and the cost of other manures in your locality.

The Mud of the Coves, mentioned by a Hampton, Va., correspondent, will, in our judgment, be found very useful, both for composting with other manure and to apply to light soils in the autumn or winter, without composting. It will harm no general crop.

Gas Lime, (to L. B.,) applied plentifully, if fresh, would, we think, kill the roots of plants near walls.

Pomological.

SMALL FRUITS.

A PAPER READ BEFORE THE PENNSYLVANIA FRUIT GROWERS' SOCIETY BY A. S. FULLER, JAN. 18TH, 1872.

YOUR President has thought proper to invite me to read a paper on Small Fruits. This is certainly a broad field to occupy, with plenty of light and shade, hills and valleys, through which I propose to ramble, and ask your indulgence if I should happen to tarry at some of the gloomy and barren places. Not that I wish to place small fruit culture in an unfavorable light, but in as bright a one as possible and keep truth in view.

We have had this branch of horticulture constantly spread before us in glowing colors, and although no one desires to place a bad picture upon exhibition, still it is not exactly fair to ignore legitimate evils that cannot always be avoided. We are all more or less prone to wait until our fellow man has fallen into the ditch before warning him of its existence, especially if we are to gain something by the unfortunate mishap.

Our great fault as a people is our impetuous nature, as constantly exhibited in being ever ready to follow a leader. It matters little what direction the leading goose takes, whether to the gold fields of California, or after a new blackberry, the flock blindly follow.

A few years since small fruit culture as a distinct branch of horticulture was entirely unknown. But a man here and another there started off berrying, each followed by a numerous group, all cackling their very best to attract attention. The results we all know. Some have failed to fill their crops and are gloomy; others, being more shrewd or industrious, made money, consequently are happy.

The Market Overstocked.—I believe that it may be asserted without fear of successful contradiction, that the markets in many of our large cities have been for the past two years overstocked with the leading kind of small fruits, particularly with strawberries, raspberries and blackberries—at least there has been such an abundance that prices were so low as to leave very little margin for profit. These evident results may be traced directly to several causes, among which I will name a few.

1. The feverish excitement created through the introduction of new varieties, with estimated profits claimed or anticipated in their culture.

2. The rapidity with which most kinds can be propagated. Strawberries, as is well known, may be multiplied to an unlimited extent without the application of any skill beyond that of making the soil rich, and since the somewhat modern mode of propagating the raspberry and blackberry, by cuttings of the roots, came into general use, the number of plants produced is only limited by the demand.

3. The range of country over which these fruits succeed is so extensive that no one locality can for any considerable length of time retain a monopoly.

4. Probably the most powerful influence which has opposed high prices is our facilities for sending this class of fruits to market. Railroads and steamboats have almost annihilated distance, and the man living hundreds of miles away and upon cheap lands can and does successfully compete with those located near our best markets.

In other words, the disadvantage of distance which formerly gave certain cultivators an advantage over their fellow-laborers in the same field, no longer exists, except to a very limited extent. The late varieties of the South must compete with the early of the North, in addition to the different kinds that come into competition with each other. Northern-grown raspberries must come in competition with Southern blackberries, and when this last named fruit ripens with us in latitudes north of New York City, it meets the early Southern peaches, and the strife between localities and their products is constant and often severely felt by producers.

We are often told that the more fruit the people consume the more they want, which is all very true, but we should also remember that our fruit growers gain strength with experience, and the products of their fields increase in proportion. I fear, also, that many persons overlook the fact that at the present time there are no secrets in horticulture, and the masses are becoming well informed upon subjects relating to the culture and production of fruits, and act accordingly.

Competition is brisk, and this leads me to believe that there are but two classes of small fruit growers who can make the business

Very Profitable.—The first are those who have an abundance of capital with which, in a measure, to control unfavorable circumstances, if they only make a profit of a penny per basket and sell enough it will amount to considerable in the aggregate. Cultivators without a large capital having to come into competition would be mined with prices which gave the extensive producer a small margin for profits.

The second class are those who have a home market and raise their fruit without any considerable outlay for labor. A man who works in the field himself, and has a family to gather and market his fruit, will find small fruit culture quite profitable, inasmuch as he receives an immediate return for his labor, but should he attempt to extend his operations until a number of hired laborers have to be employed, he will very likely find the profits growing gradually less. It is just here that so many persons have made a most serious mistake in the culture of the small fruits. At the beginning they have probably produced a few hundred quarts of fine fruit upon a small plot of land, and this being disposed of at a home market, they resolve to extend operations in the same direction without taking into consideration the amount of capital necessary to purchase baskets and crates, as well as the extra amount of labor required in production. Even if these things are considered, the fruit grower is very liable to forget that there is sometimes a run of bad weather during the harvest season, also low prices and a short crop.

Perhaps some may accuse me of drawing too strongly on the negative side of this question. I beg them to remember that for many years there has been a strong team on the other side. I do not wish to discourage any one from engaging in the culture of small fruits, but merely desire to put them on their guard against expecting too great results.

Varieties.—Probably it will be expected that I shall say something about the different species and varieties in cultivation. I think, however, that this part of the subject has been pretty thoroughly discussed, not only before this Society, but in all other similar organizations, to say nothing of the continuous stream running through the horticultural and agricultural press. We have as yet very few varieties suited to general cultivation. Among strawberries, a half a dozen sorts may be selected that will comprise all the valuable properties known to this fruit. If this be true, and few will doubt it, what good excuse can there be for cultivating several hundred?

With blackberries a less number of sorts will give us all the good qualities known in the entire list of cultivated sorts. With the raspberries we may be excused for extending the list, on account of the variability of the different sorts in their adaptation to soil and climate. There are but few varieties which succeed over a wide range of country, and they are either native sorts or seedlings therefrom.

The Hudson River Antwerp succeeds no where else as well as in the region of country from which it receives its name. Similar instances of the adaptation of varieties to localities are familiar to all fruit cultivators. Knowing these things we should always be extremely careful in deciding upon the value of new varieties. Even committees appointed by our horticultural societies frequently err in making up their reports, and it is not a very uncommon occurrence that discarded or condemned sorts become eventually the most popular. Merits of which we were entirely ignorant in the beginning are often developed as the plants are propagated and disseminated.

Taste.—The difference in taste has also much to do with the reception or rejection of any variety. If I were called upon to decide which was the very best raspberry, flavor to rule, I should select the wild red of our woods and fields. Another man would probably take Brinckle's Orange for his standard, while a third would choose the wild black raspberry, and at this point the question of taste would certainly come up for discussion. As we have no recognized standard of taste, and in fact there can be none only in a very limited degree, I shall claim that mine is as good as anybody's, and deserves equal respect. This question of taste is far too generally overlooked by those who seek information in regard to certain varieties.

If we are to take any one author for our guide, we must know something of his personal taste before it is safe to follow him in selecting varieties for our own use or market. We should find one man ever ready to extol the sweet varieties and condemn the acid, and of course asserting that it is only the sweet sorts that are really rich and high flavored. Another man, possing equal abilities in every respect, sees richness only in the sprightly-flavored sorts. Under such diverse opinions, who will decide which one has the highest and most perfect taste? I cannot understand why a man who prefers a cabbage to a banana does not display as high taste as the one who may happen to reverse this order of selection.

There is certainly one strong argument in favor of the cabbage, and it is the well-known fact that the land of "Sauerkraut" has produced more noble specimens of humanity in one century than all the tropical countries combined have in a dozen. If a man happens to possess what is usually termed a sweet tooth, or a palate that revolts at the approach of acid, we cannot expect him to go into ecstacy over the advent of a Wilson strawberry or blackberry.

This question of taste is still an open one, but the masses seem inclined to go on the sour side. Beginning with the apple and descending to the cranberry, we find acidity in every instance to lead, in spite of the sweet-toothed critics. But we should be careful not to confound taste with quality, for a fruit may be either very sweet or very acid, and still be very inferior. It is only when all the elements known of a particular species are present in abundance that a variety can truly be considered rich and high flavored. I have been thus explicit in mentioning this question of taste and quality, because there are persons who have been misled in making selections of fruits for their own use, through following the advice of a person with a different taste.

Origin of Varieties.—I hope our small fruit culturists will not lose sight of the fact that they have as yet done very little towards producing improved varieties.

We have certainly made some progress in the methods of propagation, cultivation and marketing these fruits, but nature has given us about all that we have in the way of improved sorts, except in a very few instances. The skill of our horticulturists is not apparent in but a small number of our cultivated small fruits. This in itself should not discourage any one, but prompt every horticulturist to try and make some advance upon the best known sorts.

We have done something toward improving the strawberry and raspberry, a very little for the gooseberry, and less for the currant, there being no American variety equal to the best foreign ones. Of blackberries we have several valuable sorts, but they are all natural seedlings, found in the woods or by the road sides. The same is true in regard to the huckleberry, cranberry and many other small fruits which should have been improved by us long ago. We can truthfully claim to possess the best small fruits in the world, but modesty and honesty would seem to dictate that we should not claim very great honors for the little we have done in producing them.

Evident Results.—Results cannot be weighed, measured, or even fully known. The raising of a new seedling strawberry is in itself a very insignificant act, but the results may in themselves be of great importance. The production of the Hovey's seedling strawberry caused a complete revolution in the culture of this fruit in America. Previous to its production we looked to Europe for the new sorts, and never dreamed that all we required was native sorts to make strawberry culture take a high stand in our pomology. The experiments of the late Dr. Brinckle of this city (Philadelphia), in raising new raspberries, produced results which established the same facts in regard to this fruit, and I am happy to know that the raspberry mantle of this much-lamented pomologist is likely to fall upon another citizen of this great city.

The new varieties produced by D. W. Herstine are already making their mark in many gardens of choice fruits. It is from such apparently small beginnings as the experiments of Brinckle, Clarke, Arnold and Herstine that finally culminated in the feverish excitement that prevailed a few years since for new varieties.

Small fruit culture has now taken an important position in our American horticulture, and although I am inclined to believe that they are really no more profitable as a whole than the large fruits, still they fill a place in our domestic economy which is of the utmost importance to the health and welfare of our people. They are the missionaries and educators which are rapidly making the country a garden that will furnish the best fruits in the world, and these, too, in the greatest abundance.

Dairy Husbandry.

NEW YORK DAIRYMEN.

First Annual Convention of the New York State Dairymen's Association and Board of Trade.

[Continued from Page 70, last No.]

Commercial Aspect of the Dairy.—J. W. CRONKHITE of Little Falls presented an able and interesting paper upon the commercial aspect of the dairy. He commenced with the early history of cheese making in Herkimer, and traced it, step by step, up to the present time. He said:—In the steady increase of this product new demands have been made upon it, and new avenues of commerce have opened to its growing interest. And yet the supply has not exceeded the demand, but a ready market at remunerative prices is ever within your reach. The magnitude of the dairy product of this country has called out more extensive arrangements for the transaction of this important business. So that from the commerce of a canal grocery and a village provision dealer (a pitiable commerce, indeed, in those dark days of the dairymen) it has made its way as a staple commodity in all the large cities of this country, and is beckoned beyond the sea as a sweet morsel to European cities.

New York, the great commercial emporium of this country, has suffered from wicked and corrupt government to an extent that is alarming the world. The developments from day to day are astounding. Retributive justice seems at length awakened. Her ports and her laws are being investigated; her commerce driven away, except when it would contribute to the personal aggrandizement of a thieving ring. It is said that they successfully opposed every improvement of the commercial facilities of the city by private enterprise, and made the urgent demand for such improvements the means of plunder and robbery. The wharves of the city, the gateways of its commerce, were made the means to rob and plunder her trade, while they were so neglected that a committee of the Legislature in 1867, stated "that the condition of the piers, wharves, bulkheads and slips of the harbor of New York were most deplorable, and a disgrace to such a commercial emporium as the city of New York." This condition of the wharves, by reason of exposure of goods to the weather and thieves, and the unnecessary cost of carting, imposed a burden of more than $5 per ton upon all the goods shipped over them, creating a loss, in the aggregate, of more than $50,000,000 annually. It is not unreasonable to suppose that the dairy interest, exporting a large amount of its products, has contributed its proportion to this loss. Five dollars per ton is an important item. Let us be thankful that persistent vigilance in exposing these frauds, has led the people, in love of justice and self-protection, to unite in breaking this thieving ring.

When we examine the records kept in our warehouse at Little Falls, we see that on July 12 and 13, 1869, the shipment was 6,755 boxes, or 418,492 pounds. On the corresponding days of 1871 they were 7,640 boxes, or 473,365 pounds, showing an increase of 53,873 pounds.

We find that as a shipping point Little Falls may safely challenge any other point in this country. The large increase of the shipments of these two corresponding days may be considered as an index to all other market days of the season.

The product of the dairy as an article of commerce we see is growing into increased importance, and is not likely to become less. The consumption of American cheese is becoming more general abroad, and new markets are opening to it from year to year. It is becoming more and more an article of home provision, and it is extending its market from city to city and village to village all through this country.

You have consolidated the milk of your herds and established factories all over the country, so that the poorer dairyman, with his half-dozen cows, is placed on a *pro rata* basis with the wealthy landholder. So, too, it is within your means to again consolidate for the marketing of your products, by establishing your own house in New York and Liverpool, and take commerce in your own hands, and thus save the profits of the "middlemen," as well as a host of shorts and leakages that are "charged back" to you all the way from here to the other side of the Atlantic.

The next speaker was Mr. L. D. Arnold of Tompkins who gave a well written address upon

The Future of Dairy Husbandry.—Mr. Arnold said there was evidently now a better use made of milk than formerly. At the constant rate of increase of population in the United States, the year 1900 will find us with a population of 100,000,000 inhabitants. If we contrive to consume cheese at no greater rate than at present, it will require two and one-half times the quantity we now consume to supply the annual home consumption of that day, or 450,000,000 pounds. The shipping demand must also increase. Cheese contains more than twice the nutrition, pound for pound, that meat does, while more pounds of cheese than of meat can be produced from a given quantity of food. Cheese, therefore, he thought would very naturally grow in favor with the masses, as being far the cheapest and best animal food for laboring people.

He estimated that in the year 1900 our people would require a billion and a half of pounds of butter for their yearly use. The question then was, "Where are all these dairy products coming from? Under our present system of managing, milk dairying can never be crowded into warm climates profitably. Except upon elevated and mountainous tracts, dairying must be excluded from the South. But he thought the demands of the year 1900 would be easily met by the people of that day, and have dairy lands to spare after that. He said the future of dairy husbandry in the United States hangs on nothing so dependently as upon the quality of the goods to be thrown into the markets we would hold. Efforts at improvement must be constant, unremitting from year to year. If we would rise higher, we must strive harder to improve in our art. Science must be called to our aid; a constant watchfulness in observing results; communication between dairymen should be more frequent and full. Organizations like the one here inaugurated are among the most efficient means of advancement.

He attributed the low prices this year in part to the large amount of poor cheese made in 1870. The great bulk of the bad cheese was disposed of at home. It was scattered everywhere and lodged on the shelves of the retail grocers. Their patrons, after partaking of it a few times, grew cautious and purchased sparingly, if at all, for people will not eat poor cheese freely. In this way people got out of the habit of eating cheese, and the home demand was injured. He looked forward with bright hopes for the future of dairy husbandry in the United States, and these hopes were not based on any limitation of butter and cheese producing territory, but upon the steady expansion required to meet the constant increase of our population.

Mr. Lewis of Herkimer followed with a very excellent and practical address upon

How to Improve our Dairy Stock.—He mentioned four methods employed at present to increase the quantity of milk, 1st, by the purchase of cows; 2d, by high feeding; 3d, by adding water; and 4th, by breeding. He thought that careful and judicious breeding was the only legitimate and satisfactory method by which the desired improvement in our dairy stock can be effected. He would use, with our native cows, a thorough-bred bull of that breed best adapted to our respective farms, and that particular branch of the dairy business we intend to pursue. For a butter dairy, would use a thorough-bred Devon or Jersey bull, and raise calves from those cows which would produce the greatest amount of butter, irrespective of the quantity of milk. For milk to sell, he would cross his best cows with the Ayrshire or Holstein, raising the calves as before. On level and rich pastures, he would prefer a cross with the Short-Horns from a good milking family, and upon such lands he was of the opinion the Short-Horns produced the greatest amount of good milk, butter, cheese and meat of any grades or full-bloods living. In conclusion, he dwelt upon the constitution of the cow, which he said must be good, and this was quite as important as her milking qualities.

Inquiry.—N., Clarendon, Vt., asks some of our readers to give their experience in churning milk for butter. He asks if more butter is made and its comparative quality.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Gathering Nuts.—*Jan.* 15.—There being no snow on the ground, I find it a good time to gather nuts of nearly all kinds. Hickory, Black Walnut and Butternuts are scattered through our woods in great abundance, and there is nothing to prevent gathering them at this time, and all in the very best condition for growth. It is a great pity that the settlers on the Western prairies do not avail themselves of such opportunities for obtaining tree seeds. A few dollars spent in this way would certainly be a good investment. I am having a quantity of hickory nuts gathered for a friend in Colorado, and hope to live long enough to sit under the shade of the trees produced therefrom.

Pruning Old Apple Trees.—*Jan.* 16.—One can scarcely find a better time to prune large trees than during the mild weather in winter. But the manner pursued by some persons in pruning old apple trees appears to me quite absurd. I have always supposed that the main object in pruning such trees was to keep up a vigorous and healthy growth, but how can this be done if all the young and thrifty shoots are annually cut away and none left but the old and enfeebled heavy branches. This seems to be the general practice, and I am only surprised that these old apple trees live as long as they do. When I want to restore health to an old tree I cut away as much of the old wood as it seems advisable, and leave that which is young and healthy. One healthy young shoot is worth a dozen old branches for restoring health. After a branch has produced fruit for a dozen or more years it is pretty sure to show signs of becoming weak, and if the internal structure is examined the annual deposit of wood will be found very thin. At the same time new shoots will start out of these old branches near their base, these are usually termed sap-shoots, and the almost universal practice is to cut them away entirely; but they are sure indications of feebleness in the branches above, and if the trees are very old a few of them should be encouraged and the branches above them entirely cut away. Of course all large wounds made by the removal of such branches should be covered with wax or some similar composition that will protect the exposed wood and prevent decay. I know this is a somewhat radical method of restoring old trees to health, but it is effectual, as I know from experience.

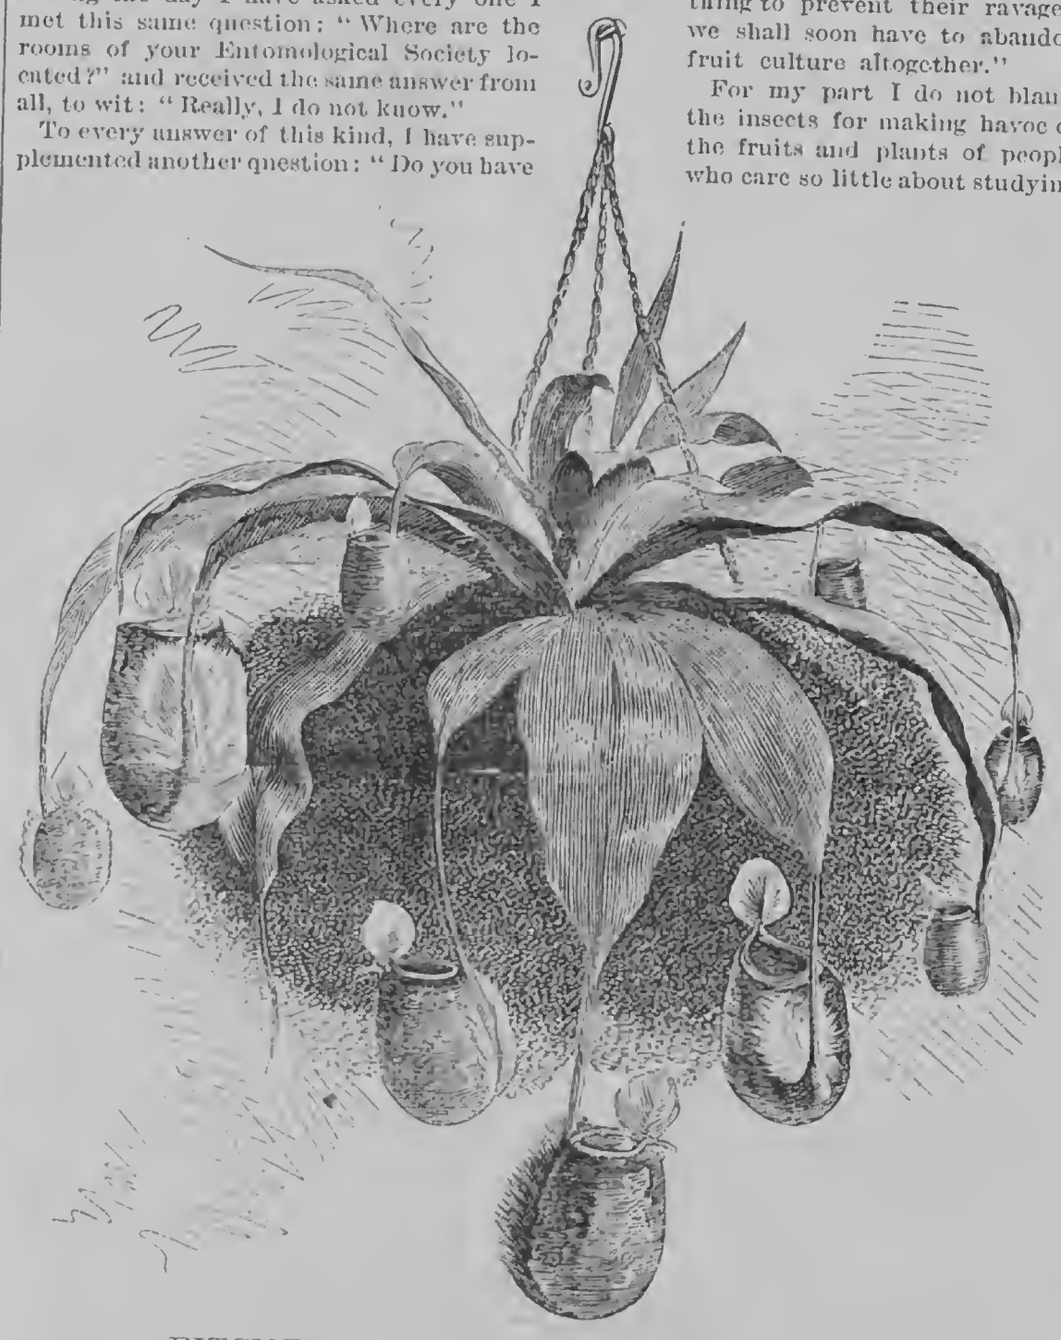
Across New Jersey.—*Jan.* 17.—Jersey has always been noted for her poor lands and penurious people, but she is steadily improving, through the outside pressure brought to bear upon her by the many railroads which cross the State. In passing from New York to Philadelphia to-day I could not help noticing the hundreds and thousands of acres of poor, worn-out land lying between the two greatest cities of this continent. If it will not pay to improve and keep land fertile in such a locality, will it anywhere? There must be something wrong in the people who own this land, because climate, locality, and the natural or original condition of the soil are all favorable to the highest state of cultivation. Perhaps the next generation will appreciate their advantages in regard to locality, and restore this region to its former position in the agricultural and horticultural world.

Searching for an Entomological Society.—*Jan.* 18.—Philadelphia has long been celebrated for being the residence of some of the most noted entomologists known. The old pioneer in the science, THOS. SAY, the elder LECONTE and his son, JOHN LECONTE, as well as HORN and many lesser lights who have devoted the greater portion of their lives to the study of entomology, all hail from this city of "Brotherly love."

Knowing this to be the case, I thought it would be a very easy task to learn something of what was going on in the entomological world, but I was sadly disappointed. Upon leaving my hotel this morning, I went directly to the Academy of Natural Sciences, where I met two gentlemen well known to the scientific world, and I inquired of them where the rooms of the Entomological Society were located, but neither had ever visited the place, but believed they were located somewhere in Thirteenth St. Of course I could get the required information out of the City Directory, but I concluded to make some inquiries of horticulturists who, of all men, should be interested in this science.

My acquaintance among the Pomologists of Philadelphia is quite extensive, and during the day I have asked every one I met this same question: "Where are the rooms of your Entomological Society located?" and received the same answer from all, to wit: "Really, I do not know."

To every answer of this kind, I have supplemented another question: "Do you have any trouble with insects in growing fruit about this city?"



PITCHER PLANT.—(Nepenthes Hookeriana.)

"Why, certainly, our fruits are nearly ruined by them, and unless we can do something to prevent their ravages, we shall soon have to abandon fruit culture altogether."

For my part I do not blame the insects for making havoc of the fruits and plants of people who care so little about studying their habits and history. I found the rooms of the Entomological Society at 518 South 13th street, and, in company with two gentlemen, spent half the night examining the Society's collection, which is probably the largest and richest in this country. The Society receives a very meager support from the public, and were it not for a few noble-hearted men, who think more of knowledge than money, it would soon cease to exist.

LILY OF THE VALLEY.

An Agreeable Surprise.—*Jan.* 19.—On my return to New York this morning, I received a note from an entomologist in Texas, informing me that he had sent a few rare species of beetles in care of a friend in Brooklyn. Of course I could not think of going home without these treasures, and went for them immediately. In calling upon my friend, Mr. G., who is himself an entomologist, we talked insects as steadily as two jockeys ever "talked horse;" and in the course of our conversation G. asked if I had ever called upon Mr. A., the coleopterist. I replied in the negative, when G. proposed that we should give him a call in company, to which I readily consented. A few minutes' walk brought us to a very small shop, in the window of which were some stuffed birds, fishhooks, and similar small, cheap articles of trade. I confess that the place was not one that I should have selected as being the depository of any great amount of scientific knowledge. We went in, and my friend introduced me to a man of middle age, with a somewhat rough exterior, but a *physique* that showed unusual force of character. After a few moments' conversation we were invited to visit the gentleman's workshop, which we found in the back yard. It was a small, one-story room, rough outside and within, and I doubt if any one, not knowing its contents, would give twenty-five dollars for the entire establishment. By considerable stooping and crowding, we three were able to get into the shop. Here was a most agreeable surprise to me, for from floor to ceiling, were piled boxes full of the rarest entomological specimens from all parts of the world. More than all, the owner of these knew all that is known of their history. Talk of the wealth of STEWART or ASTOR! It is all dross, compared to the rich store of knowledge possessed by this apparently humble citizen. I have seen some few very excellent entomological cabinets, belonging to private individuals, as well as to public institutions, but nothing that would compare in rich and rare specimens, with this one in the little workshop. As I left my new acquaintance, I could not help thinking how few among the hundreds who daily pass the little shop, know of the valuable scientific treasure it contains.

Floricultural.

NEPENTHES HOOKERIANA.

PROBABLY most of our readers are acquainted with some one or more of the native species of the pitcher plant, (*Sarracenia*). The leaves of all this genus are of that peculiar tubular form which is not unlike a pitcher, hence the name. They are chiefly bog plants growing in swamps among mosses, and in summer, when the leaves are fully developed, they usually contain a small quantity of water, into which various species of flies and other insects fall and are drowned.

There are many other nearly related species and genera, native of tropical countries, which have been introduced into our conservatories. We give herewith one of the most unique of the newer species of *Nepenthes*—Hooker's Pitcher Plant. The leaves which spring from near the base of the plant produce pitchers broad at the base and with a broad, winged front with ciliated hairs on the edges, the long petiole is attached to the front and grows up between the wings. But the pitchers produced higher up the stems a great alteration takes place—the petiole being attached behind, the pitcher becoming narrower at the base and the wings entirely disappear. This plant is not only wonderfully curious but well adapted to growing in hanging baskets, provided one has a house where a warm, damp atmosphere can be sustained. Such a house as the one shown in the RURAL NEW-YORKER, Jan. 27th, page 68 containing, ferns and other tropical plants, would be most suitable. A small conservatory or fernery filled with such rarities would not only afford a greater field for study, but give more pleasure to the owner than many a structure of greater pretension.

FORCING LILY OF THE VALLEY.

IT is only of late years that our florists have attempted to force hardy plants into bloom during winter. There are, however, many species that produce flowers very abundantly when forced, and we do not know any more beautiful plant for this purpose than the common Lily of the Valley, (*Convallaria majalis.*) The flowers are of the purest white, and their delicate fragrance and form always command admiration and a good price, especially during the holidays. A few days since, while passing up Broadway, we saw a small bunch of these flowers in the window of a well known dealer in flowers, and the price marked on them was only $10, which was, as near as we could judge, a little more than their weight in gold.

If this old and well-known flower will command such a price, we think they are certainly worth forcing into bloom in winter. The florists should not have a monopoly of this plant, for it is quite common almost everywhere, and can be readily forwarded among other house plants. The flowers are produced on long racemes, surrounded by two or three broad, deep green leaves, as shown in the accompanying illustration.

How Forced.—In autumn take up the desired number of good, strong roots, such as have plump buds or crowns. Pack them closely together, either in pots or broad, shallow boxes, covering the crown about an inch deep with fine rich soil. Give sufficient water to settle the earth firmly about the roots, then place them in a position to grow and bloom. If wanted for the holidays, they should be placed in a warm situation about the first of November. If it is not desirable to have them all bloom at one time, a portion can be kept in a cellar and brought out as required. If one has no conservatory in which to force them they can be placed near a stove or in any warm position until the leaves appear, then set in a window where they will receive the light. It is not necessary, however, that they shall receive the direct rays of the sun the entire day, as a partial shade seems to suit them best.

Cestrum Elegans.—Since we gave an illustration and description of this plant, in the RURAL NEW-YORKER of Dec. 23, 1871, a number of correspondents have inquired where the plants can be purchased. Will our florists take notice, and give the desired information through the advertising columns of this paper?

The Apiarian.

EXTRACTING HONEY — DO DRONES CONDENSE HONEY?

"How long should honey stay in a hive before extracting?" Extract it before capped over, and when there is enough to pay for emptying. All that is required, generally, to keep honey, is open crocks, in a dry, well ventilated room; some varieties of honey, in an uncommonly wet season, may require a steam bath. I claim the time taken by the bees evaporating their honey fit for capping, is so much loss to the keeper; also the time and material in capping is a total loss. We endeavor to give the queen the largest number of empty cells possible throughout the honey season, to make up the great loss of workers at the time.

And now a few words in regard to statements by Mr. HEAD, that "in the absence of the drone bee, a good, solid article of honey cannot be made." I think Mr. HEAD must have stated what is not the fact; for this summer I have extracted several hundred pounds of as good and solid an article of honey as you ever saw, and have not had a single drone bee in my hive this season — neither "the honest stay-at-home, or that single rowdy off high in air with his queen in a capacity not to be mentioned." Will Mr. HEAD show how some stocks carry a large number of drones over winter, when his "stay-at-home drone has lapped that thin portion always at the surface when the cells are filling," and has been capped over for winter? And will he state whether *any other old bee* ever "touches the pollen or bee bread" as food for themselves? After the middle of September, after Mr. HEAD has had his "rectifiers" of that thin substance in honey killed off, and we have a rush of buckwheat or other honey, from one to two weeks, and extract from five hundred to a thousand pounds of good, thick honey; will he please state what sucks up that thin substance?

Now for the true method by which bees evaporate honey. No "rowdy or stay-at-home drones," but *worker bees*, expel the excess of moisture. At any time when there is a flow of honey, in the middle of the day, you will notice clusters of bees near the mouth of the hive. Watch the movements of their tongues or proboscines; you will notice the several parts of which it is composed expand like spreading your fingers, and honey between each opening; these they open, and exposing the fresh gathered honey to the atmosphere, the watery portions are carried off, it is deposited in the cells, and capped over for future use. I claim that in an apiary of a hundred stocks, one hive is enough to furnish drones or male bees; any others are in excess and consumers of honey. We keep all drone cells in comb by themselves, and control the rearing of males as in other stock.

G. S. COOPER.

St. Charles, Ill.

Scientific and Useful.

USEFUL AND SCIENTIFIC NOTES.

Wood for Water Pipe.—I am an old man and have laid many rods of pipe of several kinds of wood, that being a part of my calling. The durability of pipe depends much on the ground. I was once called upon to re-lay a line of pine logs, a part of which were laid through a swamp; they had been laid twenty-eight years. The logs in the swamp were all sound except the joints. I renewed the joints and laid them down again; the rest, in the dry ground were all decayed. At another time I was called upon to re-lay some basswood logs. They had been laid only seven years and were all decayed except one length of ten feet that passed through a wet, spongy place; that piece was nearly round. I have laid several lines of Tamarack logs; they are very good to bore, being generally very straight, and last as long as most timber. Cedar will last the best.—A. WILSON, *Marcellus, N. Y.*

Potato Starch.—What would be the probable cost of building, or buildings, machinery, number of horse-power required for use, quantity of water required, &c., in the production of potato starch. Would a two inch flow of spring water be sufficient? What the required force of hands to attend and the cost of making per pound to use up two hundred bushels of potatoes per day? Why is English starch superior to either American or Canadian? Which is superior for general use—corn or potato starch? What kind is used most in cotton factories? What is the general average price per pound? What standard treaties is there on potato starch manufacture, and where can I obtain it?—D. M. M. P.

IF any of our readers can answer these questions, let them do so. We cannot, except by visiting some starch manufactory, to which we have no access at present.

Fire-Proof Fence.—We find in the Philadelphia Press this paragraph:—An exchange says that a fire-proof fence can be made by following these directions:—"Make a wash of one part fine sand, and one part wood ashes, well sifted, and three parts lime ground up with oil, and mix them well together. Apply this to the fence with a brush—the first coat thin, the second thick. This adheres to the boards or planks so strongly as to resist either an iron tool or fire, and is, besides, impenetrable by water."

TRAVELING SUIT.—(See page 87.)

Industrial Societies.

MEETINGS, ELECTIONS OF OFFICERS, &c.

National Wool Growers' Ass'n.—At the regular meeting of the Executive Committee of this Association at Syracuse, N. Y., on Dec. 20th, 1871, not much business was transacted, beyond the election of officers and receiving the report of the treasurer. The following officers were elected: *Pres.*—HENRY S. RANDALL, New York. *Vice-Pres'ts.*—Wm. R. Sanford, Vermont; S. Archer, West Virginia; Burdett Loomis, Connecticut; A. F. Wilcox, New York; J. C. Stevens, Ohio; A. M. Garland, Illinois; Eli Stilson, Wisconsin; Benj. Flint, California; F. Julius Lemoyne, Pennsylvania. *Sec.*—A. M. Garland. *Treas.*—A. F. Wilcox.

A committee composed of Messrs. Clark, Kelly, Stilson, Garland, Wilcox, Archer and Sloenm, were appointed to draft resolutions of respect to the memory of Hon. Edwin Hammond, deceased since the last meeting of the Association, and reported the following, which were unanimously adopted:

WHEREAS, The National Wool Growers' Association have heard with profound regret of the death of Hon. Edwin Hammond of Vermont, a member of the Executive Committee, and sincerely deploring his loss; therefore

Resolved, That in his death the National Wool Growers' Association is called upon to mourn the loss of one of its early, efficient and tried friends, and the Executive Board are deprived of a prudent and wise counsellor, to whom they have been accustomed to look for valuable and faithful service, and the great interest represented loses one of its most eminent and useful promoters.

Resolved, That the Association tender to the family of their deceased associate their most sincere expressions of sympathy at the loss which they have sustained in the death of a parent, friend and counsellor.

Resolved, That the Secretary be directed to enter this testimonial of our respect upon the records of the Association, and transmit a copy to the family of the deceased.

State Sheep Breeding and Wool Growers' Ass'n.—At a meeting of the New York State Sheep Breeding and Wool Growers' Association, held at Syracuse, Dec. 20, 1871, the following named gentlemen were elected officers for the ensuing year: *Pres.*—Hon. HENRY S. RANDALL of Cortland. *Vice-Pres'ts.*—Wm. T. Remer, Yates; C. C. Champlain, Steuben; J. C. Joslin, Rensselaer; S. N. Franklin, Cayuga; I. V. Baker, Jr., Washington; John P. Ray, Ontario; Peter Martin, Monroe; J. H. Earll, Onondaga; Wm. Chamberlain, Dutchess; A. G. Percey, Wayne; E. Townsend, Genesee; J. C. Short, Livingston. *Ex. Com.*—Lyon A. Sherwood, Newark, Wayne Co.; C. C. Cottsell, Washington; David Cossitt, Onondaga; J. J. Brainard, Wyoming; Isaac N. Johnson, Seneca; F. H. Hibbard, Cortland; D. W. Percey, Rensselaer. *Cor. Sec.*—Emory B. Potter, Naples, Ontario Co. *Treas.*—Asel F. Wilcox, Fayetteville, Onondaga Co. *Rec. Sec.*—H. D. L. Sweet, Syracuse.

Western N. Y. Hort. Soc.—Officers elect for 1872:

President—PATRICK BARRY, Rochester.

Vice-Pres'ts—T. C. Maxwell, Geneva; J. La Rue, Hammondsport; G. H. Moody, Lockport.

Secretary and Treasurer—William J. Fowler, Rochester.

Ex. Committee—H. E. Hooker, Rochester; J. J. Thomas, Union Spring; S. S. Gruves, Geneva; E. Moody, Lockport; H. T. Brooks, Pearl Creek.

Native Fruits—J. J. Thomas, Union Springs; Chas. Downing, Newburg; W. Brudle, Rochestor; G. S. Conover, Geneva.

Nomenclature—Chas. Downing, Newburg; J. J. Thomas, Union Springs; P. Barry, Rochester; D. W. Bendle, St. Catherines; S. D. Willard, Geneva.

Entomology.—H. T. Brooks, Pearl Creek; Dr. Sylvester, Lyons; J. J. Thomas, Union Springs.

Ornamental Trees and Plants.—Geo. Ellwanger, Rochester; E. Frost, Geneva; T. C. Maxwell, Geneva.

Garden Vegetables—E. S. Hayward, Rochester; John Crane, Lockport; J. W. Gray, Albion.

Foreign Fruits—Geo. Ellwanger, Rochester; W. B. Smith, Syracuse; E. A. Brouson, Geneva; E. W. Sylvester, Lyons; C. L. Hoag, Lockport.

Committee to Report Quantity of Fruit Shipped from Western New York—C. L. Hoag, Lockport; E. W. Herendeen, Geneva; Dr. Sylvester, Lyons.

Only one meeting is to be held in 1872, and that at Geneva.

Iowa State Ag. Soc.—Officers elect for 1872: *Pres.*—Col. JOHN SCOTT. *Vice-Pres.*—Edwin Smith. *Sec.*—Dr. J. M. Shaffer. *Treas.*—Wm. B. Leach. *Directors*—M. W. Robinson of Polk Co.; P. McIsaac of Black Hawk Co.; Aaron Kimball of Howard Co.; Oliver Mills of Cass Co.; Phineas Cadwell of Harrison Co.; C. F. Davis of Lee Co.; John W. Porter of Johnson Co.; F. L. Downing of Mahaska Co.; John Grinnell of Clayton Co.; S. B. Hewitt of Wright Co. Col. John Scott, President, and A. S. Welch, President of the State Ag. College, were appointed a committee to attend the meeting of the National Agricultural Society at Washington, D. C., in February next, and at St. Louis in May next.

Newburg, N. Y., Horse-Thief Detecting Society.—The Home, Garden and Orchard says the old officers (who are they?) have been re-elected, and the following persons appointed riders for 1872:—James Tuggart, Daniel H. Merritt, William Wilson, C. Gilbert Fowler, John M. Sears, David Leon, Amzi Benjamin, John L. Aderton, Jas. B. Hasbrouck, Walter Dunville, David Jugger, Gethern J. Appleton, Wm. Philip Clark, John Moore, John H. Waters, Jr., McCauley Dickson, Aymar Van Buren, Alexander Leslie, Gilbert T. Culyer, Edward Haigh. We should like to know more about this organization.

Maine State Ag. Soc.—Officers for 1872: *Pres.*—Hon. SAMUEL WASSON of Ellsworth. *Sec.*—Samuel L. Boardman of Augusta. *Treas.*—Wm. E. Morris of Portland. *Trustees.*—B. F. Hamilton of Biddeford; Rufus Prince of Turner. Hon. Wm. P. Wingate of Bangor and Samuel L. Boardman of Augusta were appointed delegates to the National Agricultural Convention at Washington, Feb. 15th.

The Hamilton, N. Y., Ag. and Mech. Ass'n held its annual meeting at Pootyille, Jan. 1, and elected the following officers: *Pres.*—N. BROWNELL. *Vice-Pres'ts*—C. B. Ackley, W. Keech and D. L. Stebbins. *Directors*—F. H. Ingalls and B. C. Ackley. *Treas.*—D. B. West. *Cor. Sec.*—O. B. Lord. *Rec. Sec.*—D. W. Usher. Next exhibition is to be held Sept. 17, 18 and 19.

Glen Spring, N. Y., Farmers' Club.—Officers for 1872: *Pres.*—W. W. MAUNEY. *Vice-Pres'ts*—G. D. Baker, Geo. Eldred. *Sec.*—W. W. Buxton, Milo Center. *Treas.*—D. H. Clark. *Lib.*—C. Metcalf. *Ex. Com.*—J. F. Reynolds, G. Gamdry, C. D. Davis, Mrs. W. Sutherland, Mrs. A. G. Bartholomew.

Eastern Iowa Hort. Soc.—This organization recently met at Cedar Rapids. The following are the officers elect: *Pres.*—G. WOOD, Springdale. *Vice-Pres.*—Suel Foster, Muscatine. *Sec.*—Jos. L. Budd, Shellburg. *Treas.*—Henry Stedam, Iowa City. *Directors.*—Abner Lacey, W. J. Abernethy, H. H. Smith, G. A. Knowles, Dr. W. H. Rossean.

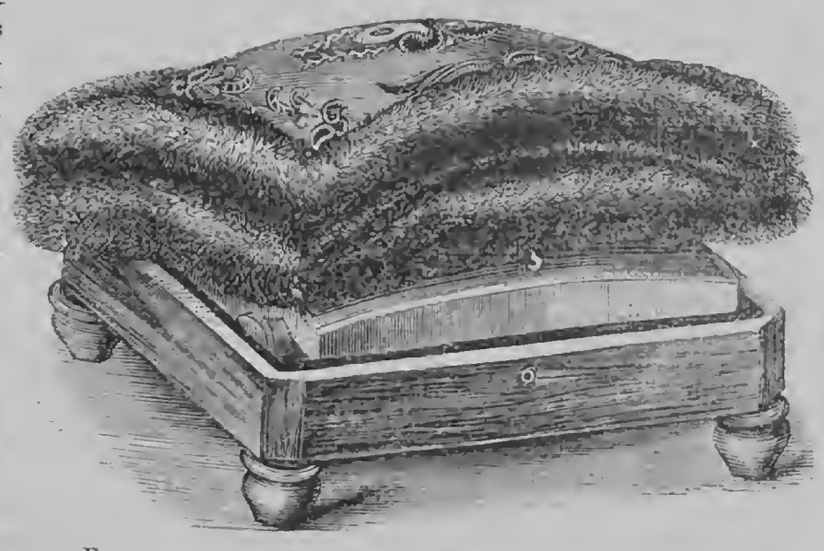
The National Ass'n for the Promotion of the Interests of the American Trotting Turf, holds its annual meeting at Cincinnati, Feb. 7. All Agricultural Societies that give premiums for trotting should send delegates, in our opinion.

Iowa Bee Keepers' Ass'n.—Officers elect: *Pres.*—J. W. CATTELL. *Vice-Pres.*—W. H. Furman. *Sec.* and *Treas.*—Mrs. E. S. Tupper. The next annual meeting is to be held at Des Moines the second Wednesday in January, 1873.

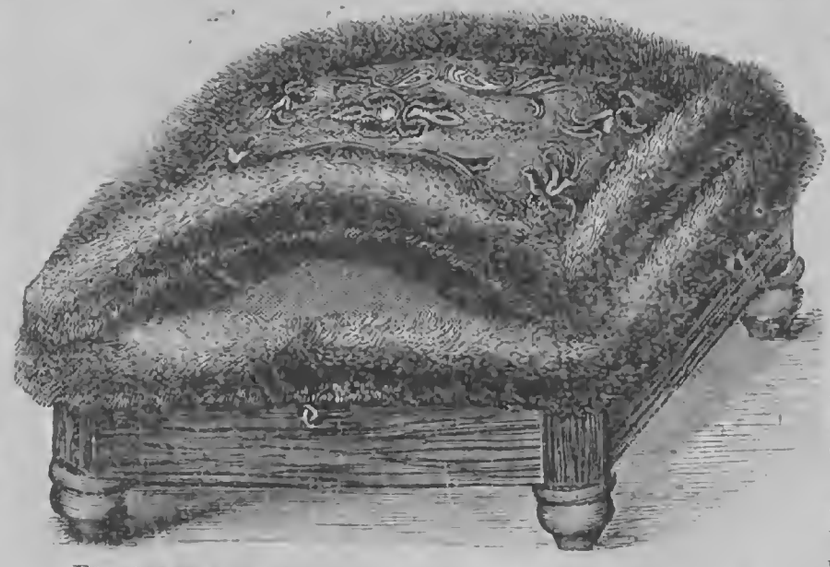
The Illinois State Ag. Soc. has decided to hold its next State Fair at Ottowa, commencing Sept. 16.

Chester, Vt., Farmers' Club.—Officers: *Pres.*—J. P. BARNES. *Vice-Prest's.*—R. P. Pollard, J. C. Carr, J. H. Adams. *Sec.*—J. S. Adams.

Beaver Dam, Wis., Ag. Soc.—Officers elected: *Pres.*—G. H. STEWART. *Sec.*—A. J. McCoy.



FOOTSTOOL, WITH HOT-WATER TIN, OPEN.—(See page 87.



FOOTSTOOL, WITH HOT-WATER TIN, CLOSED.—(See page 87.)

The Poultry-Yard.

PIGEON PENS.

In pigeon lofts where it is desirable to breed different varieties of birds, pens should be provided somewhat similar to the accompanying illustration, (Fig. 1), which can be placed in almost any loft. The pen is two feet in hight and length, and eighteen inches deep; half the front, as shown in the cut, is closed with a board or blind, and the other half with a wicket or wire gate. Inside, from the blind to the back is fixed a shelf one foot from the floor and the same width, on to which opens through the blind a small door for the egress and ingress of the birds, with a ledge for them to alight upon. On the shelf is placed the nest-pan, and as soon as the old birds are ready to lay again, it should be shifted with the young to the floor beneath and a clean one substituted.

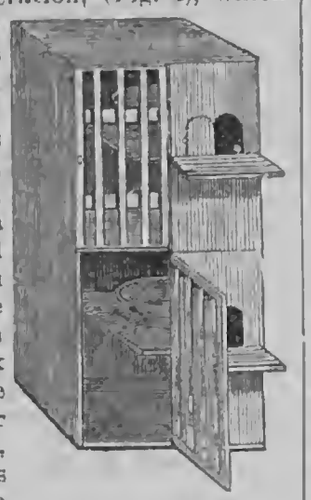


FIGURE 1.

The England Poultry Chronicle, (from which we take our engraving,) says the advantages of this pen are that, "the young birds cannot disturb the old birds while sitting, it puts them entirely out of danger when they begin to leave the nest, causes them to learn to feed themselves early, so that when they are able to ascend to the shelf they are ready for removal to the general loft. These pens have, among other advantages, those of being readily and thoroughly cleaned, they give the loft a neat and uniform appearance, and in every way add to the pleasure of the fancier in ways unnecessary to detail."

Fig. 2 shows a pen more particularly adapted for the transportation of pigeons, or it may be used as an exhibition coop. It can be made any desired length—a pen three feet long, two wide, and two feet high, would be the most preferable size—being easy to handle. The top and bottom are made of light, half or quarter inch stuff, the back can be tight if desired. For an exhibition pen it should be open, as shown in the engraving. Lath or sawed strips can be used for the bars, as they would be the cheapest and easiest made, but wire can be used instead for rods. That must be decided by the taste of the builder.

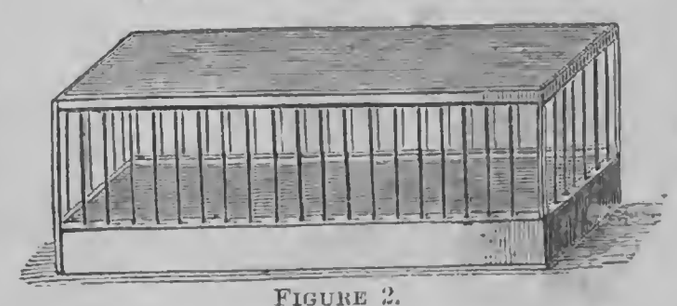

FIGURE 2.

PRIZE POULTRY.

THE Poultry Savant of the Hearth and Home seems to imagine that a set of "arbitrary rules" which govern judges in their awarding of premiums at our Poultry Fairs convey false impressions to the uninitiated. Who ever heard of arbitrary rules? I understand arbitrary to be despotic—without rule or law—the will of one. A rule is the negation of any thing arbitrary, and presupposes common consent. Rules are the expression of principles in concise language. They are meant for the uninitiated. We are supposed to understand the principles of a science before we attempt to teach the subject understandingly. Law, Medicine, Navigation, Architecture, all have their rules. Language has its rules; and one of the most important for a writer to learn is the right use of words. The principles of all sciences are grouped in rules.

What does a "Standard of Excellence" mean? asks our champion of the cross-breeds, and answers that it only refers to the "color of legs, straightness and shape of comb, etc., and that such marks are not such as accompany useful qualities." That is to say, no animal, particularly a fowl, can possess ornate and useful qualities combined. Do not many of the useful properties of an animal count in making up its points of beauty? May not a ship be both staunch and beautiful? Can you show me what advantages a cross has over a pure-bred fowl?

The first thing a "Standard of Excellence" demands is that the breed shall be pure—that the fowl shall be the perfection of its kind, which may include size, condition, flesh-abounding, egg-producing, etc., together with its ornamental characteristics. Color of plumage is one of the strongest insignia of the pureness of blood. The largest fowls do not always lay the biggest eggs or carry the most flesh it is very true. The Light Brahmas, Plymouth Rocks, or Highlanders, may be more profitable in the opinion of some people, since they carry more bone than flesh. But there is another party who has his idea of profit—the consumer—who may demur to your notions of usefulness, and seek to purchase the fowl with the most flesh and the least offal.

I think our friend of the Hearth and Home could study the "Standard" with good advantage to himself; and when he shall have made himself familiar with the peculiar characteristics of all kinds of poultry, he will not regard the "horribly deformed feet" of the Dorkings or Houdans with so much aversion. I am sorry it is so painful to him to see an extra toe on a fowl, and a comb to lie on one side of the head, and such diversity of color in plumage and legs. These are mere matters of taste—they do not cause any pain to the bird, and therefore need not fear the interference of Mr. BERGH. But it is this "high breeding" (on the part of fanciers) "that causes delicacy of constitution and susceptibility to disease." High-bred is to be bred in high life, says BYRON. It is the reverse of being bred in low life. To be bred in high life, does not necessarily cause delicacy of constitution. The low bred are not exempt from such. The gentleman is rather unfortunate in the use of his words. I presume he means high-fed. To pamper the appetite of an animal is as injurious as not to fully satisfy it with food. Inanition is as bad as plethora. Good food, sufficient in quantity and given at regular intervals, is one of the tenets of physiology. A premium bird must be one that meets all the requisites of judicious care and feeding, large and symmetrical in shape, (I am not speaking of Bantams, nor of that *medioc.* size so admired by the Farmers' Club,) not too fat, but carrying plenty of meat; of sound constitution, and fully able to re-produce its like in an equal, if not superior degree.

"Not only the physical appendages but the very instincts have been so perverted by the cruel cunning of the fanciers, that 'excellence,' as applied to game fowls, means an irresistible passion of the birds to torment each other to death." This is a fair specimen of the whole tenor of the article I have been answering. It was not the cunning of the "fanciers" that perverted the instincts of the game fowl. The same plastic hand that molded the Universe—that gave to us the sun by day and the moon by night, and the starry firmament, the ocean and the land; that gave strength to the lion, ferocity to the tiger and savageness to the hyena, also gave to the game fowl his cruel instincts. The "Standard" judges him by his useful and ornamental qualities; the cockerel by his pluck. The mass of people do believe that premiums are offered for fowls on a basis similar to that in cases of other live stock, and truly so; and it is a perversion of the truth to allege to the contrary. Why the gentleman has striven so desperately to underrate pure blood and elevate cross blood in poultry, is beyond the comprehension of the most astute understanding. He has not given us a single good reason; and in the face of science, experience and common sense, he urges his theory. If there is nothing in blood, History is all a fiction, and the human race a lie. If there is nothing in "The Standard of Excellence," whose will he raise in its place? I trust not that of the critic of the Country Gentleman. We have had HAISTEAD'S. We have a TEGETMEIER and a LOCKWOOD. Whose shall we have next? ISAAC VAN WINKLE.

Greenville, N. J.

Vermin in Fowls.—A writer in the London Field gives the following as his method of ridding his fowls of vermin. He says:—"During the past season I have found common paraffin to be a most effectual cure both for house and birds. For the former, simply sprinkle it about the building every other day or so until they have disappeared; then a good plan is to keep a can of the same in the house with the cork out. For birds (with a common small paint brush) apply it from neck to tail on the back, and again under the wings; this will kill them all in an hour or so, and not hurt the birds."

The Horseman.

POLL EVIL.

POLL EVIL is a serious matter to those who have to deal with it. Last spring one of these ulcers began to make its appearance on one of my mares; and, even before the bunch was apparent, the neck grew stiff, the nose being carried much higher than usual. I could get little information about treatment, and made no opening until about the first of August, when it had been soft for some time. I used injections for three months, during which time the ulcer was growing worse, and the mare had become so reduced that there was little left but skin and bones, notwithstanding I was feeding her a peck of grain per day. I then procured a long, narrow-bladed knife, and guarding it with a stick upon the back in such a manner as to prevent its cutting any further than there was an opening sufficient to admit the stick, passed it into the cavity and to the end of it, down the neck toward the body. As the cavity extended up the neck toward the ear, I did the same with the other end, when I had an opening at least eight inches long by three deep. Then rubbing the inside thoroughly with powdered blue vitriol, left it for three or four days.

I also began feeding the following condition powder, two teaspoonsful twice per day in meal:—One ounce each of fenugreek, cream tartar, gentian, sulphur, saltpeter, resin, black antimony, ginger, and half an ounce of capsicum. After two weeks, giving once per day, the sore began to knit together, and is now nearly all healed. I found it necessary, sometimes, when there were indications of a pipe forming, to cut just enough to destroy it, rubbing occasionally with vitriol as at first. The powders worked wonders inside, and the mare began gaining flesh rapidly on the same amount of grain. She is now in good condition, with a prospect of being able to go to work again.

I believe the knife to be the surest and quickest remedy; and if I had known it at first it would have saved months of valuable time, and acute suffering to the mare.

The opening should be made as soon as the swelling begins to grow soft, and not too near the ear or root of the mane—always lengthwise of the neck. Every corner of the cavity should be examined, and cut if necessary, as any hesitation is positive cruelty to the animal and damage to the owner. If some blood flows, there is no cause for alarm.

The powders are invaluable in any case of indigestion or debility. G. E. T.

West Haven, Vt.

NOTES FOR HORSEMEN.

To Cure Colic in a Horse, a correspondent says, "Give one to three drachms oil of anisc."

Sassafras and Heaves.—A correspondent says:—"Sassafras is a splendid thing for a heavey horse."

Cure for Ringworms Wanted.—An old subscriber of the RURAL NEW-YORKER, who has ringworms all over his face, asks for a remedy.

Slabbers in Horses.—We see it asserted that a horse can be cured of this in summer time by simply giving him a cabbage leaf. This will stop it until he eats something that will cause him to slabber again.

To Prevent Ringbones on Colts.—A correspondent of the RURAL NEW-YORKER says:—"Tell those who wish to prevent and cure ringbones on colts to try letting the colt suck seven or eight months, keeping the mare up by extra food."

Breeding from a Deformed Colt.—I have a colt, of very good stock, but deformed in his knees. Would like to know if his *get* would be liable to this weekness? He was given to me when about four months old, being then very crooked, but seems to be growing out of it. His other points are said to be good. He is now seven months old, and remarkably large for his age.—M. C., *Mobile, Ala.*

IF the deformity has not been inherited from sire or dam, there is little risk in breeding from him; though, as a rule, a deformed horse cannot be recommended as a breeder.

The English Coach Horse.—At a meeting of the Jefferson Co., N. Y. Farmers' Club, recently, Gen. PRATT urged the adoption of measures to introduce into that locality the "thorough-bred English coach horse." He considers these animals "the most valuable horses known, possessing all of the desirable qualities in size, style, action and color, having been bred for over 200 years. They stamp with almost infallibility their characteristics upon their offspring."

Stringhalt.—WALTER A. DAVIS has a valuable mare troubled with stringhalt, and wants a remedy. It seems to be conceded that this trouble is the result of an injury or a strain, and as soon as discovered complete rest is recommended, with light diet, nauseating medicines, with an occasional light dose of cathartic medicine to clear out the bowels, and cold water bandages around the body. Chronic cases, of long standing, are regarded incurable. It is recommended, however, where the horse is debilitated, to rub the spine daily with a mixture composed of one pint of linseed oil, two ounces spirits of hartshorn and half an ounce of fine mustard, at the same time giving, morning and evening, a dose of one ounce each of powdered golden seal, powdered gentian, cream of tartar and charcoal, and one-half ounce asafœtida, mixed and divided into eight equal parts.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

To Break up Ague.—I noticed an inquiry, some time since, for something that would break up the ague without quinine Take one ounce of wandering milkweed or bitter root; put in a bottle with a pint of brandy; let it stand a few days to get the strength from the roots. Dose, a tablespoonful in the morning, before eating. I cannot give the botanical name of the plant. It grows very plenty with us on meadow land, and resembles buckwheat in appearance.—P. M. M., *Perryville, N. Y.*

WE do not know any plant by the name given by our correspondent.

Darkness and Small-Pox.—The London Lancet says:—If a patient, in the beginning of the attack, be put in a room from which absolutely all light is excluded save that of a candle, the effect is to arrest the disease in the papular or vesicular stage; the skin between the vesicles is never inflamed nor swollen; the large scabs of matter never form over the face; there is no intense pain, and only trifling itching, and the smell is either very slight or altogether wanting.

To Cure Salt Rheum.—I have known severe cases of salt Rheum cured by using the following:—Two ounces of fresh butter; one tablespoonful of sulphur; one ditto oil of tar; half an ounce origanum; half an ounce rosemary. Melt the tar, butter and sulphur together. Be sure the sulphur is melted. Let stand until cold, then add the oils and stir until cold. Apply plentifully two or three times a day, heating it in.—J. N. ALLEN.

To Remove Tan.—M. B., Santa Clara Co., Cal., asks "what will remove tan and make the face smooth and keep the skin in a youthful state." We answer, the most thorough cleanliness. Frequent and thorough bathing, using soap, according to circumstances. Keeping the pores of the skin open and active is the best preservative of beauty we know of, except a good digestion; indeed it helps to insure that.

Frosted Feet.—I should be glad if some of your learned correspondents would tell us how to treat frosted feet most safely and effectively.—KATIE S.

ANOTHER writer recommends bathing the frosted parts with coal oil as soon as possible after frosted, and when the oil is absorbed bind on roasted turnip.

Bleeding at the Lungs.—Say to those asking for remedies for bleeding at the lungs and lung complaints, to try a thick flannel pad about the throat and lungs. Tell them to wear double, thick flannels and to protect the feet, throat, and whole person, so that it cannot receive a chill under any exposure.—READER.

To Cure a Felon.—P. M. M. writes the RURAL NEW-YORKER:—"When the pricking, painful sensation begins to be felt, put on spirits of turpentine freely, heating it in. A few applications will generally effect a cure."

To Disguise Castor Oil, a physician says, "Rub up two drops of oil of cinnamon with an ounce of glycerine, and add an ounce of castor oil. Children will take it as a luxury, and ask for more."

To Remove Warts from the Hands, wet them two or three times a day with common black ink, and they will disappear. —J. N. A.

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

Dyeing, Boy's Costume, Etc.—Mrs. T. C., wishes to know if a light brown empress cloth can be colored a dark wine, and if the brown must be extracted before coloring; and how to dress a little boy, three years old, in pants or dresses? Directions for coloring accompany dye packages. The color of the goods is usually extracted, I believe, before being dyed a different color. Keep your boy in dresses another year.

About Drawing.—"A Grateful Subscriber" writes as follows:—"Can you inform me respecting the best instruction book for landscape and perspective drawing, or could you give in the RURAL NEW-YORKER a few lessons upon perspective drawing? Although a farmer's wife I have a class of misses in drawing and have found the RURAL NEW-YORKER a nice copy book for simple subjects, and which will answer for several weeks yet."

THERE are a dozen or more works upon Perspective Drawing, all of which, perhaps, are equally good and equally bad, and none of which the RURAL can recommend over another. Your bookseller will probably oblige you by allowing you to examine such as he may have on his shelves. There is an English work, "Burchett's Linear Perspective," which is very highly recommended, at least by English artists. It may be had at this office by remitting $3.50. Drawing is an art every child should study, and ought to be a feature of all public schools. But the manner in which it is commonly taught in the country, both in schools and private classes, is false from the outset. A child may make drawings from copies, and continue to do so until gray, and never become an artist. Instead of giving your girls something to copy, place before them *actual objects*, beginning with the simplest forms first, such as a cube, a cylinder, cone, hexagon, vase, book, bottle, leaf or flower. If they succeed in making a correct representation of a cube after a week's trial, they are worthy of encouragement, and may proceed to draw the succeeding objects mentioned, varying their position as the pupil's capabilities develop. It requires a disciplined pencil to draw well even so common and simple a thing as a chair.

Traveling Toilet.—We give (see page 85) an illustration of a beautiful traveling suit. Dress of maroon colored woolen tissue. The skirt trimmed with two gathered flounces, headed with a deep trimming composed of a large gathered ruche. Second skirt very short in front, forming a puff at the back, and raised on each side by a gathered ruche. Bodice with waistcoat in front and postillion jacket at the back. White cloth paletot, trimmed with black velvet, with braid, and with a mixed black and white fringe. Blue velvet hat, with feather thrown over the back, and falling at the side.

ART OF SHAVING.

As men continue to shave and to be shaved (a practice which some regard as unnatural and undesirable) we transfer to our columns the following brief essay upon shaving which is from the pen of so celebrated an authority as Mr. MECHI:

"Never fail to well wash your beard with soap and water and to rub it dry, immediately before you apply the *lather*, of which the more you use, and the thicker it is, the easier you will shave.

"Never use warm water, which makes a tender face. In cold weather place your closed razor in your pocket or under your arm to warm it. The moment you leave your bed (or bath) is the best time to shave.

"Always wipe your razor clean, and strop it before putting it away; and always put your shaving-brush away with the lather on it.

"The razor (being only a very fine saw,) should be moved in a sloping or sawing direction, and held nearly flat to your face, care being taken to draw the skin as tight as possible with the left hand, so as to present an even surface, and to throw out the beard.

"The practice of pressing on the edge of a razor in stropping it soon rounds it; the pressure should be directed to the back, which should never be raised from the strop. If you shave from heel to point of the razor, strop it from point to heel; but if you begin with the point in shaving, then strop it from heel to point.

"If you only once put away your razor without stropping it, or otherwise perfectly cleaning the edge, you must no longer expect to shave well and easy, the soap and damp so soon rust the fine teeth and edge.

"A piece of soft plate-leather should always be kept with razors, to wipe them with."

Domestic Economy.

ODDS AND ENDS.

Footstool with Hot-Water Tin.—On page 85 we give two illustrations of this comfort-giving device. The framework of the stool is of polished wood, and so arranged as to contain a hot-water tin, the movable top being stuffed and covered with woolen rep. Over this is fastened an ornamental cover of dark brown cloth, embroidered in applique, lined with fur, or kitted pieces of cloth to imitate fur, and trimmed with brown fur. The top of the stool is also edged with fur.

Good Biscuits.—I herewith send you a recipe for making good biscuits, in answer to a "Young Housewife," in RURAL NEW-YORKER of Dec. 30, such as graced our table on New Year's day, and are fit to grace the table of a queen:—Three pints of the best wheat flour; one pint of cream (sweet or sour); one pint sweet milk; one teaspoon salt; one teaspoon soda; two of cream tartar; mix very soft, and bake in a quick oven. I know nothing about "IRVIN Brothers' Yeast Cakes." I have excellent bread from Twin Brothers' Yeast Cakes. One cake will make two loaves; set the sponge with water at night; in the morning mix with warm, sweet milk, set to rise, mold in loaves, let rise again, and bake.—MRS. H. S. B., *Catskill, N. Y.*

Pudding Items.—To prevent pudding boiled in a cloth from sticking to the bottom of the pot, put a plate or saucer in the bottom. All boiled puddings should be plunged in boiling water. To serve a boiled pudding at once, plunge it into cold water very quickly, when the bag will slip off easily.

Pudding-eating is an English custom, and although bountifully indulged in there, where the atmosphere is heavy, should be very sparingly indulged in here, where the atmosphere is light and clear. Manual laborers, who toil in the open air, can eat heavy puddings with impunity, when indoor workers would find difficulty in digesting them.

When to Use Certain Vegetables and Sauces.—Potatoes are good with all meats. With fowls they should be mashed. Carrots, parsnips, turnips, greens, and cabbage are eaten with boiled meats. Beets, peas, and beans are appropriate with either boiled or roasted meats. Mashed turnip is good with roast pork. Tomatoes are good with every kind of meat, but especially with roast. Apple sauce with roast pork. Cranberry or currant sauce with beef, fowls, veal and ham. Currant jelly is used by many persons with roast mutton. Pickles are good with all roast meats, and capers or nasturtiums with boiled lamb or mutton. Horseradish and lemons are excellent with veal.

How the Chinese Cook Rice.—A stew pan with a close fitting cover is chosen. Over the top of the pan is placed a piece of white muslin, large enough to allow it to hang down in the pan, without touching the bottom. Into the sack so formed, place the rice; pour over it two cupsfull of water, and put on the top of the stew-pan, so as to hold up the muslin bag inside, and fit it tight all around. Place the pan on a slow fire, and the steam generated from the water will cook the rice. Each grain, it is stated, will come out of the boiler as dry and distinct as if just taken from the boiler. If the water boils away, before the rice is done, more may be added. The cooking must be slow and moderate.

A Very Nice Snow Custard.—To one quart of milk take four eggs; set milk on the top of the stove, in a clean vessel; then separate the eggs; beat whites into a stiff froth; when the milk is scalding hot, slip the whites on top of the milk, turning them once gently, so that they will not cook, then lift them out and dish; whip up the yolks with two tablespoonfuls of sugar; pour into the milk, stirring rapidly all the time it is scalding. The very moment it comes to the boiling point, lift it off—if it boils it will curdle. When it cools sufficiently, pour into a float dish, with any kind of flavoring; then put the froth on top, and it will be delicious. —MARION, *Pittsfield, N. Y.*

To Color Red with Analine.—Take a double handful of wheat bran, pour some scalding water over it and let it settle; pour it off and then rub in the analine and simmer it over the fire one hour; take it out and dry it and then let it simmer one-half hour in urine. The color will not rub off.—MARTHA.

LITERARY ITEMS.

BEAUREGARD is writing notes on Pollard's "Lost Cause."

M. D. LANDON will write a biography of Artemus Ward.

A SON of Nathaniel Hawthorne is engaged writing a long story.

JUSTIN MCCARTHY sketches John Ruskin in the February Galaxy.

MRS. MARY A. LIVERMORE has retired from the Woman's Journal.

THE Fisk-Mansfield love letters have been added to current literature.

A LARGER hall is wanted for the Academy of Sciences at Peabody, Mass.

DR. BELLOWS'S memorial of the late H. T. Tuckerman is to be published.

THE new edition of Newman Hall's "Come to Jesus" is the 1,551th.

MR. J. A. COCKERELL is to become Editor-in-Chief of the Cincinnati Enquirer.

THE Overland Monthly lives and thrives, in spite of the loss of Mr. Bret Harte.

MISS THACKERAY has been at work several years on a novel called "Old Kensington."

ALFRED B. STREET, the poet, has a clerkship in the Secretary of State's office at Albany.

CELIA THAXTER, who has published a volume of poems, is called "The Poet of the Shoals."

FRANKLIN'S Birthday was observed in Concord, N. H., in this city, and in several places West.

"THE Life and Adventures of Brigham Young" has been brought out at a Liverpool theater.

THEODORE PARKER wanted lecturers to be more generous of thoughts and more stingy of words.

WILL M. CARLETON has charge of the columns of the Detroit Weekly Tribune. He is writing a series of farm sketches for it.

New Publications.

In the Fields again with Prof. Gray!

STANDARD

Botanical Text Books,

By ASA GRAY, M. D. Fisher Prof. Harvard University.

MORE EXTENSIVELY IN USE THAN ALL OTHERS COMBINED.

This justly celebrated series of Text Books presents the latest and most accurate Principles of Botanical Science.

HOW PLANTS GROW.—The most charming Elementary Scientific Text-Book ever published. Fully Illustrated. Price, $1.12.

THE SCHOOL AND FIELD BOOK.—The most thorough, practical, and best adapted work for class use published. Recommended by the most eminent Professors and Teachers in the country. Price, $2.50.

Lessons and Manual.....$3 90
Structural Botany..... 3 50

Liberal Terms offered for introduction. Samples of any of the above, for examination, will be forwarded by mail on receipt of price.

Send for full Descriptive Circulars.

New Publications.

THE

WEEKLY EVENING MAIL.

Best Family Weekly in the World.

$2.50 a Year.

UNPRECEDENTED INDUCEMENTS TO SUBSCRIBERS.

On the first of January, 1872, the publication of a weekly edition of THE NEW YORK EVENING MAIL was begun under most encouraging auspices.

It has been a success from the start, because it possesses peculiar features that make it especially desirable as a newspaper for

FAMILY READING.

No other existing weekly contains such a variety of

Attractive and Original Correspondence

from all parts of the world, including letters from London by Justin McCarthy and F. W. Chesson; from Paris, by Francis S. Saltus; from Berlin, Vienna and Rome; from Washington, by Col. R. J. Hinton; from Boston, Philadelphia, Chicago and other places of importance.

In its

LITERARY AND ART DEPARTMENTS

it is stronger than any other family weekly.

A FIRST-CLASS SERIAL STORY

from advanced sheets furnished by the author of "A House of Cards" from England. This will be one of the most interesting stories published during the year. It is entitled "A Golden Sorrow."

Besides these features there will be contributions from such writers as "Howard Glyndon," "Sophie Sparkle," "Anchor," and other well known correspondents of THE DAILY EVENING MAIL.

There will also be a

FASHION DEPARTMENT

for the Ladies, and

An Agricultural Department.

REVIEWS of the events of the week—foreign and domestic, political and religious, artistic and literary, dramatic and musical, etc.—will be carefully prepared.

VERY LIBERAL PREMIUMS

are offered to subscribers, singly or in clubs. Each subscriber will receive one of Prang's Chromos

Worth Two Dollars,

or four-fifths of the subscription. To clubs of five will be sent one

OIL CHROMO,

and five WATER COLOR CHROMOS, worth $16. To clubs of ten will be sent Chromos worth $32.

Liberal Cash Premiums to Postmasters and others getting up Clubs.

Supplied by all News Dealers through the American News Company.

DAILY EVENING MAIL

Served by Carrier or sent by Post for 50c. a month.

Sample Copies of THE DAILY AND WEEKLY MAIL sent Free.

"PROGRESS AND IMPROVEMENT."

MOORE'S RURAL NEW-YORKER.

A NATIONAL ILLUSTRATED

RURAL, LITERARY AND FAMILY NEWSPAPER.

D. D. T. MOORE,

Conducting Editor and Proprietor.

PUBLICATION OFFICES:

No 5 Beekman Street, New York City, and No. 82 Buffalo Street, Rochester, N. Y.

WESTERN BRANCH OFFICE:

No. 75 North Side of Park, Cleveland, Ohio.

☞ Subscriptions Advertisements, &c., received,—and Specimens, Show-Bills, Prospectuses, &c., delivered,—at either of the above offices of this journal.

TERMS, IN ADVANCE:

Subscription.—Single Copy, $2.50 per Year. To Clubs:—Five Copies, and one copy free to Agent or getter up of Club, for $12.50; Seven Copies, and one free, for $18; Ten Copies, and one free, $20—only $2 per copy. As we are obliged to pre-pay the American postage on papers mailed to foreign countries, Twenty Cents should be added to above rates for each yearly copy mailed to Canada, and One Dollar per copy to Europe. Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk. ☞ Liberal Premiums to all Club Agents who do not take free copies. Specimen Numbers, Show-Bills, &c., sent free.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS Co., 119-121 Nassau St., New York.

Advertising.—Inside, 75 cents per line, Agate space; Outside, $1 per line, each insertion. For Extra Display and Cuts, a price and a-half. Special and Business Notices, $1.50 and $2 a line. No advertisement inserted for less than $3.

SATURDAY, FEBRUARY 3, 1872.

RURAL NOTES AND QUERIES.

The Rural's Circulation has rapidly increased during the past month. Our Chief in the Mailing Department reports that we have already nearly as many subscribers for 1872 as we had at the close of last year. Considering that a great majority of our subscriptions expire with the year, this is remarkable—unprecedented, certainly, in the history of the RURAL NEW-YORKER. It proves that the RURAL'S "New Departure" is popular, and that our Agent-Friends, all over the Continent, are active and influential. Indeed, their efforts and remittances are augmenting, rather than diminishing as usual at this season. Thanks to all friends, everywhere!

—If our circulation continues to increase, in accordance with present facts and indications, we shall feel constrained to advance our Advertising Rates on or before the first of April.

Study of Natural History Important.—Complaint was made at the Farmers' Club the other day that the mice are destroying thousands of young trees throughout the country. A member made the very sensible suggestion that this is due, in a measure, to the fact that the natural enemies of the field mice are so generally destroyed by thoughtless owners of shot-guns. For every boy who has a gun shoots every owl and hawk he can lay his eyes upon, and traps and kills every skunk that steals his perfume in the fields. This is true. And it illustrates the necessity for a more thorough and universal study of Natural History in our Rural schools. Our boys and girls are taught less of what they ought to know and more of what is of no earthly use to them. Of what is right about them and before their eyes daily they know least—and yet it is a kind of knowledge they will find of most use to them in the practical affairs of farm life. A learned doctor said that the small snakes are also great enemies of mice, and in some countries they are never killed because they are regarded efficient agents in the destruction of these pests. And yet what American farmer boy ever fails to kill a snake if he can find a club or stone to do it with?—even those snakes that are at least as harmless and beautiful as any thing created? The prejudice against snakes is something greatly to be regretted. It is a barbarism akin to that which resulted in the burning of witches in the early times; and one of these days it will be looked upon by civilized people in much the same light.

American Workingmen in their relations to government, seem to have been a puzzle to the Grand Duke ALEXIS. Passing through a cartridge factory in Connecticut with Gov. JEWELL, the following characteristic conversation is reported to have occurred;—ALEXIS asked, "Are these men what you call the common people?" The Governor replied that they were a fair specimen of the working classes in this country. "But do you mean to say that these men get into official position?" further asked the imperial scion. "Perhaps not any of these men," rejoined Gov. JEWELL: "but men of their class do; they are educated men, most of them—that is, they can all probably read and write, and most of them take and read the newspapers." "Do you know of any cases where such men have actually been elected to office?" again queried the curious ALEXIS. "O certainly," the Governor said; "I, myself, worked in the shop as a tanner till I was twenty years of age." It need not be added that this puzzled the man who had never been taught to believe in the Divine right of every man to be a sovereign. He could scarcely comprehend the fact that he was talking of the sovereigns of this country and to one of their servants.

John Weiss on the Music of Trees.—JOHN WEISS gave, at Chickering Hall the other night, a lecture on Music, which was one of the best analyses of music—of its character, essence, origin, object and effect—we ever have heard or read. We mention this that all who are influenced by good music and love it, and may have opportunity to listen to this lecture, may have our pledge that they will lose much if they forego such opportunity. But our chief object in noticing this lecture is to pay our tribute to Mr. WEISS' studies of the music of American Forest Trees. The passage of his lecture in which he describes what the trees yield of harmony and symphony, and the individual music of the Elms, Pines, &c., is one of the finest specimens of analysis of Nature it has been our good fortune to hear. We wish we could re-produce it, that it might help to open the ears of RURAL readers to the voices that sing to them throughout every season, and from every hill and valley where a tree lives and grows. JOHN WEISS has studied nature to some purpose, and we wish his voice and studies could be made available to inspire every Ruralist with the wish and will to listen and learn as he has done.

The Botanist of the Department of Agriculture.—The January Gardener's Monthly says: "The RURAL NEW-YORKER remarks that, judging from the recent report of the Department, Dr. Parry has done nothing the past year. It has probably overlooked the fact that this report, though appearing December, 1871, is for the year ending December, 1870."

The RURAL NEW-YORKER has said no such thing. We have not alluded to the past year's work nor overlooked the fact that the report we commented upon was for the year 1870. We distinctly stated it was for 1870 in our notice. We take things as we find them; we wish Bro. MEEHAN would when he quotes us.

Agricultural Convention at Madison, Wis.—We have received an announcement of an Agricultural Convention to be held at Madison, Wis., February 8 and 9. The names of twenty or more distinguished agriculturists are announced as speakers, and it is designed to have the addresses and discussions on two broad general questions:—1. Practical Farm Management; 2. The Present Workings of and Possible Improvement of the Various Organized Agencies for Agricultural Advancement. Wisconsin contains men of caliber and activity as agriculturists, and there will be a live and profitable meeting.

Briggs & Bro's Catalogue of Flower and Vegetable Seeds, Bulbs and Plants, was briefly noticed in our last, with a promise of "further notice next week." We had only glanced at it sufficiently to see that it was, as we said, *a beauty*, intending to examine carefully and notice more fully this week,—but some friend (?) has spirited our copy away, and the extras ordered of BRIGGS & BRO., Rochester, N. Y., have not arrived. Can only say, therefore, that our impressions are that the Catalogue is worth many times its price (25 cts.) to any one engaged in cultivating flowers, vegetables, etc.

B. K. Bliss & Son's Illustrated Spring Catalogue and Amateur's Guide to the Flower and Kitchen Garden, for 1872, contains nearly 150 pages of closely printed practical matter, finely illustrated. Everybody should send for it. In addition to many fine illustrations of Flowers, Vegetables, &c., it has engravings and descriptions of new Horticultural Implements, Rustic Work, Hanging Baskets, Trellises, &c., &c. The firm make a specialty of horticultural implements and always have a fine assortment on hand.

The Horticultural School for Women, at Newton, Mass., has been discontinued. The reason given for this step is that the Bussey Institute of Harvard College has decided to admit women, and the Newton school found it impossible to compete with an institution so large and well founded as the Bussey Institute. It is not stated that women are taught practical horticulture at Bussey Institute, but we infer such is the case from the report of the proceedings of the New York Woman's Club in relation to this matter.

Short-Horns for Japan.—We notice that the Purchasing Agent of the Government of Japan is purchasing improved stock in Illinois—having purchased four Short-Horns, one South Down buck lamb and two ewes, and one Berkshire boar pig, of Mr. J. H. PICKRELL, Harristown, Ill. Japan is likely to be a new field for our herdsmen to supply.

Normal Schools—Location.—"A Rural Reader, Litchfield, O.," is informed that Iowa has, we believe, no Normal School; Minnesota has three—at Winona, Mankato and St. Cloud, respectively; Wisconsin has two—at Plattville and Whitewater; Kansas one, at Emporia.

The Tribune Almanac and Political Register.—This famous annual has been issued for 1872, and contains the usual amount and variety of Political and Statistical information—indispensable to politicians and valuable to everybody. See advertisement in this paper.

Georgia Tea.—W. JONES, Liberty Co., Ga., has found a striking resemblance to the tea of China in that made by steeping the leaves of the *Gordonia lasianthus* or Loblolly Bay of Georgia. He says it resembles the Chinese tea in taste and smell. It grows in great abundance near the sea coast of Georgia and Florida.

THE SEASON.

Hallock, Peoria Co., Ill., Jan. 13.—Good winter weather for eight weeks; ground frozen solid; a good time for business. Wheat, $1 to $1.10 per bush.; oats, 30c.; corn, shelled, 33c.; ear, 34c.; rye, 60c. Illinois has the best corn crop for years.—I. Y.

Hesper, Winneshiek Co., Iowa, Jan. 18.—Weather pleasant; snow one foot; sleighing good for many weeks. Wheat, 95c.; oats, 23c.; corn, 25c.; hay, $8; butter, 15 to 20c.; eggs, 15c.; dressed hogs, $4.25; beef, on foot, $2 to $3; improved farms, $20 to $25 per acre; wood land, good, $20 to $25 per acre; horses, $250 to $300 per pair; extra heavy, $350 to $400.—C.

Oregon, Mo., Jan. 18.—Weather quite warm; snow is leaving very rapidly. Some farmers report the wheat winter killed, but such instances are quite rare. Money very tight, and some demand 20 per cent. interest, which is rather steep for farmers, with wheat at $1.25@1.35 per bush.; corn, 20@30c.; oats, 25@30c.; hogs, $3.50 per cwt., gross; beef cattle, $3.50 per cwt., gross.—J. W. M.

Half Day, Lake Co., Ill., Jan. 15.—Our dry season still continues. There has been a great scarcity of water here for the last four months for stock. But little snow. Ground bare at this time. December was the coldest December ever known in Northern Illinois. The mercury on the 4th of December was 3° below zero, 6 A. M.; Dec. 5th, 12° below zero, 9 A. M.; Dec. 18th, 5° below zero, 6 A. M.; Dec. 20th, 3° below zero at noon and 16° below at 9 P. M.; Dec. 27th, 7° below zero at 6 A. M.—J. G. L.

Pittsfield, Merrimac Co., N. H., Jan. 18.—The year 1871 was considerably cooler than the average for the past fifteen years. Mercury rose above 90° but six times during the year, viz: April 8, 90½°; May 21, 92°; May 29, 92°; May 30, 92°; June 2, 91°; June 3, 94°. On August 1, rose to 90°. Mercury fell below zero on twenty-five days. The rain fall during the year was thirty-three inches, being six inches more than 1870, and one inch more than the average for the last fifteen years. Up to last night about twenty-nine inches of snow had fallen this winter, which is eight inches more than the amount which fell prior to the middle of February of 1871. During the most of the present winter the ground has had a slight covering of snow, which is favorable for the next hay crop. Hay is being sold for $35 per ton, and corn for about $1 per bush.; many of our graziers have bought corn for feeding purposes, and the result is having a favorable effect on the stock. Eggs sell for 30c. per doz.; butter, 30c. per lb.; Western apples, $5.75 per bushel.—G. R. D.

RURAL BREVITIES.

A NATIONAL Agricultural Congress is to meet in St. Louis, Mo., May 27.

THERE are nearly 400 students in the Illinois Industrial University.

JOHN NOWLAN wants to know where he can get a pair of Silver-Spangled Hamburg fowls.

J. T. SMITH & SONS, Brentwood, N. H., sent us a very complete catalogue of flower and garden seeds.

IN answer to an inquiry, broom corn seed can be obtained of any seedsman advertising in our columns.

FROM St. Albans, Vt., during 1871, 3,270,182 pounds of butter, and 435,000 pounds of cheese were shipped.

A St. CHARLES Co., Mo., sheep grower lost $39 worth of sheep in a single day—a heavy dog tax for a man, who keeps no dogs, to pay.

IN 1871, 2,064 Short-Horn cattle were sold at public sale in Great Britain, at an average price of $280 per head, or an aggregate of $576,080.50.

DREER'S Garden Calendar for 1872, by HENRY A. DREER, seedsman, Philadelphia, Pa., has reached us and is chock full of information for florists and gardeners.

MR. B. H. TRUE of Georgia, largely interested in promoting emigration to the South, and in the development and improvement of its resources, called upon us Jan. 25.

THE schedule of prizes offered by the Massachusetts Horticultural Society for 1872 is issued and has been received at this office; $4,972 are appropriated for this purpose.

IT is announced that Dr. RYLAND T. BROWN of Indianapolis, Ind., has been appointed Chemist of the Department of Agriculture, and has entered upon the discharge of his duties.

JAMES ANDERSON, Jr., wants to know and get the best grain drill. There are so many good ones it would be invidious to say which is best. Only good ones are advertised in these columns.

A GOOD practice is that adopted at the California State Fair, of marching all the stock on exhibition around the ring at 9 A. M., affording opportunity to see it without visiting the stalls in detail.

IN England they have a wholesome way of punishing severely those who expose scabby sheep for sale upon the market. We wish we could feel certain of a rigid inspection of animals in our own markets.

A CORRESPONDENT asks if there is a berry basket same shape and size as the American, made of oak instead of the miserable brittle wood used in most baskets. We know of no oak basket.

AT Freeport, Ill., the new buildings for manufacturing sugar of the beet are nearly completed, and $15,000 worth of new machinery, in addition to that from Chattsworth, has been secured. Seven hundred acres of beets are to be planted in the spring.

THE PRESS AND THE RURAL FOR 1872.

THE PRESS is unanimous in commending the RURAL NEW-YORKER in its new style. We have already received hundreds of complimentary notices, and not one which is the reverse. Extracts from a few of these are subjoined—with a tender of hearty thanks to all who have kindly and cordially greeted MOORE'S RURAL for 1872:

THE RURAL NEW-YORKER is, without doubt, the most triumphant success in industrial weekly journalism that the country can boast of.—*Our Home Journal, New Orleans, La.*

MOORE'S RURAL NEW-YORKER has taken a new departure. It is printed in new type, improved, and displays a handsome new vignette heading. The RURAL stands A No. 1.—*Advertiser, London, Ontario.*

MOORE'S RURAL NEW-YORKER appears in a new and handsome form, its bright face looking even more cheerful than ever. All the old force of able editors and assistants is retained, and its pages sparkle with good things as they always do.—*Daily Times, Watertown, N. Y.*

MOORE'S RURAL NEW-YORKER.—This splendid farm and fireside journal, which is justly a favorite wherever it is known, comes to us very materially improved in its contents, style and illustrations. We cordially recommend this journal to our readers.—*Sentinel, Greenville, Tenn.*

THE RURAL maintains its vigor and will continue to be read by its friends and find many new ones. Our friend MOORE knows how to get up a paper for the farmer, the florist, the housekeeper, and for everybody else who wants useful information, and he can't be beaten.—*Rochester Daily Union.*

THE RURAL'S new dress and style cannot fail to please, while the new heading, in our estimation, is unequaled by anything we have yet seen in beauty of design and looks. The change of size we think decidedly better, making it much easier to handle, and will give satisfaction to the reader.—*Democrat, Flint, Mich.*

THAT wonder of modern journalism—the RURAL NEW-YORKER—has made a new departure. The new engraved head is neat and attractive. But the great attraction is the immense amount of reading matter, its admirable quality and its adaptation to the wants of the rural population in all parts of the country.—*Bulletin, Williamsport, Pa.*

MOORE'S RURAL NEW-YORKER is not only a necessity to the farmer, but to the farmer's wife and children. Charmingly illustrated, excellently edited, combining in itself the best elements of both secular and religious papers, it fills a place in every household, and is indeed one of the "must-haves."—*The Guiding Star, Cincinnati, Ohio.*

THE RURAL NEW-YORKER has for many years been a household idol in Western New York. It has now extended far beyond its old limits of circulation, and its national popularity is well earned. Its editorial staff is large and able; its illustrations are numerous and excellent, and its matter is such as always renders it popular. People wishing to have a first-class family paper will find the RURAL just what will answer their taste.—*Yates Co. Chronicle, N. Y.*

AMONG the many of our exchanges that come to us with the New Year, arrayed in new outfits, none present a more attractive appearance than that staunch Agricultural, Literary and Family Journal, the RURAL NEW-YORKER. Its new vignette heading and all the illustrations in its first issue are very fine. We can unhesitatingly recommend it to our readers as a first-class Agricultural and Family Newspaper.—*Advocate, Atlanta, Ga.*

The Publisher's Desk.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Notice to Everybody.—Now is the time to form Clubs for the New-Style RURAL NEW-YORKER. It is the most Popular Paper in the land, and everybody can get up Clubs and secure Premiums. Thousands of our subscribers can do this if they will, for hosts of people only need an invitation to take the paper. If the four or five thousand persons who get their papers in wrappers (at post-offices where only one copy is taken) will make a little effort, each can form a Club, secure a Premium, benefit his neighbors, and also receive his own paper earlier—as Club packages are not delayed in the mail like single papers. Almost everybody can make it pay to help circulate the RURAL. Try it, Reader, and see if it is not profitable.

Bound Volumes of the Rural New-Yorker. Back volumes of the RURAL, handsomely bound, are constantly kept on hand at its Publication offices. Vol. XX. for 1861, containing 828 pages and over 800 illustrations, $4. The Semi-annual Volumes, issued since Jan. 1, 1870, $2.50 each. The volumes being too heavy for the mail, are usually sent by Express or as Freight, subject to charges.

Premiums Sent Promptly.—We send all Premiums as promptly as possible. Most articles are sent, or ordered sent, within twenty-four hours of receipt of request. Those not receiving their Premiums in a reasonable time should advise us of the fact.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,

Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

IF YOU KNOW of a friend suffering from irritation of Throat, Lungs or Chest, or in any way troubled with Kidney Complaint, advise them to try the *White Pine Compound*. They will never regret the trial, but will thank you for the advice.

"I feel that my comfort depends upon Whitcomb's Asthma Remedy."—*J. Shaw, Saugus, Mass.*

The Literary World.

NEW PUBLICATIONS.

Our Children; Their Physical and Mental Development.—By AUGUSTUS K. GARDNER, A. M., M. D. Hartford, Ct.: Belknap & Bliss.

No more important subject for a good book, than the above, could be chosen, and Dr. GARDNER appears to have given it deep and practical thought. It is aimed to tell parents how to rear healthy children. He truly says:—"Few very healthy men are deeply depraved. This natural happiness drives away temptation from many; and vigor of body is the basis for a robust morality." This is the key-note of the book under notice. He treats of nearly every topic connected with child-life in a common sense and interesting manner. Like most professional writers, he lugs a few prescriptions for the apothecary into the last part of the volume. They are mostly simple. The book is illustrated, and is a good companion volume for every family. It has 340 pages, and is handsomely bound.

Half Truths and the Truth.—By Rev. J. M. MANNING, D. D. Boston: Lee & Shepard.

ANY work from the pastor of the Old South Church of Boston is sure of being readable. Dr. MANNING is a professor in the Andover Theological Seminary, where he lectures on the relations of Christianity to Infidelity. In this book he treats of the "Origin and development of prevailing forms of unbelief, considered in relation to the nature and claims of the Christian system." The spirit of this work is admirable, since it is temperate and broad. It treats of the Pantheism of Spinoza. Another volume will be devoted to the Positivism of Comte. Every one who is interested in these discussions, and who wishes to know what an able exponent of Christianity can say against Pantheism, will do well to read "Half Truths and the Truth." The volume is a handsome one of 400 pages, printed on tinted paper.

Character.—By SAMUEL SMILES. New York: Harper & Brothers.

THE essays embraced in this volume are both interesting and, in the main, sensible. The topics treated are, Influence of Character, Home Power, Companionship and Example, Work, Courage, Self-Control, Duty and Truthfulness, Temper, Manner and Art, Companionship of Books, Companionship in Marriage, and The Discipline of Experience. Incidentally, much wisdom upon related subjects, and many happy and entertaining illustrations or examples are interwoven in the text. It is a pleasant book to read.

Aunt Patty's Scrap Bag.—By CAROLINE LEE HENTZ. Illustrated by F. O. C. Darley. Philadelphia: T. B. Peterson & Brothers.

MRS. HENTZ has long been known as a pleasing writer, and to many readers she will need no introduction. She has published at least a dozen volumes of romance before this, all of which have been well received. The story of "Aunt Patty's Scrap Bag" is well told and will interest both old and young people. The book is illustrated and grows quite sensational before it closes.

Hymns of Prayer and Praise. New York: A. S. Barnes & Co.

THIS hymnal has been prepared for individual, family and social worship, and has been compiled mainly from "Hymns of the Church," embracing its choicest selections. Music accompanies the Hymns, and those who believe in Music in the Family, and that the healthful heart and spirit should always give praise, will want this little volume.

June on the Miami, and other Poems. By W. H. VENABLE. Cincinnati: R. W. Carroll & Co.

MR. VENABLE is an Ohio poet, of the same school as JOHN JAMES PIATT. His poems possess more than usual interest to the general reader. Some of them are very sweet, while others show much pathos. "The People's President" will find many admirers. The collection makes a handsome little volume.

Fair to See. A Novel. By LAWRENCE W. M. LOCKHART. New York: Harper & Brothers.

A STORY of English life, opening with a hunting scene in the Highlands of Scotland. Of course the interest of the romance turns upon the marriage of a young lady, after much intriguing. A certain phase of English life appears to be graphically depicted, and the book is written with much vigor.

Reading Without Tears; or, A Pleasant Mode of Learning to Read. New York: Harper & Brothers.

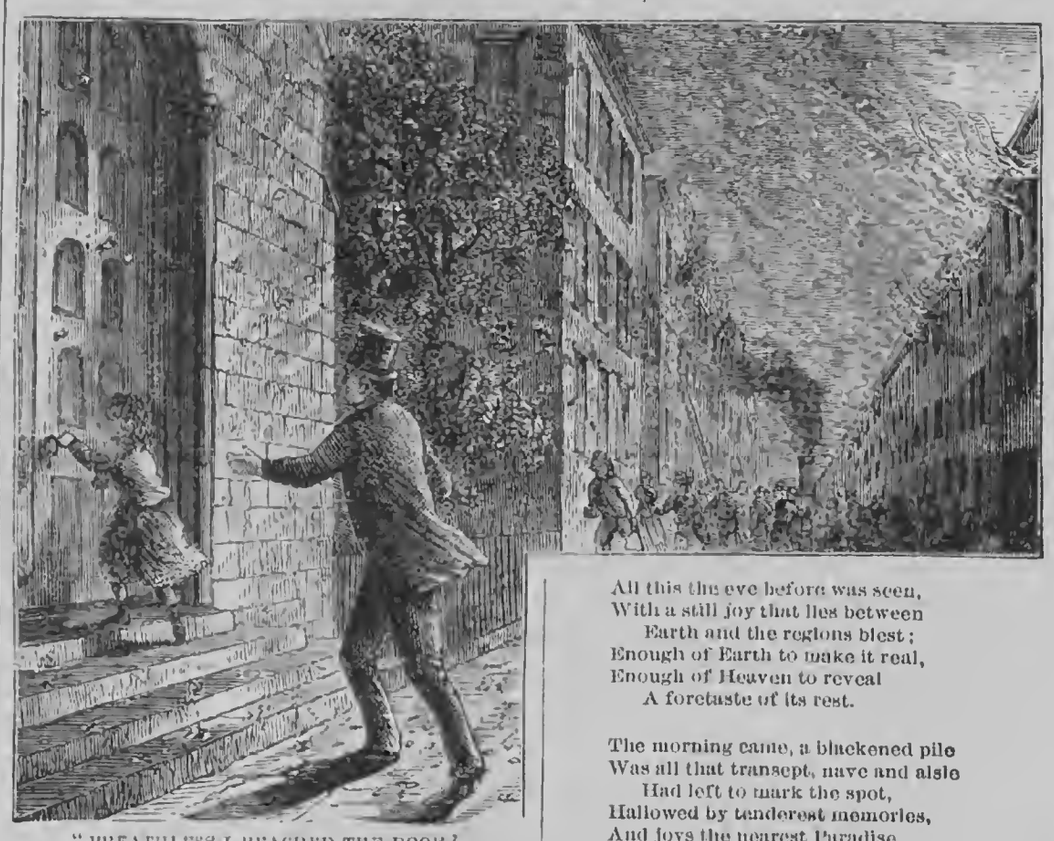
THIS is, it seems to us, just what it is pretended it is, a graduated mode of ascending from letters to words and from words to sentences. It is a neat and attractive little volume, suitable for all beginners, whether children or adults.

[Written and Illustrated Expressly for Moore's Rural New-Yorker.]

THE RECTOR'S STORY:

A TALE OF THE CHICAGO FIRE.

BY ANDREW H. SMITH, M. D.



"BREATHLESS I REACHED THE DOOR."

AT night we laid us down to rest,
In homes as tranquil and as blest
As mortals could desire;
Ere morning dawned they served to light
Our footsteps in our frenzied flight
Before a sea of fire.

The horrors of that fearful hour
Transcend the reach of human power,
In language to present.
I will not try to more than tell
As best I may, or ill, or well,
One little incident.

"HOLDING HER TREASURE TO HER BREAST"

The church our loving hands had reared
From swift destruction was not spared—
The heavenward pointing spire,
The nave that to the organ's swell
Re-echoed tones we loved so well,
The transept and the choir:

The chancel where with bended knee
We took the hallowed mystery,
Or plighted troth was given;
The porch, where from our sight were hid
The features of our sainted dead,
Till seen again in Heaven:

All this the eve before was seen,
With a still joy that lies between
Earth and the regions blest;
Enough of Earth to make it real,
Enough of Heaven to reveal
A foretaste of its rest.

The morning came, a blackened pile
Was all that transept, nave and aisle
Had left to mark the spot,
Hallowed by tenderest memories,
And joys the nearest Paradise
That fall to mortal lot.

A moment ere the holy place
Felt the destroyer's dread embrace,
Breathless I reached the door,
And there I found a child whose head
Scarce seven summers yet had sped
With golden pinions o'er:

One of my flock, whose childish breast
The love of holy things impressed,
Impelling her to seek
The chance to rescue what she could
Most precious, from the fiery flood;
Stout heart for hands so weak.

Our burning homes with lurid light
O'ercame the darkness of the night,
Guiding our footsteps where
The records of the church were stored,
And vessels holy to the LORD
Kept with a reverent care.

We had an altar service rare,
Valued by us beyond compare—
The offering of love;
It told a tale of by-gone years,
Of tender memories, parting tears,
Of treasure stored above.

For gold and silver, hallowed
By sacred memories of the dead,
Were in the vessels wrought;
The cup that baby lips had pressed,
The heirloom plate, with ancient crest,
From o'er the ocean brought.

The ornaments that added grace
(If such could be) to loveliness
Now moldering in the dust;
The bridal ring of one since gone,
Or, sadder yet, the token worn
By beauty loved and lost.

I seized the casket which contained
This service, but there yet remained
Records of priceless worth.
I turned me, half irresolute,
To where that childish figure stood—
The frailest thing on earth.

She caught the question from my eyes
Her ready arms received the prize;
Then, like a flash of light,
She darted down the narrow aisle,
Turned for a moment, with a smile,
Then vanished in the night.

From stranger lips, in after days,
I heard the tribute of her praise;

Amid their own dismay,
Men paused to see that tender child,
Surrounded by a scene so wild,
Undaunted hold her way.

The driving sand before the gale
Beat in that tiny face so pale—
Red cinders filled the air,
And jets of fire, and tongues of flame,
Around her temples went and came,
And singed her flowing hair;

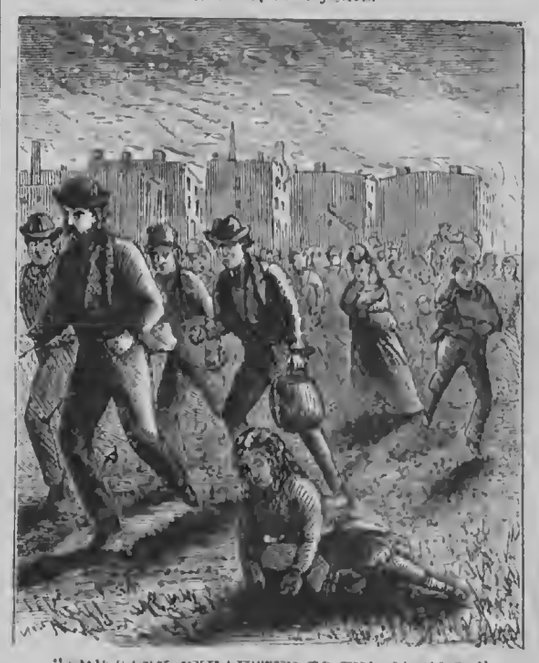
But still she ever onward pressed,
Holding her treasure to her breast,
Nor yet could safety find:
For miles along the burning street
She hastened on with winged feet—
Death following close behind.

At length, beyond the city's bound,
She sank exhausted to the ground,
Amid the crowd unknown;
No father's arm, no mother's breast
On which her weary head might rest—
A friendless child, alone.

Two days in cold and hunger passed,
A night beneath the starry waste,
Before the child was found;
And ever to her faithful breast,
The precious casket still was pressed—
Both little arms twined round.

And so they brought the child to me,
For she declared it might not be
That other hands should take
The trust confided to her care;
And so they yielded to her prayer,
For tender pity's sake.

I took the casket from her grasp,
That lingered with a loving clasp,
And then a gush of tears,
The first her gentle eyes had shed,
Made many a strong man turn his head
Who had not wept for years.



"SHE SANK EXHAUSTED TO THE GROUND."

Our hearts with deep emotion filled,
While gazing on the fragile child,
And each one breathed a prayer
That so much faithfulness and truth,
Joined with such innocence and youth,
Might Heaven's blessing share.

As long as human hearts shall swell,
When men of deeds of courage tell,
Let this remembered be;
The victor of the bloodiest field
Might well the wreath of honor yield
To LOUIE ENDERLY.

"I TOOK THE CASKET FROM HER GRASP, THAT LINGERED WITH A LOVING CLASP."

Our Story-Teller.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker,
BY TWO WELL-KNOWN AUTHORS.

[Continued from page 74.]

III.—Preparing for the Holidays.

"AUNTY MIMY?"

"LORD sabe dis nigger! It is de young Missus!"

The negroes were so absorbed in their singing, that they failed to hear MARGARET'S light step, and she stood in the middle of the cabin, with her hand on Aunty MIMY'S shoulder, before she was observed. There was the circle of slaves, in their grotesque costumes and attitudes, suddenly struck dumb by the appearance of the girl. In their midst she stood, her soft, white wrapper trailing on the floor, her long, dark hair covering her graceful shoulders, the fire lighting with a strange glow her colorless face, and giving a wonderful intensity to her earnest eyes. The slaves had never seen their sweet young mistress look so *spirituelle* before. They gazed at her almost in awe, and waited for her to speak.

"Aunty MIMY," said she, "I thought you knew better than this. Haven't you heard my father's orders about the slaves singing at night?"

"Bress de LORD, chile, we done sot here, and we talk about the chillen of Isrel, and de Red Sea, and how old PHAROH and all de hosts done got swallowed up, and fust

we know, we all singing. 'Spects nobody to blame, Miss MARGARET."

"But this thing must be stopped. I have interfered to save the slaves from punishment, time after time, and I can't keep doing it. It's very thoughtless of you all to get me into trouble, by doing what my father has forbidden."

Here there was a general exclamation of—"Dat so! Dese niggers, dey no 'scretion. Miss MARGARET be an angel right from de sky."

"It would be better to obey me than to call me an angel."

"'Spects dat be true. De heart ob dese niggers be all right, frou and frou, but dey done forget so easy."

"Well, I know you forget, and I know you love your master and all of us, and want to do right, but this singing must be stopped at night. Father will not allow it, and if it continues, I cannot be responsible for consequences."

"Sponsible? No," broke in Auntie MIMY. "Dar ain't no sponsibility tached to anybody but de niggers demselves. Ebery single one ob 'em jus 'serve a good, sound thrashing; MIM mos' ob all, cause she de oldest ob de heap. Bress de Lord, honey, we neber do dis agin—see if we do!"

"No, we won't; no, we won't," said they all in chorus.

"You den' tink, Miss MARGARET, dat massa HEFFERSTONE heah de rumpus dese niggers kicked up so far, do she?" inquired little TITUS, the slyest and most mischievous of all the house servants. "Cause if he hab, de ting for dis colored chile to do is to jus go an drown hesef. Massa HASKELL vow he whip him nex time widin an inch ob his life. Golly!" and the little scamp balanced himself on his head for a moment, then turned a double somersault, and, but for Aunt MIMY'S powerful hand, would have certainly landed in the middle of the blazing pine knots.

"Pity de debblish little black rascal couldn't git de licking he's been 'serving for de las four weeks. If MIMY had a had one wit lef in her old, brack head, she'd lef him burn to a cinder, so she would."

"It is time you were all in bed," interrupted MARGARET, amused in spite of her sadness at the comical faces of TITUS, who, in the endeavor to wriggle away from the tremendous grip of the old colored women, had almost escaped from his clothes.

"Behave yourself TITUS. Good night all." And MARGARET beckoning SUSAN to follow, walked slowly away from the ebony group.

"Why do you weep, SUSAN?" she inquired, as her companion still continued to sob. There was no answer. This was the woman whom MARGARET, in her ignorance, had dubbed cold and hard.

"Please tell me, SUSAN," she coaxed. "Perhaps I can do something for you."

"Please, Miss MARGARET, say no more about it." And then added, bitterly, "Although a slave, I am nevertheless a woman, which fact ought to be sufficient in the eyes of a woman to excuse an occasional emotion;" and now SUSAN'S voice was as firm and evenly modulated as ever. "For the sake of all, Miss MARGARET, forget about this unfortunate episode. I beg your pardon. Miss MARGARET, for having disturbed you."

This was enough to rouse a more patient spirit than MARGARET'S, and she replied at first a little coldly, with something of the mistress apparent in her voice:

"Very well, SUSAN." And then impulsively added, "I do believe my heart will break. This system of trading in flesh and blood is diabolical. God must interfere before long. *A slave*, SUSAN? How can you so entirely misinterpret my views; how can you so utterly misunderstand me? You are no bond-woman to me, and, mark my words, neither will you be to the rest of the world after a little. A few blows, a few heartbreaks, a few separations, and the institution is levelled. In GOD'S sight you are as free as I am, and in my sight you are my friend and equal, with perhaps as good a right to a noble name as I have."

"Miss—— MARGARET, please—" and the tones grow fainter, and fainter, and the woman seemed about to fall.

"I mean it, SUSAN, every word of it. You trust me dear, do you not?"

"Oh, yes, yes," sighed her companion. "But we must rest a moment. I am too weak to go on just yet."

"I'll wake up old HANNIBAL, and ask him to help us. Its only just a step or two to his cabin," and MARGARET hurried away. She had proceeded but a short distance when a familiar voice arrested her attention. It was HANNIBAL talking to himself. He had been awakened by the noise of the negroes, and was hurrying on as fast as his shuffling gait could carry him to prevent its repetition.

"Hab no notion what'll be done wid dem niggers!" he exclaimed, apparently quite out of patience. "If it was'nt for dat Sunshine, I'm jus bout of de pinion dat—"

What HANNIBAL'S opinion was did not come to light on that occasion, for just then MARGARET said softly—

"Oh, Uncle HANNIBAL is that you? I am so glad, for SUSAN is very ill, and I don't know how I am to get her home."

"SUSAN? SUSAN?" repeated the old man. "What dat you say, Sunshine? SUSAN sick down heah in de woods in de dead of de night? The two of you is as crazy as loons anyhow. What for do you parade roun in dis style?" and the negro, more annoyed than MARGARET had ever seen him, waited for an answer.

"Why Uncle HANNIBAL! You must have heard the noise the negroes were making. Of course I could'nt let that go on. If father had heard it there would have been no bounds to his rage, and they would all have been whipped to-morrow,"

"Den dey get dheir deserts. De las' ting I did was to talk to dem niggers, and tell 'em to go to bed, and de nex ting I hear Sunshine tell me dat SUSAN am sick in de woods, and HANNIBAL mus' tote her home! Whar be the chile?"

"Right here Uncle HANNIBAL," and MARGARET tucked her hand in his, and led him to the spot where SUSAN, now partially recovered, stood waiting for the return of her mistress.

"It was too bad to call you, uncle," said SUSAN, apologetically—"But Miss MARGARET thought I shouldn't be able to reach home without help; but I'm better now, and we can go right on if you are ready."

"What was de case wid you SUSAN?" inquired HANNIBAL, with great tenderness.

"I got to thinking, that's all, and for a moment I was out at sea without a chart or compass," was the quiet reply.

"Dat chart and compass berry 'portant tings to hab on dis onregular sea of life! HANNIBAL'S advice is neber to start out widout 'em agen, even on a short voyage—as short as dis one to the nigger quarters," and there was a touch of dry humor in the old man's voice that went a good way toward softening the hard lines of philosophy which he strove to impress upon the minds of his companions.

"Mr. BRAYTON is coming at the holidays. Did you know it, HANNIBAL?" inquired MARGARET as she walked on ahead, leaving the old man and SUSAN together.

"And dar's a big lump ob company to pile in, SUSAN hab jus' been a telling me. Stop a minute, please, dear little missus. Don' you tink dat Missis HEFFERSTONE would jus' let SUSAN go to Richmond for two free weeks at dat time? She don' feel bery good mos' ob de time, and ober dar she could jus' pick up a little."

"I will ask her, Uncle HANNIBAL, the very first thing in the morning, but unless SUSAN is too ill to be of any service, I am sure mamma will not spare her; you know how much she values SUSAN'S services—and there's no one here to take her place. Do you really want to go so very much, SUSAN?"

"Oh, so much, Miss MARGARET—so much! I would rather die than stay here through the holidays," came the answer in low, suppressed tones.

MARGARET fully realized that SUSAN'S desire for a temporary absence was dictated by no ordinary motives. SUSAN and a caprice could never be even distantly related. She tried to think what it all meant—tried to ferret out the mystery—for that there was a mystery, was plain enough to be seen by eyes less keen than MARGARET'S. HANNIBAL understood it thoroughly; that also was apparent. How did he come by this knowledge? They had never been thrown much together—never had met, that MARGARET was aware of, until SUSAN came to live with them two years before.

"SUSAN, tell me why you want to go away when our friends come," said MARGARET, coaxingly.

"I have not felt well all the fall, Miss MARGARET; I want a little rest and change, and I don't feel like seeing company." There was no invitation to confidence in the tone; and the words were cold and quick.

"Well, I will do my best to persuade mamma to let you go, but I am afraid it will be impossible. I want you to go, SUSAN, if it will make you happier; you believe that, don't you?"

"I do, Miss MARGARET. Good night Miss MARGARET; I hope you have not taken cold."

"Good night, SUSAN;" and the two women parted, the one apparently as reserved and the other as vaguely dissatisfied as when they left the house on their errand to the negroes.

"HANNIBAL said I could help SUSAN, and that she needed my help," thought MARGARET, as she took off her wrappings; "but I don't see how; may be it is a help to her to know that I really care for her; she must be sure of that. I don't understand why I am so interested in her, and so sorry for her; she never complains; she is comfortable, but somehow I can't bear to see her go on in this way, locking herself up from everybody. It would kill me to live so;" and wondering why SUSAN wanted so much to go away at that particular time, and hoping that she could influence her mother to let her go, MAGGIE fell asleep.

The full months flew quickly by. With the holidays came a number of invited guests, for it was the custom of this hospitable family to entertain handsomely during the winter. Col. HEATHERSTONE'S sister, with her family, consisting of three children and a colored nurse for each, had already arrived. Mr. BRAYTON, a large cotton speculator in the neighborhood of Mobile, was hourly expected, also two young lady friends of MARGARET'S from New York. GEORGE was in his element. ALFRED, always dignified and reticent, shrank from the anticipation of so large a number of guests, and wished from the depths of his soul that the quiet of their daily life might never again be broken in upon, or at least while he was obliged to prosecute his studies at home. ALFRED HEATHERSTONE had graduated from college with all the honors of that institution; and, very much against the wishes of his family, had determined upon the profession of a physician. He was now studying with one of the best M. D.'s in the State, and was pushing forward the work with great energy and enthusiasm, notwithstanding the opposition he constantly met with at home. MARGARET, of course, sympathised with him thoroughly. She was mother, father, brother, sister, counselor, friend and lover. She gloried in the thought that he would one day be independent of the indolent *dolce far niente* life which had made wrecks of many of her friends.

"You won't study *all* the time our friends are here, will you, ALFRED?" said MARGARET, bursting in upon him one morning as he sat in his cosy little library writing.

"Well, no, not all the time," he laughed. "I don't suppose I shall be let. Aunt CLARA has just taken me to task for my retiring disposition, as she is pleased to call it, and insists that I have disgraced our whole ancestry with my choice of a profession."

"I hope you don't care for her nonsense?" replied MARGARET, her face flushing crimson. "If I thought I should grow one millionth part as disagreeable as Aunt CLARA is, I'd pray to the LORD to remove me from this world at once."

"Oh, Aunt CLARA has her good points."

"I suppose so, but it's hard to see them with the natural eye."

"You must look through the glass of charity, little one."

"I wish I could always have that glass close at hand as you do, dear ALFRED. I shouldn't make so many mistakes, and hurt people's feelings so often."

"That will all come right in time MIGNON; a rose doesn't attain to perfect blossoming in an hour; there is much pruning to be done first."

"Ah, dear ALFRED, the pruning is hard to bear!"

"Yes, darling. But we won't anticipate. It is better to live in the present. 'Sufficient unto the day is the evil thereof,' you know. I suppose you think sufficient unto the day is the evil of Aunt CLARA, eh, MAGGIE?"

"Yes, I do think so. She frets me in spite of myself. She is papa's sister, and I don't want to dislike her, but it's hard to get along with her ridiculous airs. You should have heard her talk about the North this morning. She seems to think that its no better than the interior of Africa. She believes the Yankees would all be made slaves and work with the negroes before they would fight."

"What does she think of Miss TAYLOR and Miss ARNOLD?"

"Oh, she's scarcely seen them yet; but she knows they are rich, and riches with her cover a multitude of sins. She conveniently forgets that they are Yankees, and remembers that they have been to Paris. By the way, Mr. BRAYTON met MIN last winter in New York; there was quite a little scene when they recognized each other last night."

"All the better; that makes a basis of acquaintance already."

"Yes; MINNIE and HOPE were singing the 'Last Rose of Summer,' with the cotton speculator's bass for a background to their sweet soprano this very morning; so you see they are getting along very well."

"HOPE! That's a sweet name, isn't it, MAGGIE?"

"Yes, I think so; but none too sweet for the darling girl who bears it. She is just the dearest little thing in the whole world, ALFRED."

"Dearer than MINNIE TAYLOR?"

"O, she's different. MINNIE is brilliant, and she's affectionate, too; but there is so much to HOPE. She is somehow loving and strong at the same time. You know, ALFRED, we have an impression that loving men and women are not strong."

"I believe there is some such feeling in most persons' minds; but there was never a greater mistake. There is no element so full of all strength as love; I fancy the mistake comes from taking an inferior thing, a sort of sentimental softness and weak yielding for that which is the very marrow of character."

"That's it; you always straighten everything out, ALFRED?"

"How do you like BRAYTON, little one?"

"Better than I thought I should. I had heard a good many things not exactly to his credit, you know. I don't feel as if he's a bad man."

"He has the elements of a noble, generous man. But everything has been against his real growth. Rich, handsome and gifted, he has been petted by society to an unlimited extent; not feeling the need of exertion, he has always floated with the current, and that is enough to take the manhood out of anybody. His impulses are good, and he would like to do right, if it wasn't troublesome; but when the test comes he hasn't the moral muscle to row against the tide."

"Yes, I see. But can one blame him?"

"It is impossible, Pet, to suddenly become a perfect gymnast; but it is possible to everybody to take the initiatory steps, and then those that follow, and so on; then one finds himself always growing stronger, and when the test comes he is able to meet it. LOUIS BRAYTON has all that a man needs, but his power is undeveloped. It is in the seed. That will not save him from consequences, however. If a child reaches maturity without learning to walk, nature will not make a by-law to provide for him.

"But, MAGGIE, aren't we getting metaphysical?"

"A little, I should think; but I like your metaphysics, ALFRED. You help me to see into things. I must go and look after the girls now; we're going to help HANNIBAL and JAKE decorate the rooms with holly and the rest of the Christmas greenery. Won't you come, dear?"

"No; I'll join you this evening, after all the work is done. I am in the middle of a treatise now that I want to finish, and then I'll put away my books for the holidays."

Ah, these were jolly times indeed! For once there seemed to be the right elements brought together for enjoyment, with the exception of Aunt CLARA, who would occasionally throw a wet blanket over the spirits of the party, by the expression of some stupidly conventional idea, in regard to social decorum or by *mal apropos* remarks in reference to the political situation—there would have been no limit to the fun and frolic.

"Don't mind her," said MARGARET, in a whisper, to HOPE, who stood by her side with an armful of holly ready to pass to JAKE, doing his best to decorate the rooms.

"I have made up my mind to take her precisely as I would any counter-irritant, rather peppery and disagreeable for the time being, but then so healthy, you know, dear—under certain circumstances."

"What's that you are saying, MARGARET?" said the lady in question, lounging over from the opposite side of the apartment, where she had been freely criticising JAKE'S handiwork. "A low tone in company should always be avoided, niece."

"I was talking to HOPE, aunt—in fact, making a few remarks intended for her private ear—Mr. BRAYTON; ah, Mr. BRAYTON," as MARGARET recognized the gentleman's step in the hall. "Come in, please, and tell us if you think a cross will look well on this side of the mirror? It will show well from all parts of the room, seems to me;" and MARGARET cocked her classic little head on one side, canary fashion, and surveyed the bare spot with the eye of a true artist.

"Is it me you are appealing to, Miss MAGGIE?" replied the gentleman, kindly—advancing to the side of the beautiful girl. "On the subject of crosses I shall be scarcely a fair judge, I fear. A cross to me"—and the gentleman's face flushed crimson, and then quickly paled again—"is so sacredly significant—so typical of unbounded love—and *such* a love!"

MARGARET looked into the speaker's face with undisguised astonishment. What was to come next? she wondered. That Mr. BRAYTON was a perfect gentleman, a scholar, a fascinating man of the world, she thought she understood; but that he should be possessed of any deep Christian sentiment, entirely passed her comprehension. Mr. BRAYTON went on.

"A love so strong, so tender, so divine in its humanity that even when the prayer—'If it be possible, let this cup pass from me,' was forced from the lips of our precious sufferer, even then followed the sweet words, 'Nevertheless, Thy will, not mine, be done.' No, Miss MARGARET, I cannot like crosses in drawing-rooms. I beg your pardon for having spoken so freely."

"There shall not be a cross in the house, Mr. BRAYTON. I quite agree with you," replied the enthusiastic little lady, her eyes full of tears.

"No crosses? What is it, MARGARET—no crosses for Christmas?" interrupted Aunt CLARA. "Why I never heard of such a thing! Folks will have a right to think we are all heathens!"

"I hate folks," put in MARGARET quickly. "JAKE go on. We will have crowns instead. FANNY you go and tell SUSAN to come here a moment. You see, Mr. BRAYTON, SUSAN can mark out some pasteboard symbols, and then we can trim them. I never knew before why I disliked crosses, or rather why I could not bear to see them in all sorts of common places. I am very grateful to you, sir," and MARGARET extended her hand to the gentleman just as SUSAN entered the room. The octoroon walked straight up to MARGARET, looking neither to the right nor left, and said gently, but in a tone of absolute decision:

"Miss MARGARET, I cannot help you here. I will do anything by myself. You know I tried to go away."

"I know it, SUSAN; but what do you mean? Why can't you help us?"

"I can't explain, Miss MARGARET. I must go, even if you command me to stay."

"Very well, then go." SUSAN went out as quietly as she came in, but she did not go out alone. Mr. BRAYTON followed her.—[To be continued.

ONE OF WASHINGTON'S LETTERS.

THE last issue of Old and New contains some letters from WASHINGTON, never before published, which contain much interesting matter. In one of them, written to JOHN MITCHELL, Feb. 17, 1779, he says:—"I wish for as much fur as will edge a coat, waistcoat and breeches; and that it may be sent to me as soon as possible. Let this be accompanied by two pounds of starch. * * I must request you to get me a good hat. I do not wish by any means to be in the extreme of fashion, either in the size, or manner of cocking it. Please to examine if any of the enclosed tickets have come up prizes, and if anything is to be made of them be so obliging as to do it for me."

Many persons will be surprised to find that the Father of his Country indulged in lottery tickets. His advice about the fashion of his hat is good, and will apply to our day.

A SCHOOLMASTER in Bridgeport, Conn., who asked a small pupil of what the surface of the earth consists, and was promptly answered, "land and water," varied the question slightly, that the fact might be impressed on the boy's mind, and asked,—"What then do land and water make?" to which came the immediate response, "Mud."

MR. GEORGE GROTE, the eminent historian, died worth about $600,000 in personal property alone. He bequeathed the copyright of his "History of Greece" and other works and all his books to his wife for her life, and after her decease, to the University of London, Burlington Gardens.

THIRTEEN women have applied for admission to the new school of journalism at Yale,

Ladies' Port-Folio.

HAVE PATIENCE.

A YOUTH and maid, one winter night,
Were sitting in the corner;
His name, we're told, was JOSHUA WHITE,
And hers was PATIENCE WARNER.

Not much the pretty maiden said
Beside the young man sitting;
Her cheeks were flushed a rosy red,
Her eyes bent on her knitting.

Nor could he guess what thoughts of him
Were to her bosom flocking,
As her fair fingers, swift and slim,
Flew round and round the stocking.

While, as for JOSHUA, bashful youth,
His words grew few and fewer;
Though all the time, to tell the truth,
His chair edged nearer to her.

Meantime the ball of yarn gave out,
She knit so fast and steady,
And he must give his aid, no doubt,
To get another ready.

He held the skein; of course the thread
Got tangled, snarled and twisted;
"Have Patience!" cried the artless maid,
To him who her assisted..

Good chance was that for tongue-tied churl,
To shorten all palaver;
"Have PATIENCE!" cried he, "dearest girl!
And may I really have her?"

The deed was done, no more that night,
Clicked needles in the corner;—
And she is Mrs. JOSHUA WHITE
That once was PATIENCE WARNER.

LETTER FROM CITY TO COUNTRY.

NEW YORK, Jan. 18th, 1872.

MY DEAR LU:—We have reached New York, as you infer from receiving this; and like the man who fell from a tower, and said he did not mind the coming down so much as the stopping, so we got on well enough through the journey, till the landing in the depot.

The progress of civilization now-a-days, you know, brings the Hudson River train into the Grand Central Depot—a horrid, cold, great big place, with noise enough to scare back all timid immigrants. Indeed, I am not sure but NELLIE and I would have stayed in the car until it returned, had not our courage been fortified by the plan of procedure drawn out for us by Cousin HUGH. So then, in pursuance of this plan, we got out, and passing the hack-men by, asked a policeman to put us on a Fourth Avenue car. It was quite dark by this time, and it did seem a little scary for us two to be alone in such a great city. There was nothing, however, to be afraid of, and the conductor stopped for us, as we had asked him, at Twenty-Sixth St. Then there were two blocks and more, to walk, to reach the St. James. But Cousin HUGH was right; we felt more safe than had we taken a hack.

I am told it's perfectly astonishing how people from the country are imposed upon by these hack-men. Exorbitant charges, of course; and sometimes they stop half-way, and pretending they are not allowed to drive out of a certain district, put their passengers into a street car, leaving them to reach their destination as best they may.

NELL says if we had trusted ourselves to a hack, she was fully prepared to say to the driver, "Now you scoundrel, look out for yourself," and the idea of seeing her bravery so expand leads me almost to wish we had run all risks. But, really, in view of the great peril attending an entrance into the civilized city of New York, I think it would be a good thing if a Protection Society might be instituted—based, perhaps, on the plan of the Castle Garden Association, which we have heard of, and mean to visit:—that is, we mean to visit Castle Garden.

Well, we reached the St. James—the entrance for ladies on Twenty-sixth street—and, I must say, for all we were girls alone, and from the country beside, we had not a speck of embarrassment. You see a waiter sits at the door, and he showed us at once to the ladies' parlor, and the clerk came up there to us. I can't tell you how delightful it was to find ourselves really seated in that beautiful parlor, after the horror of getting from the depot. Of course our baggage we had put in the care of the expressman, on the cars; so we carried only our satchels and water-proofs. Disposing of baggage in this way enables ladies to travel alone so nicely.

But let me tell you about it, at the hotel. The clerk gave us, as we asked, a small room, and a card on the door informed us that the price of it was $3 a day. Then for meals one pays, you know, according to the *carte*, or bill of fare.

Well, we left our bags and cloaks in our room, and, as we were alone, the clerk asked if we would go down to supper, and he accordingly escorted us down. That is the beauty of this house; they are so attentive to you, if you are alone, and need a little attention. The bill of fare in the restaurant promises you almost everything, but we made a light supper of stewed oysters, with an omelette; but the coffee,—oh the coffee!

I think that night I felt perfectly contented with myself, and the world in general. As for NELL, soon after supper she became somnolently inclined, and when we had retired, the last heard of her was a languid murmur, "Oh, how nice this bed is,—so—lovely!"

But commend me to the European or restaurant plan for comfort in the morning. One can realize the blessedness of a morning nap, with no dreadful breakfast bell to ring (wring) you from your pleasant couch, calling you abruptly from the land of dreams. I am ready to concede everything in favor of the moral advancement of the race, when I contemplate this delightful improvement in hotel life; and I am particularly glad that all intelligent physicians now-a-days agree that early rising is very injurious to health! Indeed, I presume it will, before long, be made an indictable offence to wake a person from sleep! The story, you know, is told of a Dutch jury, who refused to find a verdict of guilty against a certain woman whose husband had disturbed her morning nap:—It appears she vented her wrath thereat by throwing the boot-jack at him, and the boot-jack unluckily hitting him, killed him. "Had she been left undisturbed, it could hardly be supposed she would have done so uncivil a thing in her sleep," wisely argued the jury. Consequently she was fully exonerated and the conduct of the husband censured as very reprehensible. Indeed,

"They knew what's what; and that's as high
As metaphysic wit can fly."

Well, here at this good St. James, one sleeps as though in enchanted land; footsteps, outside your room, fall soft on the tufted floor; and when the dream is dreamed out, you awake to the reality of—"no hurry," and "hot coffee."

I suggested to NELL, as we entered the cheerful restaurant for breakfast, that we stop our watches—time being made for slaves, and not for us, who were bound on having a good holiday time. I reminded her of the delicate gallantry of the Earl of Leicester, who, on the occasion of Queen ELIZABETH'S visit to Kenilworth, had all the clocks stopped, that no thought of time—much less its impertinent tongue—should interfere with the royal enjoyment.

NELL suggested, in a practical way, that here in New York, one walking out can stop for dinner where and when you choose. At last we did start for a stroll, and found the same throng of people on Broadway as of old. Fashion, I think, has contrived more startling effects, and style is a little more audacious. Just think of wearing a knot of artificial flowers on the shoulder! As for hats,—they go higher and higher—with a sort of "Hall Columbia" look.

I am told, on good authority, that one wicked old bachelor in the city is taking underhand measures to introduce the Chinese fashion of compressed feet. He thinks this will have a tendency to relieve the Broadway sidewalks; and he says the big bustles crowd him so!

But, oh dear, I come to the end of my paper, and haven't got even so far as TIFFANY'S. In my next, I shall have lots to tell you. KATE.

GOSSIPY PARAGRAPHS.

A CONCEITED young parson once said: "This morning I preached to a congregation of asses." "I thought of that," retorted a lady, "when you called them your beloved brethren!"

IT was a common superstition in olden times that a turquoise ring would heal enmity between man and wife, and that an emerald always grew pale when danger threatened its wearer.

MANY ladies have ruined the shape of their ears by wearing heavy, massive earrings, which not only spoil the shape of the ear by elongating it, but also produce headache and pains in the face.

THE newest tortoise-shell chains have their links of a circular instead of an elliptical shape, flattened on one side, every alternate link being a half-circle. This arrangement makes them fit more closely to the neck of the fair wearer.

AN Indiana woman having discovered a flaw in the matrimonial title-deed sued her husband to recover for services rendered him as an employe since the date of the ceremony. She claimed to have been his "housekeeper," and recovered $1,200.

Reading for the Young.

A FLOWER BED.

"Now I shall have a flower bed!"
Said EMMA, with delight,
The roses bloomed upon her cheek,
Her eyes were sparkling bright.

"These tiny seeds you brought to me,
Contain a living germ,
That, planted in the earth will grow,
With roots and branches firm.

"O, how delighted memory
Feasts on their beauty now!
A joy forever, truly,
Is in the blossom's bough.

"Come, EDWARD, take the spade, and dig
A flower bed near the door;
For oft my eyes must feast on them,
While hands are doing more."

"Yes," EDWARD said, "I love to see
You happy all day long;
And love to hear you sing of flowers,
So cheerful is the song."

He dug the bed with cheerful heart
And dug it very fine,
For something whispered to his breast,
"These flowers will calm my mind?"

H. E. S.

A LETTER TO THE YOUNG RURALISTS.

FROM COUSIN JOHNNIE.

MY DEAR LITTLE RURAL BOYS AND GIRLS:—I am much interested in the letters in the Young Folks' Department, and still more in their writers. Their experiences bring back very forcibly to my mind the recollection of my own childhood. It used to be frequently impressed upon me at that time that I was seeing my happiest days. Most grown people, I find, are very fond of telling children this is the case; but I don't believe in doing so—for, in the first place, I don't think it's true. You know, my dears, and I am not quite so old yet as to forget that *little* people, as well as big ones, have their troubles, which are just as great to them as big peoples' are to them. In the next place, I think it's rather discouraging to children to have nothing but sorrow to look forward to when they are grown up. But one thing I *do* believe, dear children, that the brightness of your future will depend very much on the use you make of your childhood—for you know the old saying, "Just as the twig is bent the tree's inclined."

The most of you doubtless go to school, yet did you ever ask yourselves what education is, and what is the use of it? I should like to see what answers you can give in your next letters, to these questions, which are very important ones. Though I write for your parents in the RURAL (under my own name), I think I shall always write to you, my dears, under the nick-name I have had all my life. Isn't it a funny one?—as I am neither a boy nor a man. The next time I write I will tell you about it, but now, though I should like to say a great many things to you, I must stop, so as to leave room in the department for some of your own letters. COUSIN JOHNNIE.

OUR LETTERS FROM BOYS AND GIRLS.

How to Make Slings.—E. D. H. of Baltimore, Md., writes:—"I would like to tell the boys how we make slings here in Baltimore. The articles needed are four pieces of cord, about a quarter of a yard long, two pieces of rubber, about six inches long and one wide, and a piece of leather cut in the shape of a diamond, about two inches wide and three long; then cut from a tree a prong in the shape of a Y; then take two of your pieces of cord and tie one end of each to the prongs, tie the other ends of the cord to one end of each of the rubber; then to the other ends tie the two remaining pieces of cord, and to them tie your leather. Then take hold of the handle of the prong, place a stone in the leather, and, holding it between finger and thumb, pull back, then let fly at anything you choose. It is nice fun for the woods, though broken windows follow its use in the city."

A Gentle Calf.—HENRY T. RAYMOND, aged ten, writes from Steuben Co., N. Y.:—"I want to tell the boys about my calf. I have a calf that will be two years old next spring. She is so gentle that you can lead her around with a rope or string, when she is in the pasture, no matter how long she has been there. If she sees me or pa coming she will run right up to us, and when we lead her to the pasture and put her in she will try to get out and follow us home. I go to school when I have not got the rheumatism."

A Nut Gatherer.—FRANK A. B., ten years old, writes from Musopotamia, Ohio:—"Father owns a sorrel horse, six years old, and I take almost all the care of her. I can ride her and set on her heels, and do most anything I am a mind to with her. I raised one bushel and a-half of pop corn this year, and gathered five or six bushels black walnuts, two or three bushels butternuts and a little over a peck of chestnuts. So you see if apples are *not* very plenty, we will have something to eat these long winter evenings while we read the RURAL, which father takes, and we like it first rate."

Deers and Bears.—WILLIE F., twelve years old, writes from the north woods of Michigan:—"My father takes the RURAL NEW-YORKER. I like to read the letters that the boys and girls write. We came here one year ago last Christmas. We went twenty-three miles without seeing a house. When we got to Grass Lake I saw four deers, that a hunter had shot, and we had venison for breakfast. I have a deer lick, where I salt the deers, once a week. I call them my cattle, but they are very shy, so I don't see them. They come in the night, and get the salt, but I have seen three or four since we came here. One of our neighbors shot a bear back of our house, and we had some of the meat. I don't think it as good as venison. Another of our neighbors was driving his ox team along the road, and they stopped; he looked up and saw an old bear and two cubs right in front of his team. He hollered. The old bear and one of the cubs ran off; the other ran into a brush pile. He jumped off of his wagon and caught it. It bit him on one of his hands pretty bad, but he kept hold of it. It was as tame as a dog in a few weeks. We expect the cars to run through our town next summer, as they are twenty-eight miles from us now, and they are at work all the way up to town twenty-three miles north."

A Tennessee Girl.—ALICE A. writes from Cedar Creek, East Tennessee, as follows:—"I am a girl twelve years of age. The first time I ever saw your paper was about two years ago, when I visited my sister in Virginia; she has since moved to Tennessee, about two miles from where my father lives. I take great delight in visiting her. I think the greater portion of my pleasure derived from visiting her, is reading your good paper and caring for my little nephew, whose name is Sidney. I think he is the sweetest little creature in the world. My brother-in-law has been taking your paper for about three years. I am going to persuade my pa to take it next year, as I am so fond of reading it. I have several little pets; I have a cat, calf and a little pony, and I used to have a pig, but my pa sold it. I think a great deal of them."

A Wine-Colored River.—From Elizabeth City, N. C., MARY T. U. writes as follows:—"Papa takes your valuable paper, the RURAL. I like it very much, especially that portion devoted to the boys and girls. I live in North Carolina, on the banks of the beautiful Pasquotank River. Its water is highly colored, and any one that had never seen it before would mistake it for wine. The steamers run from Norfolk, Va., to Elizabeth City, through the Dismal Swamp Canal. The water is colored in the river and canal by passing through juniper and cypress swamps. We have a beautiful lawn in front of our house, which is adorned with evergreens and shrubbery; the Mimosea, Hydrangia, Pomegranate, are very pretty flowering shrubs, and bloom in July."

From a Six-Year-Old.—DEAR RURAL: I am a little girl six years old. I have four brothers, and we all have a pet pig a piece. Me and little brother SAMMIE shell corn and feed them. I go to school, and read in the Second Reader. My pa takes the RURAL NEW-YORKER. I have got so I can read the Girls' and Boys' Letters and all the rest of the little pieces. I go to Sunday School; I love it very much; I go there to learn to be good. My pa is a farmer; we have lots of fruit. I love apples dearly. This is the first letter I ever wrote; so good-by, Mr. RURAL.—OLLIE K. of *Montgomery Co., Ohio.*

The Puzzler.

ILLUSTRATED REBUS.—No. 5.

☞ Answer in two weeks.

CROSS-WORD ENIGMA.—No. 2.

My first is in wool but not in sheep;
My second is in night but not in sleep;
My third is in play but not in toy;
My fourth is in lad but not in boy;
My fifth is in hurry but not in run;
My sixth is in jolly but not in fun;
My seventh is in cane but not in staff;
My eighth is in smile but not in laugh;
My last is in tidy but not in neat;
My whole is something good to eat.

☞ Answer in two weeks. ISOLA.

PUZZLE.—No. 1.

FIFTEEN young misses, Margie, Carrie, Mira, etc., attend a boarding school. The rules of the school require these fifteen young ladies to walk for exercise each day in the week of seven days. They are required to walk each day in five files, three in each file, thus:

* * *
* * *
* * *
* * *
* * *

All walk each day, but no one can have the same companion in a file twice.

It is required to determine the order to be observed each day. C. L. PALMER.

☞ Answer in two weeks.

RIDDLE.—No. 1.

WHAT force and strength may not get through,
I with a gentle touch can do;
And many in the streets would stand,
Were I not, as a friend, at hand.

GEN. CABRAL has defeated the followers of Baez, and organized a provisional government.

From Mexico.

GOV. PESQUIRO of Sonora is hurrying forward troops to take Mazatlan from the rebels.

From Hayti.

THE President made himself unpopular by liberating all political prisoners on New Year's Day. The American flag has been removed from Samana.

The Staple of Life.—That most deserving class, the housekeeper element, is subject to more trials and difficulties than most mortals. The old saw of HORACE, "that every man has his own taste," is the best evidence of this fact. It is true that bread is the staple of life, but when it is possible to make that word "bread," including everything from a pie crust to a biscuit, so as to furnish the most nutritious, agreeable food, entirely free from everything which could injure the human system, or neutralize the effects of the farinaceous matter itself, the old saying might well be rendered, "Bread made with 'Dooley's Yeast Powder' is the staple of life." Housekeepers! you all know that the greatest difficulty you have is to make palatable, nutritious, easily digested bread, biscuits, rolls, pastry, cakes, &c., and if you want to get rid of one of your troubles, "go for 'Dooley's Yeast Powder.'"

Ladies of Fashion.—To preserve the fresh glow of juvenility against the lapse of years and time's effacing fingers, is an object which has ever been dear to those gifted with beauty and personal charms. A benefactor of the race has invented a toilet preparation known as the "Bloom of Youth," which has accomplished wonders in aiding nature to retain the much prized gifts. Laird's "Bloom of Youth" is undoubtedly the best preparation in the world for removing all blemishes and discoloration from the skin, leaving it clear, soft and beautiful. Sold at all druggists. Depot 5 Gold street, N. Y.

Watch No. 1006, Stem Winder bearing Trade Mark "Frederic Atherton & Co., Marion, N. J.," —manufactured by United States Watch Co., has been carried by me some months; its total variation from mean time being only eight seconds per month.—WM. MITCHELL, Con. P. & K. R. R., Portland, April 10, 1868.

Sugar at Six Cents a Pound would not be as cheap as our Four Ton Hay Scale. The Jones Scale Works, Binghampton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, January 27, 1872.

THE trade of the week shows much activity in Imported Merchandise and Domestic Commission Goods. The demand for the latter is on the increase, and the mills are so actively engaged that the American consumption of cotton out of the present crop promises to reach 1,100,000, if not 1,150,000 bales. The woolen mills are also well employed, but it is stated that many of them are mixing more cotton with wool than usual in these fabrics, owing to the comparatively high prices of the latter. The Customs Duties paid into the Treasury at New York for the fortnight ending to-day amount to about $7,200,000, indicating that about $20,000,000 foreign merchandise has been placed on the market in the two weeks.

Money is 7 per cent. in Wall Street on Stocks and at Bank. Paper not accommodated at Bank ranges 8@12 per cent. per annum. Gold varies but slightly from 108 per cent. Exchange on London 109¾.

The following are the comparative movements of the City Banks for the past fortnight:

	Jan. 13.	Jan. 20.
Capital	$87,301,600	$87,155,500
Loans	275,253,200	279,032,900
Gold and Greenbacks	71,681,300	73,112,800
Deposits	241,624,100	220,261,500
Circulation	28,139,300	28,371,200

PRICE OF STOCKS AND BONDS.

American Gold	109¾	N. Y. Central Scrip	83¾
U. S. 5-20's of 1867	112¾	Reading	114
U. S. 6s of 1881	115¾	Rock Island	110¾
U. S. 10-40s, 5 ¾ cts	110¾	N. West	72¾
U. S. New Loan	110¾	Do. Preferred	92¾

Western Telegraph	72½	Adams Express	91
Pacific Mail	57¾	American Express	61
Lake Shore Scrip	88	United States Exp's	62½
N. Y. Central Stock	97½		

Our table is lower than last week on most of the Railroads by ½@2 per cent. Union Pacific Stock is an exception. The sales and purchases of this stock have been on a very unusual scale for several days, the movement supposed to be in contemplation of a change in the Board of Directors at the annual meeting in March. The capital is 36,000,000, or 360,000 shares. The traffic of the road has been greatly interrupted this winter and is now suspended by snow drifts on the plains and in the mountains. Most of the freight from New York is now going out by the Pacific Mail steamers via Isthmus of Panama. An alliance between the Road and Mail Company is said to be in contemplation, although the advance in the Mail stock is hardly sustained. The Government Stocks are firmer than last week, especially the 5 per cent. Loans' in which not only the Savings' Banks, but many of their fluid depositors are now investing.

The Bureau of Statistics has brought up the Trade Tables of the United States to the close of the ninth month of 1871. We annex a summary.

FOREIGN TRADE, U. S.—NINE MONTHS, 1871.

Imported in foreign goods in gross	$440,804,539
Re-exported on of bond, &c.	11,059,351
Total, as for U. S. markets	$429,745,188
In bond, Dec. 31, 1870	$55,616,781
In bond Sept. 30, 1871	61,395,227— 5,778,446
Foreign goods taken for consumption	$420,966,742
Exported American produce, gold value	331,355,671
Balance of nine months	$89,611,068
Exported in domestic specie	$50,777,935
Exported foreign specie	15,258,321
Together	$72,036,256
Less foreign, imported	10,920,527
Net outgo of specie	61,115,929
Apparent balance against United States	$28,795,339

COMPARISON WITH NINE MONTHS, 1870.

Nine months	Jan. 1 to Sept. 30, 1871.	Jan. 1 to Sept. 30, 1870.
Goods for consumption	$420,966,742	$342,062,151
Produce exported	331,355,674	271,503,607
Bal. exclusive of specie	$89,611,068	$70,558,544
Net specie outgo	61,115,729	48,508,120
Apparent balance	$28,495,339	$22,050,424

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Jan. 26, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 23,112 bales of cotton, 956 pkgs. dried fruits, 3,502 bbls. eggs, 47,020 bbls. flour, 35,240 bush. wheat, 512,630 bush. corn, 96,615 bush. oats, 8,035 bush. barley, 9,995 sacks grass seed, 252 bbls. beans, — bags do., 916 bbls. corn meal, 2,480 bags do., 257 bales hops, 3,006 pkgs. pork, 1,611 pkgs. beef, 13,688 pkgs. cut meats, 12,067 pkgs. lard, 1,174 kegs do., 13,631 pkgs. butter, 5,506 pkgs. cheese, 6,257 dressed hogs, 4,574 bags peanuts, 421 hhds. tobacco, 1,819 boxes and cases do., 3,332 bbls. whisky, 1,148 bales wool.

Beeswax.—Shippers are buying more freely and as the stock received only light additions prices show a fractional advance; sales of Southern at 31½c.

Beans and Peas.—Mediums have met with a brisk sale, a number of parties have been buying pretty freely ahead, with the impression that the steadily decreasing arrivals would soon start prices. Marrowfats have been taken moderately well by shippers; at the close prices have been put up five cents on nearly all descriptions. Green peas are in moderate receipt, but the demand is hardly so brisk and prices are rather weak. There have been free arrivals of Canada but they are chiefly for direct shipment abroad; prime medium beans, $2.45@2.50; good mediums, $2.20@2.35; poor, as low as $1.25; pea, $2.50@2.60; kidney, $3.10@3.25; red kidney, $1.25@2.25. Prime marrowfats, $2.45@3.05; fair do. $2.60@2.80; common lots as low as $2.25. Canada peas, in barrels, $1.20; green peas, $2@2.05; Southern, B. E., per two bush. bag, $2.35@2.75.

Butter.—The market lacks the tone of last week. Choice grades bring late figures easily, but there have been heavy arrivals of common and medium stock, and the general market has been depressed. Exporters say there is no margin for them on most grades; the purchases from this direction have been confined to a few common lots. Holders show some anxiety about the stocks of the common grades, with last season's experience in new, when so much butter was carried over into the summer and worked off at low figures. There is no accumulation of strictly prime.

State, pails, good, 32@35c.; State pails, finest selections, 36@37c.; State dairies, fine, 30@32c.; State dairies, fair to good, 26@29c.; State, half-rubs, good to fine, 32@35c.; State, do., common to fair, 24@28c.; State, firkins, fine yellow, 28@31c.; State Welsh, good dairies, 28@31c.; State do., common to fair, 22@25c.; State do., fresh made, 32@34c.; State, fancy select tubs, 35@38c.; Ohio, good, 18@21c.; Ohio, Central and Southern, 14@17c.; Western, choice yellow, 20@21c.; Western, store-packed, 9@14c.; rolls, good West., 18@20c.; rolls, common to fair, 13@16c.; grease butter, 8@9¼c.

Cheese.—There is a better feeling in the market; holders feel secure, since they are confident of being able to handle the stocks even with the small shipping outlet current. The home trade have been buying freely, and some parcels have been sold as high as 15c.; but this figure is rarely reached. At the close there are an increased number of orders from the other side, and there is a very firm feeling. Shipments since our last, 109,871 lbs. The quotations are 11@11¾c. for fancy factory; 12½@13c. for fair; 10@11c. for common; 12½@13½c. for farm dairy; 9@10c. for common; 11½@13c. for Ohio factory; 2@11c. for common do.; English dairy, 11@13c. Vermont factory, 12@13¼c.

Cotton.—The market is ⅛c. higher gained early in the week under a brisk demand from the South for contracts, and a fair shipping trade. At the close the demand from all sources is lighter. Shippers say that there is no margin offered them, and with heavier receipts at the ports there is a weak feeling.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	19¼	19⅝	19⅝	19⅝
Good Ordinary	20⅜	20⅜	21	21¼
Low Middling	21⅝	21⅝	21¾	22⅛
Middling	22⅛	22¼	23⅛	23⅛
Good Middling	22⅞	23	23¼	23½

For forward delivery latest sales are at 21⅜c. for Jan.; 21⅝c. for Feb.; 21 7-16c. for March; 22⅛c. for May; 22½c. for March; 22⅝c. for April; 22⅞c. for May; 23c. for June on basis of low middling.

Dried Fruits.—Trade does not improve to the extent anticipated, and holders are somewhat discouraged. The stocks of most descriptions are full, and with some anxiety to realize in some directions, lower prices have been submitted to.

Apples—Old State, qrs., 7@8c.; Western, new, 6@8¾c.; Southern, new, qrs., 7@8c., do. fine, sliced, 9½@11½c.; new State qrs., 3@9½c.; do., sliced fine, 11@13c. Peaches, peeled, new N. C., 17@18½c.; do., do., do., 15@16½c.; do. E. Sh. Va., 15@16½c.; new unpeeled halves, 7@8c.; do. quarters, 6c. Plums, 25@27c. Cherries, new, ₩ lb, 20@30c. Blackberries, 13½@14c. Raspberries, 28@29c.

Eggs.—The market has been completely upset by the steadily increasing arrivals, and it has been difficult to fix upon a price. Sales at one time made at 31c. for fresh, but the cold weather the last day or two checks a further break, and some parties are running out their supplies at 33@35c. The quotations for fresh are 33@35c. for Penn., New Jersey and L. I., and 33c. for Western.

Flour.—The outlet is very light, and prices are again 15c. per bbl. lower. The position of the market is very discouraging. The arrivals, comparatively, are light, but with the business almost entirely from the home trade, stocks are steadily augmented. $5.75@6.10 for superfine State; $6.15@6.70 for common extra do.; $6.50@6.90 for good to choice do.; $6.85@7.25 for fancy do.; $5.75@6.10 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.35@6.70 for extra do.; $6.75@7.25 for choice extra do., including shipping brands of round hoop Ohio at $6.00@6.50, and trade brands of do. at $6.85@7.30; good to choice white wheat extras at $7.30@7.40; Minnesota, fair to very choice extra, at $7@8.60; St. Louis at $6.70@7.35 for common to fair extra, and $7.40@9.50 for good to choice. Southern at $6.65@7.50 for extras and $7.10@9.50 for good to choice. Rye at $4@5.30. Buckwheat flour is quoted at $3.20@3.50. Corn meal, Western white, $3.50@3.55; do. yellow, $3.70; do. Jersey, $3.75@3.85; do. Brandywine, $4.20; do. Marsh's calorie, $4.15@4.20; do. Southern, $4.15@4.20.

Fresh Fruits.—Apples are lower with a light business. The stock is still turning out very poorly, and this is unfortunately the case with a large portion held for reserve. Shippers are buying only as they have positive orders for consumption. The glut of Sicily oranges and the low prices cuts off some trade in apples from retailers. Cranberries are still hard to see; for prime lots no change is made in prices. Pecans have been in large receipts, fully 3,000 packages received within a week by sailing vessels from Texas. The demand is good and prices firm. Peanuts are higher and active.

Apples, Mich., &c., bbl. $2.50@3; do. State good, $3.50@4; do. selections, $4.@4.50; cranberries, fine, bbl., $8.50@9; do. common to fair, $5@7.50; do. crates, fine, $3@3.25; do. do. common, $2@2.50; oranges, Ex., bbl., $6@8; peanuts, Wilmington, bush., $2@2.10; Virginia, new, $2@2.20; do. common, $1.25@1.60; chestnuts, $1.75@2; hickory nuts, $1.75@2; black walnuts, 75c.; pecan nuts, ₩ 8@9½c.

Grain.—For wheat there is scarcely any inquiry at the moment and quotations are about nominal. Holders concede a decline of three cents per bushel. We quote No. 2 spring in store at $1.49@1.51; No. 1 spring in store at $1.51@1.56; Winter red Western, $1.60@1.63; amber Western, $1.61@1.63; and white Western at $1.63@1.65. Rye is quiet and steadily held. Sales of Western in store at 98c. Barley is worked off in small lots at late prices. Sales of Western at 80c. and Canada West $1.12½. Oats are lower, closing steadily at 52½@55½c. for Western and Ohio. Corn is in large receipt and lower. At the reduced prices exporters are buying more freely. Sales at 72@75c. for new Western mixed afloat, 72½c. for prime do. in store, 72@72½c. for white Western, 73c. for yellow Western 74c. for old and new Western mixed.

Hops.—Light arrivals and a stronger market on the other side creates a more confident feeling. For prime lots brewers pay better figures. The scarcity has thrown trade back on choice old. The poorer grades meet with more attention. We quote:

New Yorks, growth 1871, 20@35c.; Eastern do. 1871, 20@60c.; Western do. 1871, 20@30c.; yearlings do. 1870, 10@30c.; olds do. 1869, 10@15c.; old olds do. 1868, 8@12c.; Californians do. 1870, 15@30c.; Californians do. 1869, 9@15c.; Bavarians, 75@85c.; Englishs, 60@65c.; Belgians (nominal), 50@55c.

Poultry.—Live poultry is doing better and a little more stock could be easily handled. Dressed has been received to a fair extent and receivers have managed to keep the market comfortably clear of stock, with steadier prices realized. For choice lots of turkeys 20c. has been paid, but this is an exceptional price. We quote:

Turkeys, Western, good, 13@16c.; do. poor and frozen, 12@15c.; do. State, 15@18c.; do. Jersey, 15@18c.; Ducks, Western, 14@15c.; do. poor and frozen, 12@13c.; do. State and Jersey, 16@18c.; Geese, Western, 10@12c.; do. poor and frozen, 8@10c.; do. State and Jersey, 12@14c.; Fowls and Chickens—Western good, 13@15c.; do. poor and frozen, 10@13c.; do. State, 14@15c.; do. Bucks Co. and Jersey, 15@18c. Live at 14@15c. for Western chickens, 15@16c. for State and N. J., do.; roosters, 8@9c.; ducks, per pair, 75c.@$1.50c. Geese—Western, $1.50@1.75; do. Canada, $1.75@2.

GAME.—The arrivals are large of almost every description. Quail and grouse are worked off easily and bring better prices. The market is abundantly supplied with buffalo meat, and some of it goes off very cheap, one invoice in poor order selling as low as 2c. per lb. Venison is plenty, and selling low. Ducks, teal and wigeon, 30@40c.; do. mallard and red, 75c.@$1; do. canvas, $1.50@2. Venison, whole, ₱ lb., 6@8c.; do. long saddle, 8@10c.; do. short saddle, 10@12c.; do. Minn., 13@15c. Buffalo hind saddles, 2@6c.; do. calves, 3@5c. Quail, scarce, ₱ doz., $1.75@2.00; do. soft and small, $1.25@1.50. Grouse, ₱ pair, 60@65c. Partridges, Eastern, 40c., do. State and Western, 50@60c. Rabbits, 20@30c. Hares, 30@35c. Squirrels, gray, 8@10c.

Provisions.—The market for pork is strong. The inquiry is still moderate from all sources, but the stock receives only light additions. New, $11.50, and for April, $14.31; for March, $11.35. Prime, $12.25 for new extra. Prime mess, $11.50 for old Western, $11 for new. Dressed hogs are firm and in fair demand, at 5¾@6c. for Western, and 6@6¼c. for city. Middles are quiet, at steady prices. Sales of Cumberland at 6¾@7c. for short rib. Cut meats meet with a small trade. Hams in pickle at 9@9½c.; in salt at 8½@8¾c.; shoulders in pickle at 6c., and in salt at 5½@5¾c. Lard is selling moderately well, and with light arrivals, prices are firm. Western steam, 9½@9 9-16c. for spot, 9¾@9¾c. for Feb., 9¾@9¾c. for March, 9¾@10c. for April. Prime city is dull at 9¼ cents. Stearine is lower; sales of prime at 9c. Smoked meats are quiet at 11@13½c. for hams, 8½@9c. for shoulders, and 8@8½c. for clear rib. Beef is dull at $9.00@10.00 for plain Western mess; $11@13 for extra mess. Beef hams are inactive at $23@25. Tierce beef is inactive. Sales at $15@18. India mess, $19@21. Tallow is weak at 9¼@9½c.

Seed.—Prices of Clover show no change. There is a good trade for export at 11½@11¾c. for Indiana and Michigan. Timothy is nominally $3.50.

Tobacco.—Business in all descriptions has been very light. The home trade are the chief buyers. Holders are firm in their views.

Vegetables.—The shipping trade in potatoes is lighter and prices are hardly so firm, although no important changes are made in prices.

Potatoes, Rose, ₱ bbl., $1.75@2; Peach Blows, $1.75@2; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.25@1.50; Dyright, $1.25@1.75; Nova Scotia, $1.75; sweet Del., $3.75@4.00. Onions, red & yellow, $1.50@1.75; white, $2.50@3; Conn., 100 strings, $2.50@3. Garlic, per 100 bunches, $20@22. Turnips, Russia, bbl., $1.25; flat, $1@1.25. Cabbages, per 100, $5@7. Hubbard squash, per bbl., $2@2.25; marrow, $1.50@1.75. Beets per 100, $1.25. Carrots per 100, $1.50.

Wool.—Prices of fleeces have been advanced, and buyers have been more indifferent, although they are looking around and making bids that nearly meet holders' views. Pulled have been in good demand at full rates. Texas and California are changing hands among dealers; there is some inquiry from manufacturers. Foreign is worked off more freely at firm prices. Sales are of medium fleeces, 61@63c.; XX Ohio, 70c.; XXX and picklock, 75c.; super pulled, 65@67c.; extra do., 60c.; tubbed, 65@75c.; scoured, $1.03; Texas, 30@50 ; Oregon, 58c.; spring clip California, 40c.; fall clip do., 40c.; Cape, 43@46c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Jan. 27, 1872.

WE have no change to note in the market at Little Falls for the week ending Jan. 27. Both cheese and butter come in sparingly and small lots are picked up by moderate dealers. Sales from farm dairies have been as low as 9c , though fancy is worth 11c. and upward. We hear of no transactions in factories worth reporting.

Our advices from abroad are for the first week in January. Our London correspondent reports cheese firmly held. American extra fine 54s. to 55s.; fine, 50s. to 52s.; good, 50s. to 54s.; seconds, 37s. to 38s.

The other descriptions of cheese sell as follows:—New English Cheddar, 70@78s.; Wiltshire double, 56@64s.; Cheshire medium, 376@56s.; fine, 66@80s.; Scotch, 68@73s. Dutch cheese—No quotations.

In butter, rather more was doing toward the end of the week in foreign secondary sorts; fine European short. We give quotations as follows:—Clonmells, 120@131s.; Corks, 133s.; Normandy extra, 150@160s.; Canadian, 70@116s.—*N. A. W.*

LIVE STOCK MARKETS.

NEW YORK, Jan. 25, 1872.

THE understanding now is that freights on stock from the West will be about doubled by the first of February, and shippers are exerting themselves to get stock forward as fast as possible, but find a difficulty in the insufficient number of cars and engines set aside for this work. The weather has been all that could be desired and thus far drovers have been very fortunate about detensions on account of snow storms, at least in this vicinity. We hear of storms now prevailing at the West, which may influence shipments from there. Our markets are firm all round, at the present writing."

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	7,669	80	924	25,803	38,858
Last week	7,803	70	823	25,959	33,376
Correspond'g w'k '71.	4,861	75	796	24,836	11,796
Average, '71	7,187	88	2,301	25,132	25,177

Beeves.—There is little variation in the receipts of the past two week, an average of rising 9,800 being a large supply—too large in fact not to be felt upon the market. Especially was this the case last Monday when 143 car loads were thrown into the Communipaw yards; 105 at 100th st, and 41 at Weehawken, making 4,791 on sale that day. They were all taken, but in disposing of them drovers yielded from ¼ to 1c. ₱ lb from the previous Monday. The yielding was partially provided for by a decline on Thursday and Friday when our last report was made up. The quality was generally inferior on Monday, so many of the shippers sending in thin lots which will be ruled out when freights advance. Cattle men are anticipating this time, and so send in their scallawags. The few good droves sold fairly, some of them at 11½@12c. per lb., but the poor ones run down to 8@10c., or fully 1c. below the rates of the previous week.

Now, with a moderate run, and weather cold enough to hold dressed meats any length of time, the market is rather stronger again, but nothing, no matter how fine, sells above 12c., and it takes prime steers to bring 12@12¼c., decent droves going at 11¾@11¾c., and common at 8@10c. Bulls were sold at 1½c. ₱ lb., live weight, and poor, dry cows at 7¼@8½c., the only Texans on sale going at 9@10c. We have been having very few Texas cattle of late, they being nearly all bought up for further feeding in the country, the belief being general that the cattle trade will be a good business another year.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Choice bullocks, ₱ lb	12¾ @ 13	12¾ @ 13
Good to prime	11¾ @ 12	11¾ @ 12
Medium	11 @ 11¾	11 @ 11¾
Ordinary	9¾ @ 10¾	10 @ 10¾
Poorest grade	7½ @ 9	8 @ 10
Average of all sales	11¾ @ —	— @ 11¾

Milch Cows.—There is plainly a better feeling in cows this week. Milk has advanced, the cold weather lessening the flow. Then again, milkmen begin to look towards spring and provide for future wants. Quite a good many springers are now sent in for sale, most of them ordinary to medium, and bring $50@65. Good milkers are worth $75@85, a few fancy selling at $90@100. There was one very handsome cow sold at $115. Some poor cows still sell below $50.

Veal Calves.—There is a fair demand for good calves, prices remaining as last week, or 9@10½c., in lots. A few are peddled out at 11c. Ordinary veals sell at 6@8c. The greatest trade is still in dressed calves, good ones selling at 13@14c., ordinary to fair at 10@12½c. They are in fair supply.

Sheep.—Receipts continue quite uniform, but are not up to the requirements of the market. Butchers anticipate their arrival, meet them before they reach here and bid against the middle men for them. In this way farmers get good prices for their stock and save the commission for selling, which is quite an item. They require to exercise considerable caution in selling on time. It is fortunate, however, that the sheep trade has been brought so nearly to a cash business. Heavy losses forced owners and salesmen to this.

The market closes very firm at 6½@7c. for thin lots, 7¾@7¾c. for fair and 8@8¾c. for prime. Something very fine would reach 8c. A few of the latest transactions were 1 car Ill., sheep, 90 lbs., sold at 7¾c.; 1 car State, 78 lbs. at 7¼c.; 1 car do. prime, 98 lbs. at 8¼c. The average of 7,818 mixed sheep sold during the week was $7.83 with $7.63 for 4,636, and $7.10 for 1,789 of a poorer grade.

Hogs.—Besides the larger number of 38,858 live hogs, there were 6,536 Western dressed received during the week. The market shows considerable strength, helped by the cold weather. Live are quoted at 5 1-16@5¼c.; a car O., 206 lbs. just selling at latter price. City slaughtered are worth 6@6¾c., some light pigs of 100 lbs. and underselling at 7c. Western dressed advanced to the uniform price of 5¾c. to-day and close firm.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

TO FARMERS.—DOUBLE REFINED POUDRETTE of the "LODI MANUFACTURING Co," for sale in lots to suit customers. This article is sold for *half the price* of other fertilizers, and is cheaper for tobacco, cotton, corn and vegetables than any other in market. It is made entirely from the night soil, offal, &c., of New York city. Price, delivered on board in New York city, Twenty-five Dollars per ton. I ask attention to the following Testimonials:

ONEIDA Co., N. Y., Oct. 12th, 1871.—*Dear Sir:* For two years past I have used the Double Refined Poudrette for corn, potatoes and garden Vegetables, and I have realized on the first crop 100 per cent. for all the money invested. Yours truly, T. B. ALLANSON.

WINDHAM Co., VT., Dec. 4th, 1871.—*Dear Sir:* I think the Lodi Company's Double Refined Poudrette the best manure I can find for tobacco, corn and potatoes. I shall order a number of tons another season. Yours respectfully, E. S. HORTON.

JESSE VAUGHN of Lancaster, N. Y., under date of September 30th, says:—I applied the Double Refined Poudrette, last Spring, on corn and potatoes, and I believe I have the best corn in town, and my potatoes are an excellent crop. I have used your Double Refined Poudrette several times before, and always with good results, but this year the effect has been more perceptible than ever before. I expect to want more next spring.

A pamphlet giving full directions, &c., sent on application to JAMES T. FOSTER, 66 Cortlandt St., N. Y.
For Sale by V. P. DOUW & CO., Albany, N. Y., J. S. PIERCE & SON, Burlington, Vt.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.
Patented June 27, 1871.

One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented! So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a lifetime. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and travelling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

A. W. WEBSTER & CO., 599 Broadway, N. Y.
Please state you saw this in RURAL NEW-YORKER.

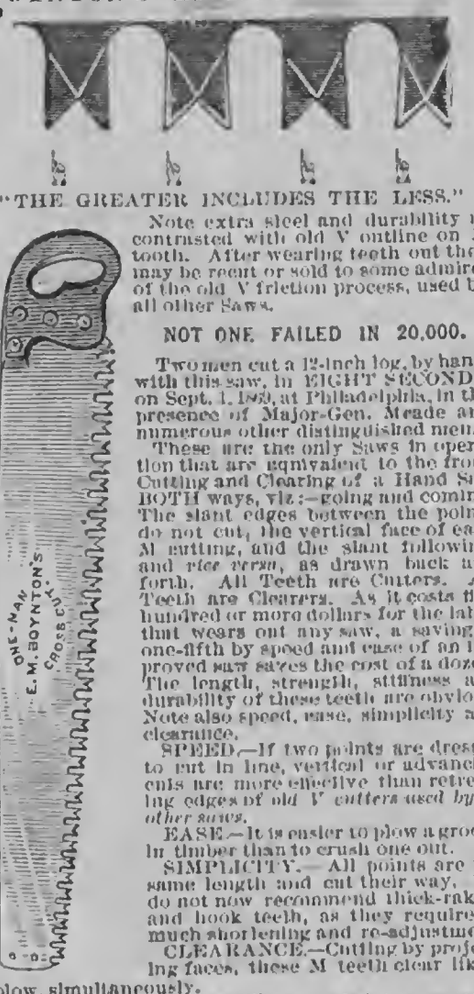
BOYNTON'S LIGHTNING SAWS.



"THE GREATER INCLUDES THE LESS."

Note extra steel and durability as contrasted with old V outline on M tooth. After wearing teeth out they may be resent or sold to some admirer of the old V friction process, used by all other Saws.

NOT ONE FAILED IN 20,000.

Two men cut a 12-inch log, by hand, with this saw, in EIGHT SECONDS, on Sept. 1, 1869, at Philadelphia, in the presence of Major-Gen. Meade and numerous other distinguished men.

These are the only Saws in operation that are equivalent to the front Cutting and Clearing of a Hand Saw BOTH ways, viz.:—going and coming. The slant edges between the points do not cut, the vertical face of each M cutting, and the slant following, and *vice versa*, as drawn back and forth. All Teeth are Cutters. All Teeth are Clearers. As it costs five hundred or more dollars for the labor that wears out any saw, a saving of one-fifth by speed and ease of an improved saw saves the cost of a dozen. The length, strength, stiffness and durability of these teeth are obvious. Note also speed, ease, simplicity and clearance.

SPEED.—If two points are dressed to cut in line, vertical or advancing cuts are more effective than retreating edges of *old V cutters used by all other saws.*

EASE.—It is easier to plow a groove in timber than to crush one out.

SIMPLICITY.—All points are the same length and cut their way. We do not now recommend thick-raking and hook teeth, as they require so much shortening and re-adjustment.

CLEARANCE.—Cutting by projecting faces, these M teeth clear like a plow, simultaneously.

These Saws are universally conceded to surpass in speed, in ease and in simplicity. If any one questions it, let him accept my $500 challenge (toward expenses of a public contest) and have the matter settled. Now enlarged dust-spaced saws for sale by the Hardware Trade of America. Agents wanted where the Hardware Trade do not sell the genuine saw. Infringers prosecuted. A 6-ft. Cross-Cut and a Wood Saw shipped on receipt of $6.

N. B.—None genuine without the name on saw of

E. M. BOYNTON,
Sole Proprietor and Manufacturer,
80 Beekman St., N. Y.

P. S.—Do not confound my Lightning M. Cutting Teeth with any infringements or feeble imitations of name or outline having thick-raking teeth, which, unless very carefully shortened, are electric only in their shocks to the operator.

Two men cut twenty-six cords of hard wood in 8 hours with the Lightning Cross-Cut Saw, by hand, and will do it again for $500.

Front view M, teeth showing dress and set of 2 points to cut in line.

CARHART'S
PATENT TWO-HORSE
PULVERIZING CULTIVATOR

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the mowing machine better than any cultivator in use, and can be used for more purposes than any other implement on the farm.
Price, $20.
C. C. BRADLEY & SON, Manufacturers,
Syracuse, N. Y.

THOMAS' PATENT
SMOOTHING HARROW,
With 54, 81, or 108 Round

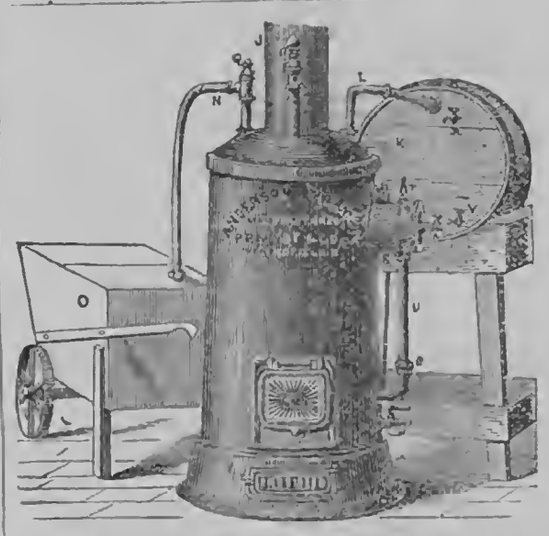
CAPONIZING INSTRUMENTS

Such as illustrated and described in "The People's Practical Poultry Book," can do so by forwarding their orders, accompanied by the cash ($4), to the office of MOORE'S RURAL NEW-YORKER, No. 5 Beekman St., New York City; or, 32 Buffalo St., Rochester, N. Y.

Implements, Machinery, Etc.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK: Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler: No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.
For further particulars address
P. P. MAST & CO., Springfield, Ohio.

IOWA FARMING LANDS

THE CHICAGO, ROCK ISLAND & PACIFIC RAILROAD COMPANY

Is now offering for sale to actual settlers more than

500,000 ACRES

of the finest and most desirable Farming Lands in the West.

The lands are chiefly situated along the line of its railroad between the cities of Des Moines and Council Bluffs, and are the most fertile and accessible lands offered for sale at low prices in the State. Prices will range from $5 per acre, the average being about $7 or $8.

Sales are made either for cash, or on short or long time, so as to suit all purchasers. Full warranty deeds given.

EXPLORING TICKETS,

entitling the purchaser of land to a credit of amount paid for fare upon his land, are for sale at the principal ticket offices of the Company.

For pamphlet (with map), or any information regarding the lands, address
J. L. DREW, Land Commissioner,
Davenport, Iowa.

NORTH

MISSOURI LANDS

FOR SALE

BY THE

Hannibal & St. Joseph R. R. Co.

About 120,000 Acres of the Finest Farming and Grazing Land in the United States, for sale at low prices and on very easy terms; thus enabling an industrious man with small capital to pay for his land with money earned from it.

Missouri is not too far West to be at a great distance from markets; its Railroad facilities are great and constantly increasing; the climate is splendid, and good crops are almost a certainty; while the numerous thriving towns and cities springing up on every hand attest beyond doubt that the blight of slavery has been effectually dissipated, and that Eastern men and Eastern capital are doing their perfect work.

Our Lands Defy Competition.

Send for full Descriptive Circulars and Sectional Maps, inclosing 30 cents, and stating what paper you saw this in, to Land Commissioner H. & St. J. R. R., Hannibal, Mo.

1,500,000 ACRES OF THE

RICHEST FARMING LANDS

IN THE WORLD,

For Sale to Actual Settlers,

NEOSHO VALLEY, KANSAS.
MISSOURI, KANSAS, AND TEXAS RAILWAY CO.

CARS NOW RUNNING 400 MILES.

The Lands offered by this Company are mainly within 20 miles of each side of the road, extending 170 miles along the NEOSHO VALLEY, the richest, finest and most inviting valley for settlement in the West. One-third of the labor required at the East in the culture of farms will insure here double the amount of crops.

PRICE OF LAND.—$2 to $8 per acre; credit of ten years' time.

TERMS OF SALE.—One-tenth down at the time of purchase. No payment the second year. One-tenth every year after until completion of payments, with annual interest. For further information, address ISAAC T. GOODNOW,
Land Commissioner, Neosho Falls, Kansas.

FARM AND MILK ROUTE for Sale. Contains 195 acres. In and adjoining the flourishing village of Baldwinsville, which lies upon the Oswego and Syracuse R. R., 12 miles from Syracuse, and contains about 4,500 inhabitants. The best of schools, &c. Elegant two-story frame house, with two wings; good and spacious barns and sheds; splendid location; well watered and fenced; adapted to grass or grain; young orchard, and variety of fruit. Soil, sandy loam. Terms easy. For further particulars, address JOHN W. SIMMS,

THE CULTIVATION OF DUTCH BULBS.

MASON & HAMLIN CABINET ORGAN

Style No. 1, $50.

For $50.

SECURELY PACKED

SO THAT IT CAN BE SENT BY ORDINARY FREIGHT ROUTES WITHOUT EXTRA CHARGE.

As an illustration of the very low prices at which they are enabled, by the introduction of extraordinary facilities for manufacture to sell their well known ORGANS, which are acknowledged to be the

Best in the World

The MASON & HAMLIN CO., invite attention to this, their lowest priced style, by which they are, nevertheless, **willing to be judged both as to the Excellence of their Work, and its Prices.** It is quite small, and in plain case, but the workmanship is the VERY BEST, the tone powerful and of finest quality, and its durability can be fully depended on.

Other styles at proportionate rates. New Styles this season of FIVE OCTAVE DOUBLE REED ORGANS IN VERY ELEGANT CASES at $110, $132, and $125 each.

ILLUSTRATED CATALOGUES,

With full descriptions and lowest prices, from $50 to $1,000 each, also **Testimonial Circular,** with opinions of more than 1000 musicians, sent free to any address.

MASON & HAMLIN ORGAN CO.,
596 Broadway, N. Y.
154 Tremont St., Boston.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.

DENSLOW & BUSH'S "SAFETY" OIL

WILL NOT EXPLODE *even if a lighted lamp be upset and broken!* SAFEST AND PUREST OIL KNOWN. *Fire Test guaranteed over 150°.* Used in 100,000 families. For sale everywhere. Dealers address DENSLOW & BUSH, 130 Maiden Lane, N. Y.; 40 India St., Boston; 34 S. Calvert St., Baltimore; 479 S. Canal St., Chicago.

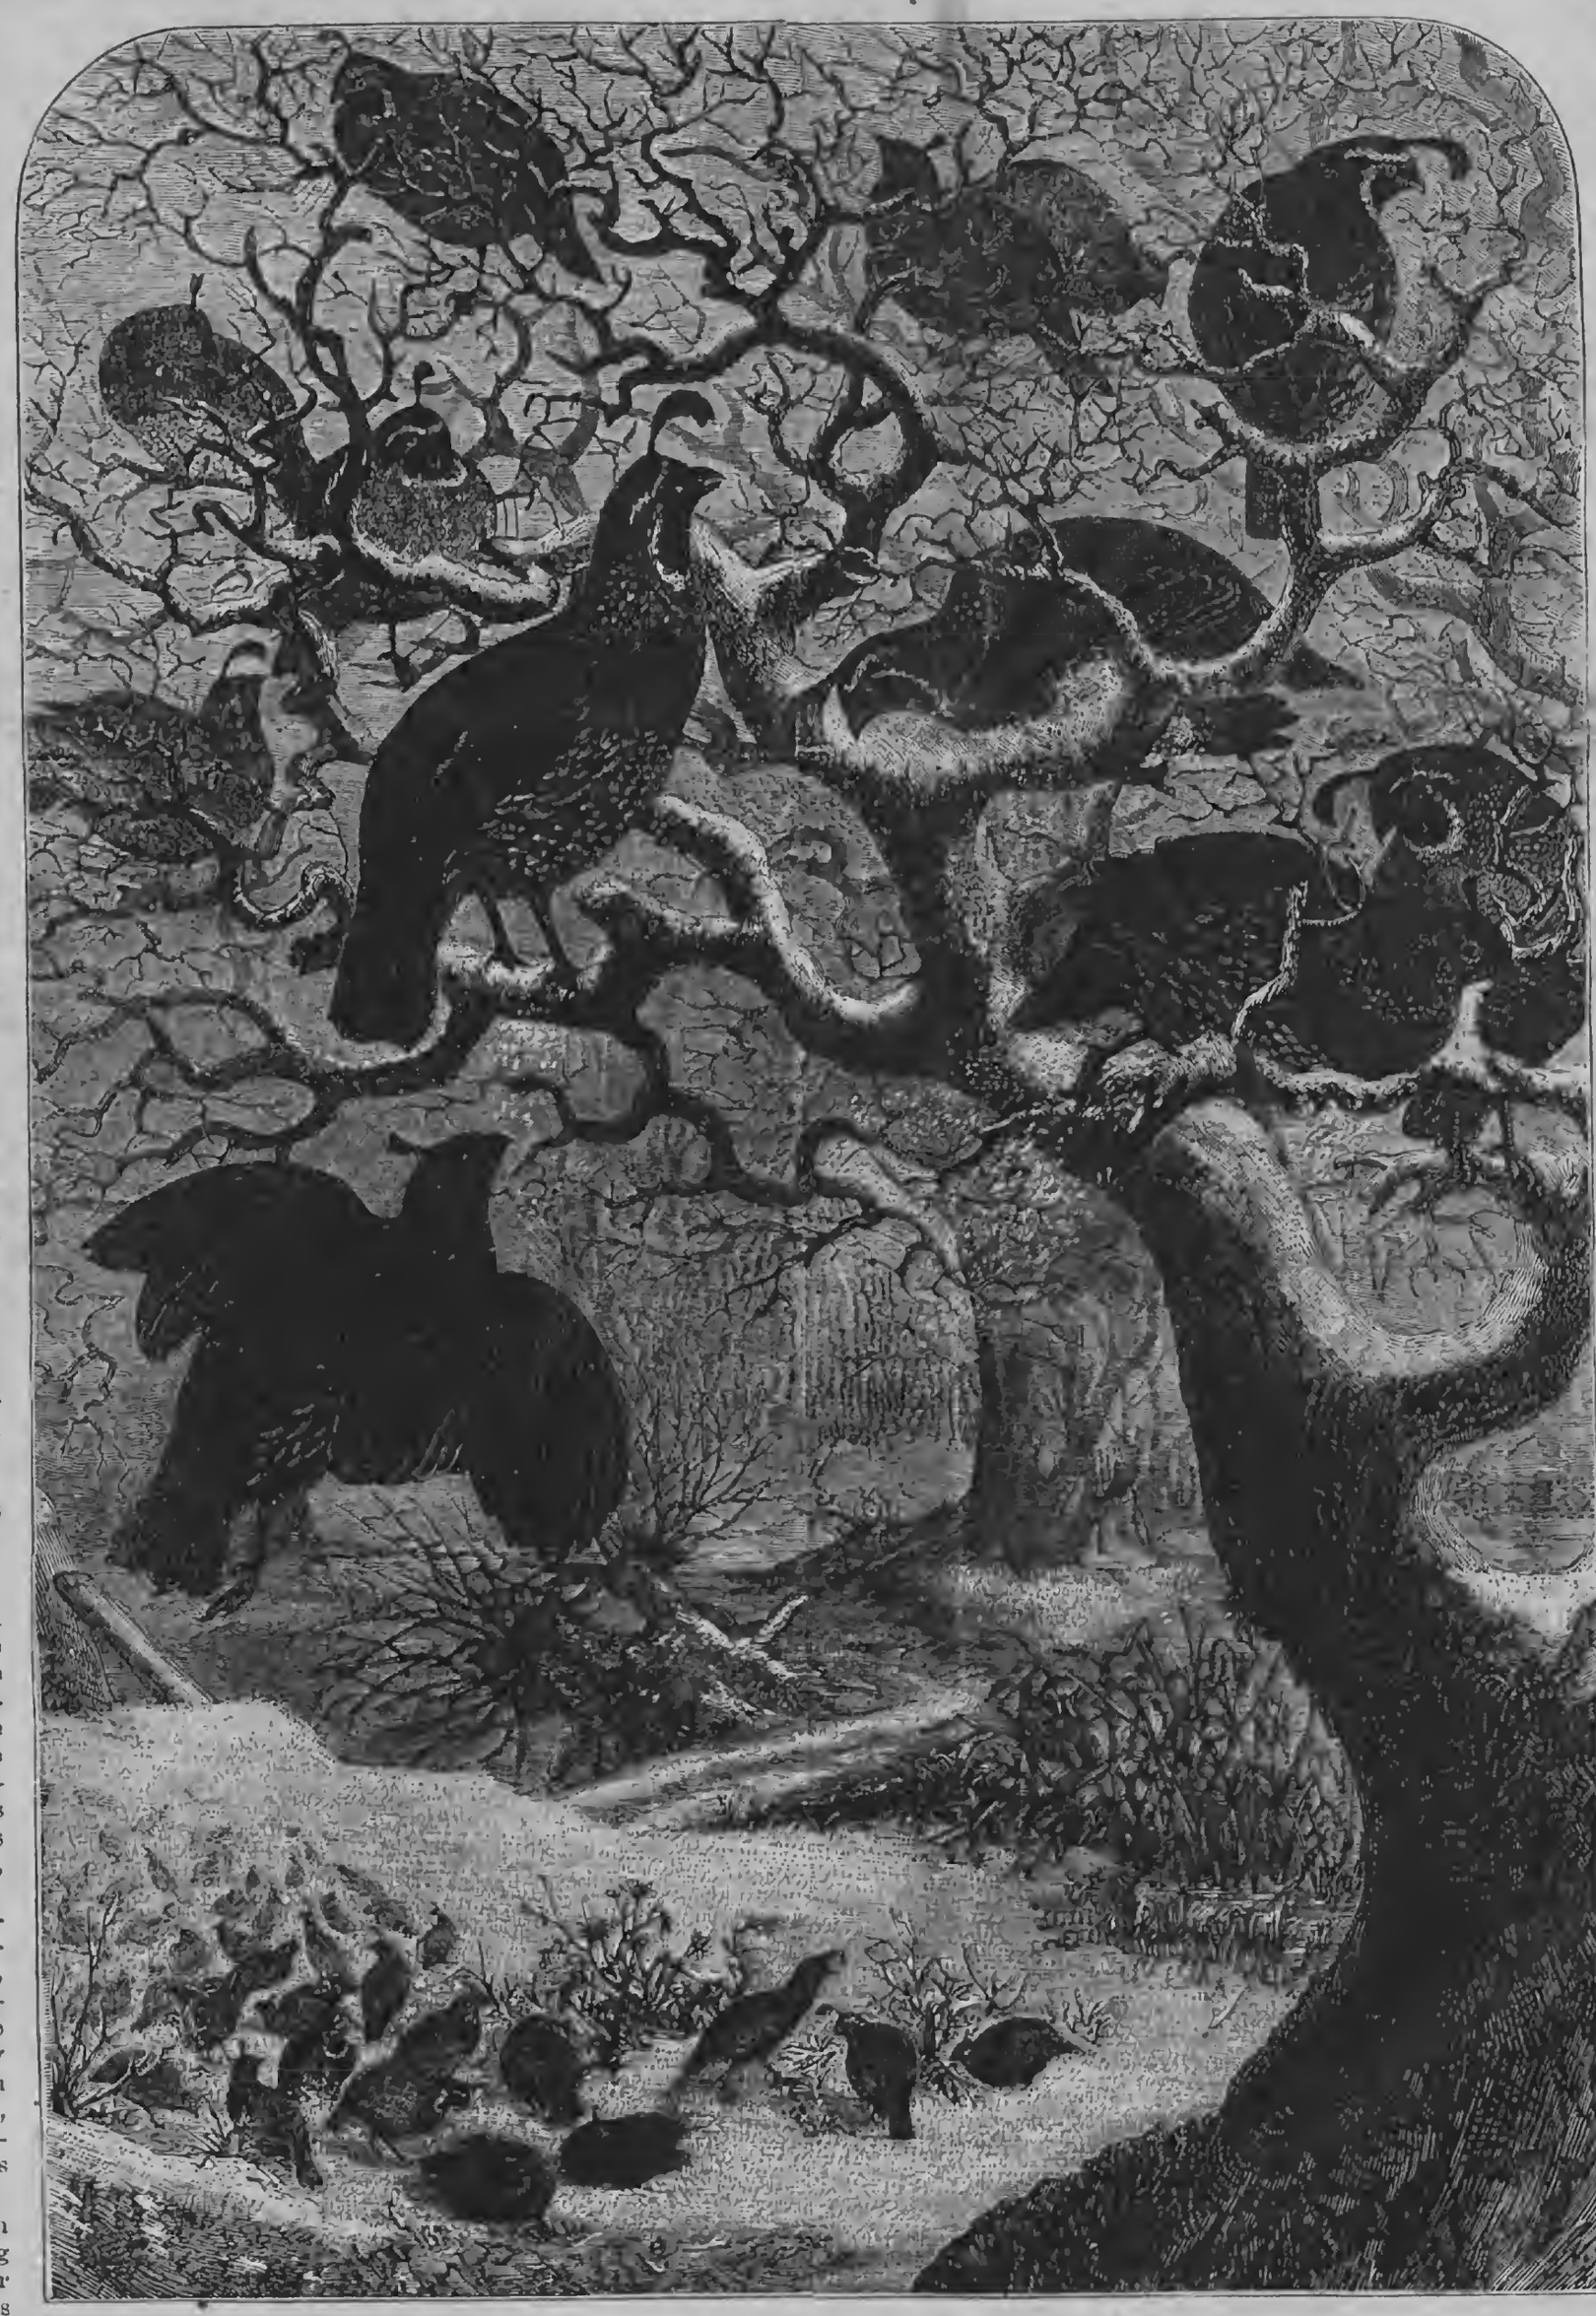
Sportsman.

SPORTSMAN NOTES.

The California Quail, illustrated on this page, is a most beautiful bird. Some sportsmen confound them with the partridge—*Ortyx Virginianus* or *Perdix Virginianus* of some. The scientific name of the common quail is *Coturnix vulgaris*.—The quail is a hardy bird, seldom forms into coveys, and is less prolific than the partridge. When they migrate they assemble in large numbers and travel by night, but when they arrive at their destination they separate, each bird foraging on its own hook.

The common quail is seven to eight inches long, with a dusky bill, hazel eyes, and a mixture-brown, black and ash color—in the head, neck and back; a yellow streak is seen on each eye, and another of the same color down the middle of the forehead; a dark line passes from each corner of the bill, forming a kind of gorget above the breast. The scapular feathers are marked by a light yellowish streak down the middle of each; the quills are a lightish brown, with small rust-colored bands on the exterior of the feathers. The breast is of a pale rust-color, spotted with black, and streaked with pale yellow. The tail consists of twelve feathers barred like the wings. The female is without the black spot on the breast, and is less vivid in plumage. This characteristic belongs to almost all birds, and is the same in the beautiful California quails represented in our Engraving, a variety distinguished—as are some of the Oriental varieties—by a feathered tuft on the top of the head, and by a more brilliant and lustrous feathering.

Sportsmen who can give us anything about the habits or peculiarities of this variety of quail that affects the manner of hunting them will confer a favor. We know that they are, as a rule, critical students of the Natural History of the game they hunt—at least they should be.



CALIFORNIA QUAILS ASSEMBLED TO MIGRATE.

Destruction of Pigeons when nesting.—B. F. PALMER asks if there is a law prohibiting the destruction of pigeons while nesting, in New York State. He has been told that there is. We believe that the following is a section of the game-law of this State. We know it was incorporated in the bill of last winter, and our remembrance is that it became a law: "No person shall kill, catch, or discharge any firearms at any wild pigeon while on its nesting grounds, or break up, or in any manner disturb, such nesting-ground, or the birds therein, or discharge any firearm at any distance within one-fourth of a mile of such nesting-place, at any pigeon, under a penalty of twenty-five dollars for each offense."

The Best Fishing-Place for Salmon in Sacramento River, in California, is said to be about Rio Vesta, and the fact is thus explained by B. B. REDDING, the State Fish Commissioner: "When the salmon return from the ocean they are infested with parasites, which they rid themselves of by tarrying a while at this point, where the salt and fresh waters mingle. Again, in returning, a similar halt is made, to rid themselves of fresh water parasites, thus offering an extended and profitable fishing season at Rio Vista, while other parts of the stream are employed more strictly as a thoroughfare."

Fishing Through Ice.—P. C. S., Otsego Co., N. Y., wants some of our readers who *know how*, to tell him what is necessary to catch pickerel through ice on a pond.

Field Crops.

TOBACCO CULTURE IN CONNECTICUT.

ONE of the sessions of the Connecticut Board of Agriculture, held at Davidsonville recently, was devoted to a consideration of the best modes of raising tobacco. The principal speakers were Dr. RIGGS of Hartford, and M. ALLEN of Windsor, although many other skillful cultivators participated in the discussion. We summarise their several statements as follows:

The Soils best suited for the growth of tobacco are light, fertile, sandy loams. The next best quality is upland, alluvious, that is, alluvial deposits that are not overflowed in the time of freshets. Stiff clays are the most objectionable of all; it is impossible to produce a fine leaf suitable for covers from such a soil.

Preparation.—The land for tobacco should be plowed deeply in the fall and sowed with rye, which should be manured with 200 pounds of Peruvian guano. The first thing to be done in the ensuing spring is to plant a seed bed. This is a tropical plant, and requires all the warm weather which can be afforded to it by the climate of Connecticut. The preparation of the seed bed should, therefore, be made as soon as the ground is fit to plow. It is much better to plow it the preceding fall, and manure it heavily; select manure as free from the seeds of weeds as possible, as nothing is so injurious to seed beds. It should be again manured in the spring with fish guano, Peruvian guano and superphosphate of lime. It is very essential to start the plants early and keep them growing rapidly; if anything checks their growth at any time, the quality of the tobacco is injured.

The Seed sown should be used at the rate of a thimble full to a square rod. A seed bed 70 feet long and 8 feet wide, will give plants enough to cover five acres. The best way to sow the seed is to put it in a common watering-pot which should then be half filled with water, the holes in the rose should not be *less* than the ordinary size; it must first be shaken vertically to diffuse the seed through the water, and swung circularly to distribute the seed upon the ground; this vertical and swinging motion must be kept up alternately until all the seeds are sown.

Spring Plowing.—As soon as the rye that was sown in the fall is high enough, it is plowed under. The object of this is to furnish food for the cut worms; when they are well supplied with this they do not trouble the tobacco plant; but if not supplied with it they often destroy the crop. After a few days it is covered with barnyard manure; the amount of this is graduated to the richness of the soil. If it has not been previously cultivated for tobacco it will require about 30 cords to the acre; add 400 pounds of Peruvian guano, and smooth over the surface with a stone boat; let it remain in this condition for a few days, and then throw it into ridges 3½ feet apart by turning a back furrow for each. The tops of these ridges are then scraped off by passing a wooden scraper over them.

Setting the Plants.—It is better to select a cloudy day, if possible, for setting the plants; but if this cannot be done so as to get the plants set in season, it is not worth while to wait for it, as all the plants should be set by the tenth of June. Great care should be taken not to break off any of the roots in pulling them. In setting them, let all the roots be put straight in the ground; if allowed to fall into loops, the plants will be much impaired. The earth should be carefully pressed around the roots by the fingers, leaving a cup-shaped depression around the stem; and if the weather be dry, about a gill of water should be poured over each plant. If it continues dry, chop up some green grass in a cutting machine and mulch each plant with it, and water from time to time with a solution of Peruvian guano. The plants, when transplanted, should have leaves about as large as the palm of the hand.

Cultivation.—No pains must be spared to keep the plants growing vigorously all the time; if they are once seriously checked in their growth, their quality is very greatly impaired. Break off the suckers as fast as they appear. Never allow the surface of the ground to form a crust; this must be broken by plowing as fast as it is formed. Two men should always do the hoeing; if one does it he will break off many of the leaves by crossing from one side to the other. After a time the lower leaves will begin to turn yellow; they should then be broken off. The plants should be about three feet apart in the row. When the blossom buds are fully formed and the flowers begin to disclose themselves, the tops must be broken off; if any of the upper leaves are decayed, they must be broken off down to the healthy leaves; if this is not done the decay will be communicated to all the rest. Only eight or ten leaves should ever be left on the plant.

When to Gather.—You may know when the plants are fit to gather by going through them in a sunshiny day, about 11 o'clock, A. M. If, on bending them, they crack with an audible snap, they are quite fit for gathering. After this condition is assumed, the sooner they are gathered the better.

The Gathering should be done in cloudy weather. The great thing to be kept in view in the process, is to avoid breaking off the leaves; this requires a good deal of manual dexterity to accomplish. It should not be cut but severed from the ground by one stroke of a fine saw, held in the right hand. The plant is then brought down to the ground by a sweeping motion of the hand which does not agitate the leaves. It was formerly left to wilt for a time; but experience shows that this is not only unnecessary but injurious; it is, therefore, conveyed to the tobacco barn as soon as possible.

In order to do this a needle is provided like the figure 1, in which *a* is the socket,

FIGURE 1.

and *b* is the blade. The socket is slipped over one end of a lath, four feet in length; the needle is then thrust through the lower end of the stalk and carried forward to the opposite end of the lath; about five plants are thus put upon each lath. A wagon is fitted up with a frame, the upper part of which is about four and a half feet above the floor of the wagon and each end of the lath is rested upon it, the laths being about four inches apart; the plants are then conveyed to the tobacco barn.

The Tobacco Barn is about 52 feet long and 38 feet wide; side strips 4 feet apart laterally, and 4½ feet vertically, are distributed through the entire building, and over these the laths bearing the plants are hung about eight inches apart, beginning with the upper tier and working downward. The building is set from two to three feet from the ground, and the lower part is left open to allow the air from the bottom to rise up through it all the time. There is a ventilator at the top, as shown in Fig.

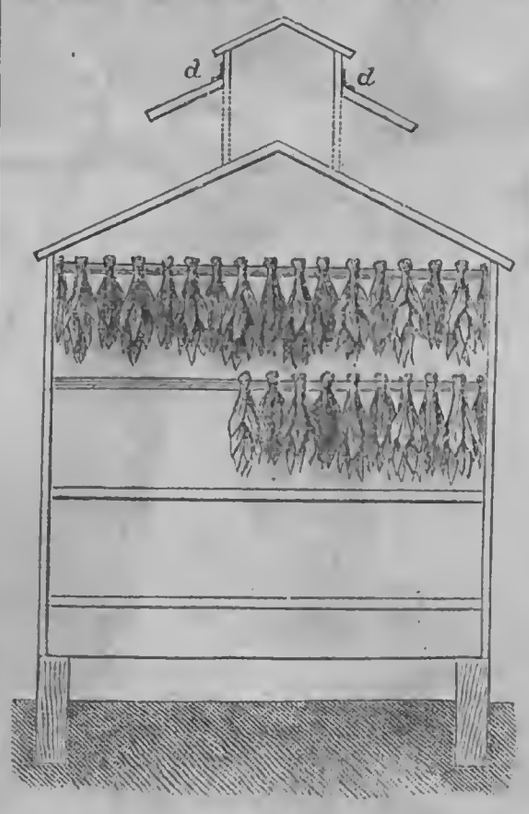


FIGURE 2.

2, the boards, *d*, *d*, swing on a hinge at their upper edge; they are 16 feet long and 12 inches wide, and are supported in the position seen in the figure by props placed under the middle of them from the inside. If a high wind arises, these props are generally displaced and the shutters fall, and can be readily opened again when the storm is over. This is a great improvement on the old method, which consisted wholly in lateral ventilation, and the rain often beat in and the outside rows were spoiled. Pole sweating was also very common, and the upper tier was almost always blackened with the vapor of the lower tiers, so as to diminish its commercial value very materially. In this modern way, the rain is wholly excluded, and the vertical ventilation colors all the tiers alike. There is very little pole sweating, and in all respects the tobacco thus cured is of a superior quality.

How Long it should Remain Stored. The tobacco should be kept in the barn until the lower end of the mid-rib of the leaf is thoroughly dried. If the tobacco is packed while any moisture remains in this part, the leaves all around it are much impaired.

It is usual to plant tobacco three years in succession, and then lay it down to grass for three years more. Tobacco has been raised as a market crop in Connecticut for seventy-five years, and the lands subjected to this rotation have increased in their fertility rather than diminished. It was the unanimous opinion of the growers that if treated in this way tobacco is not an exhausting crop.

The Excellence of Tobacco is judged of by its texture and color; when stretched out a finger is rubbed under the leaf; if when thus rubbed, the finger is seen through the leaf and its color is like that of a bat's wing it will class with the best. It must have the characteristic odor of the best tobacco and must feel to the finger like a kid glove. Other things being equal, the thinnest leaves are considered the most valuable.

Seeds are Collected from plants having leaves near to each other on the stem and which are characterized more by breadth than the length of their leaves. Of course the thinner they are the better.

The Whole Cost of Cultivating an acre of tobacco will not exceed $250 per acre and about 2,000 lbs. acre is considered a good crop. The profit on an acre often amounts to $1,000 per acre and sometimes very much exceeds it. Some farmers, instead of making a ridge by plowing a back furrow, draw over the ground an instrument like a reversed triangular harrow, which draws the earth into a ridge, and a scraper is attached to the rear end, which flattens the surface.

Tobacco Worms.—Great pains is taken to pick off and kill the tobacco worms as fast as they make their appearance. Contrary to the general belief, the tobacco worm is specifically different from that of the potato or tomato worm. X.

The Vineyard.

VINEYARD NOTES.

Temperature for Vines.—Can you inform me how low a temperature the Concord, Salem, Delaware and Creveling grape vine will bear without injury to the fruit buds? They were trimmed in November, but not covered; some are still on the trellis; the ground is covered with about eight inches of snow. The mercury has been 8°, 10°, 16°, and, for a few hours, 24° below zero. I had a fine crop last year.—B. T.

WE should not expect much fruit from unprotected vines in a locality where the mercury sinks to 24° below zero. Your vines, however, may not be injured, because it is not always the degree of cold that kills; for the hygrometrical state of the atmosphere at the time of severe cold has great influence upon vegetation. We have known plants to be killed at 10° below zero, and at another time not injured at 20°. Much, also, depends upon the length of time which plants are exposed to severe cold, as well as the rapidity with which they are thawed. With hardy plants it is difficult to determine what degree of temperature is certain death.

Grape Vine Cuttings.—Will you please inform me how to raise grapes from cuttings?—J. B. K.

TAKE off the cuttings immediately, and make in length of eight to twelve inches, according to varieties and growth. We usually leave two or three buds on each cutting. Tie the cuttings up into bundles of fifty to one hundred, and then bury in soil in a cellar, where they can be kept moist and not freeze. In spring, plant in rows, covering all but the uppermost bud, packing the soil firmly about them. We supposed everybody knew how to grow grape cuttings, but it appears that we were mistaken. A book that you can purchase for $1.50 will give you information worth ten times its cost. See our book list.

Honey Bees and Grapes.—"Porte Crayon" in Horticulturist says as soon as his Concord grapes began to color, "they were attacked by insects (chiefly honey bees), and before they were fit to eat three-fifths of them were destroyed." This is the first time we ever heard the honey bee charged with destroying grapes. And we are inclined to doubt "Porte Crayon's" theory or accuracy of his observation—certainly shall doubt it until somebody confirms it.

Floricultural.

CULTURE OF THE AMARYLLIS.

WILL some one please inform me through the RURAL NEW-YORKER how to cultivate the Amaryllis in pots, to have them bloom? What kind of soil is best suited to them—I mean the finer kinds, as I have no trouble in succeeding with the cheaper kinds?—MRS. M. A. W., *Petersburg, Ill.*

YOUR question is a difficult one to answer, because we do not know to what species of plant you refer under the name of Amaryllis. There are really but few species and varieties of this plant, but hundreds that are near relatives but natives of different countries, therefore requiring peculiar treatment to insure success. We can only give you general directions, as follows:—Pot in rich vegetable soils, with some sand, and give water sufficient to keep up a vigorous growth throughout the season; but when the plants show signs of rest, gradually withhold water until the bulbs are fully ripened. Then allow several weeks or months of rest, leaving the bulbs in the pots of soil, but give none, or very little water. After a reasonable period of rest the plants may be again started by giving heat and moisture. Amateurs, as a rule, try to keep their Amaryllis bulbs constantly growing, which is unnatural, and the results, as might be expected, are unsatisfactory.

FLORICULTURAL NOTES.

Is Erianthus Ravenna Hardy?—I sent for a plant of Arunda Donax (an ornamental grass), and they sent Ravenna instead. Will you please inform me if the Ravenna grass is hardy?—MRS. JANE E. S., *Coral Bluff, Pa.*

YES, we have found the Erianthus Ravenna not only perfectly hardy, but a beautiful and valuable ornamental grass.

Euonymus Japonica.—"Lady G." The sprig sent arrived safely, and the foregoing is the name of the shrub from which it was taken. The plant makes a beautiful hedge anywhere south of Philadelphia. It is liable to winter-kill north of that point. We shall be glad to answer your questions at any time. Thanks.

Mildew on Roses.—My roses, cultivated in the greenhouse, are badly affected with mildew. Can you give me a remedy?—X. Y.

THERE are various recipes given in books on gardening for destroying mildew. Sulphur is largely used by some of our florists, but is objectionable on account of the odor. Syringing the plants with a solution of soap and soft water is a better remedy, and not at all objectionable even in a conservatory where choice show plants are grown. One pound of soft soap in a gallon of water will give about the requisite strength. Soot is also excellent for this purpose, dusted over the plants when wet. The next day the plants should be syringed with clean water.

Lilium Auratum.—I planted one last spring; it had three blossoms; the lower blossoms had six petals each; the upper one twelve perfect petals. Will it have as many next year?—LILY, *Batavia, Ill.*

IT would be merely guesswork to say what your *Lilium auratum* will do next year; but if it should remain healthy the flowers may continue to be double. If you had saved seed from those semi-double flowers there would have been a good chance of obtaining permanent double sorts therefrom. High culture tends to increase the number of petals in flowers; and by being careful to save seeds from those that first show such a change, we are enabled to produce varieties with double flowers. There are a number of double lilies now in cultivation, and we presume ere long a double *auratum* will be produced.

Lillies in Shallow Water.—Some time ago the RURAL NEW-YORKER replied to a lady floral amateur that "she can raise perfect water lillies when the water is but two or three feet deep." I never saw any lillies of full size and beauty grown in such shallow water; they will not compare in size, beauty and fragrance with the wild *Nymphæ*, which grows, up from the cosy bed of deep water in the stilly bends of the Seneca river, beyond the Montezuma marshes. They attain the size of a large coffee cup and are exquisitely delicate and very fragrant. I have heard that great lover of flowers, the late DAVID THOMAS, dilate on the matchless beauty and fragrance of those lillies, which he said surpassed everything in floral excellence that art had yet attained, and he had at that time nearly an acre in well-kept shrubs and flowers on his farm at Greatfield.—S. W.

Dairy Husbandry.

NEW YORK DAIRYMEN.

First Annual Convention of the New York State Dairymen's Association and Board of Trade.

[Continued from Page 83, last No.]

SECOND DAY.

THE meeting was opened with a very able address from DAVID W. LEWIS of New York City, on the

General Marketing of Dairy Produce.—Mr. LEWIS sketched the history of the cheese trade, comparing it with other interests and referring to the various methods inaugurated for reaching the world's markets. The cheese trade, he thought, was not lagging behind other interests, but rather taking the lead of many of them. He referred to the growing tendency among farmers for changing the line of their production, and said this was often acted upon hastily. If wool was down, the sheep are slaughtered; if hops don't pay the cost of picking and baling, hop poles make the kitchen fire burn; if ship loads of humanity, from foreign lands, crowd our labor markets, children become scattering, and school-houses voiceless; but how often we have changed from wool to the dairy, from hops to stock, or from good, old-fashioned little house and big family and big heart to the large house and empty rooms, that we regret the bareness of results and see the desirability of only deliberate, carefully-considered, well-regulated change.

Transient expedients and frequent changes for apparent temporary benefits, are of doubtful utility, while continuous, persistent production in one channel is, as a rule, best recognized and rewarded, and the farmer who places his product at the top of the market, must produce it and reproduce it until it secures position as of the highest stand of value. This was illustrated by the Herkimer county dairymen, and by their market at Little Falls, which has become the recognized market of Central New York.

Quantity of product, as well as quality, gives force and strength in marketing. This is shown in the preference in price for factories of both butter and cheese over private dairies, and is one of the several reasons why it is better for a community to join hands in a creamery or cheese factory, and consolidate their product.

With uniformity of production and the constant tendency toward increased facilities of intercommunication by telegraph and mail, we shall see the strength and usefulness of home markets increased. Each district will get more and more to have its specialty, and its market center to become the headquarters of that specialty, and draw to it an amount of trade and exchange in ratio to the importance of its production. Business is then brought nearer the farm, property is benefited, social intercourse and mental culture are facilitated, and the circulation and life of the country kept up vigorous and active, the better to offset the feverish tendencies of the controlling centers of population. In home markets the producer and consumer, or their agents, are nearer together; the friction of exchanges is lessened. Each is instructed in the needs of the other, and all are benefited.

Referring to the credit system, he said that credit is the heart of the whole circulating system of the exchanges of society. It is always found largest and strongest in the most vigorous organizations and centers of commerce, and no market can hope to become a center of pulse and motion without its expansions and contractions.

The annual address was delivered by LEANDER WETHEREL of the Boston Cultivator, upon the subject of

Dairy Stock and the Food Therefor.—This was a very elaborate and learned production, eloquently delivered, and was received with frequent and hearty applause by the audience in attendance. We have no space in the present paper to give a synopsis of this most valuable address. It was thoroughly practical, and contained a mass of facts of the utmost importance to dairymen, and it fully sustained the high reputation of the speaker as a critical and careful investigator. We shall have occasion to refer to this most admirable address in a future article. The annual address was followed by a very interesting and valuable paper from EDWARD J. WICKSON of the Utica Herald, on

The Chemistry of the Cow.—After describing the elements required in the construction of the cow, and how compounds formed in the living animals are governed by the same laws which determine the combination of dead matter, he said it was safe to call a cow a laboratory—a laboratory for the manufacture of chemical products, and that the chemistry she practices is not falsely theoretical nor visionary. One of the most important agencies employed by the chemist in his processes is heat; and a furnace is found in every well-furnished laboratory. We find in the cow a furnace similar to that in the laboratory. It supports a life-long flame, for when the warm breath can be no longer detected, something we call life is gone. The lungs are the furnaces in the animal structure. By them the air is drawn from without and placed in contact with the blood derived from the food, etc., etc. In a similar way food, digestion and the product of the cow (milk) were treated from a chemical point of view, making the address original and ingenious in its conception, and exceedingly interesting and instructive to his hearers. The applause which greeted Mr. WICKSON at the conclusion of his speech, showed the high appreciation with which the lecture was received.

Cheese Making as a Science.—This question was treated in an able lecture by Mr. T. D. CURTIS of the Utica Herald. The speaker commenced by defining clearly the difference between science and art, to the latter of which he thought the present condition of cheese making was applicable. But he had faith that ultimately cheese making will be recognized as properly belonging to the domain of science as much as any other branch of chemistry. He affirmed that the whole process was chemical, and that mechanical appliances are only for the purpose of convenience or for assisting the chemical changes. We need to have a scientific knowledge not only of milk in general, but of the identical batch before us, which we are to work up into cheese. And as the presence of any foreign substance or influence may greatly disturb our operations and vary results, if not ruin our product, it is essential that we should have a pure atmosphere to work in.

It will not do to have the walls and ceilings of the room hung with mold and the air loaded with the spores of fungi. If we do they will settle in our vat, seize upon the nitrogen of the milk and develop a crop of products quite different from what we aim at. He gave a brief exposition of the fungi theory, and said the brewers seem to understand this matter of developing acids better than the cheese makers, because they have introduced more science into their business. The fungus seeds appear to be the acid-makers. Knowing this fact, he reasoned that we ought to be able to control and direct their work by scientific methods. But so far from this, everything is left to chance, and no cheese maker knows whether his curd is in the lactic state, is turning to vinegar, or getting into an intoxicating condition, though sober himself.

He referred to the establishment of an experimental factory where scientific men should be employed to solve some of the intricate problems connected with milk and its products. He said when we get waked up enough to our own interests to go to work in this sensible and scientific way to obtain practical and scientific knowledge, we shall not be long in putting cheese making among the sciences, or at least among the human occupations having a scientific basis.

In the evening a very elaborate essay was read by Mr. M. QUINBY of St. Johnsville, upon

The Cause and Remedy of Abortion Among Cows.—The cause was attributed to the excessive use of the male, and numerous facts and arguments were given to prove this assumption. In the discussion which followed, this theory was combated, and many facts given by dairymen present whose herds had been troubled with the disease, that went to show that other causes than that suggested were at work in bringing about this serious trouble in the dairies of Central New York.

The meeting was a very profitable one, and the various papers read seem to have been carefully prepared and were of a high order of merit.

Artificial Color of Butter.—When artificial color of butter is required, we know of nothing better than extract of annatto. —*Rural, Jan. 6th.*

FOR four gallons of cream, grate two small, or one ordinary sized dark orange carrot (the pale yellow carrot will not answer); soak the same a half hour in tepid water or milk, and strain the liquid into the churn before churning. This will give a natural grass color, and something very like a grass flavor also, which cannot be said of annatto. We have practiced thus several winters, and always with entire satisfaction.—MRS. W. B. P.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Cutting Cherry Cions.—*Jan. 22.*—Grafting the cherry is generally attended with far less success than the pear, apple, and other kinds of fruit trees. The principal cause of failure is that they are not grafted early enough in the season. The young shoots used for cions are very sensitive and will not withstand the least check after the buds begin to swell in spring, which is generally before most other kinds of fruit trees, hence the necessity of cutting the cions early (this month being a good time), and then put them away in the cellar, covering with damp moss or some similar material that will prevent shriveling, and keep them sufficiently cool to keep the buds from starting into growth. There are thousands of large, thrifty Mazzard cherry trees all over the country which bear nothing but small, bitter cherries, that might be changed to the finer sorts very readily by grafting. The operation should be performed in the usual method of cleft grafting, and as soon as severe freezing weather is past. The clons should be inserted into branches of not more than one or two inches in diameter, and the greater number that is put into a large tree the more certain will it be to live and remain healthy. If all the top is cut away and only a few cions inserted, it is likely to check growth. It is a good plan to only graft one-half to two-thirds of the branches in one season, grafting the remaining portion the next,

Inside Frames in Green-Houses.—*Jan. 23.*—It is now pretty well understood by all florists that the atmosphere of an ordinary green-house cannot be kept sufficiently humid and warm to insure success with cuttings of the more delicate kinds of plants, hence the necessity of what are called inside frames. The propagating beds should not only be covered with glazed frames, during the time the cuttings are producing roots, but it is also advisable to have a similar place to set the young plants for a week or two after they are potted. I have found it advantageous to keep such plants as *Begonias, Coleuses, Sanchezias* and *Achyranthuses* in these frames the greater part of the winter, at least those that were small and from which cuttings were wanted. By having a goodly number of inside frames located over the hot water pipes, one can succeed with many of the delicate species of plants which would fail in almost any other situation. The amateur florist who inserts a few cuttings in a pot of sand, and then covers them with a glass, produces a similar result, although on a smaller scale. All cuttings of green wood, with leaves attached, require a confined, humid atmosphere.

Propagating Begonias.—*Jan. 24.*—The Begonias are becoming general favorites, on account of their beautiful leaves, as well as the showy flowers of some few species. They are readily propagated from cuttings of the leaves, but even some of our florists fail to multiply them very rapidly, simply because they are in too great haste. Leaves that are to be used for cuttings, should be large, healthy and fully mature. There is nothing gained in using small, half-grown leaves, because they are more liable to fail than large ones, and the plants produced are seldom as vigorous. A large leaf may be divided into pieces of not more than one inch in diameter, but always cut in such a way that a portion of the edge of the leaf shall remain on each cutting. Place the cutting edgeways in the sand, leaving very little uncovered. Another plan is, to take a large leaf, lay it the underside down upon the sand, pressing it firmly in place, then pin it down with a number of small wooden pegs. Wherever a peg is driven through the leaf, buds and roots will be formed; and when these are sufficiently well advanced the leaf may be lifted and divided. Of course a close, humid atmosphere is required for this purpose.

Fumigating Plants.—*Jan. 25.*—Although the hundreds of little Lady Birds which I have introduced into my greenhouse to feed upon the green aphis or plant lice have been constantly active, still they fail to keep them in check. I have had to commence fumigating with tobacco, the only sure thing with which I am acquainted for destroying this great pest of plants. A few live coals from the furnace, placed upon the ground or in a pot, and then covered with tobacco, will usually produce sufficiently strong fumes to kill the lice. But to be sure of making clean and thorough work it is well to fumigate two nights in succession, for those that are only weakened the first are sure to die the second. Before fumigating, the plants should be wet over-head, in order that the stems and leaves may be moist; for the smoke seems to settle upon them more closely when in this condition than when dry. The next day after fumigating the plants should be thoroughly syringed with clear water for the purpose of washing off smoke, dead lice and other filth.

Evergreen Cuttings Rooting.—*Jan. 26.*—The evergreen cuttings which I referred to in my Diary of Oct. 26, are now producing roots quite rapidly. They were made and planted during November—some of them in December,—all being placed in shallow boxes filled with pure sand. These boxes were set under the center staging of my green-house, on strips of plank two inches thick. Of course they receive no bottom heat, and being so near the ground the temperature is never very high. I put in 15,000 of the choice species and varieties, and from present appearances there will be few failures. The cost of growing evergreens in such a situation is certainly a mere trifle, except the procuring the first stock of trees to cut from, as the space they now occupy is of little value for any purpose.

Repotting Plants.—*Jan. 27.*—Nearly all early spring flowering plants that have been grown in pots during winter should be shifted into a larger size just before the buds begin to appear. The roots at this season will usually have grown out against the side of the pots, and unless given more room, the plant will not, as a general rule, bloom freely. Such plants as *Cinerarias* and *Calceolarias* require special care at this time, not only in giving abundance of room for their roots, but in keeping the young flower stems free from insects.

The Naturalist.

MANAGEMENT OF RABBITS.

SOME TIME in the spring or early summer information was asked for about managing rabbits. No notice has been taken of the subject, so far as I have seen, and I now propose to say a few words. In England some men make it an important business to raise young rabbits for sale. Every doe has a box to herself with a place partitioned off like a parlor bed-room, where she makes her nest and deposits her young. When this takes place it is carefully noted down, and three days after she is again placed with the male. These boxes are furnished with a manger and rack like a miniature stable, and whatever is good feed for a horse is good feed for them. They are the only animals that I am acquainted with that feed upon grasses, that prefer red clover to any other green feed. They will feed on any kind of grain, but chopped stuff, I think, is preferable. Those who live near to a brewery feed largely of brewer's grains. No drink of any kind is ever furnished. In the summer they get all needful moisture from clover, cabbage leaves, lettuce, &c.; in the winter from any roots that are at hand. They do not seem to like potatoes as well as turnips, carrots or beets; but they are hearty feeders and are not very particular which. Excess of moisture is injurious. If allowed to roam at large, beneath an English sky, dropsy sets in; they soon sicken and die.

His plan of close confinement does very well there, where, if it make a good deal of work, there are plenty of hands to do it; but here it would be better to allow them more room. They remain perfectly healthy if permited their liberty; but, all things considered, they are much better confined, being as destructive as wild rabbits when at large. If it was desirable to keep many, a room as large as a common wagon house would be the right thing. Socially they are decidedly Mormonitish. Boxes should be placed round the room for the accommodation of each doe. The place should be rat-proof, and, if possible, out of the reach of very severe frost.

I have never tested it, but have an idea a given quantity of meat could be produced as cheaply as so much poultry. I will merely add that the required number intended to be kept, whatever it may be, should be placed together at once, for they are extremely vicious and quarrelsome, and when they become thoroughly domesticated if a stranger should be introduced among them, they would probably kill it. C.

WE shall be glad to receive any interesting facts for this Department from any of our readers; also inquiries for answer.

The Apiarian.

ANSWERS TO CORRESPONDENTS.

Hives.—We have had very many inquiries, asking us if we have ever used this or that patent hive; and if so, how we like them, etc. We have neither tested the merits of the hives our correspondents have named, or have seen them in use by other bee keepers, and we had rather have the one we described in the RURAL NEW-YORKER of Dec. 16th, 1871, than all of them combined. It possesses more advantages, with fewer objections, than any patent hive we have ever seen, in our opinion. Remember, we always mean the latter, if we do happen to forget to say so. There is no arrangement of a hive that can compensate for the lack of movable frames, and the more simple in construction the better. The LANGSTROTH hive is patented, and any agent or owner of territory can charge any sum he pleases for an individual right. Regarding the validity of this patent, we will only say that it is yet an open question, but will soon be settled by the U. S. Courts. We believe that the law requires that any patented article must be stamped as such; especially all articles that are sold as such. We prefer a two-story hive where the honey extractor is employed to obtain surplus honey. But if the one-story hive be preferred, make the hives large enough to contain two or three extra frames upon each side. Honey can be extracted from the brood combs; but great care must be used, or the unsealed brood will be thrown out of the cells. We deem the

Honey Extractor to be of great value, and every apiarian should have one of his own. Oftentimes the hive will contain too much honey, not giving the queen a chance to lay sufficiently to keep up the strength of the colony. Hence the reason why we so often hear the complaint in the fall of the year, "too few bees and too much honey." The reason why so many bee keepers find, in the spring, that their bees have died leaving plenty of honey in the hive, is attributable to the same cause. Bees, to winter in good condition, must have empty cells to cluster in at the commencement of cold weather; and in very many cases we can accomplish this in no other way than to empty some of the center combs with the extractor. In fact, we consider the honey extractor to be of equal importance to a successful and profitable prosecution of bee keeping with the movable comb frame; and we should speedily abandon all hope of making this lovely (to me at least) pursuit a remunerative one were it not for these two all-important aids.

Dysentery.—Many bee keepers have complained that this malady is destroying their bees, in many instances threatening the total destruction of whole apiaries. In this, as in some other cases, we think a little prevention to be far better than a great deal of cure. There are two principal causes of this disease (if it may be called a disease), the first and most important of which is insufficient ventilation. In some seasons the honey gathered by the bees is of a poor quality, being thin and watery; this is especially true of a very wet season. Now, when a considerable quantity of such honey is stored in the hive at once, it is very liable to ferment and sour, before it thickens sufficiently to be sealed over by the bees, especially during a warm and moist spell of weather, unless the hive has ample facilities for thorough ventilation.—Again, if the hive is not properly ventilated in the winter season frost will accumulate upon its walls and the combs; and when this melts the combs will oftentimes be drenched with moisture.

Should there be any considerable quantity of unsealed honey at such a time, it will absorb a part of the moisture, rendering the honey thin and watery. The direct cause of this complaint is the consumption of such honey by the bees; and we believe that ninety-nine cases out of a hundred originate from improper or insufficient ventilation. The bees are compelled, or do at least, consume greater quantities of honey than they ought, and are compelled to discharge their fœces in their hives. We have seen combs of such stocks that were literally besmeared with this offensive-smelling excrement of the bees. Our advice to all would be, ventilate your hives properly and thoroughly, and you will have little or no trouble from this source.

HERBERT A. BURCH.

Pomological.

NEW PEARS.

BY F. R. ELLIOTT.

AMONG the new varieties of pears brought to notice during the past season, the Messrs. CLAPP of Massachusetts have perhaps presented a larger number of sorts bearing, in their own fruit character, according to the representations of pomologists as to character and habit of tree, more of valuable promise than any other man or men. They (the Messrs. CLAPP) probably stand to-day at the head in the way of giving to the public new native pears of promise to supersede foreign sorts. The results are, of course, only to be known after years of extensive cultivation. If then, out of a half hundred or more, they, like Prof. J. P. KIRTLAND, have given to the public one variety superior in any respect to any previously known, then have they made their mark in this life, longer to be remembered and favorably acknowledged than would the erection in every state of an elaborate monument of stone, with its duly wrought inscriptions.

CLAPP'S NO. 73 PEAR.

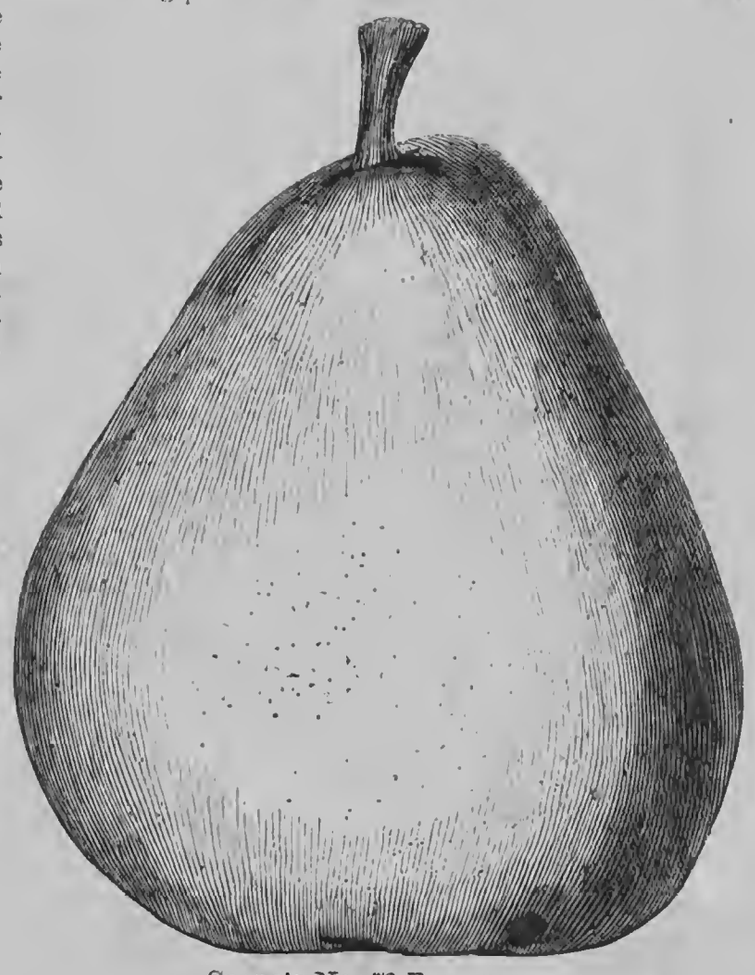
OF these pears I have had but a partial examination, and am indebted to the courtesy of Hon. MARSHALL P. WILDER for opportunity of measurably ripening and describing the following two numbers:

No. 73 is of full medium size, in general shape and form resembling Bartlett; greenish yellow, with many rough russet dots, and patches of russet, and a common cheek when exposed to the sun; stem stout, set with a fleshy, abrupt depression; calyx with short, irregular segments, in a deep, abrupt basin, slightly furrowed; flesh whitish, coarse, granular, half melting, juicy, half vinous, sweet and pleasant.

POMOLOGICAL GOSSIP.

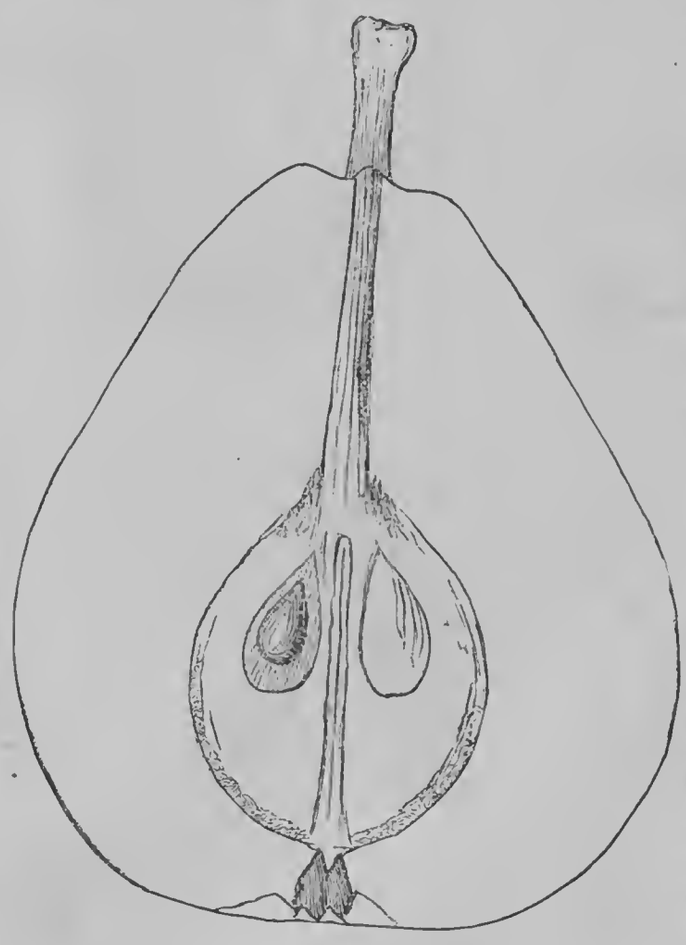
It is Good to be Let Down Easy.—When one has to fall, it is kind in those who are the cause thereof to knock away the prop of support gradually, and let one drop easily. I therefore have to thank "Ruralist" for the easy way in which he has let me down from my supposed knowledge of the difference between the Angers and Orange Quince. I had supposed that a half century of yearly observation of the Quince in its varieties, and that after importing thousands on thousands of Angers from LeRoy and others—after a practice of budding the Pear and Orange Quince on them day after day, and after fruiting them in various localities year after year, that I had learned the difference between Angers and Orange; but your kind correspondent has quietly pulled me down from my stilts so easy that I don't feel much hurt.—F. R. ELLIOTT.

Cranberry Culture on Upland.—Mr. HENRY WILDER asks "If it is desirable or profitable, and if we would recommend farmers and gardeners to try to raise cranberries in gardens on common good upland.—What varieties may be recommended for garden culture?" We do not think farmers and gardeners would find it profitable to attempt to cultivate cranberries on upland for market purposes, and compete with those grown on marsh lands. But we have seen very fair crops grown in a small way in gardens for family use. The ordinary Bell cranberry was the one in cultivation in the instances named. The best garden crops we have seen were on deeply pulverized sandy loam. The plants were taken from the marsh in October, planted in hills, and mulched in winter to prevent freezing out. The mulch was left on until late in spring—until after all danger from frost had ceased; then removed and the plants cultivated like any other garden crop—the soil irrigated in dry weather, if necessary. We do not advise any one to purchase or send for plants for upland culture with any hope of profit. We have never known any profit derived from such culture except the pleasure of growing the fruit for ones' own use.



CLAPP'S NO. 72 PEAR.

No. 72.—Size medium to large; form oblong, obtuse pyriform; skin rough; surface uneven; color deep rich yellow, with many small minute grey or russet dots; traces of russet around the basin; stem short, stocky, angular; calyx in a compressed, furrowed, shallow basin; flesh fine, whitish, half buttery, moderately juicy, and, as a late variety, of great promise.



CLAPP'S NO. 72 PEAR—Outline.

Arboricultural.

ARBORICULTURAL NOTES.

Manure for Apple Trees.—In setting out apple trees, should I add manure? If so, which kind is best?—A SUBSCRIBER.

IT may be that your soil is naturally rich and does not need manure. You should be able to judge for yourself on this point. If the land has been in cultivation for a number of years, it will probably need manuring; if so apply the best you have; but we would choose that from the barn yard in preference to any other, although bone, poudrette, plaster and many other materials are excellent for this purpose.

Osage Orange Seed.—I write you to find out how much Osage Orange seeds are worth a pound, and which is the best and quickest growth for a hedge; also, how much seed it will take to sow a hedge some thirty-five rods in length, and what cultivation or condition the ground should be in? The soil is of a sandy loam. I wish to know what time it should be sown.—C. T. HILL, M. D.

THE price of Osage Orange seed is variable; some years it is very plentiful, in others scarce. The late frost in Texas last spring is said to have injured the crop, and we believe there is but a small quantity of fresh seed in market this winter. The price is given in seedsmen's catalogues. You can probably produce an Osage Orange hedge in less time than with any other similar plant. If you only want plants sufficient for a hedge thirty-five rods long, say 500 or 600 plants, the cheapest way would be to purchase them, as they would probably not cost above $5.

Raising Osage Orange.—We wish to inquire for the best method of planting Osage Orange for hedge. Is it best to sow the seeds in a nursery and transplant to the hedge row, or sow the seed at once where the fence is to be, if the last named plan will answer, then how much seed is required per rod. Also the manner of preparing the ground, the seed, and planting the same.—CHAS. BROWN & SON'S.

IF you want a good, uniform hedge, sow the seed in nursery rows and transplant into the hedge row when one or two years old. If the seed are obtained at this time of year put them into warm water and soak for two or three days, then mix with sand and set out-of-doors where they will freeze, or at least remain cold until spring. Be careful and not place the seed where they will sprout before the seed bed is ready for their reception.

In the spring prepare the ground by planting it deep and thoroughly pulverizing with a harrow. A light, friable soil is best, as the young plants will come up through it more readily than if heavy. When the seed-bed is ready, make shallow furrows with a hoe, and in the same manner as gardeners usually do for peas. The rows should be far enough apart to admit of cultivating the soil between them with a small one-horse cultivator. In the drills, scatter the seeds thickly but evenly; cover about two inches deep with fine earth. If the soil is light, it is a good plan to roll it after sowing. Commence cultivating as soon as the plants appear, and keep all weeds down as carefully as you would with any garden vegetable. If the plants make a vigorous growth, they will do to transplant into the hedge row when one year old; if not, allow them to remain in the seed-bed two seasons.

The Use of Evergreens.—No suburban or country residence can be considered complete without its surroundings of beautiful trees. Evergreens should be extensively employed, because they add greatly to the beauty of the surrounding scenery in the most gloomy season of the year; but they should never be employed to the exclusion of deciduous trees and shrubs. Extensive walks and drives are sometimes bordered with evergreen trees; but usually this displays bad taste, inasmuch as the view within such close lines of dense foliage becomes monotonous, and the eye experiences satiety instead of a pleasing variety. With deciduous trees and shrubs the most charming change is continually going on; from the bursting of the buds in spring there is one continual progressive advance from day to day.

Industrial Societies.

INDUSTRIAL SOCIETIES.

Ohio Dairymen's Association.—The eighth annual Convention of the Ohio Dairymen's Association was held at Wellington, in the county of Lorain, on the 24th and 25th days of January, 1872, President Hon. S. S. WARNER in the chair, and Maj. A. C. Houghton, Secretary.

Taken altogether, this was the largest, most practical and common sense agricultural convention which I have ever attended, in Ohio or elsewhere. The people were there themselves, and talked about wh they knew; and there was no lack of sensible talk on all matters pertaining to the dairy business. There was not so much of poetry and prayers as I noted at the meeting of the American Bee Keepers' Association in Cleveland; nor so much of political personality as there was at the State Agricultural Convention in Columbus; nor so much of music and mutual admiration as there was at the State Horticultural meeting at Milford; but for good, average common sense and earnestness in an important branch of husbandry, the dairymen of Ohio bear the palm.

Full discussion was had, and a number of able papers were read, on a great variety of subjects which vitally concern the dairyman, of which we may give a synopsis in the proper season of dairy operations. Mr. Willard acquitted himself more than satisfactorily, in his Annual Address, several thousand copies of which will be immediately printed for distribution by the Association.

After an active session of two days, the Convention adjourned, to meet in the same place, at the same time, next year. The following gentlemen were elected as officers for the ensuing year: *Pres.* D. L. POPE of Westfield, Geauga Co. *Vice-Pres'ts.*—Lucius Bartlett of Geauga Co.; B. L. Barden of Fulton; M. Call of Summit; S. E. Carter of Lake; A. D. Rawlins of Cuyahoga; G. W. Crosier of Lorain; W. H. Williams of Medina; S. Freeman of Portage; L. D. King of Huron, and S. Horton of Mich. *Sec. and Treas.* Col. S. D. Harris of Cleveland. *Cor. Sec.*—Anson Bartlett of West Jefferson, Madison Co.—S. D. H.

La Moille Co., Vt., Ag. Soc.—Officers elect: *Pres.*—Hon. ALGER JONES, Wolcott. *Vice-Pres'ts*—Geo. F. Small, Morristown; Orson Hadley, Hyde Park. *Sec.*—E. E. Allen, Morristown. *Ass't Sec.*—F. A. Leland, Hyde Park. *Marshal*—J. S. Dremman, Hardwick. *Ass't Marshals*—A. Dwinnell, Hyde Park; Orlo Perkins, Stowe. *Sup't Fair Grounds*—A. D. Thomas. *Sup't Stock*—I. N. LeBaron. *Sup't Tickets*—H. M. Noyes. *Sup't Floral Hall*—H. L. Safford. *Auditors*—H. H. Powers, L. H. Doty, George L. Waterman, Henry Harris, P. A. Stevens. *Directors*—Abel Spaulding, H. D. W. Doty, A. M. Goodrich, Hyde Park; W. S. Thorpe, W. M. Small, Solomon Stowe, Morristown; R. R. Wall, Geo. A. Harris, Azro Slayton, Stowe; R. G. Hill, Wm. W. Delano, J. W. Bryant, Elmor; N. Whitney, I. D. R. Collins, N. Boynton, Wolcott; Geo. Sargent, W. M. Bassett, W. Pond, Eden. The meeting then elected for the other towns:—Jerre Shattuck, Belvidere; Henry Smilie, Cambridge; Nason Chaffee, Waterville; Adolphus Holton, Hardwick.

Washington Co., Vt., Ag. Soc.—Officers elect for 1872: *Pres.*—E. A. ELDRIDGE of Warren. *Vice-Pres.*—W. S. Martin of Plainfield. *Sec.*—A. D. Arms of East Montpelier. *Treas.*—Clark King. *Auditor*—E. E. Andrews of Berlin. *Directors*—Barre, W. C. White; Berlin, E. E. Andrews; Cabot, J. M. Fisher; Calais, A. Toby; Duxbury, H. Buckley; E. Montpelier, L. Coburn; Fayston, W. S. Drew; Marshfield, J. B. Pike; Plainfield, J. Bartlett; Moretown, L. D. Hills; Middlesex, A. L. Warren; Montpelier, A. O. Cummings; Northfield, L. W. Avery; Roxbury, A. Webster; Worcester, A. Miles; Woodbury, E. Town; Warren, P. Rifford; Waitsfield, G. W. Olmstead; Waterbury, O. W. May; Orange, C. Cutter.

Faribault Co., Minn., Ag. Soc.—Officers elect: *Pres.*—S. PEEFFER. *Vice-Pres'ts*—Dunbar, Mr. Tellett; Minnesota Lake, C. L. Penn; Lura, T. J. Probert; Guthrie, N. McColley; Winnebago City, T. A. Lattimer; Foster, J. M. Drade; Brush Creek, W. J. Robinson; Emerald, H. Sellon; Blue Earth City, J. H. Sprout; Jo Daviess, J. A. Dean; Verona, W. W. Potter; Prescott, D. Freer; Barber, J. Vial; Walnut Lake, H. C. Lewis; Clark, C. R. Lord; Village of Wells, Col. Polleys; Pilot Grove, A. R. Moore; Elmore, Judge Preston; Rome, Geo. Bartlett; Seeley, P. C. Seeley; Keister, H. Conrad. *Treas.*—D. S. Dunbar. *Sec.*—R. W. Richards.

Steuben Co., N. Y., Ag. Soc.—Officers elect for 1872: *Pres.*—SAMUEL E. HASKINS, Avoca. *Vice-Pres'ts*—A. C. Brundage, Urbana; I. B. Van Housen, Prattsburgh; N. B. Stanton, Hornby; F. J. Marshall, Wheeler; H. O. Fairchild, Urbana; V. Van Wormer, Cohocton; H. S. Rosenkrans, Wayland; John Richardson, Bath. *Sec.*—Reuben E. Robie, Bath. *Treas.*—Geo. W. Hallock, Bath. *Gen'l Sup't* Chas. N. Ackerson, Bath.

Winona Co., Minn., Ag. Soc.—Officers elect: *Pres.*—J. J. RANDALL, Winona. *Vice-Pres'ts*—the Presidents of the various town Societies. *Sec.*—N. Buck, Winona. *Treas.*—J. H. Lock, Hillsdale. *Ex. Com.*—H. D. Morse, Winona; H. C. Jones, Mt. Vernon; J. Hart, Hillsdale; W. K. Bates, Rolling Stone; A. C. Hamilton, Winona; James Fitch, Pleasant Hill; James Randall, Fremont.

Stanstead Co., Vt., Ag. Soc.—Officers elect for 1872: *Pres.*—E. D. NEWTON, Magog. *Vice-Pres.* Dudley Davis, jr., Conticook. *Sec. and Treas.*—E. H. LeBaron, Hatley. *Directors.* G. M. Ayer, F. W. Locke, Stanstead; Geo. C. Hanson, Barnston; Squire Colby, Hatley; W. W. Oliver, Magog; Isaac Baldwin, Barford.

Pottawattamie, Iowa, Co. Ag. and Mech. Soc.—*Pres.*—G. W. LINGGEN. *Vice-Pres.*—John Dohany. *Sec.*—Jos. Lyman. *Treas.* and *Cor. Sec.*—Sam. Haas. *Directors.*—Geo. Keline, John W. Anderson, A. S. Bonham. W. Orr, W. Lyman.

Lennox, N. Y., Farmers' and Mech's' Ass'n.—Officers elect:—*Pres.*—L. C. KILHAM. *Vice-Pres't's*—B. Stiles, C. S. Bates. *Treas.*—T. F. Hand. *Sec.*—E. F. Lewis. *Delegates to Meeting of State Ag. Soc.*—L. C. Kilham, N. M. Chaffee, E. F. Lewis.

Oswego, N. Y., Farmers' Ag. and Hort. Soc.—Officers elec: *Pres.*—THOMAS G. THOMPSON. *Vice-Pres't's*—Philo Bundy, Milton Coe. *Sec.*—Daniel R. Green. *Treas.*—Schuyler L. Parson. *Directors*—Philo Wheeler, Wm. G. Stark.

White River, Vt., Ag. Soc.—Officers elect: *Pres.*—CROSBY MILLER, Pomfort. *Vice-Pres.*—Royal H. Tupper, Rochester; W. C. Danforth, Barnard. *Sec.*—Lorenzo Kent, Woodstock. *Treas.*—Merrick Sylvester, Bethel.

Herkimer Co., N. Y., Ag. Soc.—Officers elect: *Pres.*—JAS. H. BELLINGER. *Sec.*—Morris Fikes. *Treas.*—M. Crim.

Rock Co., Wis., Ag. Soc.—Officers for 1872: *Pres.*—SETH FISHER. *Vice-Pres'ts*—Geo. Sherman, B. B. Eldridge. *Sec.*—R. J. Richardson, Janesville. *Treas.*—Cyrus Miner. *Directors*—J. Fisher, N. B. Benis, D. McLay, L. Clark, C. L. Martin.

Penobscott, Me., Ag. Soc.—Officers for 1872: *Pres.*—STEPHEN D. JENNINGS, Garland. *Sec.* and *Treas.*—T. P. Batchelder, Kenduskeag. *Trustees.*—Jacob Eastman, Exeter; John H. Garvin, Exeter; Eben S. Hunting, Corinth.

Kenosha Co., Wis., Ag. Soc.—Officers elect for 1872: *Pres't*—WM. V. CULL, Salem. *Vice Pres't*—O. C. Stonebrenker, Bristol. *Sec'y*—H. H. Tarbell, Kenosha. *Treas.*—L. W. Thayer, Kenosha. Annual Fair Sept. 17, 18 and 19.

New Hampshire State Poultry Soc.—late Merrimac River Valley Ass'n. *Pres.*—A. W. QUINT, Manchester. *Vice-Pres.*—A. Beard, Nashua. *Sec.*—W. G. Garmon, Manchester. *Treas.*—Geo. W. Riddle, Manchester.

Danby, N. Y., Farmers' Club.—Officers elect: *Pres't*—HOMER JENNINGS. *Vice-Pres't's*—James Lamkins and Sheldon Wilcox. *Sec'y*—W. E. Chapman. *Cor. Sec'y*—E. L. B. Curtis. *Treas.*—L. C. Beers.

Green Co., Wis., Ag. Soc.—Officers elect: *Pres't*—T. H. EATON. *Vice-Pres't*—W. Coldren. *Sec.* W. W. Wright of Monroe. *Cor. Sec.*—C. A. Booth of Monroe Sentinel. *Treas.*—T. Emerson.

Martin Co., Minn., Ag. Soc.—Officers elect: *Pres.*—WM. H. BUDD. *Sec.*—H. A. Munger. *Treas.*—O. P. Chubb.

The Gardener.

ABOUT LETTUCE.

THERE are about one hundred varieties of lettuce in cultivation, at least, that number of names appear in seedsmen's catalogues. We do not suppose that the distinction between the various sorts are very marked, still the expert can usually detect a slight difference between those most nearly related. For all practical purposes, the varieties may be divided into two classes, viz: Cabbage Lettuces and Cos Lettuces. The varieties of the first class are usually round-headed or somewhat spreading, and not quite so sweet and delicate in flavor as the Cos varieties, still they possess valuable qualities that could scarcely be dispensed with. The varieties of the second class usually grow more upright than those of the first, forming an oblong or oval head when mature, and if the heads are tied up so that the inside leaves will be well blanched, they become sweet and crisp. Of course there are poor sorts in both sections, and our remarks should be considered as applying to the entire class, making an allowance for exceptions.

The two classes may be again subdivided, placing the different colored sorts in sections by themselves,—such as the green, brown, red, curled and smooth leaved.

WHEELER'S KINGSHOLM COS LETTUCE.

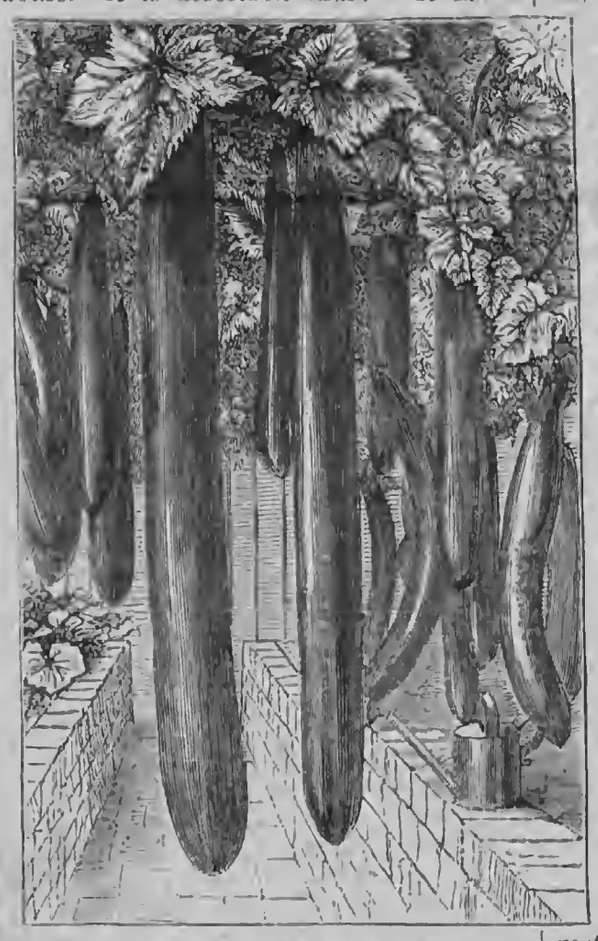
New varieties are annually produced, but progress with a vegetable that has been brought to such perfection as shown in some of the best sorts, must necessarily be very slow. A new Cos variety, called "Wheeler's Kingsholm Cos," is now being offered in England for the first time. We give an illustration of a single head, which will afford a fair representation of its style and growth. This new sort is described in the English horticultural magazines as being the finest variety yet introduced into the London market. We presume that our seedsmen will soon have seed of this variety for sale.

For very early lettuce the seed should be sown in the fall, and when the plants are large enough, transplant into cold frames. During cold weather in winter the beds should be covered with sashes and mats, giving air and light during pleasant weather. Those who have no frames or sashes may secure quite an early crop by sowing in the open air during September, and then cover the plants with straw or some similar material at the approach of cold weather. The plants should be uncovered as soon as the frost leaves the ground in spring. When no such preparations have been made for early lettuce, the next best plan is to sow in a hot-bed, prepared in February or March, in Northern localities and earlier in Southern.

The main thing to be observed in cultivating lettuce is to make the soil rich, it being scarcely possible to overreach the mark in this direction. The best variety known will be poor enough if sown in poor soil. The best plan is to sow the seed quite thickly together and then transplant as soon as the young plants are large enough to handle conveniently. Water, cultivate thoroughly, and make the plants grow rapidly, is the only plan to secure a good crop of crisp, tender lettuce.

GARDENERS' NOTES.

Marquis of Lorne Cucumber.—The accompanying illustration of this cucumber shows it growing in an English cucumber house. It is described thus:—"It has a



MARQUIS OF LORNE CUCUMBER.

beautifully short neck, perfectly smooth skin, is very straight and extraordinarily productive. As an exhibition variety it is unequaled, on account of its immense size, yet it is most symmetrical in form, and is the finest cucumber ever introduced. The flesh is very solid and firm, with but few seeds, while the flavor is exceeding fine." It grows from two feet to thirty-seven inches in length. It is a result of a cross between the "Invincible" and "Needle-Gun" varieties.

Entomological.

THE RED SPIDER—(Acarus tetarius.)

WILL you be so kind as to tell me what can be used effectually to drive off the red spider from all kinds of house plants. They are very small, indeed, but kill the plants in a short time.—S. S. J.

THE fumes of sulphur are certain death to this insect, although not a pleasant substance to use in a dwelling house. The sulphur should not be burned, but either dusted over the plants or mixed with hot soap-suds, and then the plants syringed with the compound. The red spider will not live in a moist atmosphere; when it does appear upon plants it is a pretty sure sign that the air is too dry to insure a healthy growth of vegetation. When this pest appears upon house plants, they should be washed off by using a syringe that will throw the water with considerable force against the leaves. Where plants are frequently watered overhead, and the air kept constantly moist, there is little danger of injury from this pest. When the red spider gets into a conservatory, gardeners sometimes place a little sulphur on the hot water pipes or flue, where it will melt and give off its fumes; but they have to be careful not to allow it to burn, for the fumes of burning sulphur will kill plants as well as insects. If you will attend to the syringing of your plants with warm water, we think the red spider will soon disappear. If one or two applications of water does not suffice, add a little carbolic acid soap, which you can find at any of our seed stores.

LET our fiends send us any insects they may find about which they are curious. We shall be glad to name and describe them.

The Herdsman.

ABORTION IN COWS.

IN a recent RURAL NEW-YORKER there was a statement, by H. R. C. DALE of Wyoming Co., N. Y., in regard to cows aborting. Mr. DALE states that he has two young cows (one three and the other four years old) both in good condition, which have calved prematurely, and asked if it was caused by feeding pumpkin or corn stalks? Having had many years experience in the care of stock, and taken much pains to inform myself both by study and observation, I am of the opinion that nothing a well-fed cow will eat of her own accord will cause abortion. I have fed pumpkins to cows with calf, not only during the fall, but as late into the winter as they could be kept, and never took out the seeds nor thought of doing so; nor do I believe it possible even for a cow to eat pumpkin seeds enough to cause her to abort; for in feeding, year after year, I have seen the master cow go from one pumpkin to another as they were thrown out, and eat the seeds only, and never had but one case of that kind in more than twenty years' experience (and that was caused by fighting), though I have been called to assist my neighbors frequently.

I am further of the opinion (and experience in every instance has proved it,) that there is but one cause for cases of this kind, and that is a weakness caused by abuses in some way—either accidentally or intentionally. From three to four months before calving is the most critical time, and cows should then be handled with great care, especially if they are stabled; for cows that are stabled are more liable than those that are not—not that the stabling, in itself, has anything to do with it, but because they are more liable to slip in passing in and out, often spreading their legs or hurting them across the small of the back, which, with a cow in that condition, is a very tender spot. A kick from a heavy boot just forward of the udder not unfrequently has the same effect.

Permit me to ask Mr. DALE two questions, the answering of which may suggest to his mind the cause of his misfortune:—Have your cows been fighting? Who has taken care of them? FARMER.

Mystic Bridge, Conn.

BLACK-LEG IN CATTLE.

THE RURAL NEW-YORKER of Dec. 23, 1871, contains a letter from "A SUBSCRIBER" from Tompkins Co., N. Y., respecting black-leg. The symptoms as given in his letter correspond precisely with those of four cows and three calves I have lost this winter. In looking about for a remedy, I found on page 268 of Dr. KING'S "Family Physician," under Household Department, the following recipe:—"Add one pint of salt to one and a-half pints of vinegar; drench. Cow to have no water for twelve hours after drenching. Repeat this every hour for thirty-six hours." I thought best to try this, as every cow was sure to die, if diseased, and this could no more than kill; this is the way I used the recipe:—I took a pint of salt and one and a-half pints of vinegar; added to this one *big* tablespoonful of pulverized cayenne pepper and four tablespoonfuls of tincture of extract of lobelia. I put in the pepper and lobelia because I noticed that the nose of the cow I was about to treat was dry.

When I began treatment, said cow was hardly able to move. In two hours she seemed to be considerably better. I then repeated the dose; next morning repeated again, and the latter part of second day gave another, the cow all the while getting better. I gave, in all, about six drachms, but left out the lobelia after the second; gave it hot as was bearable. The cow recovered very rapidly—improvement almost immediately perceptible.

I had four other cows down and unable to get up—all at the same time. Treated them same as above; all got well. Still another cow, apparently well in the evening, was dead at daylight; she had not been treated at all. So I took time by the forelock, and drenched all my cows once a day, as above, for a few days, and have lost none since. The jelly patches or clotted blood on my cows appeared along the spine, just under the skin. The disease affecting my cattle seemed to be the same as is known as black-leg, black-quarter, quarter-evil, etc., and the above treatment was certainly a dead shot. FRED HYDE.

Unionville, Mo., 1872.

The Poultry-Yard.

HAMBURG AND LEGHORNS.

P. H. wishes to know the comparative merits of these two breeds of fowls. I have bred both kinds the past season. I think the Leghorns fifty per cent. better than Hamburgs. Hamburgs do not mature so rapidly. There is no breed of fowls that does what it has to do in the way of feathering-up quick and laying early like the Leghorns. My April Leghorn pullets began to lay early in September, while the Hamburgs, of same age, are not laying yet. As a breed to cross with White Cochins, Light Brahmas or any large white fowl, the Leghorns are just the thing. I have crosses of Light Brahmas and Leghorns, hatched in May, that began to lay early in October. Crossing the Leghorn and Brahma in this way makes a very early market fowl. Surplus cocks of this cross, hatched in April, will market well in August and September, while the pullets will pay for their bringing up, and give a handsome profit for a year to come.

All that class of non-sitters that have dark legs and skin, are not fit to cross with on any of the large breeds. But by alternate crossing of Leghorns and Brahmas, beginning with Brahma pullets and a Leghorn cock, and after a few years' breeding, *i. e.*, crossed together by the use of cocks from separate strains, a breed may be made surpassing, in my opinion, the Plymouth Rocks and many of the so-called fine bred fowls, for uniformity of style and color, at least for real value to the producer and consumer.

Houdans have been bred quite extensively here for the last year. Those who first introduced them are closing them out in any way to get rid of them. As a fowl for real merit, the Dominique stands as high as any small or medium sized breed. Gray Dorkings next. Were I to go into the chicken business on a large scale, Leghorns, Brahmas and Dominiques would be my first choice, breeding the two former as heretofore stated. R. E. N.

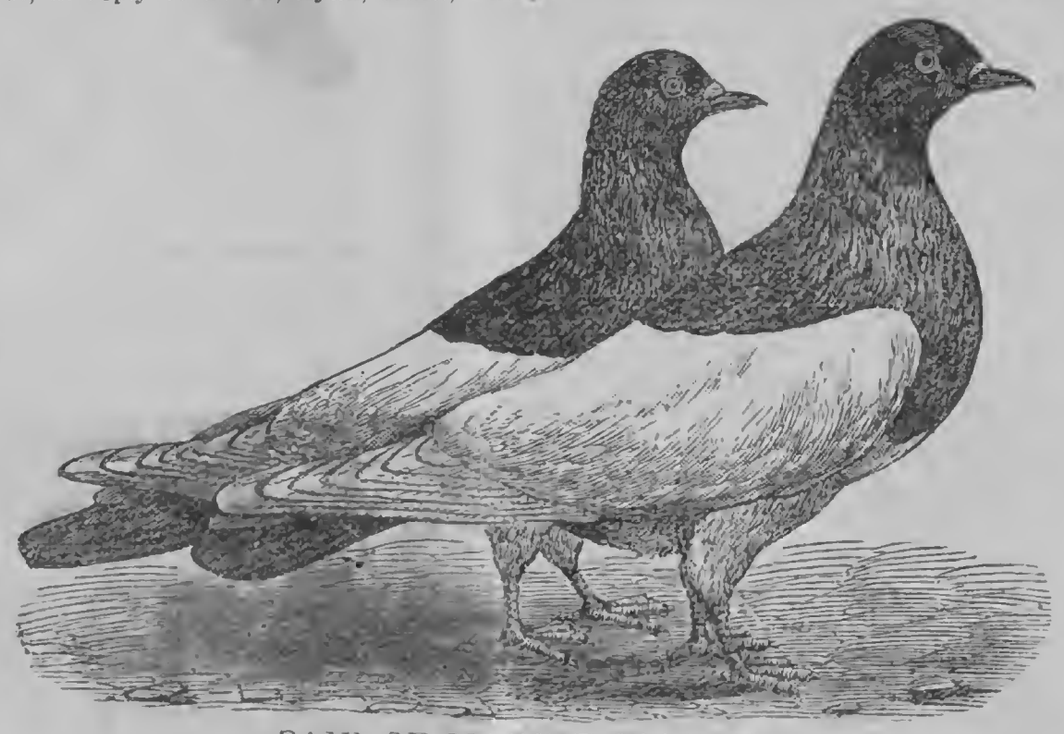
MANAGEMENT OF POULTRY SHOWS.

I HAD intended writing my thoughts for the RURAL NEW-YORKER on the way poultry shows are managed in this country, but I find what I believe to be the case, so nearly described in a late number of the London *Field*, that I have clipped it out and ask for it a place in your columns. I am sure this will meet the views of many of the amateurs who have for years exhibited poultry in this country. The writer says:—"As exhibitions are now conducted and encouraged, I am afraid, from what I read and hear, they have become, in the hands of many, merely prize-grabbing transactions, at which many unfair practices prevail. I write this purposely, before I am defeated at a big show, so that being a disappointed exhibitor may not be laid to my charge. There can be no doubt that men of means, who like grabbing prizes, cannot well be prevented from so doing, as they can buy and exhibit, and fairly so, in accordance with the rules; and also borrow, should there be nothing in the rules against it. Well, this kind of exhibiting has come to such a pitch that you may as well keep your birds at home as exhibit them if one or two men are going to show. Amateurs, young fanciers, etc., in these days have no chance, nor any encouragement, and I believe must soon give up, unless the rules are framed as they used to be, "that birds exhibited be *bond fide* the property of the exhibitor," or "been in his possession six months" or a given time. This would stop the clique system I believe at present in vogue, and encouragement would be given to those with small means and young in the fancy to go on. I am not for closing competition, but I think amateurs, etc., should be protected from professional trimmers and other fraudulent practitioners." SERIS.

POULTRY NOTES AND QUERIES.

Toy Pigeons.—We give herewith another illustration of a variety of the German Toy pigeons, which are known on the Continent under the name of "Magpies." BRENT says, "in appearance they offer very striking contrasts of color; the wings, lower part of the breast and thighs being perfectly white, while the remainder of the plumage is colored. The great beauty of birds of this breed depends on the purity and richness of their colors and the accuracy of their markings; the line of separation between the colored and white portions of the plumage must be sharply and accurately marked. If the white and colored feathers intermix, such birds are valueless as show birds and not to be depended on for stock." Magpies are of various colors, as black, red, yellow, and blue, but those shown in our engraving are considered by fanciers superior to other colors.

A Plea for Houdans.—W. P., Ovid, N. Y., in reply to P. H., Lynn, Mass., who wrote us that Houdans were no winter layers, etc., says:—"I now have four or five out of eight that are laying. I have raised Houdans three seasons. I do not find them subject to disease. Out of thirty-eight hatched in 1870 I raised all but one, and that was a chick about four weeks old, crop-bound. Have not had any sick ones except that. With me they are what 'The Peoples' Practical Poultry Book' says 'Bright as a flower and upright as a bolt.'"



PAIR OF MAGPIE PIGEONS.

A Large Duck Egg.—A Mr. THORNHILL of Crumpsall Green, near Manchester, England, contributes to the Manchester Guardian the following story of an extraordinary sized duck's egg. He says he "recently found one of his ducks dead upon her nest. She had been ailing for some months, and could neither eat nor lay. The body was opened, and there was taken from it an egg, which we have seen, and which measures 18½ inches in its greatest circumference, 15¾ inches at the smallest circumference, and its capacity is 2¼ pints of water. It contained three yolks, and after they had been drawn the shell weighed eight ounces. The duck was a cross between a Muscovy and an Aylesbury, and was of the ordinary size."

Answer to E. R.'s Queries.—S. J. BESTOR, Conn., writes in reply to the queries of E. R., in RURAL NEW-YORKER of Jan. 20, that "the male pigeon is generally thicker-set and larger-necked than the hen. In courting he makes a merry round, or complete wheel about. The hen, more modest, makes but a half round in her courtesy. The cooing of the male bird is also more defiant or bolder than the lady bird." In regard to eggs not hatching he says:—"There might be fifty reasons why eggs do not hatch."

Quick Growth of Ducks.—The prejudice against ducks, on account of their extreme voracity, is not well founded, for if they eat enormously when half-grown, they increase in weight proportionately. Quick growth is one of the things most desired in animals of all kinds that are raised for the table. If the experiment be tried of rearing chickens and ducks that were hatched the same day, in a flock together, and giving them all they will eat, the latter will outstrip the chickens in growth.

Fowls for Name.—E. D. W., Pittsburgh.—We are at a loss to say to what breed the fowls you describe belong. It must have been one of those queer freaks of nature which produced the variety. We can find no description of the fowls you mention in any work published in this country or England. We would advise that they be exhibited at your next Poultry Show as a novelty, and request that the Judges give them a name, if one can be found.

Chicken Diseases.—J. D., Guilford Co., N. C., writes us that "all the recipes put into the RURAL for the chicken disease did not do ours any good. I think we lost about 500 in two months." Now if our correspondent will give us the symptoms of the disease that destroyed so many of his chickens we will publish them, and ask our thousands of readers to tell him how to obviate his loss in the future. No remedy can be given unless the disease is described.

Industrial Topics.

EXPERIMENTS OF 1871.

As carefully conducted experiments are of considerable value to the thinking, energetic and practical farmer, I am led to adduce the results of some of mine for the past year, and hope that will be the means of leading other RURAL scribblers to give some of their's through the favorite medium that I use for that purpose; and I hope they will be as unbiased in the favor of any individual or firm, as mine are intend to be. Another and not an insignificant item in connection with an account of them, is the dating of the letter, *i. e.*, telling the place of residence of the writer and the year in which the experiments were conducted, also the kind of soil and manner of cultivation. If a contributor fails to do this, his contribution is shorn of its most valuable member, for an experiment, no matter how carefully conducted and accurately described, is of little intrinsic value unless we know the circumstances connected with it. Neither is an experiment made in a propitious climate, under favorable circumstances, of much practical avail to any one residing in an arid climate and surrounded by less auspicious circumstances. With the above vividly before my mind I will relate some of my experiments with the highly lauded

Grafton Mineral Fertilizer.—A mineral that was discovered in connection with a gold mine in Lyman, Grafton Co., N. H., some three years ago, and first used as a fertilizer in 1869. It is found imbedded in the earth, in a vein about three feet thick, and widens to about six or eight feet at the bottom of the shaft, some eighty feet below the surface of the ground. The proprietors wrote me that they were obliged to blast three-fourths waste rock in order to get their mineral; that they would sell this waste rock in large quantities at a very low sum, and that it had been powdered and sold under the name of Lisbon and Stevens minerals.

As the majority of your readers are isolated from the circulation of local newspapers that have frequently described it, I will here present an analysis of it as given by Dr. TORREY of New York and THOS. C. RAYMOND of Cambridgeport, Mass.:—Silica, 30.30; lime, 20.60; protoxide of iron, 6.27; magnesia, 11.17; carbonic acid, 32.11; total, 100.45 parts.

Last spring I purchased a box of the mineral weighing one hundred and thirteen pounds, and applied it as a fertilizer to corn, potatoes, pulse crops, garden vegetables, strawberry plants and cabbages, both alone and mixed with animal and commercial manures. On the strawberry plants and cabbages I think its use proved remunerative; but on the other named crops I failed to discover any increase, either in the growth of stalks or amount of the harvest where it was applied. When mixed with other fertilizers, the growth increased in the same proportion that the other fertilizers exceeded in quantity the Grafton mineral.

My experience does not corroborate the testimony of farmers residing in Grafton county, and perhaps yours, reader, will agree with neither. As the bucket full is composed of drops, you should add your drop to the bucket of public opinion, ere its use is universally recommended or discountenanced.

As an insect destroyer, I consider it very valuable. When sprinkled over the leaves of plants it will destroy the majority of pests found on flower or vegetable plants—such as the red spider and green fly on house plants, the slugs on rose bushes. Turnip and cabbage lice are killed by a single application, and it is very efficacious in destroying the striped cucumber bugs, but is more expensive than plaster of Paris, which has always made the "varmints vamose the ranch" by applying it to the under side of the leaves when wet.

Having annually tested the qualities of upwards of 100 varieties of cereal grains, agricultural and horticultural seeds, and having in my possession nearly 150 different kinds at the present time, I think I am entitled to "the floor," while speaking of the merits and the demerits of those most universally cultivated.

Corn.—As corn is cultivated in so many latitudes, no *one* variety is, or can be universally cultivated. I consider depth and width of kernels, plumpness of the chit and smallness of the size of the cob, prime requisites in making selections of varieties, and length of the ears and fodder of secondary importance. Last spring I purchased a variety of Hon. LEVI BARTLETT that is well adapted to our soil and climate. [Why did you not name it?—EDS. RURAL.]

The Sweet Varieties that rank in the following order:—Extra Early, Dwarf Sugar, (received from BLISS & SON,) Darling's Early, Asylum Sugar, Narragansett, Red Cob Narragansett and Eight-rowed Sugar. The Narragansett is a very late variety, and no doubt will be a valuable acquisition to the list in a warmer climate, also for fodder. The Judson Joint Branching varieties require "more genial climes and sunny skies" than it is New Hampshire's lot to boast of, in order to arrive at maturity. For stock feeding, the cultivation of

Roots are every season gaining ground with our most intelligent farmers, and this seems to be a movement in the right direction, when corn can be purchased for a dollar or less per bushel. Having several times endeavored to select the best among the many varieties, and having tried the most popular in arid as well as wet seasons, and having failed in maturing a crop, owing to late sowings and the ravages of the turnip lice, I prefer Carter's Imperial Green Top, Yellow Hybrid, to either his Purple Top, Yellow-Hardy Swede, or the Yellow or Stone. The louse works less on the dark-leaved varieties than it does on the light green (with a bluish tint), and hence I prefer those varieties. G. R. D.

Pittsfield, N. H., 1872.

The Horseman.

NOTES FOR HORSEMEN.

Do Not Burn a Horse's Hoof.—The Mirror and Farmer says:—Never have a redhot shoe put on the foot of a horse, to burn it level. If you can find a blacksmith that is mechanic enough to level the foot without redhot iron, employ him. The burning process deadens the hoof and tends to contract it. If you do not believe it, try a redhot poker on your nail, and see if it does not affect the growth.

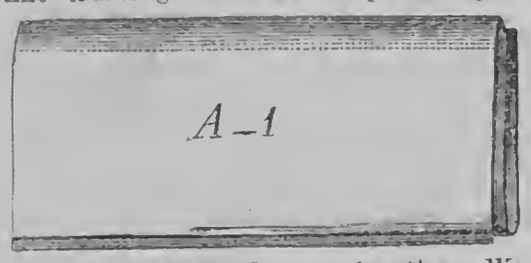
Training the Mane of a Horse.—A Jefferson Barracks, Mo., subscriber asks, "How can I make the mane of my colt grow, or lay, on the same side of his neck?" HERBERT, in his "Hints to Horse-Keepers," says: "When it is desired to make the mane lie on the opposite side from that towards which it naturally grows, it should be wetted and combed several times a day. This will suffice, if it is not very short and bushy; in such case, some of the hair may be pulled out from the under part, on the side toward which it is desired to make it grow; this will generally cause it to fall easily. If this does not suffice, the mane should be plaited in eight or ten braids, the end of each being loaded with a bit of lead."

Worms in Colts.—N. M. P., Castle Rock, Minn., asks for a remedy for worms in colts. It is the opinion of many veterinarians that worms are usually connected with indigestion—that is they produce ill health when the digestive organs are disordered. Dr. DODD recommends giving: White mustard seed (whole), powdered mandrake, sulphur, powdered worm seed, (*chenopodium anthelminticum*,) poplar bark, salt, ginger and charcoal—of each two ounces; mix and give one ounce night and morning in the feed. The following often brings away large quantities of worms:—Castor oil, 12 oz.; oil of worm seed, 1 oz.; oil of tansy, 3 drachms—to be given on an empty stomach, followed by mashes of fine feed or shorts well seasoned with salt. It should be repeated until the bowels respond.

Domestic Economy.

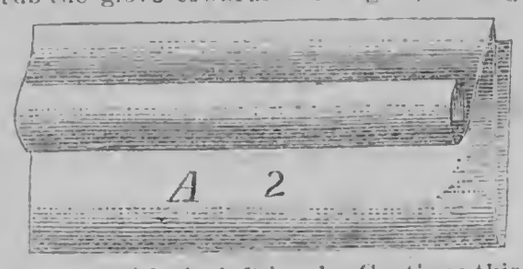
ODDS AND ENDS.

Folding Napkins Pillar Shape.—We give herewith five illustrations showing how a napkin may be folded in what is known among waiters as the "pillar shape."



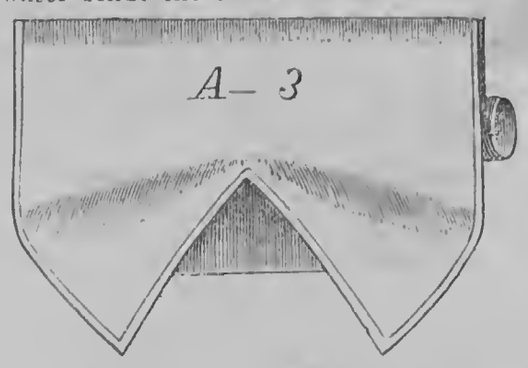
The engravings need no explanation. We add, however, that a table loses none of its attractiveness when garnished by artistically folded napkins.

To Clean Kid Gloves.—MARY F. W. sends us the following printed slip, which she says she knows from experience is worthy a place in the RURAL NEW-YORKER: "Have ready a little new milk in one saucer, a piece of white soap in another, and a clean cloth folded two or three times. On the cloth spread out the glove smooth and neat. Take a piece of flannel, dip it in the milk, then rub off a good quantity of soap on the wetted flannel, and commence to rub the glove towards the fingers, holding



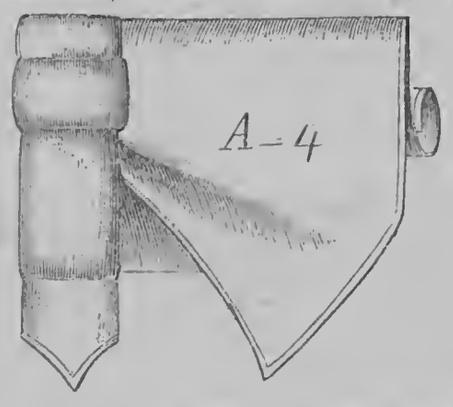
it firmly with the left hand. Continue this process until the glove, if white, looks of a dingy yellow, though clean; if colored, till it looks dry and spoiled. Lay it to dry, and the operator will soon be gratified to see that the old glove looks nearly new. It will be soft, glossy, smooth and elastic."

To Cook Potatoes.—Select such as are of uniform size; wash them, but do not disturb the skin in any way; cover with cold or lukewarm water, an inch above the vegetables; leave uncovered; place on the fire; when nearly to the boiling point, pour off the water and replace with the same quantity of cold water; the action of the cold water sends the heat from the surface to



the heart, making them mealy; throw in a portion of salt; try them with a fork to see when done; pour off the water and cover the pot with a folded napkin, towel or flannel cloth; let it stand by the fire ten minutes; peel, and send them to the table. When potatoes are boiled too fast, the skins crack before the heart is done. To add to their deliciousness, pour over them hot cream in which a little butter has been melted (or not), and sprinkle with pepper.

Roasted potatoes are introduced at lunch, or what is its equivalent, supper, with cold meats. Wash and dry them; bury them in the ashes—hot wood ashes—or bake slowly in a Dutch oven; it will require two hours' time; to economize in time, they



may be half boiled before being put to roast. Serve with the skins on. To be eaten with cold butter and salt.

To Steam a Turkey.—We find the following commended but uncredited:—Rub pepper and salt inside the turkey, after it has been well dressed and washed; then fill the body with oysters; sew it up carefully; lay the turkey in a large dish, and set it on a steamer placed over boiling water; cover closely, and steam from two hours to two hours and a-half—or till by running a fork into the breast you find it is well done. Then take it up; strain the gravy which will be found in the dish; have an oyster sauce ready, prepared like stewed oysters, and pour this gravy, thickened with a little butter and flour, into the oyster sauce; let it just boil up, and whiten with a little boiling cream; pour this sauce over the steamed turkey, and send to the table hot. Of course while the turkey is steaming, you will have the oysters all ready for the gravy from the dish, and the cream also boiled, that there may be as little delay as possible after the turkey is cooked.

A Recipe for Biscuit was recently petitioned for by some novice in cookery. Dissolve a teaspoonful soda in a little water,

and add it to a pint of thick, sour cream. Add a tablespoonful salt to flour, and mix as quickly and lightly as possible. Bake immediately in a brick oven. This is the best recipe for biscuit I have ever tried; but the best material may easily be spoiled by unskillful treatment.

Light Bread.—For the benefit of those who may have to live upon biscuits longer than they like, I send the following method of making light bread:—Scald a gill of new milk, thicken to the consistency of stiff gruel with meal, and keep warm till it becomes light. Then add half teaspoonful of salt, soda the size of a pea, a pint of warm water and thicken with flour. When this rises, mix the bread with water or sweet milk, adding salt.—ROSE GERANIUM.

Boiled Indian Pudding.—Sift one quart of Indian meal, add one tablespoonful of lard, a teaspoon of salt, one-half teaspoon of soda, one-half teacup of nice molasses; pour on boiling water and stir till it forms a very stiff batter; wet a pudding bag, made of strong, new cloth, in boiling water; flour on the right side, turn it inside out, and put your pudding batter in; tie so it may swell one-third, and boil three hours with a boiled dinner. My word for it, you will have a pudding you will not feel ashamed of. Serve with butter and maple sirup, or sugar dissolved.

Plain Cookies.—One cup sugar, one egg, beaten, one-half cup butter, one-half cup sour milk, soda to sweeten the milk, one teaspoon of ginger; rub the butter in the flour, stir in the egg and sugar, mix the spice in the milk, stir in and mix in flour till stiff enough to roll; roll very thin, and bake. For a large batch, double the ingredients. Plain but good, and healthy for children.—B. F. T.

To pickle Meat.—I have noticed recipes for this purpose in the RURAL NEW-YORKER. Here is my practice:—A barrel, clean and sweet, is always ready. When the meat is cool it is cut up to fit the barrel, in the bottom of which I put a layer of salt half an inch thick, laying the meat in skin side down; then another layer of salt and another of meat flesh side down, and so on, keeping flesh and skin sides together. It remains in this condition till the first to the middle of March, when I put salt enough in cold spring water to make a brine that will bear an egg. This I pour over the meat. I then put a weight on the meat to keep it covered by brine and keep in a cool place. It will keep a year.—JACOB SUNDERLAND.

A Humbug Recipe.—The following recipe is a humbug, and is being sold as the "New England Soap:"—Take three pounds of German erusive soap, shave it up fine, dissolve it in three quarts boiling soft water; add one ounce salts tartar; three ounces borax; then take from the fire and set it away to cool; as soon as it becomes cool enough to bear your hand in, add one ounce liquid ammonia; stir each article as you put it in.—L. D. WEAVER, *Rushford*.

Johnny Cake.—One pint of Indian meal; one pint of wheat flour; one teacup of molasses; one teaspoon salt; same of soda; one pint sour milk; one-half cup shortening. Farmers' wives and others, try it.—H. S. BROWN.

Chloride of Lime is used extensively in Germany to drive away insects, rats and mice. We know that rats do not like it in a cellar, nor in a ditch by which they have been in the habit of entering the cellar.

To Make Tough Beef Tender.—Steam it over water for half an hour—then roast in the usual manner.

New Publications.

NOVELLO'S CHEAP MUSIC.

NO. 751 BROADWAY, NEW YORK.

NOVELLO'S ORIGINAL, OCTAVO EDITION OF OPERA. Complete Vocal Scores. Edited, corrected according to the original scores, and translated into English by NATHAN MACFARREN.

PRICE, ONE DOLLAR; or, handsomely bound in scarlet cloth, gilt edges, TWO DOLLARS. The following now ready:

BEETHOVEN'S FIDELIO, with the TWO GREAT OVERTURES.

AUBER'S FRA DIAVOLO.

MOZART'S DON GIOVANNI, with all the recitatives.

SATURDAY, FEBRUARY 10, 1872.

RURAL NOTES AND QUERIES.

A Wisconsin Farmer on the Wool Tariff.—GEO. G. WHITE, Dodge Co., Wis., writes:—"I don't want you to crowd out the Sheep Department, but help protect the wool raisers. This industry should be protected by all means. We don't want the Eastern manufacturers to get the tariff repealed. They will humbug Congress if possible. I have no faith in Yankee honesty. Every agricultural journal should be wide awake to our interests. Let the tariff stand as it is; it does not require patching up by free trade politicians." Well, we do not intend to crowd out the Sheep Department often. We have faith, however, in Yankee or any other kind of honesty. We have no faith in dishonesty, whether East or West. We believe that every man will, as a rule, look after what he may deem his best interests. He may be mistaken in them, but nevertheless honest in adopting any specified course. But we have found that no matter how honest and sincere he may be, he is liable to be charged with dishonesty. If a man wishes to be regarded honest himself, he must at least allow that there may be an honest difference of opinion on the part of others. We believe that the benefits to be derived from any tariff must depend upon its stability. And one of the strongest arguments against tariffs, and one of the reasons why they do not realize for the industrial interests of the country what the believers in protection claim they will, is the perpetual tinkering to which they are subjected, rendering investments based upon their existence and prospective continuance too uncertain. Tariffs once established, should be let alone. And if it could be, they should always be understood as inviolable for a specified time, at least until their utility could be fairly tested.

Obituary—Joseph B. Lyman.—The friends of this gentleman were shocked by the announcement of his sudden death in the morning papers. He was well known as the Agricultural Editor of the Tribune. It was in this capacity we knew him as a vigorous, graceful and able writer; a man of quick and usually accurate perceptions, zealous in the acquirement of facts bearing upon the industrial interests of the country, and scholarly and forcible in his presentation of them. His more intimate personal friends pay high tribute to his social qualities as a friend, husband and parent, and mourn his loss from their midst with unalloyed sorrow. He was born in Massachusetts, graduated at Yale College, studied law and went to New Orleans to practice his profession. Soon after the commencement of the war he returned North, became Agricultural Editor of the N. Y. World, subsequently Managing Editor of the Hearth and Home, and finally was called to the position on the Tribune which he filled at the time of his death. He died at his residence at Richmond Hill, Long Island, Jan. 28, of small-pox, leaving a wife and six children to mourn the loss of a kind husband and father. All who know "Kate Hunnibee" will feel for her a profound sympathy because of her bereavement.

To Inquirers About the Best Place to Purchase.—We have repeatedly said, and we reiterate the statement, that we cannot undertake to advise our readers who ask us when and of whom it is best to purchase eggs, fowls, cattle, sheep, swine, implements, etc., etc. Men ask us to name some reliable dealer, whom we can recommend. They seem to forget that we have few more facilities for obtaining this information than they. There are many men who advertise with us who, in all their business relations with us, are strictly honorable, prompt and reliable. But we do not know, and cannot know, of the quality of what they sell—of the purity of the blood, and the care taken in breeding of the stock offered for sale. In many cases we do not have an opportunity to examine their herds. We can only judge of them from our standpoint, which is not always, we are sorry to say, a safe one for our readers. Purchasers must exercise business caution and protect themselves by references and guarantees. And we shall always be prompt to do what we may to protect our readers from deception and fraud.

The Presidency of Brown University.—As briefly mentioned in our last, the Rev. E. G. ROBINSON, D.D., President of the Rochester Theological Seminary, and probably the ablest theologian of his (Baptist) denomination in America, was recently elected President of Brown University. In noticing this election the Rochester Democrat and Chronicle says:

"Brown University stands in the front rank and among the most favored seats of learning in the country, being only less celebrated than Harvard and Yale. To be chosen its president is therefore an honor of which any scholar might be proud. It will be remembered that some two years since, President ANDERSON of our University, was elected President of Brown, but with self-sacrificing devotion to the college of which he is the head, declined to accept. Pre-eminently qualified as is Dr. Robinson from his erudition and his ability to give dignity and respect to the presidency of the greatest Baptist University in the country, we hope for the sake of Rochester Theological Seminary, that he will decline the position now tendered him.

In order that the "truth of history may be vindicated," we are constrained to make an amendment to this statement of our usually accurate and just contemporary. It is true that President ANDERSON was, as stated, elected President of Brown, but it is equally true that such election did not occur until after Dr. ROBINSON had been chosen to and declined the honorable position! This fact is well known in Rochester, and we are surprised that the D. & C. should not have given Dr. ROBINSON at least equal credit with President ANDERSON for "self-sacrificing devotion."

The Adirondacks.—The Tribune says:—"Here is another clergyman lecturing on 'The Adirondacks'—the Rev. Mr. WINSLOW of the P. E. Church, who held forth on the subject in Boston. Mr. W. should understand those romantic regions, for he has visited them no less than thirteen times, and may be considered a sort of naturalized citizen of the wilderness. Pretty soon, we solemnly warn all magazine writers and lecturers, the Adirondacks will 'give out' as an attractive theme, and other lonesome and little frequented localities must be visited for the purposes of inspiration and profit."

—All which may be true, but we think there is one gentleman who is more familiar with the Adirondacks than any other person who has written or lectured upon the subject. We refer to Dr. W. W. ELY of Rochester, (author of an excellent Map of the Adirondack region, published by COLTON,) who has visited the "Great North Woods" annually for fifteen years or more, and is thoroughly acquainted with the topography of the country. Indeed, Dr. E. has made the region his study as well as recreation, and from his actual knowledge, as well as fine scholarship, is eminently qualified to do justice to the subject. Let Dr. ELY write a book on "The Adirondacks," and the people will learn far more than has ever been told of that famed MURRAY-and-WINSLOW-ized region.

The Diseases of Cattle in the United States.—Congress, June 3, 1870, passed a resolution providing for the printing of 6,000 extra copies of this work, prepared under the direction of Commissioner CAPRON; 1,500 copies of this report were to be at the disposal of Senators; 3,000 for members of the House of Representatives, and 1,500 for the Commissioner of Agriculture. We state these facts that those of our readers interested in the perusal of the Reports of Prof. GAMGEE on the Lung Plague, the ill effects of smutty corn in the feed of farm animals, on the Splenic or Periodic Fever of Cattle; and of Dr. J. J. WOODWARD on the pathological anatomy and history of the respiratory organs in pleuro-pneumonia of cattle; of Drs. BILLINGS and CURTIS, giving the results of examinations of fluids of diseased cattle with reference to the presence of cryptogamic growths; of H. W. RAVENAL on the fungi of Texas, and of J. R. DODGE on statistical and historical investigations of the progress and results of the Texas cattle disease, may know from what sources this costly and valuable volume is obtainable.

Seed Catalogues Received.—The Seed Catalogues come in so thick and fast, and each one possesses so many distinctive merits, that we are compelled to place them all on the same level and simply acknowledge their receipt; for our space does not permit us to say all that their respective and comparative merits might induce us, otherwise, to say. Since our last issue, Catalogues have been received from E. A. REEVES, 58 Cortlandt St., N. Y. City; O. BURRAS, Norwalk, O.; ALFRED BRIDGEMAN & SON, 876 Broadway, N. Y. City; JAMES FLEMING, 67 Nassau St., N. Y. City—an excellent Catalogue; PETER HENDERSON & Co., 35 Cortlandt St., N. Y. City, their Seed and Plant Catalogues for 1872—very complete and elaborate.

Don't Invest In Vermont Gold Mines—For that whereas Dr. CUTTING, State Geologist, lately averred, in a paper read before the Board of Agriculture, that almost every week brought him parcels of worthless sand, containing yellow or white mica, or white and yellow pyrites, supposed by the deluded senders to be precious gold. Dr. C. wishes it to be distinctly understood that there are no metallic ores in Vermont which are worth working. For that the rocks of the State are too old and compact, or too nearly connected with the glacial drift. The yields of marble and slate, however, are very good. Those invited to invest in Vermont gold mining stocks, will please remember Dr. CUTTING'S statements and govern themselves sensibly.

"When May I Kill Woodcock?" asks SAMUEL S. C. of Cayuga Co., N. Y. "A gentleman told me the other day that I could not shoot them now according to law. Can you tell me?" Yes: The law provides that you shall not kill or expose for sale or have in your possession after the same has been killed, any woodcock between Feb. 1st and July 4th, under penalty of $50 for each bird.

"The Financier: A Saturday Review of Monetary Interests and Political Economy."—Is the title of a handsome 20-page quarto weekly, just started by J. H. & C. M. GOODSELL, 156 Broadway, New York, at $5 a year. The contents of the numbers we have seen are able, and appropriate to the objects announced in the title of this new recruit in a peculiar and important sphere of journalism. We trust the Financier will prove a success—financially and otherwise.

The Advertiser's Magazine is the name of a new and handsome publication just started by Messrs. S. M. PETTENGILL & Co., 37 Park Row, New York. It is devoted to the interests of newspaper advertisers, and has a long list of journals, with their circulations, etc.

THE SEASON.

Decatur, Iowa, Jan. 20.—Winter dry and pleasant, thermometer has not marked zero for five weeks. Wheat, $1 per bushel; corn, 20c.; potatoes, 30c.; sheep, $3@4; hogs, $3@3.50.—H. R.

Dunlap, Iowa, Jan. 25.—Finest winter I ever saw. Wheat, $1; oats, 20c.; corn, 18c.; potatoes, 40c.; butter, 20c.; eggs, 20c.; pork, 4c.; cows, $20@30; oxen, $70@100; horses, $100@150.—R. B. R.

Salisburg, Indiana Co., Pa., Jan. 22.—Very little snow; weather very changeable; coldest day, 16° below zero; business dull; little money circulating. Wheat, $1.35@1.40; oats, 45c.; hay, $15 per ton—W. F. B.

Beallsville, O., Feb. 1.—Corn, the past season, averaged 50 bushels per acre; wheat 10 to 15 bushels; oats, 20 bushels. Peach buds were killed by one or two cold days last month. Wheat, $1.30; corn, 45c.; oats, 35c.; buckwheat, $1; butter, 15c.; eggs, 20c.; chickens, 20c. each. No sale for hay.—E. M.

The Plains, Fauquier Co., Va., Jan. 29.—To-day is extremely cold; mercury at about zero; high N. W. wind. So far a very open winter; but little rain or snow; plenty of ice. Growing wheat looks badly, so much freezing and thawing. Wheat, $1.50 per bu.; corn, 50c.; oats, 45c.; apples, $1; pork, $5@6 per cwt.; beef, $6@8 per cwt.—J. S. P.

Oak Grove, Wis., Jan. 16.—An equable winter, with plenty of snow; business dull; prices low: wheat $1.10@1.15; corn, 50c.; oats, 30c.; barley, 50c.; potatoes, 50c.; apples, 75c.; butter, 18c.; pork, $4@4.50; hay, $10 and not very plenty; sheep scarce and high, and will be until after shearing. Considerable wheat in the hands of farmers unsold; will be held until spring. The crop very light.—G. W.

Hall's Corners, Ont. Co., N. Y., Jan. 29.—The coldest day of the month, so far. Thermometer 6° below zero at sunrise; 10° above at noon, and now, 8 P. M., nearly down to zero, with a strong wind from the West by North all day. Yesterday was mild and pleasant. There have been several car loads of apples shipped from this station, Northern Central Railroad, South, this month, buyers paying $3@3.50 per bbl. But little snow as yet; sleighing poor, but wheeling prime. A good winter for sheep, so far; mutton sheep worth 6c. per lb. and upwards.—P. F. B.

East Jaffrey, N. H., Jan. 23.—We are having a mild, open winter, favorable for hay and grain. Have four inches of snow and ice; good sleighing. Have had 13 snows, all light ones—38 inches in all. No extreme cold weather; 12° below zero the coldest. Money easier and business reviving. Pork, 7c.; beef, 7½c. per lb. in bulk; corn, Northern, $1.05; Western, 85c.; rye and barley, $1; butter, 35c. per lb., potatoes, 50@75c.; apples, Western, per bbl., $4@4.50. Everything favorable for a crop of fruit next season, thus far.—L. L. P.

RURAL BREVITIES.

A CORRESPONDENT asks some of our readers, having experience, to tell him the best way to make a surface cellar—frost-proof—and if they can be made of wood.

C. S. RUST is informed that we do not know that the Self-Acting Portable Fountain, illustrated in RURAL NEW-YORKER of Jan. 27, is for sale in this country. It ought to be.

A CIRCULAR received at this office announces that a "Second Ohio State Fair is to be held at Tiffin, O., June 4, 5, 6 and 7 at which $20,000 is to be expended in premiums and expenses."

THE Foot-and-Mouth disease among cattle does not disappear from the herds of Great Britain, and is extending in the French herds, according to last reports. Let those who import stock to this country look out.

BUSINESS INFORMATION.

Chesapeake and Ohio R. R. Company.—We judge from present appearances that the $15,000,000 gold loan of this Company, which was introduced to the market by FISK & HATCH, and by them recommended as a first-class security for investment purposes, will be shortly closed. A few weeks since less than $2,000,000 remained undisposed of, and large sales were recently made at 94 and interest, a part of which were taken for foreign shipment. The high reputation of the financial agents, together with the well-known integrity of the managers of the Company, naturally attract the attention of investors to these securities, and this fact will explain the rapid distribution of the bonds. Messrs. FISK & HATCH have always confined their efforts to enterprises of undoubted character, having been prominently identified as agents for the sale of Government loans, and subsequently of the Central Pacific Railroad bonds, which now sell above par. The Chesapeake and Ohio road is geographically a counterpart of the Central Pacific, leading inland from one of the best harbors on the Atlantic coast, as the Central Pacific terminates on the finest portion of the Pacific coast; and added to which is this great advantage, that the Chesapeake line has tributary to it unsurpassed rich coal and iron beds, which are being rapidly developed. As is well known, the Central Pacifics are already favorites in both home and foreign money centers, and the financial management of the Chesapeake and Ohios being essentially the same, it is safe to presume that these bonds will share the same popularity.

The New Composite, Sanitary Water Pipe, which is only two-thirds the cost of lead, stronger and just as flexible, and free from all deleterious influences, is worthy the attention of our readers. Professors of chemistry have indorsed this pipe. Those who would escape all risks of lead poison, will be glad to know of this pipe. It is manufactured by the N. Y. Lead Co., 65 Center street.

The Publisher's Desk.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

SIX PER CENT. BONDS

Of the Chesapeake and Ohio Railroad Company, having still twenty-eight years to run, with interest payable May 1 and Nov. 1, both principal and interest payable in gold coin in the city of New York, are recommended by us for safe and permanent investment, for the following reasons, viz:

1. *They are thoroughly secured.*
2. *Like the Central Pacifics, they will be widely known, very popular, and always marketable.*
3. *They will be dealt in at all the prominent Stock Exchanges in this country and Europe, and have the advantage of both a home and a European market.*
4. *They should largely advance from the present price of ninety-four and accrued interest, when all sold by the Company, as Central Pacifics have done.*

They are in denominations of $100, $500 and $1,000 Coupon or Registered.

The CHESAPEAKE AND OHIO being under able and honorable management, partly identical with that of the CENTRAL PACIFIC, their Securities should take equal rank in popularity and market value.

For exchange of Five-Twenties or for new investments, we cordially recommend either the Central Pacific or Chesapeake and Ohio Six Per Cent. Gold Bonds.

We continue to deal in Government Securities, buy and sell Investment Stocks and Bonds at the Stock Exchange, open accounts with depositors, upon which we allow interest at the rate of four per cent., make collections in all parts of the country, and transact a general Banking business.

FISK & HATCH.

HARVEY FISK,
A. S. HATCH.

NOTICE TO CONSUMERS.

The increasing popularity of DOOLEY'S YEAST POWDER has induced a certain firm who manufacture a Baking Powder to copy verbatim our advertisements, simply substituting their name in place of ours. While this proves the standard excellence and worth of our Yeast Powder, it is calculated to deceive the consumers, and reflects the character of the parties as well as the goods which they are endeavoring to force upon the unwary. Be sure that you call for DOOLEY'S YEAST POWDER, and take no other. DOOLEY & BROTHER, Proprietors, 69 New Street, New York.

DR. STRONG'S REMEDIAL INSTITUTE,

Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

While Waiting for a Cough "to go as it came," you are often sowing the seeds of Consumption. Better try at once Dr. JAYNE'S EXPECTORANT, a sure cure for all Coughs and Colds.

Acute Affections of the Lungs, Chest, Throat and Kidneys are easily cured by using WHITE PINE COMPOUND. For sale everywhere.

Educational.

CORTLAND NORMAL SCHOOL.

THE accompanying cut and following account of the Cortland (N. Y.) Normal and Training School, are from RANDALL'S "History of the Common School System of the State of New York," published by IVISON, BLAKEMAN, TAYLOR & Co., and heretofore commended in the RURAL NEW-YORKER:

Organized in 1868, under the act of 1866. The Normal School building is a spacious brick edifice, three stories in hight above the basement. The first story contains two study rooms for pupils in the lower grades of the Training School, and, connected with each, four recitation rooms, three ante-rooms, and two cloak rooms. Upon this floor is also a central hallway, with two large cloak rooms, a dining room, parlor, library, and office, together with rooms for the accommodation of the steward and his family. The second story contains the chapel or study room for the Normal Department, the laboratory, two private rooms for teachers, two cloak and six recitation rooms, and two halls leading from the chapel to recitation rooms. Upon the third floor are the gymnasium, well supplied with apparatus for calisthenic exercises, two bath rooms, and dormitory accommodations for lady boarders.

The grounds are commodiously located, near the centre of the village, and are ample for walks and drives, pleasantly laid out, and remote from noise or disturbance.

The cost of the building and grounds, defrayed by the corporation of the village, was about $89,500; furniture, $6,500; and library and apparatus, $2,000; in all, about $98,000.

The Board of Trustees consists of the Hon. HENRY S. RANDALL, LL.D., [one of the Editors of MOORE'S RURAL NEW-YORKER,] President; Hon. R. H. Duell, Secretary; Charles C. Taylor, Treasurer; Trustees, Hon. Horatio Ballard, Arnold Stafford, Henry Brewer, Norman Chamberlain, William Newkirk.

The School was opened March 3, 1869, under the charge of the following Board of Instructors:

JAMES H. HOOSE, Principal Department Metaphysics and Didactics.

Norman F. Wright, Principal Department Ancient Languages.

Frank S. Capen, Principal Department Mathematics.

Thomas B. Stowell, Principal Dept. Natural Sciences.

Martha Roe, Superintendent Intermediate and Primary Depts., Teacher of Methods and Objects.

Helen E. M. Babcock, Modern Languages and History.

Miss M. Marsh, Vocal Music.

Mary Morton, Drawing.

Helen K. Hubbard, Principal Intermediate Dept.

Margaret Hunter, Principal Primary Dept.

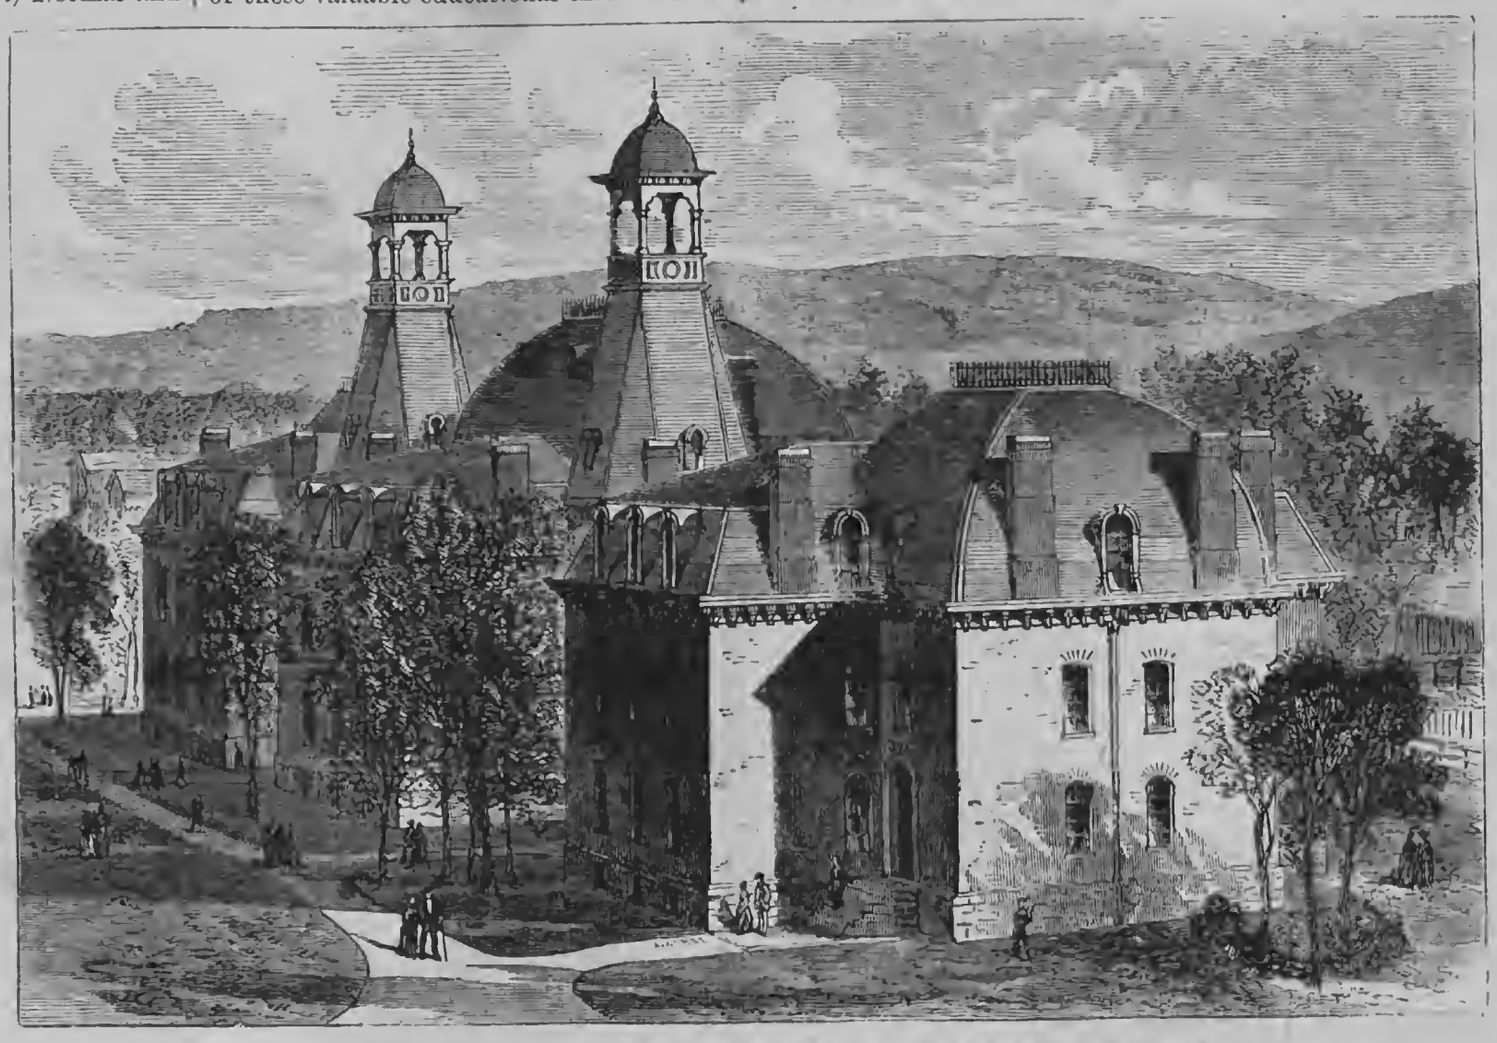
Miss M. F. Hendricks, Teacher of Reading, Elocution, and Gymnastics.

Miss Mary F. Hall, Critic in Primary Dept.

The object of the Normal School is to qualify young men and women to serve as teachers in the Public Schools of the State; and of the Training School, to provide a practising school for the Normal students. The latter comprises a Primary, Intermediate, and Academic Department.

The whole number of pupils in attendance during the year was about 800.

— In previous numbers of the RURAL we have given views and descriptions of the Jamestown, Potsdam, and Brockport Normal Schools, and shall in future issues give engravings and accounts of the Albany and Oswego schools of like character. Hence those of our readers who shall have the volumes of this journal for 1871-72 will have illustrations of all the Normal School buildings in this State, with historical sketches of these valuable educational institutions.



CORTLAND NORMAL AND TRAINING SCHOOL.

BE OBSERVING.

IMPROVEMENTS and inventions have originated with thoughtful and observing people. Thoughts are suggested by many common things that produce great results. This was the case in making paper, so needful for so many purposes, from straw. It is said that Judge HENRY PETTIBONE of Pennsylvania was passing by the contents of a leach tub, among which was a handful of straw that had been placed at the bottom. Taking a little of the straw in his hands the idea suggested itself to him that it possessed all the qualities of strong fiber, which the lye had softened until it was in a semi-pulpy state. He took this straw to a paper maker, who manufactured straw colored paper from it with such success that he was induced to continue the experiments. These experiments have been improved by others, so as to make a very desirable and useful article.

Teach the young to be observing. They are free from care, and it will tend to improve their minds, strengthen their memories, and develop their reason.—H. E.S.

[The above is sound, and should be heeded by parents and all others engaged in training the young.—ED.]

SNOW AND SNOW-FLAKES.

SUCH a common and simple substance as snow seems hardly worth writing about, as every one in America is supposed to be familiar with it. Common as snow-flakes are, they are the most wonderful and beautiful things in the world—as well as the most powerful. Whether we look upon snow in the avalanches of the Alps, the huge drifts in the gorges of the Rocky Mountains, in the valleys of Vermont, or on the plains of the West, or whether we regard a single flake under the magnifying-glass, it proves alike interesting. When snow is formed in a very still atmosphere, it takes the shape of the beautiful figures represented in our illustration. The crystals are all in the form of six-rayed stars, differing from each other in their conformation. The study of snow will afford much amusement, and, in connection with it, one should read some good work on the glaciers of the Alps, and other parts of the world, which are principally formed of snow.

JOHN HOPKINS, a Maryland Quaker, who began life in Baltimore as a small grocer, is now the richest man South of Mason and Dixson's line. He has given a great deal of money to the John Hopkins University, situated on the outskirts of Baltimore city. He is still engaged in business.

WHAT three great authors would a person name who witnessed the Chicago fire? Dickens, Howitt, Burns.

MOSAIC POETRY.

I ONLY know she came and went
—*Lowell.*
Like trontlets in a pool;
—*Hood.*
She was a phantom of delight,
—*Wordsworth.*
And I was like a fool.
—*Eastman.*
"One kiss, dear maid," I said, and sighed,
—*Coleridge.*
"Out of those lips unshorn,"
—*Longfellow.*
She shook her ringlets round her head,
—*Stoddard.*
And laughed in merry scorn.
—*Tennyson.*
Ring out, wild bells, to the wild sky!
—*Tennyson.*
You hear them, oh! my heart?
—*Alice Cary.*
'Tis twelve at night by the castle clock,
—*Coleridge.*
Beloved, we must part!
—*Alice Cary.*
"Come back! come back!" he cried in grief,
—*Campbell.*
"My eyes are dim with tears;
—*Bayard Taylor.*
How shall I live through all the days,
—*Mrs. Osgood.*
All through a hundred years?"
—*T. S. Perry.*
'Twas in the prime of summer time,
—*Hood.*
She blest me with her hand;
—*Hoyt.*
We stray'd together, deeply blest,
—*Mrs. Edwards.*
Into the Dreaming land.
—*Cornwall.*
The laughing bridal roses blow,
—*Patmore.*
To dress her dark-brown hair;
—*Bayard Taylor.*
No maid may with her compare,
—*Brailsford.*
Most Beautiful, most rare!
—*Read.*
I clasped it on her sweet, cold hand,
—*Browning.*
The precious golden link;
—*Smith.*
I calmed her fears, and she was calm,
—*Coleridge.*
"Drink, pretty creature, drink!"
—*Wordsworth.*
And so I won my Genevieve,
—*Coleridge.*
And walked in Paradise;
—*Hervey.*
The fairest thing that ever grew,
—*Wordsworth.*
Atween me and the skies.
—*Osgood.*

Our Story-Teller.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker, BY TWO WELL-KNOWN AUTHORS.

[Continued from page 90.]

IV.—The Mystery of Susan.

"WHERE'S Mr. BRAYTON?" said MINNIE TAYLOR, holding a holly wreath at arm's length. "He promised to hang these wreaths for me, but a man is never where he is most wanted!"

"What heresy is that, Miss MINNIE?" called out HARRY TRAVERSE, from acrossthe room.

"Ah, how do you do, Mr. TRAVERSE? I was saying that men are always to be depended upon!"

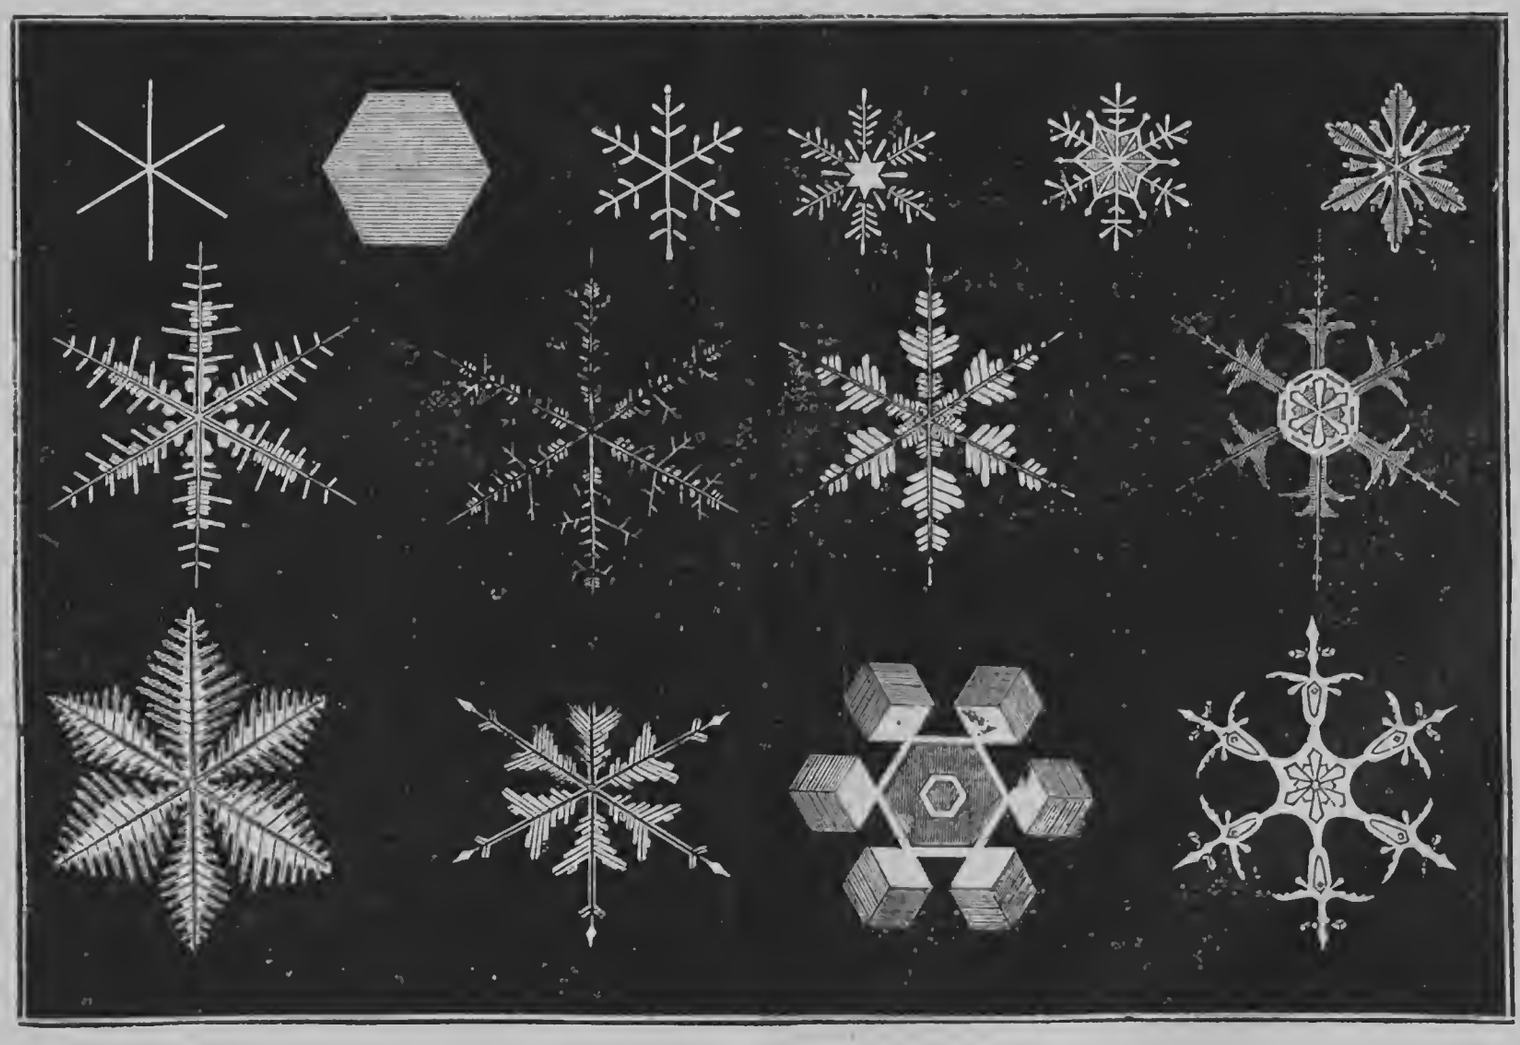
"Oh, MIN, what a story! HARRY, she wasn't saying any such thing; she was talking in a most cruel and unjust manner about your much abused sex."

"Well, MAGGIE, I depended upon you to stand by me; your defection proves that there is no faith to be placed in woman. I will hang my wreath myself," and the gay girl climbed a step-ladder and put the holly in the place assigned it. "Now, MAGGIE, answer my first question. Where is Mr. BRAYTON?"

"I don't know, dear; he went out a moment ago. HARRY, did you see him as you came in?"

"Yes, I met him. He was hurrying to overtake SUSAN. He spoke to her a moment after I passed him. I heard their voices."

"How strange, HARRY! What can it mean? I did not know that SUSAN ever saw Mr. BRAYTON before."



SNOW FLAKES, MAGNIFIED.

"SUSAN is a strange woman," said MINNIE.

"And as good and beautiful as she is strange. I love her, in spite of myself, slave that she is! You, MINNIE, must think it a horrible institution that places such women in such positions."

"I never think, MAGGIE, when it's inconvenient," replied MINNIE, demurely.

"Well, it's mighty inconvenient, sometimes, and I congratulate you on your position," said GEORGE, who had joined the group just in time to hear the last sentence.

"Of course, slavery is the thing; I don't question that. Men wiser than I ever shall be have settled the matter, and it isn't for me to dig up foundations; but when I see SUSAN, and remember that she is a slave, as Miss TAYLOR says, I find it very inconvenient to think."

"Well," said MINNIE, "we had better finish the decorations, and liberate the slaves afterwards. I don't believe they would accept their freedom before the holidays."

"Always practical, Miss MINNIE. It's an excellent idea, that of finishing the decorations. Dinner will be ready in half an hour, and this room must be in order in exactly thirty minutes;" so saying GEORGE snatched up wreaths and festoons, and clusters of scarlet berries, and went to work with a will, the girls and HARRY following his example.

The octoroon had finished her errand, and in so straight-forward and decided a manner as to admit of no questioning on the part of her young mistress. MARGARET's first impulse was to follow her and ascertain, if possible, what new trouble had come upon her; but it was so painfully evident that the miserable woman desired to avoid all notice, that MARGARET dismissed the idea of pursuit, and determined to seek her in her own room after dinner, where she knew she would be, while the rest of the family were enjoying their *siestas*. The slave walked very quietly through the hall, down the length of the east verandah, and throwing her heavy shawl over her head, started off in the direction of HANNIBAL'S cabin. The impulse to fly—to put distance between herself and the house she had just left, was written all over the graceful, shrinking figure, gliding so noiselessly, and yet so determinedly, along the well beaten path. Mr. BRAYTON followed hastily. SUSAN never looked back. She knew who her pursuer was, and her heart almost stood still as she realized that steps were steadily gaining upon her.

"Oh, if I could but die," moaned the poor woman between her clenched teeth. "But death is never near to those who have nothing to live for."

Just then her name was gently pronounced, and a strong hand placed caressingly and firmly upon her arm. Even then the octoroon did not turn her head.

"Won't you speak to me, SUSAN?" continued the gentleman, in tones so low and tender that they might have been the accents of a lover, but for the immense difference in their social relations.

"Why do you seek me?" replied SUSAN, without lifting her eyes from the ground.

"I have not sought you, child," he answered. "It was your own plan to keep your residence a secret from me, and I submitted to it as a gentleman should. I supposed you were in Richmond; but as GOD lives, I have been as good as my word—have never inquired for you even."

"You gave me my liberty, did you not?" interrupted the octoroon, her beautiful eyes flashing fire.

"I did, SUSAN," and there was an exultant ring in the speaker's voice, as he pronounced the simple sentence that caused his companion for the first time to turn her eyes to his face.

"And yet your directions to Mr. HYATT were to dispose of me to the highest bidder as speedily as possible."

"It is a lie, SUSAN!" and the Southerner's nostrils dilated, and his countenance, for a moment, was livid with passion. "Who told you this falsehood?" he went on. "You must not walk another step until you have given me the full particulars."

"Mr. HYATT told me so the day before I was sold to Col. HEATHERSTONE, and —"

"What, SUSAN? Say those words again! *Sold* to Col. HEATHERSTONE!"

"Sold to Col. HEATHERSTONE," slowly repeated the wretched woman.

"May the cur—"

"No, dear master, not that," broke in his companion, quickly, her whole manner instantly changing. For a brief moment the sadness fled from her eyes, and instead of the quiver of grief round the lovely mouth, there appeared an indescribable joyousness—an expression of satisfaction—a flash of the intense love-nature of this strange woman.

"Where were your papers, SUSAN?" continued the gentleman, apparently unaware of this total change in his companion's manner.

"My papers were stolen from my trunk—also the money you gave me to go North with—if I pleased."

"And after that diabolical business, you could believe that I had instigated such a proceeding? SUSAN, child, I thought you knew me better!" And now there was no more rage in the man's voice, but only a plaintive under-tone, a strange heart-wail that seemed to touch the very soul of the woman by his side.

"What *could* I think?" she replied, while all unconsciously her hand sought his arm. "Listen, please. Mr. HYATT sent for me to come to his office, and then placed in my hands a letter which he declared had just come from you——"

"—d the handwriting, SUSAN?"

"I could have sworn to its being yours; and——"

"And SUSAN, you believe now that I wrote it! In that were orders for your sale."

"Yes, sir, of the most peremptory description."

"You will see in the future, child, if my life is spared to arrange matters; but I see that with such damning evidence of my fiendishness, it is no use to say more at present. GOD bless you, SUSAN, and give you patience to wait a little. I will trouble you no longer."

"Dear master," and again lips and eyes were full of joy—and for an instant something deeper than joy as she gently detained him. "I believe *you*—and shall never doubt you again. It was only when driven almost to distraction by the horror of my position, that I ever harbored a thought of your injustice. Forgive me for that, please, and I will never do so again."

"Oh! you poor, hunted, tortured child! *Forgive* you? SUSAN, I should never have allowed you to leave me. You never could be as happy anywhere else as with me; and, truly home has never been home since you left it. And then, child, I have been so ill since."

A little convulsive shiver was all that testified to SUSAN'S having heard the last sentence.

"Twice have I almost crossed the dark river—and each time I felt that if I only had SUSAN with me—SUSAN to love me, and close my eyes—SUSAN to grieve for me a little after I was gone—Oh! how I suffered without you!"

"No more—for the love of the Saviour—no more, dear master! I should have come to you, had I known it. Believe that."

"Child, if you would only come back to me. Come back a free woman, as my house-keeper and companion—and—"

"No, master, no! It can never be—but listen a moment. If I can ever be of any service to you, should you be sick or in trouble, should you need anything that SUSAN can do for you, SUSAN will come—and may the powers above keep her fully informed of your situation. There comes Col. HEATHERSTONE, and we must separate."

Mr. BRAYTON hesitated for a parting word; but his companion was gone, out of sight almost before he realized that he was alone.

"Hallo! BRAYTON and SUSAN!" said the Colonel, softly, to himself, at the same time uttering a low, prolonged whistle. "Astonishing how these pretty niggers do take hold of a fellow. It's a little rough to class SUSAN with the blacks, after all, for no one in the world would ever take her to be a nigger. Funny, though, that BRAYTON should leave all the pretty girls up to the house to run after a slave; but then, there's no accounting for tastes"—and the Colonel chuckled as if the little scene he had just witnessed was the funniest thing on record, and urged his horse forward, thinking it best not to have appeared to notice them. Mr. BRAYTON followed slowly and thoughtfully, and retiring to his room did not again mingle with the guests until the bell summoned them to dinner.

At the table SUSAN served in her accustomed place, quiet and reserved as ever. MARGARET'S eyes followed her anxiously, but no recognition was returned; the octoroon seemed made of stone, but late in the afternoon when MARGARET, having left her guests in their own rooms, sought SUSAN in hers, she found her sitting in a low chair before the fire, her whole body shaken with sobs. The mistress threw her arms around the slave.

"Dear SUSAN, darling SUSAN, tell your little MAGGIE what the matter is. Nobody loves you so well. Tell me all, SUSAN. I'm sure I can help you."

"I'm sure you would help me if you could, dear; but there's nothing to help. We all break down sometimes, child; I was feeling lonely, that's all. Has Mr. TRAVERSE gone away?"

"O never mind Mr. TRAVERSE. There is something the matter, and I could help you if you would let me. You may trust me, SUSAN, indeed you may."

MAGGIE was on her knees now, with her arms around SUSAN'S neck. Her voice and manner were inexpressibly sweet and coaxing, but though evidently touched, there was no confidential response. And MAGGIE, a little chilled, a little grieved, and more than ever mystified, was forced to stay outside the heart that she so desired to enter and brighten.

The news that the Convention of South Carolina had passed a secession ordinance was received at the HEATHERSTONE mansion in the very heart of the holiday season, and preparations for Christmas festivities and the merry intercourse of congenial friends were thereafter of secondary importance. The right of the States to secede, the consequences of secession, the effect upon the slaves, and a hundred other questions were discussed, and the first thought in every heart—the first question on every lip—was, "What news from the South?" The Southern States were one immense volcano, and South Carolina was its fiery heart, but such was the agitation in this boiling center that it was felt to the remotest limits of the country, and in proud old Virginia, from the haughtiest master to the weakest slave, everybody was awed and thrilled by the hot-blooded act with which rebellion had been inaugurated. Event followed event in quick succession. Before the public mind had become accustomed to the thought that secession had actually been declared, the news spread through the country that the members of Congress from South Carolina had resigned their seats, and then that the seceding State had adopted resolutions in favor of a Confederate Government. This last decisive act took place on Christmas day, and the next afternoon HARRY TRAVERSE galloped over to Col. HEATHERSTONE'S with the Richmond papers that he had just received. The whole family, guests and all, were in the cheerful library; Mrs. HEATHERSTONE in her usual place on the sofa; MARGARET, MINNIE, HOPE and ALFRED chatting in a cozy corner; GEORGE teaching POINT a new trick, and Col. HEATHERSTONE fast asleep in the glow of the open fire with his newspaper in his hand. Aunt CLARA and Mr. BRAYTON were holding a characteristic discussion on politics, and SUSAN had just entered in answer to her mistress' summons, to arrange the pillows for "my poor head."

"There's HARRY," cried GEORGE, the first to hear the beat of the horses hoofs upon the gravelled walk. ALFRED and the girls rushed to the window, and HARRY gave his horse to a servant and ran up the steps to the piazza brandishing a package of newspapers. In a moment he was the center of an excited group, reading to his eager listeners the resolutions adopted by the South Carolina Convention, the details of the fierce excitement all over the State, and the editorials full of defiance, and certainty of success.

"Now let us hear from the North," said ALFRED, after the Southern papers were flushed. The New York journals were next listened to with varying emotions by the little company whose individual interests extended so far and in so many different directions.

"There can be no longer any question as to the result," said Col. HEATHERSTONE. "Most of the extreme Southern States are all ready to follow the action of South Carolina. Before a month has passed there will be a strong confederation, desperate in their intention to defy the Government at Washington."

"And, then," said MARGARET, rising in her excitement and walking up and down the room, "there will be a long cruel war, and fathers and husbands, and brothers will kill each other like wild beasts. O, was there no way to avoid this? Is there no way to avoid it now? Can there be no compromise?"

"Do sit down, MAGGIE, you make my head ache," said her mother, wearily. "Compromise! There will be compromise enough after a battle or two. A long, war, indeed! Why, child, are you stupid enough to think that there will be much fighting?"

GEORGE sprang up eagerly, while Mrs. HEATHERSTONE was speaking, and crossed the room to the window. He was elate with excitement. MARGARET saw what was working in him with so much power, and sighed heavily. "He will go with the first troops," said she to herself. "But will he ever come back? This is indeed the beginning, but what will be the end?"

"There will undoubtedly be fighting," said Col. HEATHERSONE, in reply to his wife, "but, let us hope, not much. The North has unwarrantably interfered with the South, and when she sees that we are in earnest, doubtless we shall come to an amicable understanding. In fact, I don't hold the North responsible at all," with a glance at his guests; "it is only the abolitionists who are to blame, and they are a very small minority." At the conclusion of this sentence HOPE walked out very gently.

"I hope I have said nothing to hurt Miss ARNOLD," continued Col. HEATHERSTONE.

"O, no," replied MINNIE, "you have said nothing; but the truth is that HOPE'S family are all abolitionists, dyed in the wool."

"Poor child, I am sorry for her; she has much to bear," said ALFRED.

"No more than most of us, I fear. I see separations and heart-breakings," and MARGARET followed HOPE to her room.

"Dear HOPE, let me in."

The door was opened softly.

"Excuse me, HOPE, darling, but I could not bear to leave you up here alone."

"Come in, MAGGIE. I want to talk with you. I must go home immediately. If there is fighting my brothers will be the first to go to the front, and I shall be needed. I ought not to be absent when my country is in trouble."

At that moment the thought came bitterly to the two loving friends that their country was no longer one. HOPE was already a foreigner in MAGGIE'S home.

"I suppose you must go, dear; I think I should want to if I were in your place. It is dreadful, this thought of brother killing brother; but we cannot help it, HOPE. Somebody has a fearful responsibility."

"Your brother thinks it is the abolitionists."

"But I don't, HOPE. I believe that slavery is wrong in its foundation, and what is wrong must some time fall to the ground. GOD is against slavery, and it may be that He used the abolitionists to bring about this crisis, but that matters little."

"Your negroes seem very happy."

"I think they are, and no doubt the majority of the slave owners treat their slaves well; and very likely if the negroes are freed they will be for years worse off in many respects than they are now; but I think as you do, HOPE and as your father does about buying and selling human beings. I think I was born with the feeling. I don't know how else I got it."

The girls sat a long time, heart pressed to heart, talking over the past and exchanging sweet promises of remembrance for the future, little dreaming, as dark as the outbreak was to them, amid what scenes of blood their next meeting would be.

"What am de meaning of all dis talk about secesh, Massa ALFRED?" inquired HANNIBAL, as he gravely went through his morning task of brushing the clothes of the young gentleman. For a moment ALFRED'S bright face was clouded; but only for a moment.

"You have heard a good deal of this, then, have you?" he replied, scanning the old negro's face attentively.

"Wal, yes, massa, a considerable much. There's no way of not hearing it, 'less we stops up our ears, and there don't seem to be much time to give to dat performance on dis plantation, at any rate. HANNIBAL only ask for information. De skin be contageous brack, Massa ALFRED. Golly! dare's no 'stake about dat; but dis lump of ebony jus' about come to de 'clusion dat dare's jus' as much—wat you call 'em—inquisitiveness—stowed away under a brack hide as a white one."

"Yes, HANNIBAL," laughed his companion, "that has been my experience; but what do you want to know?"

"Wall, massa, dis be 'bout it. Wat am old Caroliny 'specting to do wid all dis howling 'bout getting out? Making out, in de fust place, dat she could get out, where de debbil be she going when she am out? 'Sense de word, Massa ALFRED, but somehow it do seem to HANNIBAL 'sif de old feller hab jus' jumped into mos' ebery body."

"Sound again, HANNIBAL!" and the young man stopped a moment and reflected what he had best say to the intelligent old negro. Way down in his heart ALFRED HEATHERSTONE despised the institution of his fathers. A Southerner by birth, an aristocrat by education, he was nevertheless in spirit the most democratic of men. To him slaves were not only slaves, but brothers. Like many another true hearted Virginian, he felt that there was nothing in the system to recommend it save the old argument, which had then never been successfully combated, that the work of the South could never be carried on save by negroes and bondmen. "Liberate the slaves, and your beautiful country is but a wretched wilderness," said CALHOUN, in one of his long-to-be-remembered speeches, and this sentiment was not only indorsed, but firmly and honestly believed in by the great mass of slave holders. It was freedom and poverty—slavery and opulence. What wonder that they held on so staunchly and pluckily to the last?

"Bress de LORD, massa ALFRED!" interrupted HANNIBAL, as he hung up his broom and proceeded to leave the room, "HANNIBAL hab no wish to be too inquisitums. He only tink it would be a good ting to know what be going on, so's to tell dem udder niggers de truff. Dey won't git much ob de truff, you can jus' bet high on dat, Massa ALFRED!"

"I realize that fact, HANNIBAL," replied ALFRED, slowly; "I suppose they have already been told the most ridiculous stories about the progress of affairs."

"Dat am de case," answered HANNIBAL, with quite as much deliberation.

"The Northern States, HANNIBAL, have no right to quarrel with our institutions—no right to dictate terms to us. They are insolent in their demands. The chief officers of these United States have been mostly composed of Southern men—who understood their business—knew what was for the best good of the whole country. What do you think GEORGE WASHINGTON would say if he could see the dreadful confusion we are thrown into by a few hot-headed, ignorant radicals."

"Mebbe he do see, massa ALFRED," replied the negro, lifting his eyes with great reverence. "But of course it would be berry wicked for dis old colored pusson to say wat Massa WASHINGTON say—but praps he take into 'sideration dat de present time am a good bit further ahead time dan wen he walk on de earth, Saint dat he was. One ting HANNIBAL hab notice ever sinee he so high, Massa ALFRED, dat de 'pinions ob men no more stan still dan do de men demseves. Ebery ting go ahead; some tings seem to jump ahead—and dat do case at dis time. Seems to Hannibal 'sif de bery hebens demselves hab grown big in de las' few years. Dem stars, too, dey wink at HANNIBAL in a way dey neber winked afore—bress de LORD. De only question dat discomboberated dis skull was—wat dat up and a doing old Caroliny 'speeted to do wid she self after she hab walk away from de res' ob dem States. Do she 'spec to take a trip to de udder side of de big mill pond—as Massa GEORGE call it—and den march back into her place when de rowdidow hab all blown ober?"

"Time will tell, HANNIBAL," said ALFRED, kindly dismissing his servant; "and it is best to speculate as little as possible about it. Growth," he repeated, as the door closed upon the venerable figure, "Growth! This isn't the first lesson I have taken from you, dear old HANNIBAL. Why the possibilities of that nature are beyond all estimate! A christian philosopher by birth—a slave by education! Great Heavens! Is this right? Oh! that WASHINGTON or some other noble spirit *would* speak to this bewildered country! It is no use to take counsel with each other—for even among its Southerners there is very little unanimity of opinion. I see nothing before us but war—war of the bloodiest and most relentless kind."

Mr. BRAYTON appeared singularly disconcerted—strangely cast down by the news constantly arriving from different parts of the country. Very much to MARGARET'S annoyance, he seemed to avoid the drawing-room whenever there was anything particularly jolly going on. Sometimes, in order not to appear eccentric or gloomy, he would join the group for a few moments, and steal quietly away at the very first opportunity. He had attempted, on several different occasions, to have a private interview with Col. HEATHERSTONE on the subject of SUSAN, but the house was so full of company, and the moments so crammed with festivities and startling intelligence, that the suitable opportunity did not offer. Not only did the innate delicacy of the man rebel at the idea of requesting an interview with his host; but something deeper than that even—knowledge that his motives would be entirely misunderstood. If they could meet naturally, drift into conversation naturally, then the whole trouble would be obviated, but, up to this time, no such occasion had offered.—[To be continued.

Ladies' Port-Folio.

A KISS AT THE DOOR.

We were standing in the doorway,
My little wife and I,
The golden sun upon her
Fell down so silently;
A small white hand upon my arm,
What could I ask for more
Than the kindly glance of loving eyes,
As she kissed me at the door?

I know she loves with all her heart
The one who stands beside;
And the years have been so joyous
Since first I called her bride.
We've had so much of happiness
Since we met in years before;
But the happiest time of all was
When she kissed me at the door.

Who cares for wealth of land or gold,
For fame or matchless power?
It does not give the happiness
Of just one little hour
With one who loves me as her life—
She says she loves me more—
And I thought she did this morning,
When she kissed me at the door.

At times it seems as all the world,
With all its wealth of gold,
Is very small and poor indeed
Compared with what I hold;
When the clouds hang grim and dark,
I only think the more
Of one who waits the coming step,
To kiss me at the door.

If she lives till age shall scatter
Its frost upon her head,
I know she'll love me just the same
As the morning we were wed;
But if the angels call her,
And she goes to heaven before,
I shall know her when I meet her,
For she'll kiss me at the door.

WASHINGTON LETTERS.—I.

BY MARY A. E. WAGER.

THE FAMOUS PEOPLE AND SCHOOLS OF BALTIMORE.

Washington is very much like a handsome, fascinating villain repelling one's judgment, but holding captive the senses. No city in America is so vilified and yet so much visited. As for myself, I like it. Its hills and valleys; its cozy, unpretentious houses; its broad streets; its courteous, pleasant, hospitable people; its wire-pulling, tricky but smooth and suave politicians—I like them all. As I never get behind the scenes, I know nothing of its infamy or dishonesty, and for all social and enjoyable purposes, sinners give their best along with the saints, and it is hardly worth while to be too critical so long as you are not a member of the social or civil reform committees. As I write, it is early morning, and the sun has transfigured the city. Its golden film lies on the hills and the house tops, while the dome of the Capitol glitters like a great jewel uplifted from the reach of covetousness. It was this glory, this fresh radiance, that bewildered me into calling this a "Washington Letter," when I meant to devote every word of it to Baltimore, in which city I tarried for a week on my way hither. And Baltimore it shall be. It is a false heart that ignores the beauty of the past in the dazzling splendor of the present. Aside from two women in Baltimore whom I loved, it were difficult to define what attractions the city had for me. But ever since the war the name has had a wicked but resonant charm. Our boys in blue were butchered in her streets, but through all and over all, there were hearts that beat high and bravely and loyally. And may we never grow so old or so ungrateful as not to pray in our hearts, "God bless them."

I stood, on one of the sunniest days, on Federal Hill, where the soldiers were so long encamped. The city, with its spires, lay outspread before us. Away in the distance, over the Bay, floated the flag from Fort McHenry. Washington's Monument rose fair and white from Mount Vernon. From no other point did the city present so attractive a picture. Encompassed in one view, Baltimore is stately almost to magnificence; but taken homœopathically, she is commonplace, sleepy, and lazily good-natured.

Dead or alive, there are scarcely a dozen famous people in the city. Poor, misguided Poe, whose "Bells" have been rung and chimed and tolled on the lips of so many ambitious schoolboys and girls, lies in one corner of a little churchyard, with nothing to mark the spot. The sunshine and storm of twenty years have smoothed the ground above him to a perfect level with the sod about. His poor, old and unfortunate sister, Rosa, remembers the spot, and points it out to such as care to see it. J. Wilkes Booth lies buried in Greenmount, the fashionable cemetery of the city, and bears the perpetuating memory of a monument.

Among the people I cared to see, and did see, was Mrs. Almira Lincoln Phelps, who, with her sister, the late Emma Willard, has educated so many girls. She is quite venerable now, is stout in figure, has dark eyes, a fair complexion, and soft, white curls at each side of her face. She converses with vivacity, dresses handsomely in black, has an elegant home and the society of children. Of late she has directed her energies against the Woman Suffrage movement, feeling that the present woman movement embodies the destruction of society and the ruin of the world. Of course such a lugubrious view of the matter is quite amusing to those who look upon it as the salvation of the world, or at least a decided bettering of it, and I could scarcely restrain a smile at her apparently solemn convictions. "Perhaps you do not believe as I do?" she asked. "No, I think I do not. I am of the opinion that it will require a great deal more than suffrage to make women anything else than women. So long as I do not see my way clear in the matter, I am content to stand on the 'top of the fence,' and watch the contest." She expressed much sympathy with the new avenues of work opening up for women, and hearty co-operation with various efforts for making women self supporting.

Not far from Mrs. Phelps' house, a friend pointed out another pleasant place, bought and paid for by teaching, and the property of a lady who has also a school in Paris. I have come to the conclusion that whatever money a woman can come into possession of, she can do no better with it than to bury it in real estate. It is sure to have a resurrection some day, and often a glorious one. Moreover, it gives a woman a sense of importance. And *apropos* to this matter of teaching, a United States Consul, writing me from Japan, says:—"There is a great chance for some enterprising woman to go to Yeddo and start a girls' school. She could make money. The teachers in the Imperial Schools receive from $3,000 to $4,000, with house." And it seems entirely feasible, now that Japanese princes and princesses are coming here to be educated.

While in Baltimore, I spent a day or two in the High Schools for "Females," which is a very antique word for girls. The semi-annual examinations were in progress, which led to the discussion of some educational technicalities. Everybody agreed that boys and girls should be educated together; that girls excelled as linguists; boys as mathematicians, although the very finest in the schools had been girls. Baltimore school girls are very pretty, exceedingly well dressed, with the exception of wearing their gowns too tight at the waist, and of perpetuating the barbaric custom of hanging rings in the ears. The teachers are women, and, in keeping with the customs of past ages, have to submit to the decorous felicity of having an antiquated schoolmaster at the head of their respective schools. The custom is too venerable to be laughed at, but quite old enough to be laid away from sight.

The Baltimoreans are greatly given to lecture-going, and the lecture committees are ahead of any I know of in point of superlativeness. If any ambitious orator wants to be advertised into fame in one breath, he should go to Baltimore. I went one night to hear an Englishman, an ex-M. P., who was advertised as being the "Greatest Living Lecturer." To have the privilege of sitting in the august presence of so much greatness, by paying the paltry sum of fifty cents, was one thing. To attempt to comprehend the feeling that must animate the heart and brain of the "Greatest Living Lecturer" was another. The lecturer was escorted on the stand by the Hon. Reverdy Johnson (who has less facial beauty than any other man I saw in Baltimore), and proved to be a very good-looking, well dressed Englishman, who talked faster than any woman I ever heard, and kept it up continuously for an hour and a-half, without even so much as stopping to take breath, or allowing anybody else to do so. In point of continuosity and rapidity, he was well advertised the "greatest." But he spoke very entertainingly, and his name was Parsons.

But the charm of Baltimore lies in her social relations. Her people do not seem to be driven by the relentless vigor of ambition and business. The people next door are one's neighbors, and one cannot walk block after block, as in New York, and meet with no familiar face nor cheerful salutation. Very little of sectional feeling, embittered by the war, remains, and, Yankee as I am, I nowhere received kinder, heartier welcome than at the table and around the fireside of "rebels," upon whose walls hung portraits of Gen. Lee and "Stonewall" Jackson.

There are sixty-seven female editors and reviewers in Paris.

Reading for the Young.

THE TWO MULES.

FROM THE FRENCH OF LA FONTAINE.

Once on a summer's day,
Two mules were jogging on their way,
Side by side.

One in his basket carried treasure;
The other wheat, in flowing measure—
Each for his master.

Said number one to number two,
"What kind of stuff is loaded on you,
In that old bag?

"As for me, I carry gold;
My basket's full as it can hold
Of shining dollars."

Said number two to number one,
"My master a great mill doth run—
He makes fine flour.

"I carry all his grain to mill,
And for my pay, have quite my fill
Of oats and hay."

"My humble friend, my heart doth bleed
To find you only carry feed
For millers' stones.

"You should carry loads like mine,
For lords and princes, rich and fine,"
Said number one.

But mules, like men, know not the morrow,
And cannot guess the joy or sorrow
Its hours may bring."

Some robbers then lurked 'side the road
To steal from number one his load
Of shining dollars.

They seized upon poor number one,
And when he tried away to run,
And save his dollars,

They beat him hard, with heavy sticks,
And left him in a sorry fix,
Without his shining dollars.

Ah! then he mourned to number two,
"With all my heart I wish, like you,
My master made fine flour.

"'Tis true, you serve a humble master,
But you escape the dire disaster
That falls upon me."

All ye who carry any treasure,
Gold, wit or brains, in any measure,
Expect the robbers.

For you they surely lie in wait.
Be brave, my friend; don't share the fate
Of number one.

HOW KITTY FOUND A HOME.

Four blind, wee kittens came one day to a home whose master was a miser. Is there any little body who doesn't know what a miser is? I'll tell you what kind of a man this was, and then you'll know what a miser is. He loved money a great deal too much. He loved it better than he did his poor, patient, hard-working wife, for though she grew more deaf every year, he wouldn't spare money to pay a doctor to cure her, nor yet buy her an ear-trumpet, though she had often wished for one. He loved it better than he did his children, for he let his little girls go ragged and barefooted, far into the cold weather, before he could make up his mind to spare money to buy them shoes and stockings, and as for school books or children's papers, they scarcely dared think, much less ask for such things.

And he loved money better than comfort or decency, for he wouldn't fix up the rickety old house they called home, though the wind whistled through the cracks, and the rain came through the roof, and the windows were stuffed with here an old hat, and there a bundle of rags where the lights had been broken out. Yet he had plenty of money in an old, iron-bound chest that he kept, fast-locked, under his bed. Of course, if he loved money so well as this, he loved it too well to use the smallest fraction of a dollar for the bread and milk that the kittens would soon want, so he decided at once that they must be put out of the way.

No matter what he did with them:—I hate to think of that,—but when the children, coming in from picking strawberries to sell, ran pattering out, with their bare, brown feet, to take a look at their new pets, there was only a single one left in the nest.

Well, all the love they would have bestowed on the four, these children lavished on the one remaining kitten. They named her Beauty, and in truth it grew into a beauty. It had the prettiest blue eyes that ever kitten looked out of, and a nice gray coat, and a pair of white stockings, and another pair of gray ones, and its face was white, and its ears dark gray.

By the time the snow flew and the children got their winter shoes, it was nearly as big as its mother, but it was as playful as ever. But the bigger it grew the oftener Mr. Miser was heard to say, "We must get rid of that kitten. We can't afford to keep two cats."

One day he was going to mill. He got the bags of corn into his sleigh, and old "Wreck o' Bones" harnessed, and then he called out, "Where's that kitten? Find it, Minny, Susan, Jane,—some on ye! I want to take it along!"

"What are you going to do with her? You won't kill her, Father?" poor Minny ventured to say, as she stood before him with the kitten snuggled up in her arms.

"I won't kill it. Give it here. I'm a goin' to give it away to somebody as hain't got no cat, or 't can afford to keep two." Minny hugged it close for a minute, and then gave it up to her father, who took it with no gentle grasp, stepped into his sleigh and drove off, leaving a group of tearful, indignant children gazing after him.

"I guess this is far enough from home so the critter won't find her way back," said he, when he had got almost to the mill. And then he dropped the kitty out of the sleigh upon the cold snow.

Poor Beauty looked wildly about her for a minute, and then she scampered as fast as her feet would carry her for the fence, the underbrush, a log, the woods, any place where she could hide from this great, wide, strange, white world. In the edge of the woods, near the mill, lived little Lottie Dean, with her grandmother. Lottie was a dear, loving little girl. Her mother had died when she could just begin to toddle about the floor, and her grandmother had taken care of her ever since she could remember. Now the grandmother was getting old, and Lottie was beginning to pay her for all her love and care for her. She washed the dishes, swept the room, made the beds and milked the cows, and did a great many other things that a willing child of eleven years old can do.

While poor Minny, and Susan, and Jane sat toasting their feet at the fire, and wondering who had got their poor Beauty, Lottie Dean, standing at the table washing up the tea things, heard a faint mew at the door. She hastened to open it, but she saw nothing, for Kitty was so much afraid that she drew back into the dark as soon as the door opened. Lottie waited a minute and then shut the door. Presently the kitten mewed again, for hunger and cold were making her bolder. Lottie opened the door very softly this time, and caught sight of Beauty's white face and shining eyes. She hid behind the door, leaving it half way open. Soon Beauty crept shyly in. Then Lottie shut the door very quickly. When the kitten found herself a prisoner she was a good deal frightened at first, but by nine o'clock she was sitting in Lottie's lap purring her very loudest. It was a very good home that Kitty found, and she stayed in it a long while, even till she was eleven years old. Then, the old grandmother having gone home to God, a thrifty young farmer came and took Lottie away to a new home, and Kitty went with her, and there she is to this very day.

On the 29th ult., an express car dashed into the platform of a depot at Eagle Station, Ohio, injuring a number of persons....By a collision on the Pacific Railroad at Red Buttes, on the 29th, twelve or fifteen persons were injured....On the 29th of January, a mail train on the Erie R. R. was thrown off the track at Lock Haven. One person was killed, and several wounded.

Crimes.

IT now appears that Prof. Panormo of Brooklyn, N. Y., was murdered by some unknown person, while on his way from the house of a pupil to a street car....On Sunday, the 28th ult., Mr. Alfred East, a room-mate of Prof. Panormo, committed suicide by shooting....On the 28th ult., in Brooklyn, N. Y., a man named Robert Lyons entered the house of one Michael Farrell, and commenced an attack on his family. During the affray Lyons was killed....Highwaymen have been waylaying and robbing citizens in Brooklyn....On the 26th ult., Fannie Hyde shot and killed G. W. Watson, Brooklyn. She charged him with seduction....On the 27th ult., in New York City, one Henry Hepner, a dissipated German tailor, shot his son, a young man of 18, on the street, in the presence of his wife and family. He then attempted to kill himself....Two colored men were murdered by a third, at League Station, Tenn., about the middle of January. They had been gambling....John Harvey, while drunk, attempted suicide in New York, on the 28th. On the same day Mary Hennette took arsenic....On the 29th ult., two highwaymen were captured in Troy....Three prisoners escaped from the jail in Covington, Ky., on the 29th ult ...Crime is on the increase in Brooklyn, and murderous assaults are of frequent occurrence....Capt. Murray of Jamestown, N. Y., has been indicted for manslaughter, on account of the explosion of the steamer Chautauqua.... Helen Josephine Mansfield has been mobbed in Boston....Rose Kelly and Albert Lanmann have committed suicide in San Francisco.

Railways in Indiana.

PRESIDENT TUTTLE of Wabash College, writes to the N. Y. Evangelist as follows:—Last year a second new road was opened through our town, the "Logansport, Crawfordsville and Southwestern." Its importance to local interests is seen in the fact that the counties through which it passes paid such heavy sums to secure it. It passes through some of the richest portions of the State, part of which have had no railway conveniences. The county of Clinton is a very beautiful and rich section, which was at times blockaded by its mud road. Its county seat, Frankfort, has paid liberally to get this road, and was fortunate in having the twelve miles built between it and Colfax. This has been profitably operated for two years. Last year the road was built from Colfax through a magnificent country to Crawfordsville, thence to Waveland, and thence to Rockville in Parke Co. It is also built to Kilmore, a few miles north of Frankfort, so that about sixty miles of well built and well ironed road, with superior rolling stock, are in actual operation. Its great importance is seen in its opening so large an extent of new country to the great east and west thoroughfares at Colfax and Crawfordsville, and also, when finished, at Logansport. Already it is doing a growing and remunerative freight and passenger business. This is to be largely increased by one special means.

Indiana hitherto has been the great wood-burning State, but a vast change is taking place in favor of coal. Within a few years, the finest beds of bituminous coal, also *block coal*—pronounced the best in the West for iron making—have been developed. The coal business of Indiana is already very large, and it is rapidly increasing. These valuable coal measures—in the very best localities for mining and transportation, and of the best kind—are reached by the Logansport, Crawfordsville and Southwestern Railroad. This must furnish it freights in the future in unlimited quantities. If, as is rumored, the road be continued southwest to Paris in Illinois, and northeast to Kokomo in Howard county, Indiana, it will have still larger facilities for doing business at paying rates. Howard county has already voted it a heavy bonus.

The President of the road, Mr. John Lee, is one of our most reliable men; and its main builder and contractor, on whose shoulders the burden rests mainly, is Wm. P. Cutler of Marietta, Ohio, who is one of the ablest business men in Ohio, and whose career as an extensive builder of railways at the West has been a complete success. Associated with these gentlemen are men in the board and in the executive department, whose presence is the guaranty of efficiency, wisdom and fidelity in its management. Thus the opening of this road is an important event for a large region of Indiana, and promises to be a very excellent investment of capital.

FOREIGN NEWS.

From Great Britain.

THE Prince of Wales is able to walk out.... Five persons have been drowned at the Blackwood colliery....Mr. Otway, M. P., thinks the state of Europe is such as to lead to war, and he also fears war with America, if the Alabama claims are allowed....It is proposed to send 10,000 emigrants annually from England to Brazil. ...The Prince of Wales will make a sea voyage to the Madeira Islands....The Queen will not open Parliament in person ...A definite word has been sent to France in relation to the Commercial Treaty....Gladstone is charged with being in favor of abolishing the House of Lords.... The boiler of the Amazon, a British steamship, exploded at Bordeaux, on the 30th ult., killing two men....It is proposed to license gambling at the French watering places.

Boynton's Lightning Saws.—Having received many letters of inquiry in regard to these Saws, we publish the following letter, which explains itself:

E. M. Boynton, Esq., Proprietor of the Lightning Saw, No. 80 Beekman St., N. Y.—DEAR SIR: I have caused thoroughly to be tested in steady practical use your Lightning Cross-Cut and Wood Saws. I find them all they are recommended, being superior to any other in speed, ease and simplicity, and especially in perfect clearance. For the past month we have used your cross-cut in sawing up white oak and hickory timber for fuel. I think the saw in the hands of common men cuts twice as fast as any other I ever saw, and saves its cost over the ax every three days' use. I consider it an invaluable article for every farmer.

I have tried the best of other saws all my life, as my father formerly cut much ship-timber. I can truly say I would not use any other saw as a free gift. JOHN CRANE,
President Farmers' Club.
Elizabeth, Union Co., N. J.

Youthful Beauty.—A clear skin and a bright complexion has a charm for all. How to obtain it and how to keep it is a secret worth knowing, and one long wished for by the fair sex. A delightful toilet preparation, known as Geo. W. Laird's "Bloom of Youth," will most effectually produce the above result. Warranted to be entirely free from any material detrimental or injurious to health. Sold at all druggists. Depot, 5 Gold street, N. Y.

Watch No. 12012, Stem Winder—bearing Trade Mark "United States Watch Co., Marion, N. J."—manufactured by United States Watch Co., has been carried by me five months; its total variation from mean time being only twelve seconds. GEO. LOVIS, Gen'l Eastern Passenger Ag't., Toledo, Wabash & Western Railway.

Sugar at Six Cents a Pound would not be as cheap as our Four Ton Hay Scale. The Jones Scale Works, Binghampton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, February 3, 1872.

THE Secretary of the Treasury has issued his First of February Schedule of the Public Debt of the United States. It shows a further reduction since Jan. 1, of $5,633,161, making the whole reduction under the present Administration, $237,258,310. The debt, as now classified, is:

In Funded 6 P cents. (Gold,)		$1,512,708,550
In Funded 5 P cents, (Gold,)		339,441,650
Total Funded Stocks		$1,852,150,200
Treasury Circulation, &c.	$502,266,750	
Less Gold and Greenbacks on hand	116,212,001	
		$386,054,749
Total debt		$2,238,204,949
Total, March 4, 1869:		
Funded	$2,107,846,150	
Circulation	417,617,109	
		$2,525,463,259
Reduction as above		287,258,310
Gold Interest charge, March 4, 1869		$124,255,350
Present Gold Interest charge		107,731,595
Saving per annum		$16,520,755

Trade has been fairly active during the week. The imports continue on a large scale—the amount marketed at New York being at least 10 per cent. in excess of the same month last year. Domestic Goods are brisk, the receipts of cotton only moderate, and the price advancing on lower estimates of the whole crop.

The following are the comparative movements of the City Banks for the past fortnight:

	Jan. 20.	Jan. 27.
Capital	$87,155,500	$87,155,500
Loans	279,032,900	280,881,000
Gold and Greenbacks	73,112,800	71,596,500
Deposits	220,361,500	221,074,200
Circulation	28,371,200	28,288,900

PRICE OF STOCKS AND BONDS.

American Gold	109½	N. Y. Central Scrip	83¼

N. Y. Central Stock	97¾		

* Extra Dividend.

The changes in our table this week are not important as to Gold, although early in the week the price was run up by speculation to 110¾@110¼ per cent. It is now about 109½ per cent. The United States Stocks are a fraction lower. The Railroads, after some weakness a few days ago, are now about the same as on previous report. The Northwest Common is 2 P cent. higher. Erie, after dropping from 33 to 30½, recovered to 31¾ per cent. The St. Paul Preferred Stock is paying a yearly dividend of 7 per cent. and our present quotation is 75 per cent. extra dividend, against 82½ last week. Virginia new bonds (consolidated) have recovered to 55 per cent., or 3 per cent. advance on last week's report. Money rules steady at 7 per cent. at Bank and in Wall Street.

Messrs. Jay Cooke & Co. report the sales of Northern Pacific Bonds in this country the last two days in January, as having reached $239,000—making a total for the month, of $1,513,400.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Jan. 2, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 21,823 bales of cotton, 808 pkgs. dried fruits, 3,882 bbls. eggs, 31,436 bbls. flour, 18,200 bush. wheat, 480,800 bush. corn, 70,224 bush. oats, — bush. barley, 6,450 sacks grass seed, 1,101 bbls. beans,—bags do., 2,125 bbls. corn meal, 1,000 bags do., 417 bales hops, 2,522 pkgs. pork, 1,131 pkgs. beef, 11,452 pkgs. cut meats, 12,707 pkgs. lard, 928 kegs do., 10,769 pkgs. butter, 2,411 pkgs. cheese, 5,082 dressed hogs, 4,412 bags peanuts, 702 hhds. tobacco, 1,732 boxes and cases do., 2,802 bbls. whisky, 862 bales wool.

Beans and Peas.—Receipts of beans for Jan., 4,500 bbls.; same month last year, 7,040 do. The market is very firm, in the face of a concentration of the stock, and marrows have advanced. Peas are selling moderately well at dull quotations. We quote prime medium beans, $2.45@2.50; good mediums, $2.20@2.35; poor, as low as $1.25; pea, $2.50@2.60; kidney, $3.10@3.25; red kidney, $1.25@2.25. Prime marrowfats, $3.00@3.10; fair do. $2.25@2.80; common lots as low as $2.25. Canada peas, in barrels, $1.20; green peas, $2@2.05; Southern, B. E., per two bush. bag, $2.50@2.75.

Butter.—Receipts of butter for January, 45,900 pkgs.; same month last year, 40,300 do. There have been one or two good selling days since our last; but these fitful starts in trade do not give the relief wanted while we are carrying so large a surplus. Later receipts have included a larger portion of table classes than was contained in the previous week's supply; and in sections that have had the handling of fine lots, a brisk and steady trade can be noted.

State dairies, fine, 30@32c.; State dairies, fair to good, 26@28c.; State, half-tubs, good to fine, 32@35c.; State, do., common to fair, 24@28c.; State, firkins, fine yellow, 28@31c.; State Welsh, good dairies, 28@31c.; State do., common to fair, 22@25c.; State do., fresh made, 32@34c.; State, fancy select tubs, 35@38c.; Ohio, good, 18@20c.; Ohio, Central and Southern, 14@17c.; Western, choice yellow, 20@21c.; Western, store-packed, 8@11c.; rolls, good West., 18@20c.; rolls, common to fair, 13@16c.; grease butter, 9@9½c.

Beeswax—Is held firmly, with moderate arrivals. Sales of Southern at 31½c.

Broom Corn.—The market shows no improvement. There is a fair amount of stock offering at 8@9c. for new hurl; 5@6c. for new green; 3@4c. for new red, and 2@6 for old.

Cheese.—The market has been excited. Exporters, finding the stock of such grades as they can use steadily diminishing under an active call from the home trade, have been anxious to secure stock, and there has been some competition. Holders have gained confidence and refuse prices that last week would have been considered satisfactory. 16c. is frequently asked for choice factories. The cable is quoting an advance of 2s. It is the impression that the current prices will start increased shipments forward from the interior, more especially Western make, but most parties say there are fewer to come forward than had been expected, and not sufficient in have any material effect upon prices. The shipments the past week have been 221,524 lbs. The quotations are, for State factory, prime, 15½@16c; fair to good do., 14½@15½c; ordinary do., 11@13c; skimmed, 7@10c; State farm dairy, good, 13½@15c; common, 7@10c; Vermont factory, good, 14½@15½c; Ohio factory, good to fine, 14½@15c; common, 10@13c; English dairy, good, 12@14c.

Cotton.—Prices have advanced a fraction. Foreign advices have been encouraging, and as there is some margin for shippers a number of full parcels have been taken for export. Contracts are still held with confidence, but the inquiry is less urgent. Holders are reducing the offerings, but there is sufficient on sale to meet the demand.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	19¾	19¾	20¼	20¾
Good Ordinary	21¼	21½	21¾	21¾
Low Middling	22	22½	22¾	22½
Middling	22⅝	22⅞	23	23¼
Good Middling	23⅜	23½	23⅞	24

For forward delivery latest sales are at 22½c. for Feb.; 23¼c. for March; 23⅜c. for April; 23½c. for May; 23¼c. for June, on basis of low middling.

Coal.—The auction sale of Scranton established a further decline in prices. Egg, stove and chestnut sizes 50@75c. per ton lower, and grate 25c. off.

Dried Fruits.—We are still without the wholesome demand expected at this season, and the local call, though good, does not reduce the large stock of apples and peaches to any great extent.

Apples—Old State, grs., 7@8c.; Western, new, 8@8¾c.; Southern, new, grs., 7@8c.; do. fine, sliced; 9¾@11¼c.; new State grs., 9@9½c.; do., sliced fine, 11@13c. Peaches, peeled, new N. C., 17@18½c.; do., do., do., 15@16½c.; do. E. Sh. Va., 15@16½c.; new unpeeled halves, 7¾@8c.; do. quarters, 6c. Plums, 25@27c. Cherries, new, P lb, 29@30c. Blackberries, 13½@14c. Raspberries, 28@29c.

Eggs.—After the severe decline of last week the market improved a little, and at the close, with much lighter arrivals, there is a firm feeling. Sales of fresh at 32@33c. for Western; 33c. for State; 32c. for Pennsylvania; 32@33c. for Canadian; 32@33c. for Southern; 34@36c. for Jersey. Receipts for January, 13,000 bbls.; same month last year, 10,250 do.

Flour. The market is in an unsatisfactory position. The foreign market offers no encouragement to shippers, and stocks are steadily increasing. The home trade is buying a fair amount of stock at easier rates. We quote at $6.75@6.10 for superfine State; $6.45@6.60 for common extra do.; $6.65@6.80 for good to choice do.; $6.85@7.25 for fancy do.; $5.75@6.10 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.35@6.70 for extra do.; $6.75@7.25 for choice extra do., including shipping brands of round hoop Ohio at $6.60@6.80, and trade brands of do. at $6.85@7.50; good to choice white wheat extras at $7.20@7.40; Minnesota, fair to very choice extra, at $7.00@8.50; St. Louis at $6.50@7.25 for common to fair extra, and $7.30@9.50 for good to choice. Southern is selling at $6.65@7.35 for extras and $7.10@9.50 for good to choice. Rye is steadily held at $4@5.20 for common to fair.

Fresh Fruits.—Dealers are dividing the stock of apples among other cities, but even this reduction in the supply will not admit an advance in prices. Cranberries in fair demand when prime.

Apples, Mich., &c., bbl. $2.50@3; do. State good, $3.50@4; do. selections, $4.@4.50; cranberries, fine, bbl., $8.50@9; do. common to fair, $5@7.50; do. crates, fine, $3@3.25; do. do. common, $2@2.50; oranges, Lt., bbl., $7@8; peanuts, Wilmington, bush., $2@2.10; Virginia, new, $2@2.20; do. common, $1.25@1.50; chestnuts, $1.75@2; hickory nuts, $1.75@2; black walnuts, 75c.; pecan nuts, P 8@9½c.

Grain.—The movement in wheat has been moderate. Some few lots have been taken by shippers. We quote No. 3 spring in store at $1.50@1.54; No. 1 spring in store at $1.55@1.58; Winter red Western, $1.60@1.63; amber Western, $1.65@1.72; and white Western at $1.65@1.78. The exports of corn run close on to the receipts, and the stock shows some reduction. Prices have gone up some. Sales at 74@74½c. for new Western mixed, afloat, and 80c. for very choice old Western mixed, delivered. Oats are held with more confidence, with reduced offerings. Sales at 52½@55½c. for Western and Ohio. Barley is steadily held, with a fair business. Sales at 86@87½c. for Western, and 84c. for two-rowed State in store. State malt is selling at $1.

Hops.—The market has been rather quiet. Brewers have been taking a few prime lots and paying full prices. There is some inquiry from dealers, but prices are held too high for them. There is only a moderate amount of stock offering. The receipts are remarkably light. Holders, as a rule, are very firm in their views. We quote:

New Yorks, growth 1871, 20@65c.; Eastern do. 1871, 20@60c.; Western do. 1871, 20@60c.; yearlings do. 1870, 10@30c.; olds do. 1869, 10@15c.; old olds do. 1868, 8@12c.; Californians do. 1870, 15@30c.; Californians do. 1869, 9@15c.; Bavarians, 85c; English, 65c.; Belgians (nominal), 55c

Hay and Straw.—Prices are held a trifle higher. The arrivals are small, and less prospect of an early resumption of river navigation. Shipping hay, $1.35@1.40; retail qualities, $1.50@1.75. Long rye straw, $1.10; short rye, 80c@$1; oat, 80@90c. Clover hay, 95c.@$1.15; salt do., 75@80c.

Miscellaneous.—Linseed oil is higher, on account of short shipments of seed from Calcutta. There are a large number of orders from out-of-town buyers. Sales at 81c. 82 casks of spirits turpentine, 74@75¼. Leather, at 24½ to 27, for light hemlock; 26@29 for middle do., 27@27@29 for heavy do. Lump lime, $1.75. Cut nails, $4.75@5.50. Lath, at $3.50. Lumber, at $28@30 for spruce boards and planks; $25@34 for hemlock boards and planks. New Orleans molasses, new crop, 45 to 57c. No. 1 Shore mackerel, $16.50.

Provisions.—The changes in the market for pork have been slight. Exporters are doing very little, and the home trade here is small. Large arrivals of hogs in the Western cities create some uneasiness among holders. The consumptive demand at the West is brisk, and the shipments to this market are unusually light. No general concessions are offered, although some few lots have been sold at easier prices where there has been a disposition to unload. Old mess sold at $13.50; new mess quited at $14.50. Sales for March at $14.50. New extra prime on spot at $12.25. Dressed hogs are offered freely at easier figures. Western, 6@6¼c. City, at 6½c. for heavy, 6¾@7½c. for medium and light; middles are held at firm prices, in sympathy with the feeling the West. Exporters have been buying to a moderate extent. The orders from the other side are larger, but generally at something underasking figures. Sales of short rib at 7½ c., long clear, 7½c., short clear, 7¾c., and for March delivery, short clear at 8c. Cut meats are in moderate demand, at steady prices. Hams in pickle, 9@9½c.; do. in salt, 8½@9c. Shoulders in salt, 5¾@5½c.; do. in pickle, 5c. Smoked meats, there is a moderate jobbing business at old rates. Hams, 11@13½c. Shoulders, 6¼@7c. Clear rib, 8@8¼c. Lard has been sold to exporters at steadier prices. At the close, the arrivals are larger, and prices are a fraction easier. Western steam, 9¾c. for spot delivery; 10c. for April. City, quiet at 9¾@9¾c. for steam and kettle. Stearine is in good demand at better figures. Prime, 9½@9½c. Beef is dull at $8@11 for plain Western mess; $11@13 for extra mess. Beef hams are quiet at $22@26. Tierce beef is held steadily at $15@18 for prime mess; $19@21 for India mess. Tallow meets with a fair shipping demand at 9 to 9¼c. Stock of pork in yard, Feb 1st, 47,000 bbls., 20,189 of which are old. Beef, 62,718 bbls. and tierces, 9,317 of which are old.

Poultry and Game.—Now that all chance for a harvest is over, dressed poultry begins to shape for prices satisfactory to both seller and producer.

Turkeys, Western, good, 15@17c.; do. poor and frozen, 11@13c.; do. State, 17@18c.; do. Jersey, 15@19c.; Ducks, Western, 11@17c.; do. poor and frozen, 12@13c.; do. State and Jersey, 15@18c.; Geese, Western, 10@12c.; do. poor and frozen, 8@10c.; do. State and Jersey, 12@14c.; Fowls and Chickens—Western good, 14@16c.; do. poor and frozen, 11@13c.; do. State, 15@17c.; do. Bucks Co. and Jersey, 17@18c.; capons, 25c. Fowls and chickens—Live, State and N. J., 15@16c. do. Western, 14@15c; roosters, 8@9c.; ducks, per pair, 75c.@$1.50. Geese—Western, $1.50@1.75; do. Canada, $1.75@2; do. Jersey $3@3.50; turkeys, 16@19c.

GAME.—The run that birds received during their cheap spell used up a large quantity of stock and the market for quail and grouse is firmer. Ducks when prime are doing better. Large game is slow of sale and easy prices continue to rule. The first of March will wind up the sale of many items of game. Ducks, teal and wigeon, 30@40c.; do. mallard and red, $1; do. canvas, $1.50@2. Venison, whole, ₱ lb., 6@8c.; do. long saddle, 8@10c.; do. short saddle, 10@12c.; do. Minn., 13@15c. Buffalo hind saddles, 2@6c.; do. calves, 3@6c. Quail, scarce, ₱ doz., $1.25@2.50; do. soft and small, $1.50. Grouse, ₱ pair, 65@70c. Partridges, Eastern, 40@50c.; do. State and Western, 60@70c. Rabbits, 20@30c. Hares, 30@35c. Squirrels, gray, 8@10c.

Seed.—The arrivals of clover are larger, but they are worked off easily at steady figures. Sales are on the basis of 11½ for prime Indiana and Michigan, and 10½ for Ohio.

Vegetables.—Potatoes unchanged. Trade limited; Stock is so abundant buyers do not purchase beyond direct wants. Early Rose for seed are higher. During the week 400 boxes Bermuda tomatoes arrived. These are too early to sell. Quotations were $1.25@1.50 for 5-quart box. Onions very abundant for the period.

Potatoes, Early Rose, bbl., $2@2.25; P. Blows, $1.75@2; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.25@1.50; Dyright, $1.25@1.75; Nova Scotia, $1.75; sweet Del., $3.75@4.00. Onions, red & yellow, $1.50@1.75; white, $2.50@3; Conn., 100 strings, $2.50@3. Garlic, per 100 bunches, $20@23. Turnips, Russia, bbl., $1.25; flat, $1@1.25. Cabbages, per 100, $5@7. Hubbard squash, per bbl., $2@3.25; marrow, $1.50@1.75. Beets per 100, $1.25. Carrots per 100, $1.50.

Tobacco.—Prices of Kentucky leaf have been reduced ¼c. Supplies a little larger, buyers taking only small lots. In seedleaf, a very fair inquiry is noted for fine wrappers. Spanish qualities are held at strong prices. The new crop seedleaf has been bought up freely at the East. In Connecticut and Massachusetts, 35,000 cases have been secured, largely by parties here. In Ohio, about 12,000 cases have been taken, at from 9 to 11c for running crops. 3,000 cases have been bought up in Pennsylvania, at 5@7c for fillers; 15@25c for wrappers. As far as we can learn, negotiations for New York and Western grades have been somewhat unimportant.

Wool.—Prices of fleeces have again advanced; 80c. is asked, in instances, for good Ohio. Buyers scarce at this figure; they are willing to pay 75c. Holders quite indifferent. Pulled descriptions sell freely at comparatively fair prices. Texas and California moderately active. Foreign sell well at prices in seller's favor. The stock is being steadily reduced, and as it cannot be replaced at current rates, there is no disposition to force business among holders. Latest sales of fleeces are at 75c. for combing; 72½c. for super pulled; 71½@72½c for extra; 70@75c for super and extra; 58c for Oregon; 50c for Colorado; 55c for slightly burry fall clip California; 38@40c for full do.; 60c for Angola; 35c for Mestiza; 43c for Cape.

Whisky—Is held rather higher, but trade is light. Western, 94c.

ROCHESTER, N. Y., Feb. 1.—Wheat is quiet and firm with a slight advance in price. Red winter, $1.48@1.50, and white $1.55@1.65. Corn 70c per bushel. Oats, 45c. Barley in better demand, selling at 70c, two-rowed, and 80@84c. for four-rowed. Beans, $1.50@2.50 per bush., and market dull. Dressed hogs are dull and lower, selling at $5@5.50 per cwt. Mutton 1c. higher, selling from 5 to 6c. ₱ lb. Chickens scarce, at 14c. Turkeys, 14c. Eggs 30@34c. Butter, 23@25c. The wool market is very firm; there are no sales, as stock is all out of farmers hands, but wool is worth here 60@65c. ₱ lb. Clover seed dull, $6.75@8 per bush.; timothy seed, $3@3.50 per bush. Lard 11c. ₱ lb. Honey, 22@25c. ₱ lb.

LIVE STOCK MARKETS.

NEW YORK, Feb. 1 1872.

THE freight question appears to be considerably muddled, and drovers are again in a state of uncertainty. After notifying shippers that the rates would be largely increased Feb. 1st, the railroad officials now declare there will be no change for the present. There is some little hitch in the arrangements, but it is altogether likely that they will yet come to terms and that the rates will soon be advanced. The idea of Union Stock Yards seems to enter into the discussion, and it is hoped that a consummation of that desirable object will yet be obtained. It is worse than folly to think that each railroad should have its separate cattle market where all concerned often get in ignorance of what is going on elsewhere.

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	7,169	85	752	23,013	29,154
Last week	7,693	80	924	25,833	38,858
Correspond'g w'k '71	6,741	57	615	27,386	12,858
Average, '71	7,187	88	2,301	25,132	25,177

Beeves.—After a strong market last Monday, with the large number of 5,216 beeves on sale, we now have a downward turn again, the fact that cattle are still to come forward at former low freight charges having the effect to check that laying in of stock which butchers contemplated. The arrivals have not been large since Monday—only 828 head,—but there are many on the way, started with the idea that the present would be the last week before they would have to pay double rates for bringing. Many of the late arrivals have been poor cattle and had to be sold at 9@10¼c. The offerings for Monday were 185 car loads at Communipaw, 26 at 100th st., and 61 cars at Weehawken. Some of the stock was late in and had to go over for another day. The large proportion of these cattle made the fat droves in special request; prices good. In fact, a few of the finest reached 13½c. on the scales, but they were really show animals. Fair to good lots went at 11¼@12¼c. Bulls were in excess of demand and sold at 4c@4½c. ₱ lb., live weight. The weather was cold and fine for trade, but butchers begin to fear a thaw while large stocks of dressed beef are on hand. The recent advance in pork may have the effect to check the downward inclination of beef. Chicago dressed beef is arriving sparingly. It arrives in good order, only is so solid frozen that it is difficult to cut it up. It sells at 8@9¼c. by the carcase. The decline on beef is about ½c. since Monday.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Choice bullocks, ₱ lb.	12¾ @ 13	12¾ @ 13
Good to prime	11¾ @ 12	11¾ @ 12
Medium	11 @ 11¾	11 @ 11¾
Ordinary	9¾ @ 10¾	9¾ @ 10¾
Poorest grade	8 @ 9	7¾ @ 9
Average of all sales	— @ 11¾	11¾ @ —

Milch Cows.—After a good demand one week ago, there is a lull in the fresh cow trade. The supply is rather in excess of the demand, and business dull, but prices are not materially different. Very few cows are sent in good enough to exceed $85 each, and it takes fair cows to reach $75. A lot of 26 head varied from $50 to $80, averaging about $65 each.

Veal Calves.—While live calves remain as last week, fat hog-dressed veals have advanced ½c. ₱ lb. The best are quoted at 14½c., though the very finest are selected at 15c.; fair to good selling at 12@14c. Live range from 7 to 10½c., a few retailing at 11c.

Sheep.—Arrivals are lighter, and the market rules very firm at 8½@8¾c., though 8¾c. was reached for a car extra fine 105 lb. Ohio sheep. The demand is good, and bids fair to continue so. Farmers are certainly getting paying prices for sheep now, but with the idea of increasing their flocks, they are not inclined to take advantage of the present high rates. Among the recent sales were 172 Canada sheep, 118 lbs., at 8¾c.; 278 Ohio, 90 lbs., 8c.; 320 Kentucky, 85 lb., coarse, 7¾c.; a car poor 72 lb. Ohio, at $6.55 per cwt. The average of 5,708 sold during the week was $7.39, while 2,785, mostly thin, averaged $6.75, and 7,281 went at $7.44.

Hogs.—These are running lighter, both live and dressed, and all kinds sell for more money. Live have advanced to 5¾@5¾c.; city dressed, 6½@7½c.; and Western 6¾@6¾c., the market closing firm.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

FIRST MORTGAGE SINKING FUND BONDS.

(COUPON AND REGISTERED.)

ISSUE LIMITED TO $16,300 PER MILE.

The following is a brief summary of the advantages offered to investors in the First Mortgage Bonds of the

Logansport, Crawfordsville and Southwestern Railway,

A road in Western Indiana, extending from Logansport to Rockville, a distance of ninety-two miles.

Two conditions are essential to a good investment—safety and profit.

The paramount consideration on the part of any one having money to invest should be the safety of the proposed investment.

The security on which these bonds are based consistes of very valuable franchises of the Company—a new and well-built railroad, of which the greater part is already in actual operation, suitable real estate in the growing cities on the line of the road, with substantial freight and passenger depot, and other buildings, and a full equipment of complete passenger and freight trains.

The total amount of bonds issued is limited to $1,500,000 (being but $16,300 per mile,) constituting the first and only line upon the entire property of the Company, and being but a small proportion of the intrinsic worth of the property mortgaged.

The location of the Logansport, Crawfordsville and Southwestern Railway is singularly fortunate for securing to it a large business. The road passes through a thickly populated and rich agricultural portion of Indiana, at present without railroad facilities, where abundant surplus products seeking Northern and Eastern markets, a large local passenger traffic, and connections with at least ten different railroads which supply both through and way freight, should amply provide for the prompt payment of interest on its bonds, and certainly insure its success.

The transportation of flour, grain, staves, lumber and live stock, must yield a large revenue. An important business will also be done in carrying building stone from extensive quarries opened on the line of the road. A special demand for this stone arises from the fact that it is fire-proof, and not surpassed by any in respect to beauty and durability.

To all this there is to be added the heavy coal traffic, mainly with reference to which this road was projected, that must arise from penetrating for twelve miles the celebrated Black Coal field. This business alone should provide sufficient revenue for the entire interest on the bonded dept, and its payment may thus be considered doubly secured.

The road passes centrally through five of the wealthiest counties in the State, in each case through the county seat. Statistics show that "every railroad constructed, adds five times its value to the property of the country." With the growth of these communities the traffic of the Logansport, Crawfordsville, and Southwestern Railway will keep pace. Thus the safety of an investment in its securities will be day by day increasing, and they must continually advance in value.

Next in importance to the safety of the investment is its remuneration to the investor.

The securities of this road were selected by us to be offered to our friends and investors generally, after a careful examination of many different railway enterprises, upon a conviction that the bonds of the Logansport, Crawfordsville, and Southwestern Railway offer at once the utmost security, and the most liberal returns, consistent with such safety.

These bonds are coupon and registered; bearing interest in gold, at 8 per cent. per annum, free of Government tax, payable quarterly in New York. A sinking fund is provided for the ultimate payment of the principal.

At the present rate of Government Securities, none of them pay the investor 6 per cent., and some less than 5 per cent. per annum, upon the cost of investment. The bonds of the Logansport, Crawfordsville, and Southwestern Railway, at their present offering price, pay almost twice as much interest to the investors as those of the United States.

For the present we offer these bonds at 95 and accrued interest in currency, or will exchange them for United States bonds or other marketable securities at the rates of the day, reserving the right to advance the price at any time without further notice.

Further and full particulars with pamphlets, maps, &c., furnished by us upon personal or written application.

THE IMPROVED UNIVERSAL IS THE BEST WRINGER.

1st REASON.—It has ROWELL'S PATENT DOUBLE COGS on one end only of the shaft. These cogs have longer teeth, can play apart farther without disconnecting, can never crowd together so as to bind, never work sidewise out of place; wear more evenly and turn easier than any cog-wheel ever invented.

2d REASON.—It has the **Patent Stop**, which keeps the Cogs from disconnecting and losing their power, yet allows the rolls to play apart far enough to wring the largest article easily.

3d REASON.—It has the **Malleable Iron Folding Clamp**, which cannot be broken, and fastens securely and easily to tubs of any curve, and fits washing machines or stationary tubs of fully two inches in thickness, which no *curved* or ordinary clamp can do, and it folds under out of the way when not in use and for convenience in packing.

4th REASON.—It has the **Folding Apron** or Guide, to conduct the clothes safely over the side of the tub, free from contact with the clamp or screws.

5th REASON.—It has the peculiar advantage of **Two Pressure Screws**, so arranged with patent wooden springs, that each screw presses on both ends of the roll alike, the same as if it was in the center, while the two together *give double the capacity for pressure.*

6th REASON.—The Elastic Rubber between the strong wooden springs relieves their rigidity, makes the machine turn easier, saves the rolls from strain, and causes the pressure to bear on both ends of the roll alike.

7th REASON.—All its IRON parts are WROUGHT or MALLEABLE, not liable to break, and carefully galvanized, to prevent rust.

8th REASON.—The Handle or Crank is not screwed on like other wringers, but BOLTED or RIVETED, and will turn clothes backward or forward, or from one tub to another, without coming loose.

9th REASON.—Its folding lower slat lifts down to any stationary tub or washing machine, and prevents water slopping over, as it will with ordinary wringers.

10th REASON.—**It is very light and portable,** yet built so substantially that the strongest person can not break it in wringing the largest garment.

With all these Advantages, its price is no greater than that of any inferior wringer with cogs.

Sold by the House Furnishing and Hardware Trade generally.

The celebrated

DOTY WASHING MACHINE

Manufactured and sold also by

PURE CANE SEED.
VARIETIES.—Regular Sorgo, Liberian Neeazana and Oomseeana.

Price—By mail, postage paid, 50 cts. per lb.; by express, 25 lbs. or less, 90 cts. per lb.; over 25 lbs., 20 cts. per lb., package included. Two to three lbs. required per acre. Money with order.

We are the only parties in the Country who give special attention to preserving the purity of Cane Seed. The crops from which our seed was taken were grown under our own observation and especially for us. Their yield was 200 to 700 gals. per acre. Our regular Sorgo is from seed *recently imported* from the mouth of the Yang-tse-Kiang, the finest cane-growing section of China. For circulars, address

BLYMYER, NORTON & CO.,
Cincinnati, O.

Manufacturers of Victor Cane Mill, Cook's Sugar Evaporators, Bells, &c., &c.

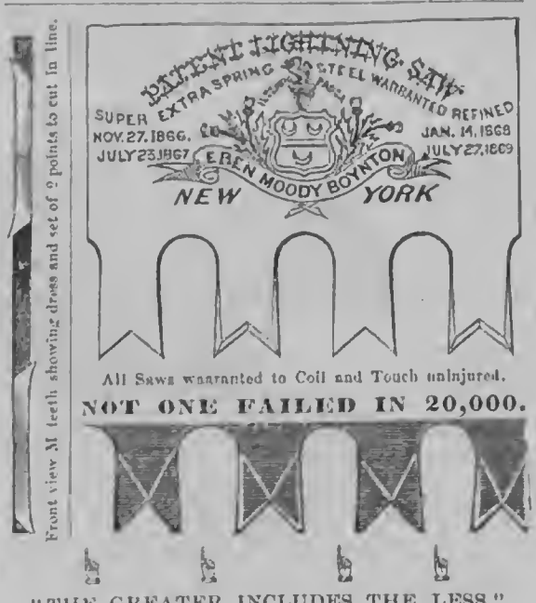
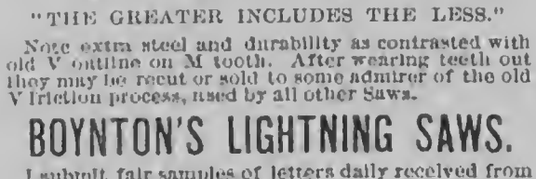
Implements, Machinery, Etc.



All Saws warranted to Coil and Touch uninjured.

NOT ONE FAILED IN 20,000.



"THE GREATER INCLUDES THE LESS."

Note extra steel and durability as contrasted with old V outline on M tooth. After wearing teeth out they may be recut or sold to some admirer of the old V friction process, used by all other Saws.

BOYNTON'S LIGHTNING SAWS.

I submit fair samples of letters daily received from ordinary farmers. Occasionally there is a man who does not know how to set or file my saw; uses one set for dry beech to saw soft wood without widening set. Such a man may learn to use saws, or employ some one who knows how to sharpen and set; but there is some chance that he will go back to chopping one cord per day when a saw could as easily saw TEN if he knew how. For the benefit of such, I indelibly engrave full directions on each cross-cut saw-plate. Many will thus learn to use any saw. For sawing hard wood the points should not be filed thin but left about as when sent out. I am now prepared to fill all orders, having doubled capacity recently. I regret delay many have suffered.

BELLEVILLE, Ontario, Can., Jan. 20, 1872.
E. M. BOYNTON, 80 Beekman St., N. Y.:
Dear Sir:—I received your Lightning (Cross Cut) Saw in due time, and am perfectly satisfied of its superiority. We have cut one cord of Beech wood in 20 minutes. My neighbors are quite anxious to get saws, and I therefore send you check on Jay Cooke & Co. for the following quantity of Lightning Saws.
S. S. POTTER.

NEW YORK, Jan. 18, 1872.
E. M. BOYNTON:
Dear Sir:—Your saw that I purchased has cut several hundred cords of the hardest kinds of Beech, Maple, Oak and Hickory timber at a rate of speed and cost of cutting saving more than one-half the time and labor—common men sawing down the trees and cutting about one cord per hour with a Lightning Cross Cut. From practical experience with men and other saws, I am certain of a gain of one hundred per cent. in speed and cost over other saws. I think the Lightning Saw is worth many times its price to the farmer and wood-cutter. Indeed, it is a great invention.
A. BRAYTON,
Smith's Basin, Washington Co., N. Y.

A 6-ft. Cross-Cut and a Wood Saw shipped on receipt of $6.

Implements, Machinery, &c.

CARHART'S
PATENT TWO-HORSE
PULVERIZING CULTIVATOR
Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the mowing machine better than any cultivator in use, and can be used for more purposes than any other implement on the farm.
Price, **$20.**
C. C. BRADLEY & SON, Manufacturers,
Syracuse, N. Y.

Musical Instruments.

DUNHAM & SONS,

(ESTABLISHED IN 1834),
Manufacturers of
PIANO-FORTES.

Moore's Rural New-Yorker, of November 18, 1871, says:

"Having used one of their instruments in our family for twenty years, we can confidently commend them to our readers as being first-class in every respect. Both professional and amateur players on the piano pronounce our DUNHAM very superior in tone. An instrument that has retained its brilliancy and sweetness of tone for a score of years needs no further commendation."

17 Union Square,
NEW YORK.

Real Estate, Etc.

IOWA FARMING LANDS

THE CHICAGO, ROCK ISLAND & PACIFIC RAILROAD COMPANY

Is now offering for sale to actual settlers more than

500,000 ACRES

of the finest and most desirable Farming Lands in the West.

The lands are chiefly situated along the line of its railroad between the cities of Des Moines and Council Bluffs, and are the most fertile and accessible lands offered for sale at low prices in the State. Prices will range from $5 per acre, the average being about $7 or $8.

Sales are made either for cash, or on short or long time, so as to suit all purchasers. Full warranty deeds given.

EXPLORING TICKETS,

entitling the purchaser of land to a credit of amount paid for fare upon his land, are for sale at the principal ticket offices of the Company.

For pamphlet (with map), or any information regarding the lands, address

J. L. DREW, Land Commissioner,
Davenport, Iowa.

NORTH

MISSOURI LANDS

FOR SALE

BY THE

Hannibal & St. Joseph R. R. Co.

About 120,000 Acres of the Finest Farming and Grazing Land in the United States, for sale at low prices and on very easy terms; thus enabling an industrious man with small capital to pay for his land with money earned from it.

Missouri is not too far West to be at a great distance from markets; its Railroad facilities are great and constantly increasing; the climate is splendid, and good crops are almost a certainty; while the numerous thriving towns and cities springing up on every hand attest beyond doubt that the blight of slavery has been effectually dissipated, and that Eastern men and Eastern capital are doing their perfect work.

Our Lands Defy Competition.

Send for full Descriptive Circulars and Sectional Maps, inclosing 30 cents, and stating what paper you saw this in, to Land Commissioner H. & St. J. R. R., Hannibal, Mo.

1,500,000 ACRES
OF THE
RICHEST FARMING LANDS
IN THE WORLD,
For Sale to Actual Settlers.
NEOSHO VALLEY, KANSAS.
MISSOURI, KANSAS, AND TEXAS RAILWAY CO.
CARS NOW RUNNING 400 MILES.

The Lands offered by this Company are mainly within 20 miles of each side of the road, extending 170 miles along the NEOSHO VALLEY, the richest, finest and most inviting valley for settlement in the West. For further particulars and pamphlets, apply to

HERMANN TROTT, Land Commissioner,
General Office at St. Paul, Minnesota.

MEM.—Government lands still to be had, under the Homestead Law, along the main line of the above Railroad.

Miscellaneous Advertisements.

A Safe AND Profitable INVESTMENT.

The Northern Pacific Railroad is chartered by Congress; the present loan and the general mortgage to secure it are authorized by special act of Congress; each twenty-five mile section of the road is to be examined and accepted by government commissioners; the right of way across the public domain and construction material are granted gratuitously by the United States; and, finally, while the government does not directly guarantee the bonds of the road, it amply provides for their full and prompt payment by an unreserved grant of land, THE MOST VALUABLE EVER CONFERRED UPON A GREAT NATIONAL IMPROVEMENT.

This grant of land is larger in extent than the combined States of MAINE, RHODE ISLAND, NEW HAMPSHIRE, VERMONT, CONNECTICUT, MASSACHUSETTS, and MARYLAND. And upon the same, as well as upon the RAILROAD and ALL ITS EARNINGS, are the First Mortgage Bonds of the NORTHERN PACIFIC RAILROAD issued and secured.

The Bonds are thus a Real Estate Mortgage and Railroad Bond COMBINED, upon property worth TREBLE THE ISSUE OF THE BONDS—a fact investors are not slow to notice, and hence the popularity of the Bonds and large sales.

They are offered at PAR in currency—EXEMPT FROM UNITED STATES TAX—have 30 years to run, and are payable, PRINCIPAL AND INTEREST, in GOLD.

The recent negotiation of Northern Pacific Seven-thirty Gold Bonds in LONDON, added to the previous sales in the UNITED STATES, furnishes means for the completion of a large portion of the road, and assures the EARLY ABSORPTION OF THE REMAINDER OF THE LOAN.

All marketable securities received in exchange without expense to the investor, at their highest current price.

THE FATE OF A GOOSE—PATE DE FOIE GRAS.—[See next page.]

The Poultry-Yard.

FATTED GOOSE LIVERS.

THE engraving on our first page illustrates the career of a Strasbourg goose, or of geese fattened for the Strasbourg market, whereat the livers of geese are bought and largely manufactured into the well-known delicacy known as *pates*, or *terrines de foie gras*—liver pies. The upper part of the engraving represents the geese in their happy home in the country, wandering in the field at will, in care of a peasant girl. In the autumn, when the geese are full grown, they are taken (from some parts of the country) to Strasbourg and sold to a "fattener"—in this case illustrated as women who understand the art of stuffing them. Sometimes, however, the fattening is done by the farmer. But the care, time and attention involved in the fattening process, renders it generally more profitable to sell direct to a professional "fattener." Different fatteners give different kinds of feed. Sometimes broad beans are first fed, and then the goose is taken between the knees of the "fattener" and his crop stuffed full of maize, scalded in salt water. This stuffing is not complete until the neck of the goose to the mouth is full. Then the bird is put in a slightly heated oven for the purpose, it is said, of "sickening the goose." Thence it goes to the cages shown in the engraving, where it can only sit or stand, and in front of which is kept constantly plenty of water, gravel, charcoal, etc.

A German friend, Mr. LEISENBERG, who is familiar with this process of fattening the livers of geese for the Strasbourg market, as practiced in Brunswick, describes it as follows:—The geese run in a common pasture until they have attained full growth. Then they are sold to a "fattener," or if fed by the grower, are put into narrow cages, such as are shown in the engraving, in which they have no room to move, except to stand up or sit down. A trough before the cages is constantly supplied with water, gravel and powdered charcoal. (It is said that the character of the water has much to do in determining the quality of these fatted livers.) Their first feed consists of crushed rye or maize, soaked in hot water until it becomes a dough, when it is baked hard in cakes about three inches long, and of a size small enough to pass down a goose's throat. The geese are seized and held, as in the center scene in the engraving, and this feed is forced into the crop as long as it can be got in. This stuffing process continues about a week, when the feed is changed to ground or cut carrots, which the geese eat voraciously without urging. The carrots are continued two or three days, and the stuffing with cake is repeated for a week. Meantime the goose gets no exercise. It sits or stands in its cage, and the liver enlarges to an enormous size. This process of fattening requires two or three months. The livers sell at high prices—often as high as $1 per pound. Usually Strasbourg agents buy them, together with the breasts of the geese, which are nicely trimmed, put down in salt pickle, and finally smoked, and are thus considered a great delicacy. The other parts of the goose are cut up, boiled in vinegar, flavored with spices, small onions, etc., and usually a couple of calves' feet are boiled therewith to furnish gelatine. This is all put in crocks; it keeps all winter, and is regarded as a delicious food.

Of the mode of preparing their livers for food we are not informed. They are regarded as a great delicacy. M. MATHIESE, Cook to the Cardinal de ROHAN, Prince-Bishop of Strasbourg, is said to be the inventor of these liver pies, the manufacture of which has developed into a profession, the sales in Strasbourg alone amounting to nearly or quite one hundred thousand pounds sterling annually. The epicures of this country pay no inconsiderable sums for these *pates de foie gras*.

POULTRY NOTES AND QUERIES.

Artificial Incubation.—The Ohio Farmer does not believe that chickens can be hatched profitably by any incubator yet invented, and thus discourses upon the matter:—"Hatching chickens by artificial means, and poultry on a large scale, are the staple problems of poultry keeping. The former has not been successful enough yet to be practical. A few handfuls of corn fed as fuel for sitting fever, will keep eggs warm better than a lamp that requires trimming and watching. Incubators are excellent playthings, and rank with aquaria, house-plants and caged songsters. Chickens can be hatched artificially, and reared also without a hen. But we have to learn of a single instance where apparatus for artificial hatching has been successfully employed in raising fowls for market. Every year, almost, some improvement is announced which trials do not justify."

Bronze Turkeys.—A writer in the Hartford Times tells what he knows about Bronze Turkeys from practical experience: "Bronze turkeys are a cross between the domestic or tame, and wild turkeys, and make the finest and strongest birds. They resemble as closely as possible the original stock, and look not dissimilar to wild birds, and next to them weigh the heaviest, fatten the most rapidly, and can be reared with much less trouble than any other variety."

Belgian Pigeon Races of 1870-'71.—An interesting abstract of the number of concours or pigeon races that have taken place in Belgium during the last two seasons has been published in the *L'Epervier*. In 1870 there were no less than 843 concours, in which at least 120,000 birds took part. These numbers, great as they were, are exceeded by those of 1871, in which 885 concours have been held, no less than 123,600 birds participating. Taking the entry fees at the very low average of three francs per pigeon, the amount competed for was no less than 370,000 francs, or £15,000, exclusive of the large sums invested in sweepstakes. Nor must it be forgotten that a large number of smaller concours were flown that were not recorded in *L'Epervier*, and which consequently are not included in the above enumeration.

The Horseman

NOTES FOR HORSEMEN.

Horse Knuckling.—J. JONES asks what is the cause of a horse "knuckling," or what is called "cocked ankles."

A Horse that Pulls Off his Bridle.—I have a horse which I think faultless in every respect but one; he persists, under all circumstances, in pulling off his bridle. Can some person who knows, tell me a cure for the vexatious habit?—SAHA.

Greasing Horses' Feet.—A Canada correspondent says the effect of greasing the hoofs of horses to make them shine, is to cause them to almost cease growing, and become hard and brittle. He condemns the practice.

Bone Spavin.—Mr. E. W. SMITH asks Mr. B. ROCKWELL, who made an inquiry through the RURAL NEW-YORKER last August for a remedy for Bone Spavin, if he used any of the recipes subsequently given, and if so, what ones and with what result? It may benefit others beside Mr. SMITH, if Mr. ROCKWELL will respond.

Ringworms on Horses.—I have cured horses of ringworms by using Dr. DADD'S prescription: Wash the parts with a strong infusion of bayberry bark; wipe dry, and then smear the denuded spots with a mixture composed of four ounces of pyroligueous acid and one ounce of turpentine. In two cases where I have applied it it has effected cures.—JOCKEY.

To Cure Scratches.—Take one pint of a strong decoction of White Oak bark, one-half pint animal glycerine, two drachms chloride of zinc; wash clean with Castile soap, rub dry and apply the wash. Once a week give the animal a ball of the following: Saltpeter, resin, ginger and Castile soap, equal parts, mixed with turpentine. Give a good sized ball; keep the bowels open with bran mash.—BELVIDERE.

To Remove Warts on Horses.—Procure an ounce of concentrated muriatic acid (spirit of salt) and apply to the top of the wart with a thin, pine stick, morning and night. The acid forms a crust which is easily taken off each day until the wart is gone. It causes no pain, and in due time the hair will appear on the spot. Keep the acid well corked and out of reach of the children.—ALDEN JAMESON.

Interfering Horses.—WM. T. CAMPBELL writes the RURAL NEW-YORKER:—"It is very seldom that a horse interferes when barefoot; and it should be the aim of the horseshoer to have the horse's foot, after the shoe is on it, as it was before it was shod; so instead of a heavy shoe make one as light as possible—a shoe the same as running horses have. Shoe them close and there will be no trouble. I have cured animals that interfered badly in this way."

Industrial Topics.

FARMER GARRULOUS TALKS.

Labor Co-operation.—It seems to me, Mr. Editor, that there is full opportunity for the correction of all the abuses of capital in its relation to labor, without spending breath denouncing capitalists. The truth is, capital is dependent upon labor; capital represents labor. Talking with WARREN MCKEAG to-day, he said that he and his fellow farm laborers were not satisfied with the manner in which they are treated on the farm, by farm owners. They work for so much per day, but they do not feel that they get adequate pay, although they get the current price for labor. I suggested that WARREN and his compeers should rent a farm, join their forces, use their savings, and see what united effort would do for them—not simply in the way of rendering them independent of those whose interests it may be to employ them for a day or two, and then allowing them to remain idle, but in order that they may realize all the profits to be made from their joint labor and capital skillfully directed. I know that co-operation is not always a panacea for the ills of those who co-operate; but I do know that it has been in many instances. HORACE GREELEY told me once of a lot of stone cutters in Rhode Island who struck because they were not suited with their relations to their employers, and opened a quarry for themselves. They succeeded in putting the results of their labor on the market cheaply, and competing with capitalists who employed labor. In other words they became capitalists.

Now let young men who have to work by the day or month, and who do not like it, unite and rent and run farms for themselves. Their joint capital may stock the farm, and their joint labor cultivate and secure the crops, without hiring help. If they can agree upon the direction and management of farms, in this manner they may succeed. But is it possible to agree? I should like to know if any one knows of an instance where success in farming has resulted from such an experiment. If so, will not such an one detail it.

Postal Savings Banks.—There is much talk, now that savings banks are proving unsound, in favor of adopting the Postal Savings Bank System of Great Britain, which is said to have succeeded. Whatever will encourage economy I am disposed to commend. And since our Government is in the market as a borrower, I do not know any good reason why it should not supply its needs from the savings of the people, paying them interest on their deposits. In England, deposits of not less than one shilling (twenty-five cents) may be made at any money-order post office. Each depositor is supplied with a book in which each deposit is entered, and is attested by the receiving officer and by the dated stamp of his office. The amount received is, the same day, reported to the Postmaster-General, who transmits an acknowledgment of each deposit to the depositor. The interest paid on deposits is 2½ per cent. No interest is paid on a less sum than £1, nor on fractional parts of £1. The depositor may withdraw his deposit at any office of deposit (not necessarily the one with which he deposits) within ten days, at the longest, after demanding it. The maximum sum allowed to be deposited by one person in one year is £30. The names of depositors and the amount paid in and returned are not disclosed to any except the officials concerned.

Thus, it will be seen, that the Government becomes responsible for and pays interest on the savings of the people. The depositors are protected from defalcating officials, because the deposits must be transmitted to the central office and an acknowledgment is sent direct to the depositor—this in addition to the receipt given at the office of deposit by the local officer—so that in case there is any unusual delay in such acknowledgment, the depositor can advise the central office of the fact and the matter is at once looked into. It seems to me that this is a very desirable economical feature for us to adopt, provoking, as it will, a more general saving of surplus earnings on the part of the people, and securing the use of these savings to the Government instead of to individuals who are tempted by extravagance or speculation to squander them. This, too, would aid in the reduction of taxation and enhance values proportionately. What do your readers think about it?

Subsoil Plowing.—I was talking yesterday with JOSIAH JOHNSTON about subsoil plowing. JOHNSTON is a thorough-going farmer. He said, "You know it was tolerably dry up in Maine last summer. Well, sir, I grew as good a crop of corn and potatoes as I ever had in my life."

How did you do it?

"Why, you see, my ground is a stiff clay, with a hard pan like burned brick, almost. I got tired, some years ago, of scraping my plow along on it, three or four inches below the surface. So I got me a subsoil plow. And in the fall when I fall-plow my land I put this subsoiler in as deeply as I can. And I've been gradually getting it in deeper and deeper every year, until now some parts of my farm, that six years ago I could not plow over four inches, is stirred and has an open soil 18 to 24 inches deep. And it was on just such land as that that I grew my crops. Did my 3-inch plowing neighbor have such crops? No, sir! Nor can they raise them, wet season nor dry. I can beat them two to one every time; and it does not matter much what kind of a season it is. If wet, the water sinks below the roots of the plants and does not lower the temperature of the surface, materially, by evaporation. I can plant earlier in spring, because the soil dries sooner after the snows go off, and gets fit to receive the seed quicker. If it is a dry season there is just so much added surface to condense the vapor in the atmosphere and make moisture for the plants. I tell you, it's no use o' talking; on such soils as mine I would just as soon do without the seed to sow, as without a subsoiler to prepare the land with."

JOHNSTON is right. I have had a similar experience. One trouble I used to find when I had but a single team, and did not want to turn the subsoil to the surface, was that it required so much time to change from the surface to the subsoil plow. But two or three years ago I saw a subsoil attachment to a surface plow, made somewhere in Illinois. My friend JONATHAN PERHAM was using it on his garden farm, and said he could not get along without it. He used a three-horse team to draw the surface plow and attachment. He was stirring the soil eighteen inches deep; but it was sand or sandy loam. Such attachments are very much needed indeed.

FARMER GARRULOUS.

Hygienic Information.

ARE ONIONS HEALTHFUL.

A PHYSICIAN has forwarded the following to the N. Y. Farmers' Club. We should like to know if any of our readers have facts which sustain the conclusions given:—"On shipboard at New Orleans, in the year 1849, in charge of one hundred marines, with cholera among them, I observed that those who eat freely of onions, supposing them to be healthy, were attacked certainly and fatally. Onions and salt cured the bite of a rattlesnake on my son, and are considered specific in all snake-bites. I have found four separate witnesses of phenomena connected with small-pox and fever.

1. Onions in rooms with small-pox rot rapidly.

2. Blisters rise in them.

3. They retain and communicate the virus many weeks after the epidemic has subsided.

4. Applied to the feet of fever patients they rapidly turn black,

5. They prevent the spread of small-pox in thickly populated tenements by absorbing the virus.

6. A man with hydrophobia, in his frenzy, ate voraciously of onions, and recovered.

From all these facts may be deduced:

1. That onions should not be eaten when there is a prevailing epidemic.

2. That onions sliced and frequently changed are good disinfectants.

3. That experiments should be made to test the extent of their usefulness. For many years I have opposed vaccination as ordinarily done, and hence hail with satisfaction any means of mitigating the virus of this distemper."

Treatment of Felons.—C. M. H. Fabius, N. Y., in Germantown Telegraph says:—A felon is easily known by a sharp pain near the bone. Fill a pint tin cup one-fourth full of wood ashes, then fill the cup up with warm water and place it in the stove. Hold the finger or the affected part in the cup until the pain is removed. The contents of the cup must be kept as hot as the hand can bear. If the pain returns repeat the process. In the more advanced stages a poultice made of slippery elm, flaxseed, or even bread and milk, is good; but the best thing to draw a felon to a head is to apply a salve made of the yolk of an egg thickened with wheat flour.

Field Crops.

SEEDLING POTATOES vs. "SPORTS."

BY GEO. W. CAMPBELL.

I HAVE been for some years experimenting with potato seedlings, without, however, producing any specially interesting or valuable results until three years ago. I planted a quantity of seed from seed-balls of the Early Rose. I then raised forty seedlings, which were grown in a single row in my garden, in soil of ordinary fertility, entirely without manure, if I except a little muriate of lime sprinkled about the collar of each plant to protect from cut-worms. They were all planted at the same time, in as nearly as possible the same soil, and had the same treatment throughout the season. Perhaps the most interesting feature in this experiment was the extreme variableness of its results. The plants, while growing, presented a great diversity in appearance in foliage, and especially in size, vigor and strength. The product was not less varied. One plant gave two potatoes, each about the size and shape of a pecan nut; weight, half an ounce. This was the smallest yield. More than half the others produced quite small potatoes, from three or four to perhaps a dozen tubers to a hill, in size from a filbert to that of a pullet's egg. Of those remaining, some produced more and larger potatoes, the product varying, with one exception, from one pound to two and a-half pounds to a plant. These seedlings were also as diverse in form and color as in other respects. Nearly all colors common to potatoes, from white to dark, rusty red, and nearly every variety of form was re-produced, but in a majority of cases a family likeness to the parent Early Rose could be traced.

The one exception above indicated stands out so prominently from all the rest, by reason of its wonderful productiveness, as to be worthy of special notice. Its yield the first year, from the seed, was *twenty* potatoes of marketable size, the largest tuber weighing twelve ounces, and ranging from this down to the size of a hen's egg—the aggregate weight being six and a-half pounds. This, it will be observed, was four pounds in excess, and nearly three times greater than the yield of any other of the seedlings. The quality was fairly tested and found excellent; by nearly all who tried them, pronounced equal to the White Peach Blow, or any of our best varieties. The next season, about three pounds were cut into single eyes, and planted in common garden soil, where corn had grown the previous year, once plowed, and lightly top-dressed with leached ashes. The yield was almost three barrels, or nearly a barrel to each pound planted; and upon measuring the ground, was found to be at the rate of 380 bushels to the acre, which was four times the yield of Early Rose, and ten times as much as the White Peach Blow yielded the same season.

This enormous productiveness still continues. The past season it was fairly tested in a parallel row with Peerless, in the same soil, planted at the same time, and with exactly the same culture and treatment throughout the season. The result was, four bushels of the seedling, against one and three-fourths of Peerless. Others to whom it was sent for trial last spring, report even greater results than my own. Dr. WARDER raised sixty-three pounds from half a pound planted, notwithstanding severe drouth all summer. Planted near by, Peerless gave but five pecks for four pounds of seed planted.

Col. D. C. RICHMOND of Erie Co. reports *three bushels* from one small potato and a piece from the end of another—not over half a pound weight. The Colonel says he expected about half a bushel, and was greatly astonished when he found the yield was *three* bushels.

F. R. ELLIOTT described this potato last season, and gave it the name of "Late Rose," which was adopted without knowing there were any other varieties of that name. The following is extracted from Mr. ELLIOTT'S description:

"In May last we received, through the courtesy of Mr. CAMPBELL, two potatoes, one of which we cooked and ate, finding it mealy; and taking ten as perfection, this ranked at nine, and probably had it been in better condition, for it was a little shriveled by drying in the mail carriage, it would have ranked the full ten. However, we give it as we had it. The tuber is much in form like the Early Rose. The upper end is of rich, pale-red, while the lower end is a pinkish white. The eye is nearly level with the surface, deep, rich, pinkish red, and with an average of five germs to each eye or cluster of eyes."

It is emphatically a *late* potato, the growth continuing through the whole season, the tops remaining fresh and green till October. The tubers all grow in a large cluster around and near the stem, rendering the digging very easy and expeditious. Next to its wonderful productiveness, its late-keeping qualities in spring are perhaps most desirable. In the same cellar, and under the same conditions, where Early Rose had sprouts two feet in length, and consequently shriveled and worthless for eating, the eyes of this seedling remained perfectly dormant, and the tuber solid and crisp as when first dug. It is easily kept in good condition in spring till new potatoes are grown ready for the table.

To distinguish it from several "sports" which have been named "Late Rose," this seedling will be called "Campbell's Late Rose," and is the only variety grown from seed of that name. For two seasons past the Early Rose seems to have shown a tendency to "sport," or ripen a portion of its crop later than its natural period; and in two or three instances these abnormal "sports" have been sought to be perpetuated and introduced as new varieties, and all under the name of Late Rose. The most natural conclusion as to these "sports" would seem to be, that their character can be neither reliable nor permanent; but that they will go on "sporting" no one knows where or in what direction. This tendency to later ripening is doubtless the result of a weakened constitution in certain plants, and most probably the incipient step towards that degeneracy and decay that has overtaken and destroyed so many of our once popular and valuable varieties. The idea that these degenerate "sports" can ever result in anything really useful or valuable, would seem opposed to all reasonable analogy or former experience; and the attempt to impose them upon the public as new and desirable varieties must be regarded as very questionable. That these views are not without foundation, I quote from Mr. GERARD C. BROWN of Croton Falls, N. Y., in an extract from the N. Y. Sun of Dec. 6, 1871, where he thus speaks of these "Late Rose "*sports*."

He says:—"The Late Rose (sport) is undoubtedly an offshoot of the Rose. I have noticed it carefully for two years; have planted it separately, and am not convinced that it will continue to maintain itself as a distinct variety. Its principal characteristic seems to be its coarse grain and lateness, which may arise from some accidental weakness or degeneration of the seed."

He also states that "it shows a decided tendency to dry-rot in winter," and that the yield was inferior to that of Early Rose or King of the Earlies, and only one-fifth that of Peerless. He regards it as unworthy of perpetuation.

Bearing upon the same subject, Mr. WM. HUNT, in an article upon potatoes in the Country Gentleman of Jan. 4th, in speaking of these "sports," says:—"But let no one suppose that varieties raised in this way will prove as hardy and as lasting as others raised from the seed-ball. Besides being more liable to rot, they will be continually given to 'sport.' Some will go back to the original; many will be deformed and scrubby, and in from three to five years all will be worthless. I have made many experiments, and know well the facts of which I am writing."

Delaware, O., 1872.

FIELD NOTES AND QUERIES.

Peanut Culture.—I should be greatly obliged if any of your Southern readers who grow peanuts extensively would give their mode. And I should be glad to know if it is profitable to grow for feeding purposes.—JAMES CUTHBERT.

WE shall be glad if any of our Southern readers will respond. It is easily cultivated, and by some of the Southwestern planters is regarded an excellent food for stock. It requires a warm, rich soil, well prepared by deep culture. It should be planted after the ground is thoroughly warm, in rows three to three and a-half feet apart and one and a-half feet apart in the row, and the plants carefully kept clear of weeds and gradually tilled until in blossom. Some of the large Southern planters harvest it by plowing out the rows, letting the nuts lie in the sun until dry, gathering what may appear on the surface, and turning in the hogs to dig out the rest.

Japan Pea.—W. J. EWBANK asks where he can obtain the Japan Pea. We do not know who has them for sale. Perhaps some of our seedsmen can answer in advertising columns.

Sheep Husbandry.

COLORADO AS A SHEEP COUNTRY.

T. S., Milwaukie, asks our "impressions of Colorado as a sheep country—from what place and how proper sheep to start flocks with can be got there—and whether it would be best to depend upon enclosures or manage the sheep by shepherds."

We have not received detailed information in regard to the various facts which would go conclusively to show the relative adaptability of Colorado to sheep and wool production, from men experienced in such matters, and who have made their observations on the spot. But from all we have learned, our impressions, of it in that respect are favorable. It occupies the same latitude with Kansas, Missouri, Southern Illinois, Kentucky and Virginia. A reliable friend of ours was told by flock masters not more than a dozen miles south of Denver, that in that locality snow very rarely lies for twenty-four hours deep enough to prevent sheep from grazing. Careful men make a little hay for their sheep, but occasions for using it are very unusual. Denver is situated nearly two-hundred miles North of the South boundary of the territory, so that greatly milder climates exist in it than the one above mentioned.

The native grasses extend over vast tracts, and are highly nutritious and palatable. Sheep thrive and keep fat on them the year round. A correspondent of the Chicago Evening Post, writing from Colfax, Colorado, says:—"The pasture yields double the quantity of sheep feed that it does of stock feed. The principal grasses are: First, bunch grass, which grows in separate stools and covers the smaller portion of the land. Although very rich pasture grass, it is as good for sheep as for stock, and if there was no other feed, neither would have any advantage. Second, buffalo or grama grass, which covers the ground like a well worn carpet, is allowed to possess more nutritive properties than any other grass, and yet is so close to the ground that our domestic cattle can get but little good from it. This grass is all leaves, which grow short and curl close to the ground. I do not know the appearance of this grass in Summer, but at the present time, if you press your hand upon it, it feels like a thick mat, and a sheep might stand still and eat a full meal after the bunch grass and weeds were all gone."

Of the profitableness of sheep husbandry in Colorado, he expresses the following opinion:—"No sheep are kept in the valley, and owners of stock ranches would prefer that none should be brought in, but I think that sheep raising will yet take the place of stock growing, except for the dairy business. Ranches can be run and stocked with sheep with much less capital than with cattle. While stock growing pays fifty to one hundred per cent. on the investment, sheep and wool growing will pay one hundred to two hundred per cent."

Greatly the cheapest mode of starting large flocks in Colorado is with Mexican ewes. They can be purchased in any numbers in New Mexico, which adjoins Colorado on the South. They are coarse-wooled and light-fleeced, but can soon be brought into profitable wool growing sheep by crosses with pure Merino rams. A portion of them have been somewhat improved by grade Merino rams. Altogether we suppose them to be superior to the Mexican sheep, with which the late GEORGE W. KENDALL of Texas commenced crossing in 1852. His Mexican ewes yielded a pound of wool a head. He states (1857) that the produce of these miserable sheep by Merino rams of "pure and approved good blood," "gave evident signs of great improvement, not only in form and apparent vigor of constitution," but in weight and quality of fleece; those of the first cross producing "at least three pounds (unwashed) of much finer wool"—those of the second cross, "four and a-half or five pounds (unwashed) still finer wool." In 1860 he wrote:—"I this year sheared many grade sheep, three and four removes from the common Mexican ewes, which yielded eight, eight and a-half, and some of them nine pounds of unwashed wool, and of wool so fine that it would require a sharp sampler to distinguish it from pure Merino." Mr. KENDALL attributed his rapid success greatly to the use of pure-blood and choice rams. (In his letters in Texas Almanac, 1857, 1860.) We understand mixed Mexican ewes can be purchased of the Indians on the northern borders of New Mexico for $1.25 to $1.50 a head. Fair grade Merinos from Missouri or Illinois would of course be much preferable, if their cost and the cost of moving them so great a distance would not be too great.

The pastoral system of sheep husbandry—*i. e.*, herding them by shepherds, without enclosures, except at night, is the most profitable—indeed, the only system which is now or will be for a great many years to come, applicable to the production of wool on a large scale in Colorado.

SHEPHERD'S MEMORANDA.

Grub in the Head of Sheep.—The New England Homestead says:—"Dr. MARTIN SACKETT of Westfield, gives the following recipe for curing grub in the head of sheep: One tablespoonful of butter, melted and mixed with a teaspoonful of spirits of turpentine. Turn this into the sheep's ears once a day, for one, two, or three days, as the case may require. He says that it never fails."

French Merino and South Down Cross.—Our friend C. H. ROSENSTIEL, Newport, Ill., has been for many years a champion of the much-abused French Merino sheep. But he has been diluting them. We have seen his flock. He has been crossing them with South Downs—a French Merino ram with South Down ewes. The result of the cross is said to be an improved carcass, both in "points" and size, a mottled and sometimes a dark face, with little change in character of wool. Further experiments are to be made. Mr. ROSENSTIEL is a practical, shrewd man, who observes closely and judges with discretion, and is reported to think favorably of the cross.

Wool Clip of the United States.—The following statement shows the wool clip of the United States for the year ending June 1, 1870, as returned to the Census office: New England States, 6,643,863 lbs.; Middle States, 17,991,085; Northwestern States, 47,-929,647; Cotton States, 4,094,269; Pacific States, 12,472,381; Territories, 1,204,590—grand total, 101,284,678 lbs. This must not be understood as indicating the total *product* of wool in the United States for the year given. To it must be added the amount pulled from pelts, which, for several years past, has been quite large.

The Wool Clip of 1870.—According to the forthcoming census report the entire wool clip of the United States and the territories for the year ending June 1st, 1870, amounted to 101,284,678 pounds. The amount grown by each of the States and territories is shown as follows:

Connecticut, 254,120; Massachusetts, 406,-659; New Hampshire, 1,121,422; Maine, 1,-774,168; Vermont, 3,102,137; Rhode Island, 77,323; Pennsylvania, 6,567,722; New Jersey, 336,609; New York, 10,599,225; Delaware, 58,516; Maryland, 435, 213; Illinois, 5,739,219, Indiana, 5,029,023; Iowa, 2,967,543; Kansas, 235,205; Ohio, 20,539,643; Michigan, 8,726,145; Minnesota, 407,185; Nebraska, 71,635; Nevada, 27,029; Wisconsin, 4,920,647; Kentucky, 2,231,430; Missouri, 3,649,290; Tennessee, 1,389,762; Virginia, 877,110; West Virginia, 1,598,541; Alabama, 370,773; Arkansas, 203,275; Florida, 37,562; Georgia, 845,917; Louisiana, 140,118; Mississippi, 288,-285; North Carolina, 799,667; South Carolina, 156,314; Texas, 1,251,328; California, 11,-391,743; Oregon, 1,080,638; Arizona, 679; Colorado, 204,925; Dakota, 8,810; Idaho, 3,415; Montana, 1,000; New Mexico, 681,930; Utah, 109,018; Washington, 162,713; Wyoming, 30,000. Total Territories, 1,204,599. Total States, 100,080,088. Total, 101,284,678.

The Herdsman.

NOTES FOR HERDSMEN.

Trouble with Cows.—Will some one please tell me the disease and what to do for two of my cows. They commenced scratching around their eyes, and the hair commenced coming off, and extending until the circle around the eye is six inches in diameter, and splotches all over the face. The skin after the hair comes off, looks rough and scaly, somewhat resembling a person's skin that has a good crop of "salt rheum."—OREGON SUBSCRIBER.

Cow with a Swelling Under her Ear.—I have a cow that has a swelling as large as a goose egg under her ear, and discharges matter freely from her ear; have lanced it, but it did no good; have tried to clean it by syringing blue vitriol in her ear; it did no good. Have given her sulphur, when the discharge would almost stop; but as soon as discontinued was as bad as ever. The cow eats heartily and thrives well. Would like some information through the RURAL.—A SUBSCRIBER.

The Apiarian.

BEE NOTES FOR FEBRUARY.

In cold climates, bees are now usually in a state of repose. If they have had proper attention in the fall, nothing will ordinarily need to be done that will excite them to an injurious activity. In very cold climates, however, when a severe temperature is of long continuance, it will be necessary, unless the hives have thorough upward ventilation, to bring them into a warm room, to thaw out the ice, remove the dampness, and allow the bees to get access to their supplies. Any needy stocks in common hives may be supplied with sugar candy—English barley candy is the best—pushed up between the combs. If the bees are in movable comb hives, give them frames of honey taken from honey stocks; or, remove an empty comb from the needy stock, and fill it with warm honey or sugar sirup, and replace it in the hive.

If bees are to be moved short distances, do it now. In mild seasons, and warm regions, bees begin to fly quite lively in February, and strong colonies will now begin to breed considerably; feed to such unbolted rye flour, placed in shallow boxes near the apiary, to encourage breeding, and to insure strong stocks and early swarms.

Does the Old Queen Lead the First Swarm?—If G. W. Wooley, who wants the "bee men" to be more explicit, and tell him how he may know that the old queen, and not a young one, comes out with the new swarm, will examine the interior of a movable frame hive, just after a first swarm has issued, he will find no queen, but a number of queen cells to furnish her successor in eight or ten days. Or, I will tell how I satisfied myself some years since. I purchased an Italian queen, and before introducing her into a stock of black bees, I clipped her wing. When that stock swarmed the next spring, I found my Italian queen on the ground, unable to fly, but trying to follow the swarm "on foot." As she was the only queen in my apiary that had her wing clipped, and the only Italian queen in my neighborhood, there was no room for doubt that the old queen leads the first swarm.

Winter Food for Bees.—In answer to A. P. C., who asks for the "best and cheapest winter food for bees," tell him to use a sirup made of good brown sugar, the proportions of two pounds of sugar to a little more than a pint of hot water; boil it and skim off the impurities; the addition of half an ounce of glycerine will prevent it from crystallizing. But good sugar candy, placed between the combs, is the cheapest winter feed. I have wintered a stock of bees that had less than ten pounds of honey, by giving them three and a-half pounds of candy.

Williamson Co., Tenn. W. E. Ladd.

BEE NOTES AND QUERIES.

Mr. Burch's Hive.—Will Mr. Burch (who described his hive in the Rural New-Yorker, Dec. 10, 1871,) answer:—In making the hive frame is the top bar to be beveled entirely from one side; or is it to be taken off from both sides, leaving the sharp edges directly under the center of the stick? Is the beveling for utility or fancy? If for fancy, what is it?—Sidney S. Staunton, *Kanawha Co., West Va.*

How shall I Make a Hive?—Will Mr. Baldridge please tell us how to make a hive that will work well when full of bees and comb? I do not think Mr. Burch's would suit me very well, but I would like to have some of our experienced bee men tell us what kind of a hive is best, how to make it, and how to use it after it is made—that is, their method of loosening and removing the frames, etc., when full of comb and bees. I move that the thousands of bee keepers among the Rural's readers unite and adopt the motto of "give and take," and by furnishing useful information for the Apiarian Department, make one of the most valuable departments of the Rural for 1872. Who seconds?—J. J. C. Browne.

Inquiries from West Virginia.—A West Virginia correspondent asks the following questions, which he requests experienced Apiarians to answer:—"Is a country which is heavily timbered with oak, poplar, beech, walnut, hickory, abounding in '*laurel points*,' which is thinly settled, the principal crop being corn, and in which timothy, white clover and buckwheat do poorly and are little raised, but in which red clover abounds, as well adapted to the *manufacture* of honey, as a rich grass country, thickly settled, and in which the plants from which bees are said to make fine honey are plentiful?

"The heat during our summer is not much more intense than it is in New York, but the number of hot days is much greater. The climate is damp, and we have, during winter, a few days on which the mercury falls as low as 15°, but the weather is changeable, and in a few days the temperature is up to 60°. Bees are out very often, but are generally frozen up again within three days.

"In such a climate would it not pay to house them, from the time that cold weather begins until settled weather in the spring, in a building constructed like an ice-house, in which an even temperature could be maintained? In a locality such as I have described, do you think that the business, well done and followed up, would become a lucrative one?"

Floricultural.

CHRISTMAS FLOWERS IN TEXAS.

Dear Rural:—I wish to tell your flower-loving readers what I have in my flower garden for the Christmas holidays, away

ANTHERICUM LILIARTRUM.

down here in the last corner of Texas. Blooming in the open ground I have Tuberoses, Cestrum Diurnum (white), Scarlet Geraniums, Lantana, Verbenas, Sweet Alyssum, Sweet Mignonette, Shrub Mignonette, Pink Maurandia, Thunbergia, Convolvulus, old-fashioned Morning Glories, Pomegranates, Dianthus of all colors (very lovely), Dwarf Sunflower, double and quilled, as fine as a Dahlia. I have had three different plantings of them since June planting. First seed ripened each time; they grow about two to three feet high, bearing from eight to twelve blooms to the stalk. They are entirely double to the center. The seed came from Paris three years ago; was brought here by a priest.

I have also Cannas, and a wild vine called here, by Mexicans, the Virgin's Tomato, Tree Lily (very full of bloom), Crepis, Spanish Plume, Scarlet Sage, Joseph's Coat, Marigolds, Zinnias, Blush Tea Rose, white cluster Rose and Gloviede Francia; these are all in full bloom, and I presume I have forgotten many.

I think such a display at this time of year would be refreshing to your ice-bound readers of the North. Christmas day was warm enough to go to church without any sort of wrap. I made ten large bouquets and sent to help decorate our church—seven fine ones. I have one White Hyacinth in a pot; it commenced blooming the 20th of December; now has two stalks of bloom, and is putting up three more; also a Blue Grape Hyacinth blooming in a pot, and *Umbellatum* Lily, with a bloom stalk with ten buds; some will be open in one or two days more. It is charming. One plant I wish to tell the Southern ladies of; it grows so well here, not minding the heat or drouth; it is Phacelia; I think it a gem. I have a lot of stocks just coming into bloom, but almost all come single. I sent for a package of Double White Zinnia seed; only one came white at all; it was single and very small. Hoping to hear of other ladies' winter flowers, I am, ever an admirer of the Rural, A. B. N.

Brownsville, Texas, Dec., 1871.

FLORICULTURAL NOTES.

Double Geranium—*Emilie Lemoine.*—We have a plant of this variety that has exceeded all expectations by its richness of color (brilliant flame), large clusters of perfect flowers, and quantity and duration of bloom. The flowers remain perfect for six weeks. It gives great promise as a winter bloomer. Unfortunately ours got frost bitten so severely as to check the development of the flower buds. It will live in a very low temperature.—Rose Geranium.

St. Bruno's Lily—Anthericum Liliastrum.—We give herewith an illustration of one of our old favorite plants, known by the common name of St. Bruno's Lily. It is a native of Switzerland, consequently hardy in the Northern States, although we regret to say that it is seldom seen even in the collections of our best florists. The flowers are pure white, and of the size shown, resembling in a reduced form the old white lily of our gardens. Their fragrance is also exquisite, and scarcely excelled, although not as powerful as that of the tuberose or mignonette. The roots grow in close, compact clumps, somewhat fleshy, but not tuberous, the stems being produced from central buds or crowns. The leaves are long, narrow, and somewhat grass-like; the flower stem or scape grows from twelve to eighteen inches, producing a large number of flowers, a few only opening at one time. This species of *Anthericum* is one of those modest little plants like the lily of the valley, of which one never tires, or gets too many.

Plant for a Name.—If Mrs. D. M. J. will send us a flower of the plant which she desires named, we will endeavor to give the required information. We presume that *Cestrum elegans* can be purchased of our New York city florists.

Preserving Flower Stakes.—A writer in the Technologist says that he has in his possession flower stakes which have been in constant use for over nine years. To preserve them he takes common coal-tar and brings it to the boiling-point, in a kettle some ten or twelve inches deep. He places the lower point of the stake in the boiling tar, immersing it as deeply as the pot will allow. After being in the tar for about ten minutes the stakes are taken out, and the tarred part rolled in sand.

Soil for Flowers.—L. L. Stanby of Georgia, asks some one to name the kinds of soil best adapted to the cultivation of different flowering plants. To answer this question fully would require a volume of several hundred pages, as different species of plants need different kinds of soil. In addition to this, it makes considerable difference where the plants are grown; in one locality a certain species succeeds best in a light soil, in another a heavy—climate having considerable influence in these matters; as a general rule a moderately compact soil is best, or we may say a mixture of sandy loam and clay, made rich with well decomposed barn-yard manure. The great secret of success is in making the soil rich; if it is not in this condition, others will have little effect in producing great results.

The "English Crocus" Bulb, received from Lady G. last fall, is now in full bloom, and proves to be the lovely, sweet-scented *Narcissus suavis.* Its fragrance now fills our sanctum.

The Swine-Yard.

THE BEST HOGS FOR TEXAS.

In reply to "M. M. A.," page 54 of the Rural New-Yorker, I would say that the Black Essex, either for breeding pure or crossing on the native swine, is unquestionably the best for Texas, as indeed for every hot country, and the next best is the Berkshire. There is a philosophical reason for this, as their black hair and skin absorb the hot rays of the sun and prevent scurf and skin blister, nor are they near so likely to get the mange.

The Neapolitan hog is almost entirely destitute of hair, his skin consequently is more liable to be scorched than the above two breeds, although he originated in a very hot climate, Naples, in Italy, being as hot as most places in America as far south as the 25 of latitude. But the Neapolitan is a highly valuable breed for crossing on the native swine and he makes a more rapid improvement than any other. I have sent them to the South for this purpose for many years past. Their meat is the most delicate of all pork, and approaches the taste of chicken. I am expecting some in the spring direct from Naples. It is said, I know not how truly, that the Neapolitans were used in England to perfect the Essex; but from what I have seen of the unimproved and improved Essex in England, I should judge that the improvement comes from the same source that the Berkshire has, namely, the black or dark copper colored Chinese or Siamese.

About thirty-seven years ago they undertook to improve the Berkshire in a neighboring county in England, by crossing the Neapolitan on him; but this cross proved a bad one and was soon given up. It not only injured the skin of the Berkshire but his general form and constitution. I saw many of this cross when in England in 1841, and heard the breeders express themselves decidedly against it.

The Berkshires are a very fine, hardy breed, and make the best hams and bacon of all others. The reason of this is a much greater proportion of lean to fat in their meat, and this lean is finely marbled and very tender, sweet and juicy.

The Essex, being a fatter animal, makes better side pork for salting and barreling.

As to Poland or Magie, and swine of a dozen or more other names, that they are breeding and highly praising at the West, these are mere crosses of the Berkshire, Essex, Suffolk, Prince Albert or some other fine, improved breed, on the Chester County, Miami or other large, coarse hog of the country. These are as valuable for general fattening purposes as most of the pure breeds, and are consequently to be highly commended; but "M. M. A." would make a much more rapid improvement on the native Texas hog, by using the pure Essex, Berkshire or Neapolitan; for these have been reared so long now as distinct breeds, that their characteristics are well established, and they are more likely to impart them to their crosses on other breeds than those more recently got up. The Berkshires can be traced back in England, as having been bred exactly as they now appear, for upwards of a half century,—perhaps nearly a century. It is about forty years since they were imported into this country, of precisely the same type as at the present day. A. B. Allen.

New York, Jan., 1872.

PIG-PEN PAPERS.

Thumps in Hogs.—An Ohioan, who believes the "Thumps" a lung disease, says he cures hogs of it in this way:—When the disease first makes its appearance, he takes the pig by the hind legs and worries it till it pants for breath; he repeats this worrying three times a day. If too large to treat in this manner he runs it till it pants heavily. This is done to force the air through the lungs and expand them, thus purifying and preventing the poisoning of the blood.

To Make a Pig Trough.—The Maryland farmer says:—Take two boards as long and wide as desired, one inch or more thick; have one of the boards narrower than the other, equal to the amount of the thickness; for instance, if inch boards, have one seven and the other eight inches wide. Plane the edge of the narrow board straight and nail the two boards together in V shape, the wide on to the edge of the narrow. Saw the ends off square and nail to these, boards equal in width, and long enough so as not to be easily upset. If the trough is long, notch a board under the center for a support."

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Collection of Tropical Woods.—*Jan.* 29.—A friend who has resided twenty years in Cuba sends me thirty-six species of the native woods. Of course these are very acceptable, and as the scientific and common names are given, I am enabled to form a very correct idea of the size of the trees from which they were taken, as well as learn something of their commercial value. The peculiar structure of some of the specimens affords me a pleasant study, especially while comparing it with those nearly related in our Northern climate. But we need not go out of our own country to find a large field in this direction worthy of investigation, because our native trees of the Northern States have scarcely been studied at all, so far as it relates to their structure and manner of growth. But suppose we leave what is generally termed science out of the question, and come down to practical, every-day names and uses. How many persons will we find who are acquainted with the different species and varieties of the trees in their own immediate neighborhood? With most of our people it is sufficient to know that a certain tree is an oak; its peculiar individual characteristic is of no account, and the same is true in regard to other genera. A collection of small specimens of every species of tree and shrub to be found in any country of a wooded region will make a most useful and interesting cabinet, and one that every farmer boy might be proud to possess. I wish I could impress upon the minds of our young men the importance of accumulating practical knowledge in such a simple way as the collecting of specimens relating to the natural history of the region in which they reside. Farmers' sons often learn to be carpenters, but it is very seldom that their knowledge of wood extends further than that which they find in the lumber yard. They may know a pine or hemlock board without knowing whether the tree from which it was sawed was evergreen or deciduous. There is not a boy who reads the RURAL NEW-YORKER who cannot collect specimens of every species and variety of tree known in America; and what a valuable cabinet they would make! Commence by making a collection of the kinds of wood in your own immediate neighborhood, preparing several specimens of each, and then correspond with friends or strangers in other localities, and open a system of exchange, the same as entomologists do with insects. Every letter written or received becomes an instructor of the most valuable kind, and a young man would soon find himself gaining knowledge which he little thought could be so readily obtained.

Patent Bee-Hives.—*Jan.* 30.—The patent bee-hive man is about, and, of course, with the best thing of the kind ever offered. Now it is my candid opinion that these patent, movable-frame, moth-protecting, double-extra hives are no better than they should be, if any better than the old, square box hive with movable honey boxes at the top. A few years since I was induced to purchase one of the many patent, movable frame hives, and I was assured that the bees would construct the comb in them so that a frame of honey could be taken out whenever desired. Whether my bees are a different breed from those kept by the patent bee-hive men or not, I am unable to determine; but it is certain they pay very little attention to the frames. Sometimes they construct the comb diagonally across the frames, and wherever they attempt to follow one, they are pretty sure to make the cells on one side so much deeper than on the other that the comb will not pass the adjoining frame, and the result is all the same, i. e., the movable frames become immovable. Bees are usually accounted very wonderful mechanics, but they certainly do make some great mistakes, provided there is any natural rule intended for their guidance. Perhaps my bees are too old-fashioned in their notions to work in a modern structure on which some fellow claims "letters patent;" at least they have always done better in the old style hives. Why do not some of the great lights in bee culture go back to the old Romans for instructions in making hives, and give us something new in that line,—such as hives lined with sheet cork; this would certainly be a good thing, and not more than twenty-five hundred years old.

The Harlequin Snake.—*Jan.* 31.—Mrs. A. B. N. of Brownsville, Texas, has sent me a specimen of the Harlequin Snake, (*Elaps fulvius*, CUV.,) a beautiful reptile occasionally found in the southwestern portion of the United States. Its body is of a light red or scarlet, annulated with black, margined with yellow. It is also called the coral or necklace snake, and is really a beautiful creature, in spite of all our inwrought superstition and hatred of this order of highly organized and intelligent reptiles. I am much pleased in adding this species to my collection.

Curculios.—*Feb.* 1.—One of the old members of the New York Farmers' Club—

A PLAIN TRAVELING SUIT.—(See Page 119.)

who, by the way, has much to say about *the curculio*—asked me, a few days since, how many different species were known of this insect. He remarked that he had been informed that there were at least sixty native of this country. It would be very difficult even to make an approximate guess, because the *curculionidae* of North America have never been carefully studied or described. In MELSHEIMER'S Catalogue of the Described Coleoptera of the United States, revised by HALDEMAN and LE CONTE in 1853, there are over three hundred species named; but this list has always been considered very incomplete. Many new species have been described since the above catalogue was published, and there are at the present time several hundred more in the cabinets of our entomologists and collectors, awaiting descriptions by some competent authority. When we take into consideration the fact that there is scarcely a fruit, nut or seed which is not infected by some species of curculio, we can readily understand how numerous they must be. Black walnuts, hickory nuts, acorns, chestnuts, and from these down to the minute seeds of our gardens, are all preyed upon by some one or more species of the curculio. The great nuts of the tropics also have their curculios, and the species are proportionally large. I have some from the Amazon regions of South America, with bodies an inch in length and as thick as my finger. They are formidable looking beetles, and their hard, horn-like covering, shows that it would require a powerful enemy to exterminate them. As we introduce tropical fruits into the more Southern States, we may also introduce the tropical species of the curculio. And in a few years a thousand species caught within our boundaries will not be considered a very complete collection.

CHILD'S CROCHET STAYS.

Cutting Down Old Forest Trees.—*Feb.* 2.—To-day I have had some of the old oaks upon my place cut down for firewood. For several years past they have showed signs of decay, a few of the branches dying annually, while the stems appeared to be sound and healthy. But upon cutting them down I found not only the center of the stems decaying, but in some instances the great oak borers (*Prionians*) had made great tunnels through the heart wood for twenty feet or more from the earth upwards. These trees would certainly have kept on decaying, no matter how much care they received, and the longer they remained the less would have been their value. As a general rule, those who own woodlands do not pay sufficient attention to the thinning out of old and feeble trees while they are sound and valuable, leaving the young and healthy to grow larger and better. Whenever a large tree shows signs of failing, it is far better to remove it and give the young saplings a chance than to allow the old monarch to remain. By proper care in removing worthless trees and species, a very few acres of forest will furnish a farmer with a constant supply of good timber, while if neglected, quite the reverse may be the result. And this practice will also enhance the value of timber allowed to stand.

Arboricultural.

PROTECTION OR NO PROTECTION.

THIS is a question that has long puzzled the brains of political economists as well as vegetable physiologists. We are, however, perfectly willing that the former should work away at the problem they have in hand, being satisfied that its solution is fraught with as many difficulties as it is when applied to the members of the vegetable kingdom. Perhaps some of the arguments offered *pro* and *con* in regard to the protection of plants may apply to commerce, but of this we will not be positive, merely hinting that there are vermin which infest custom-houses as well as barns and fields.

Our rural population have of late years become greatly interested in this subject of protection of their fields and gardens against winds, especially those of winter. In many portions of the country it appears to be positively necessary that farmers should be thus protected. But we should also bear in mind that protection in many localities encourages all kinds of depredators such as rats, mice, rabbits, and in a level country, late spring and, we might add early autumn, frosts; for wherever the wind has a free sweep early or late frosts are never so frequent as where there are obstructions. As a practical illustration we may state that within a radius of fifty or more miles of this city all tender plants growing in valleys and protected situations, were cut down by frosts last fall, at least one month before those on hills and in exposed situations. In our own garden there was all this difference within an area of one acre, the portion which escaped the early frost being about twenty feet higher than the other, and unprotected against the North and West winds. We agree with a certain English writer, who says:—"Protection seems to whet the curiosity of depredators, and they seem to fancy that such things must be better and more valuable to them on which they see extra care bestowed." This certainly seems to be true, for we have often noticed that our beds of bulbs, when protected, offered a grand harbor for field mice.

If we protect our roses or fruit trees with manure, or any similar coarse material, the mice take possession immediately, and gnaw away at our pet plants with a certain degree of immunity from danger. We are not, however, disposed to ignore protection of farms or plants, neither do we advocate a universal adoption of the system so strongly urged by some writers on this subject, but believe in allowing every one to be his own judge as to what extent protection is needed in his own particular locality. What are usually termed wind-breaks, at some distance from the orchard or garden, are usually far more valuable than close hedges or belts of trees that prevent a free circulation of air. Neither is it a safe plan to allow the leaves that fall from trees to remain undisturbed, especially if the grove is near the farm building, because fire is another element that must be guarded against, and a far more dangerous one than a cold, Northerly breeze.

ARBORICULTURAL NOTES.

Preparing Tree Seeds for Planting.—As long as the cold, freezing weather continues, hard shell seeds and nuts may be prepared for planting next spring. It is very often the case that a few nuts or other coarse seed have been laid aside in the fall and neglected, until they have become so dry that there would be little chance of growing if planted in the same condition next spring. All such seeds and nuts desired for planting should be soaked for a few hours in warm water, then mixed with sand or soil, and placed out of doors where they will not freeze, or at least remain cool and moist until wanted for planting. Apple, pear, cherry, peach, plum, and other fruit tree seed may be treated in this way with benefit. All the larger species of nuts, as well as Osage and other hedge plant seeds, require similar preparation to make them grow readily.

Value of Fifteen Years' Growth of Locusts.—Dr. WARDER recently stated before the Ohio State Horticultural Society that he had sold the produce of an acre of locust timber fifteen years old, for $1,000, the price of the fence posts being twenty-five dollars each.

When to Cut Hickory Timber, is a question which bothers J. B. J. He cut some in December, and it became wormy and unelastic within a year. He asks for the experience of RURAL readers.

Dairy Husbandry.

AMERICAN DAIRYMENS' CONVENTION.

THE annual gathering of the American Dairymens' Association occurred at Utica Jan'y 9th, 10th and 11th, and was very largely attended, delegates being present not only from New England and the Middle States, but from the Western and Northwestern States, and from the Canadas. One of the most remarkable features connected with this Association is, that the interest of its Conventions has been kept up, without flagging, while there has been no falling off in attendance—the largest hall in Utica having scarcely capacity to seat its members. We say members, since the audience in attendance is not such as is made up of persons who drop in to a meeting out of idle curiosity, inasmuch as the heavy fee charged at the doors for entrance to the Convention would naturally exclude this class. We have been present at all the Conventions of former years, and although fears were entertained that, on account of the depression of the dairy markets, there would be less interest manifested by dairymen this year than usual, resulting in a smaller attendance, still we found no diminution in numbers, while the faces of those present showed an eagerness for knowledge and a close attention to questions under discussion rarely to be found in such an immmense gathering of people from widely separated localities.

It is asserted, and the history of this Association seems to prove it, that no other agricultural interest of our country has been able to call out and sustain such large and enthusiastic meetings from year to year. This may in part be accounted for by the fact that the dairy has been recently carried into new districts, where questions concerning milk and its products are imperfectly understood, while in old dairy interests the factory system has developed a spirit of emulation among manufacturers who spare no pains in acquiring such information as shall place them at the head of their profession. The improvement that is constantly going on in this branch of industry would soon leave the manufacturer, who takes no pains to inform himself, far in the rear, and hence, to retain his situation and keep pace with those about him, he is impelled to seek all the avenues of knowledge within reach. The manufacturer, therefore, comes to the Convention for the special purpose of improving; he bends all his energies in this direction, and he infuses a spirit of earnestness that spreads from one to another, until it takes possession of the whole assemblage.

Another highly important feature for keeping up the interest of these meetings is the employment of scientific lecturers, who are constantly advancing upon new ground—bringing forward science to aid in clearing up intricate questions. Thus the Dairyman has been enabled to advance step by step, with the feeling that he is upon sure footing. The Conventions have undoubtedly done a great work as educators, and so long as the officers of the Association shall continue to employ the best talent in the land to investigate difficult problems concerning the dairy, and bring the result before these meetings, so long will the Conventions prove a success, and the interest in them be maintained.

Among the more important subjects brought before the Convention this year, we may name that concerning the practical value of chemical analysis of the dairyman's raw materials and of the products of his manufacture, by Prof. C. CALDWELL; the cause of poisoned cheese, by Mr. L. B. ARNOLD; the winter food of dairy stock and the fodder-corn question, by Mr. LEWIS; the manufacture of butter at creameries by H. COOLEY GREEN of Pennsylvania; and to these may be added the manufacture of condensed milk, which, in our opinion, is destined to have an important practical bearing on the dairy interest of the country.

The subject of Sunday cheese making elicited a warm and lengthy discussion, and although the Convention finally put itself on record in the right direction—recommending no work at the factories on that day—we should have been better pleased had this expression been more unanimous, and if some more decided action could have been taken.

The experimental farm question was warmly advocated, and a committee appointed to ask an appropriation from the State for that object. Such an appropriation, if properly managed, would, without doubt, be of great service to the dairy interest, and be of more benefit to the State than has resulted from a large share of the appropriations which have been made for objects of prospective utility during the past few years.

The Convention, on the whole, must be regarded as a great success, and in addition to the useful lessons taught in its valuable papers and discussions, the new feature of setting apart one evening for a social gathering, contributed very largely to the enjoyment of all. This last feature was suggested by Gov. SEYMOUR, and will doubtless be inaugurated at future Conventions.

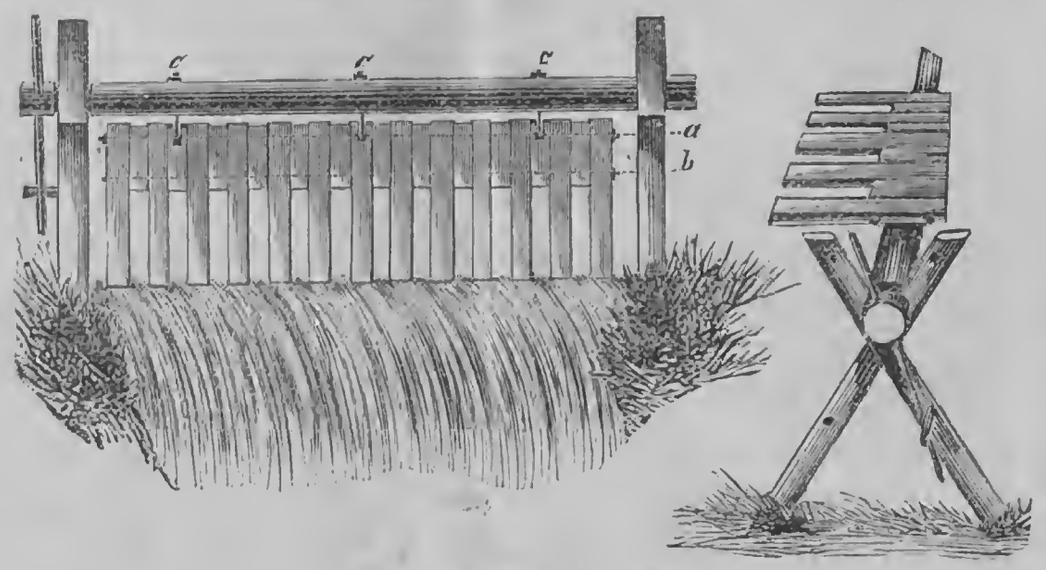
We shall refer to the addresses and discussions hereafter, more in detail; but for the present we can notice no further than by giving the list of officers elected for the ensuing year:

President—Hon. HORATIO SEYMOUR of Oneida, N. Y.
Vice-Presidents—Hon. Thos. G. Alvord, Onondaga, N. Y.; Henry Wade, Canada West; O. S. Bliss, Vermont; M. Wilder, Wisconsin; T. L. Harison, New York; Gen. B. F. Bruce, Madison, N. Y.; C. E. Chadwick, Canada West; J. V. H. Scovil, Oneida, N. Y.; X. A. Willard, Herkimer, N. Y.; John G. Cohoes, Chautauqua; Alex. McAdam, Montgomery; R. B. Stone, Ill.; Harvey Farrington, Canada West; M. Folsom, N. Y. city; J. R. Smith, Erie, N. Y.; J. H. H. Holloway, Kentucky; Halsey Sanford, Cattaraugus, N. Y.; Hiram Smith, Wisconsin; S. L. Lincoln, Mass.; L. B. Arnold, Tompkins, N. Y.; S. A. Farrington, Yates, and H. Cooley Green, Pennsylvania.
Secretary—Gardner B. Weeks, Syracuse, N. Y.
Treasurer—Dr. L. L. Wight, Whitesboro, N. Y.

Farm Economy.

STREAM GATE AND FOOTWAY.

AFTER years of aggravation in repairing and constructing stream gates, I adopted the plan, of which the accompanying drawing gives a good view of the gate as it appears across a small stream. The lever in the end of the pole is to raise and lower it. By turning the lever the gate is elevated to any hight, and kept in place by putting a pin behind the lever in the support for the gate. It can be raised to any hight, even so as to form a very nice foot-log, (as in the right hand figure,) just above the water, so as not to freeze in the water. As a general thing, the old-fashioned gates are destroyed by freezing, the ice settling and sagging the pole and breaking the gate. This gate gives a free passage for water, ice, brush, &c. There are no boards to break off nor nails to rust off, nor extra work to do to secure a foot-log. It can be made of poles, shingle lath, or fancy pickets for lawn streams. No tools are needed but a saw, brace and two bits, one one-fourth of an inch, and another one-eighth of an inch, the upper suspending rod, at *a*, being one-fourth inch, and the lower one, at *b*, being one-eighth inch.



FRONT AND END VIEW OF STREAM GATE.

The end view of the gate (on the right) shows it as used for a foot-log, and also the best style of supporting gates of this kind, since it will settle as the water washes the earth away. It can be used across a stream fifty feet wide, or even one hundred, if an abutment be put in the center of the stream and a lever on each end of the two poles is used.

A. B. COLLINS.

Knox Co., Ohio.

ECONOMICAL NOTES.

A Large Pulley.—The Taunton (Mass.) Foundry Company has made a pulley twenty-seven feet in diameter, ninety inches on the face, and weighing over forty tuns.

Farmers' Heating Furnace.—Will N. O. B., Fairfax C. H., Va., tell how much wood per month it requires to run the furnace described by him in RURAL NEW-YORKER Jan. 13, page 35.—JOSEPH ALDEN.

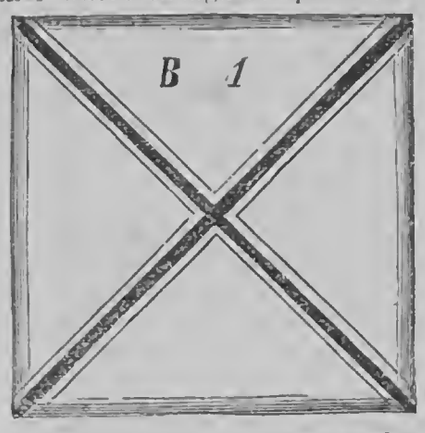
Potash from Salt Wells.—The suggestion is made by the Bureau of Agriculture that the salt wells of this country will be found on examination to contain potash, and that an important industry may be created by manufacturing that substance in a condition fitted for agricultural and chemical purposes. Such a manufacture has grown up within a few years at the Stassfurt salt works in Germany, the amount produced in 1870 being 30,000 tuns of the muriate.

A correspondent asks if some of the readers of the RURAL NEW-YORKER will not forward sketches of approved barracks for storing hay, straw, etc., with details as to the mode of manufacture.

Domestic Economy.

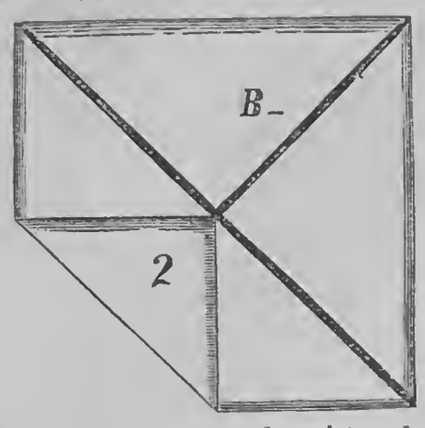
ABOUT SOUP.

I AM glad to find people inquiring about soups. They are delicious, wholesome and economical, but the majority of housekeepers seldom put them upon the table. I never buy soup meat. Bits of cold steak, the bones of a roast, veal scraps, any remnants of cold meat which comes from the table, are collected for a week, and then in the morning put into an iron pot with cold water; as soon as it comes to a boil, skim carefully, then let it simmer all day, filling up as the water boils away; towards evening season with salt, pepper and a very little sage; take one onion, one turnip and two or three potatoes, chop them fine and add to the soup with a small teacup of *raw tomatoes*; let the whole boil an hour longer, then strain through a colander, and add a spoonful of flour to thicken it slightly, and you will have a soup of elegant color and delicious enough to tempt an epicure. All soups should be served hot. Of course, when people live in a rational way, and eat their dinners at noon instead of night, your soup must be at least partially prepared the day beforehand. The above vegetables will be sufficient for three quarts of soup, and I venture to say there are few farmers' families where enough scraps of meat to



furnish the stock are not wasted every week or at least served up in unpalatable ways.

If you have much meat with your bones, it is nice to take it out before adding the vegetables, and serve it on slices of toast,



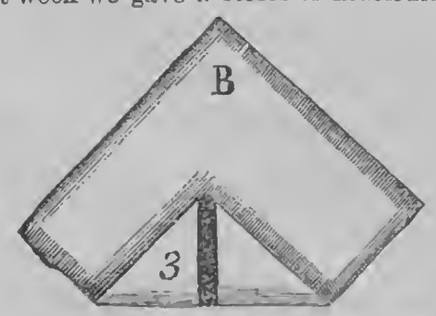
seasoned with butter and moistened with the broth.

A HOUSEKEEPER.

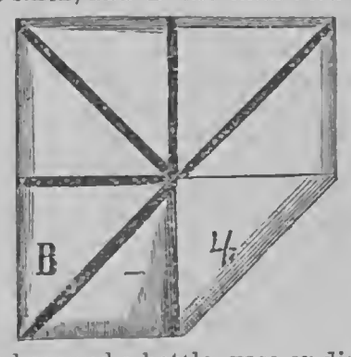
A HOUSEKEEPER, noted for the excellence of her soups, once told us that one thing that deterred many people from serving soups with every dinner, is the idea that it must be made fresh every day. She says this is not necessary. She makes a large quantity—enough for several days—at one time, and says it is improved each time it is warmed over.

ODDS AND ENDS.

Folding Napkins Water Lily Shape.—Last week we gave a series of illustrations

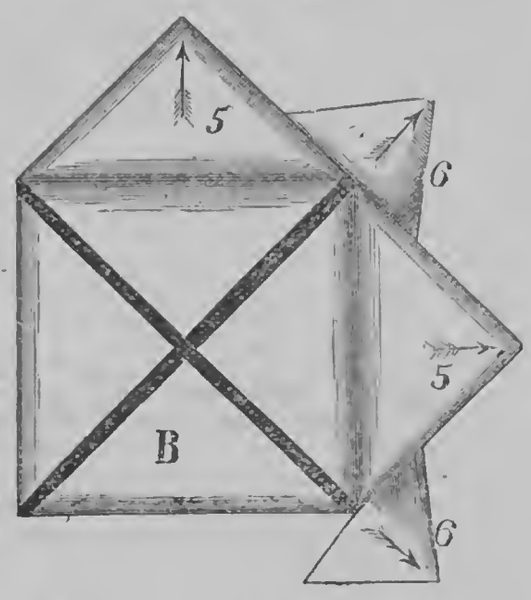


showing how to fold napkins pillar shape. This week we present another form. B 1, shows the first fold; B 2, the second; B 3, the third; B 4, the fourth; B 5, the fifth; B 6, the sixth, and B the final fold as it is

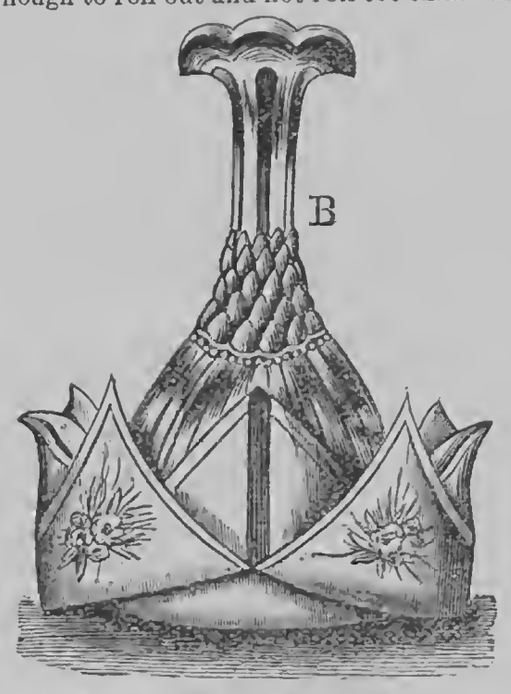


arranged around a bottle, vase or dish. The remarks we made last week as to this kind of garniture on a dinner table apply in this case.

To Make Biscuit.—I flatter myself that I can make good biscuit, and therefore send



my way. (I omit the usual direction to take a *clean* dish). Take (according to the quantity you wish to make) one-third sour cream and two-thirds rich buttermilk; a tablespoon of salt, a teaspoon of soda, is sufficient for an ordinary quantity. Mix hard enough to roll out and not roll too thin. If



the soda is not dissolved in milk or water before being put in the wetting, it takes a skillful hand to pulverize it so that there will be no soda spots in the biscuits. Bake by a brisk fire.

Cream of Tarter Biscuit are made by mixing one teaspoon of cream tartar with sufficient flour to make a batch, one-half a teaspoon of soda dissolved in the milk, with which mix the flour. Addition of sweetening makes them nicer; but with only sweet milk they are very good, and not dangerous to dyspeptics.—FARMER'S WIFE.

Domestic Inquiries.—W. R., Hale, Ill., asks for a recipe for Vermicelli Soup. H. H. S. asks for recipes for making Rice Puddings, Catskill Puddings and Apple Dumplings.

Modes and Manners.

ILLUSTRATIONS IN THIS NUMBER.

A Plain Traveling Suit is illustrated on page 117. It is a simple black cashmere dress, the skirt trimmed with four rows of satin bias. Amazon bodice trimmed with satin. Blue cloth waterproof, with cape trimmed with a deep woolen braid, headed by another narrower braid. Two rows of braid are placed lengthways on the cape. Black felt hat, trimmed with black velvet, with a natural bird's wing at the side, and fringed ends falling over the side.

Child's Crochet Stays (see illustration, p. 117).—These stays are worked with knitting cotton over white piping cord. Begin at the bottom with a chain of 270 stitches, about 21 inches long. Work 40 rows, taking up the back thread of the previous row and putting in 1 chain stitch at the end of each row before you turn the work. In the first 9 rows, in order to form the gores, take off as follows:—In the 2d row pass over the 100th and 111th, the 160th and 171st stitches, and repeat this every other row, decreasing 1 stitch further from the end each time. In the 38th row begin to increase by working 2 stitches on the 103d and the 147th stitches. Repeat this increase every other row 4 times. From the 41st row, work 58 stitches at each end for the backs, leaving the middle untouched. Work 14 rows, taking off 2 stitches every other row on the inside to form the armhole. Then work 11 rows on the front of the stays, decreasing at each end for the armhole 15 stitches, 5 stitches in the 1st row, 3 in the 3d and 4th row, and 2 in the remaining rows. Make a chain of 50 stitches for the sleeve, and work 5 rows; then 7 chain, turn the work, miss the last of the 7 chain, work double in the remaining 6 chain, and to the end of the row. Increase in the same way as in the 5th row by adding 6 chain, in the 7th and 8th row by adding 2, in the 9th and 10th by adding 4, in the 11th and 12th by adding 6, in the 13th and 14th by adding 5. Finish the sleeve with a row of double, join it round, and sew it into the armhole, observing that the straight side meets the top of the stays. Now work a row of double over the cord along the edge of the bottom of the stays and down the backs. Round the top work an edging as follows: Alternately 1 double long treble, 1 purl of 5 chain, and 1 double on the 1st of the 5, missing 2 underneath. Then work the border below the edging on the same row of double, beginning at the upper corner of the right back, and taking up the front thread, whereas the edging is worked on the back thread. 1st row—* 2 double with 4 chain between on the 1st stitch on which the double long treble has been worked, 7 chain, missing 5 underneath. Repeat from *. 2d row like the 1st, observing to work the 2 double on the center stitch of the 7 chain. 3d row—* 2 double, with 4 chain between them on the center stitch of the 7 chain, 7 chain, 1 double on the 3d of the 7, 2 chain, repeat from *. On the bottom of the stays work 2 rows like the 2d and 3d rows. At the bottom of the sleeves work 2 rows, as follows:—* 2 double with 4 chain between them, 4 chain, miss 2, 1 double long treble, 4 chain, miss 2, repeat from *. 2d row—2 double with 4 chain between them in the double long treble, 7 chain, 1 double on the 3d of the 7, 2 chain, repeat from *. Sew on buttons and loops at the back, and run a colored ribbon in the holes round the neck.

Duty to Look Beautiful.—To look as beautiful as she can is the duty of every true woman. Part of her mission in this world is to gladden and brighten it, in this way, just as it is part of the mission of trees, and skies, and flowers, and waters, and all other lovely things. Those families in which the sense of beauty is cultivated, are always the most genial and sweet and lovable. Flowers, prints, books, a nice choice of colors—all these refine and elevate insensibly. So does dress. To be well dressed is to look, and even to be charming, for it satisfies ourselves and makes us affable. The pretended moralists who denounce dress, are not moralists at all, but blind leaders of the blind.

The fashionable dress for gentlemen at a day wedding is the English suit of dark frock coat, lavender pants, black or white vest, blue necktie and lavender gloves; for evening weddings black dress coat and pantaloons, black or white vest and black necktie.

Coldness, and absence of heat and haste, indicate fine qualities. A gentleman makes no noise; a lady is serene.—*R. W. Emerson.*

NEW AND RARE VEGETABLES.

I make the seed of New and Rare Vegetables a specialty, besides raising all the common varieties. On the cover of my Catalogue will be found extracts from letters received from farmers and gardeners residing in over thirty different States and Territories who have used my seed from one to ten years.

Catalogues sent, Free, to all. ☞ I grow over one hundred varieties. Get your seed directly from the grower. JAMES J. H. GREGORY,
Marblehead, Mass.

The above cuts show the form and some of the uses of the Sugar-trough Gourd. They grow by the acre to hold two bucketfuls each, and I have raised them to hold over eleven gallons each. My Catalogue tells how to grow them, and illustrates and describes over 200 varieties of choice vegetable and flower seeds. Send stamp for Catalogue, or 25 cents for it and package of the Gourd seed.

Address WALDO F. BROWN, P. O. Box 40, Oxford, Butler Co., Ohio.

ALL FOR $1.

SATURDAY, FEBRUARY 17, 1872.

REFORM FOR WORKINGMEN.

A PROMINENT Land and Labor Reform advocate asserted, in our presence the other day, that one of the chief obstacles in the way of the success of all efforts in this direction was Ignorance. He asserted that not one in ten of the laboring men of the country—those hired by employers—had the moral and intellectual qualifications necessary to render them independent of their employers. Neither their intellects nor their judgments had been educated. They knew nothing of the laws which govern all social relations, had no business forecast nor tact, and were as powerless in the hands of their employers as if they were the veriest slaves. His panacea for their ills is education—that sort which will enable them to think, calculate, forecast and co-operate with each other, and at the same time give them self-control. For in too many cases the men of ability, of judgment and forecast among the working classes, are men without self-control—men who are neither economical, temperate nor virtuous. Prosperity destroys them. They compel themselves to subordination to others. Their habits enslave them. No man who fails to control himself can control others.

It seems to us that our friend struck the key of reform and emancipation so far as the laboring classes are concerned—Education in business, and Self-control. In other words, the succeeding generations of laboring men, if they are to be disenthralled, must be different men, remodeled and regenerated from the type of the present. They must be educated how to do business. They must be taught early how to exercise their judgment and rely upon it. They must be instructed in the first principles of true manhood. They must be impressed with the fact that they cannot control others until they learn to control themselves; and that in just such proportion as they fail to exercise self-control, in just such proportion they can be made, and must be, slaves both to themselves and others.

No matter how much we may sympathize with the sufferings of classes of workingmen, controlled and enslaved, if you please, by the brains of better thinkers and the capital accumulated by generations of labor, we never expect to see these conditions changed by the denunciations of, and appeals to the passions and prejudices of the oppressed classes by, so-called reformers. No man can be enslaved unless the qualities which make him a slave are inherent in and belong to him. Any man qualified for the best life finds it if he wills. And workingmen will disenthrall themselves when they co-operate to build each other up without attempting to pull anybody down—when they shall have acquired the strength which is born of intelligence, moral judgment, self-control and a *will* to be independent. In this they must co-operate with each other. It is their own specific gravity that keeps them under the surface now. Let them diminish it by careful culture of all the higher qualities of mind and heart, leaving the prejudices and passions to die of inaction. No one man, nor any class of men or circumstances, can keep them under when they do this. They will rise because they must, not simply because they want to do so. We never knew a man to stay in a place which he had grown too large for.

OBITUARY.

William M. Ely.—It becomes our painful duty to chronicle the death of the Hon. WM. MATHER ELY of Binghamton, N. Y., which occurred Feb. 7. Mr. ELY was born in Binghamton in 1818, and was educated at Amherst College. For many years he was a merchant, but after acquiring a competency he engaged, on account of failing health, in farming. He was deeply interested in Agriculture—was for years prominently connected with the State Agricultural Society, and for some years one of its Vice-Presidents, which position he occupied at the time of his death. Mr. ELY was likewise a member of the Legislature, as he had been for two or three years. He was considered an industrious and intelligent legislator, having acquired extensive knowledge of State affairs.

H. P. Randall.—While closing this paper for the press, we learn from the Chenango Telegraph, that on Jan. 31st Mr. H. P. RANDALL, youngest son of the Hon. HENRY S. RANDALL (one of the editors of the RURAL NEW-YORKER) was thrown from his buggy (by a collision caused by the carelessness of two men drawing lumber) and sustained injuries, including a severe wound in the back of the head, which rendered him insensible, in which condition he remained until his death on the Friday afternoon following. Thousands of the friends of Dr. RANDALL and his family will feel with us sincere sympathy, and join with us in expressions of condolence on account of this sudden and most sad bereavement.

RURAL NOTES AND QUERIES.

How to Remit for the Rural.—We print in every number of the RURAL NEW-YORKER, under head of Terms, first column of Editorial page, this significant sentence:—"*Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk.*" This means, what we have often stated in this paper, that we are not responsible for money otherwise remitted through the mail—and yet people (both Agents and old subscribers, as well as strangers,) will persist in taking their chances and losing their money. We have stood or divided losses long enough—being "out" from $500 to $2,000 per annum for many years—and now give notice that those who do not send by Draft, P. O. Money Order, or Registered Letter, *must stand the stealings en route*, or at either end of the line. We believe our own cashier and clerks are honest, but cannot affirm as to other people. Will not *all of our readers* "make a note" of the above.

Failures in 1871.—A circular of one of the most prominent and reliable mercantile agencies in the country furnishes us a statement of the number of failures, and the amount of liabilities, reported during 1871. From it we find that in Alabama there were 26 failures, with liabilities amounting to $525,000; Arkansas, 59 f. and $95,000 l.; California, 89 f., $4,279,000 l.; Connecticut, 77 f., $3,915,000 l.; Delaware, 11 f., $258,000 l.; District of Columbia, 9 f., $158,000 l.; Florida, 2 f., $11,000 l.; Georgia, 42 f., $904,000 l.; Illinois, 172 f., $5,820,000 l.; Indiana, 60 f., $860,000 l.; Iowa, 69 f., $797,000 l.; Kansas, 58 f., $790,000 l.; Kentucky, 80 f., $1,163,000 l.; Louisiana, 45 f., $2,457,000 l.; Maine, 81 f., $1,420,000 l.; Maryland, 81 f., $1,194,000 l.; Massachusetts, 210 f., $8,241,000 l.; Michigan, 125 f., $1,521,000 l.; Minnesota, 37 f., $471,000 l.; Mississippi, 30 f., $355,000 l.; Missouri, 99 f., $1,995,000 l.; Nebraska, 11 f., $251,000 l.; New Hampshire, 21 f., $129,000 l.; New Jersey, 72 f., $597,000 l.; New York, 321 f., $9,051,000 l.; New York City, 324 f., $20,740,000 l.; North Carolina, 35 f., $390,000 l.; Ohio, 189 f., $4,077,000 l.; Pennsylvania, 357 f., $7,110,000 l.; Rhode Island, 21 f., $303,000 l.; South Carolina, 30 f., $801,000 l.; Tennessee, 42 f., $369,000 l.; Territories, 4 f., $152,000 l.; Texas, 38 f., $673,000 l.; Vermont, 25 f., $282,000 l.; Virginia, 76 f., $1,722,000 l.; Wisconsin, 81 f., $386,000 l.—a total of 2,915 failures, with $85,252,000 liabilities. In 1870 there were 3,551 failures, with $88,242,000 liabilities, and in 1869 2,799 failures, with $75,054,000 liabilities. It would be interesting to know how this statement compares with the number of failures and amount of liabilities of the agriculturists of the United States.

Advice to Patrons of Husbandry.—We see it stated that the "Lecturer" of this Order in Iowa "is advising farmers no longer to communicate through agricultural journals—without pay." Now that lecturer ought to go a step further. He ought to advise farmers to make their interchange of experiences and practice with each other, verbally, a matter of bargain and sale. That man, whoever he is, must be eminently qualified as a "Lecturer!" We advise the Patrons of Husbandry in Iowa to be careful how they place faith in a man whose brain is not large enough to know that the farmers of the country to-day owe more of their prosperity and knowledge of agriculture to their free interchange of experience through the Agricultural Press, than to any other cause whatever; and who does not seem to know that, but for the Agricultural Press, such an Order as the Patrons of Husbandry would never have had an existence? We warn the influential men in the Order—those who are really at work *pro bono publico*, and not for their individual aggrandizement—that such kind of teaching will not strengthen the Order financially or otherwise. We wonder if WM. SAUNDERS, the "head-center" of the National Grange, and Secretary KELLEY, indorse such counsel to the Patrons! If so, we are mistaken in these men and in the real motives which actuate them.

Beet Sugar in Europe.—A Liverpool, England, commercial circular, dated Jan. 5, 1872, places the imports of beet sugar during 1871, into Great Britain, at 160,447 tons, against 77,000 tons in 1870; 38,000 in 1869, and 41,000 in 1868. Thus it will be seen that nearly one-third of the sugar consumption of Great Britain in 1871 was of beet sugar from the Continent. This fact is attracting the attention of Englishmen, who are inaugurating the culture of the sugar beet and its manufacture. It is also stated as a fact, that while the fact that the Cuba crop of sugar had fallen off 150,000 tons had no perceptible effect upon prices in Europe, the falling off in the estimated beet sugar production of 100,000 tons caused an advance of 2s. to 3s., which has been everywhere maintained. The following table shows the beet sugar product of Europe the past five years, including the estimate for the present season:

Tons	1871-72	1870-71	1869-70	1868-69	1867-68
Zolverein	200,000	250,000	215,107	208,140	165,014
France	310,000	300,000	285,146	213,904	224,767
Austria	150,000	175,000	152,205	101,601	124,053
Russia & Pol'nd	120,000	135,000	152,500	87,700	112,500
Belgium	55,000	50,000	43,552	37,078	31,039
Holland and other countries	25,000	15,000	12,500	10,000	7,500
Total	860,000	925,000	841,310	658,223	664,888

Our Story—Back Numbers.—The Story, "*Before and After*," which we are publishing, is attracting much attention, and we are daily asked if back numbers from its commencement can be obtained. Yes; as we electrotype the RURAL, new subscribers can be furnished so that all may have the absorbing Story complete. Tell this to your neighbors and other friends, and advise them to subscribe singly, or form or join a club. How many of our readers will help the RURAL, and benefit friends, by aiding as above?

Anti-Weed Law in Pennsylvania.—The Germantown Telegraph announces that a bill is before the Legislature of that State by which owners, occupiers or lessees of land are to be compelled to keep not only their farms free from such weeds as mullens, wild carrot, Canada thistle, horse nettle and ox-eye daisy, but those portions of the public roads which pass through or adjoin their properties. Railroad companies are to be amenable to the provisions of the act.

Gas from a Well for Rochester.—In West Bloomfield, N. Y., a gas well has been discovered, the flow from which is estimated to be 800,000 cubic feet per twenty-four hours. Prof. S. A. LATTIMORE of Rochester University, has made a careful photometric test of its illuminating power and found it to be 14.42 candles. A main to convey this gas to Rochester is being rapidly laid, and it is thought the city will, ere long, derive all its light from this well. It is about 22 miles from Rochester.

THE SEASON.

Russell, Iowa, Jan. 30.—We are having a hard winter so far; ground frozen up in November, and has not thawed to the depth of two inches since. Jan. 28 was the coldest day and night for a number of years.

Quaker City, Guernsey Co., O.—Weather very cold during the week ending Feb. 3, thermometer ranging in the neighborhood of zero all the week; on Tuesday morning 8° below. Have had a very dry, cold winter. Fears are entertained for the fruit crop of 1872. Wheat looks very badly.—N.

Polk City, Iowa, Jan. 29.—Weather very cold; snow six inches deep. Corn, 15c.; oats, 20c.; potatoes, 30c.; wheat, $1; apples, $1.25; hogs, $3.50 per cwt., gross; cattle, $3.50@5; milch cows, $20@35; horses, $80@125; farm labor, $15@20 per month; last year's corn crop very heavy—average, 50 bushels per acre.

Clarence, Iowa, Jan. 30.—Moderate winter until the past week; considerable sleighing. The Davenport and St. Paul and Sabula and Ackley Railroads have just commenced doing business—four and seven miles distant respectively, and are in competition with the old Chicago and Northwestern. Wheat, $1@1.04; oats, 24c.; corn, shelled, 27@28c.; in ear, 21@25c.; eggs, 20c.; butter, 8@15c.; live hogs, $3.50@3.65; Timothy seed, $2@2.25.—H. E. B.

Jerseyville, Ill., Feb. 2.—Wheat is worth $1.50 per bushel; corn, 40c.; oats, 35c.; Irish potatoes, $1.25; apples, 50c. per bu.; butter, 30c.; eggs, 15c.; hay, $16 per ton; clover hay, $10; clover seed, $7 per bushel; timothy seed, $3. We think we have the best land in the country; in price it ranges from $25 to $125 per acre, according to locality; soil is black sandy loam, with yellow subsoil. The ground is frozen very deep, and we are having the dryest time now that has ever been known in this country; almost every well is dry; springs are dried up; stock suffers very much for want of water. Winter grain looks very well.—D. R. R.

South Trenton, N. Y.—Thermometrical averages for January, 1872:—Highest point attained, the 30th, 38° above zero; lowest, on the morning of the 15th, 10° below zero; 13½ inches of snow fallen on 8 different days; melted, it makes 1¼ inches of water. Not a drop of rain fell during the month. Average temperature at 7 A. M., 17° 9'; at 2 P. M., 23° 6'; at 9 P. M., 9.18°; average for the month, 19° 33'. Three days below zero; 26 days below the freezing point and 5 days above. January, 1872, was not as cold by 2° as January of 1871, but the steady cold weather exceeded that of last January. There is, on an average, about 11 inches of snow on the ground, but very badly drifted. Prevailing winds, west; some famous blowing days, doing damage to fences, trees, roofs, &c. Water in wells and streams very low indeed.—STORRS BARROWS.

BUSINESS INFORMATION.

Ames Plow Company's Catalogue of Plows.—We have just received a handsomely printed and illustrated pamphlet, entitled "Catalogue of Plows made only by the AMES PLOW COMPANY, manufacturers of Agricultural Implements and Machines, dealers in Seeds, Fertilizers, and other requirements of Agriculturists and Agricultural Districts. Warehouses: Quincy Hall, Boston, and 53 Beekman St., New York—1872." All interested should procure a copy of this Catalogue. By the way, the SESSIONS & KNOX'S Patent Hard Steel Plows, made by this Company, are becoming very popular. They are in our Premium List, and are more frequently selected than any other plow we ever offered.

The New Remington Rifle.—We recently examined a "copy" of the Remington Rifle, the arm recently adopted by the State of New York for its National Guard, and were most favorably impressed with its simplicity of construction and general elements of excellence. It has been adopted by the Army and Navy of the United States, after a severe and prolonged test, in which its decided superiority was manifest. More than half a million have already been manufactured, and "the cry is still for more." It has received many certificates for its great excellence, and is apparently the best single breech-loader now in use.

Good Idea in Advertising.—In the advertisement of Messrs. B. K. BLISS & SONS, the great Seedsmen and dealers in Horticultural Implements, of Park Place, New York, we read this sensible sentence:—"We will send a packet of choice Flower Seeds to persons ordering catalogues, if they will state the name of the paper in which they saw this advertisement." Of course our readers ordering these fine catalogues should not overlook this offer, for if they do they will fail to receive some choice Seeds.

The New York Life Insurance Company has issued its 27th Annual Report, from which it appears that its net cash assets are over fifteen and a-half millions of dollars; its receipts amount to nearly twenty-three millions of dollars; its cash assets are nearly nineteen millions of dollars, and the divisible surplus is $1,488,134 43. During 1871, 8,908 policies were issued. The trustees of this Company comprise some of our best-known merchants, bankers and publishers.

Catalogues Received.—From ROBERT DOUGLAS & SONS, Waukegan, Ill., Catalogue of evergreen and ornamental tree seedlings. From R. G. HANFORD, Columbus, O., spring catalogue of new plants. From R. H. ALLEN & Co., 189 and 191 Water St., N. Y. city, retail catalogue of garden, flower and field seeds and grains.

RURAL BREVITIES.

D. R. R., Jerseyville, Ill., asks where he can buy pure Cotswold ewe lambs. Let advertisers answer.

J. E. B., Champaign, Ill., asks what is the best wagon dog—a peaceable, yet self-respecting, watchful dog?

J. P. MANLOVE asks if he can procure black bass ready hatched, with which to stock a pond of spring water, and at what cost. Who can tell him?

HON. M. IRELAND has resigned the position of Treasurer of the National Grange of Patrons of Husbandry, and J. R. THOMPSON is elected his successor.

M. D. C., Hempstead, L. I., is informed that we do not know of any Carpenter's Dictionary. We have for sale a Carpenter's and Joiner's Hand-Book, price 75 cents.

THOS. G. WILLIAMS' questions on floral topics will be answered, if directed to this office. We recommend Breck's Book of Flowers, price $1.75, for sale by us.

IN the Senate of the Alabama Legislature is a proposition to divide the Agricultural College fund of the State, and endow two Colleges—one for whites and one for blacks.

GOV. MERRILL of Iowa, in his recent message, recommended an appropriation of $100,000 for further buildings for, and improvements in, the State Agricultural College—all of which looks like business.

PUBLISHER'S SPECIAL NOTICES.

Form New Clubs!—Now is a good time to form new clubs. Agents and Subscribers (both new and old) can do this with little effort—and secure good pay in the shape of Premiums. New subscribers can begin at the time of subscribing, or with year and volume—thus securing all of the Thrilling Romance we are publishing, beside many excellent articles and beautiful illustrations.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,

Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

Whitcomb's Asthma Remedy.—In no case of purely Asthmatic character has it failed.

The Literary World.

NEW PUBLICATIONS.

Cathcart's Youths Speaker.—By GEORGE R. CATHCART, A. M. New York: Ivison, Blakeman, Taylor & Co.

A HANDSOME volume of nearly two hundred pages, filled with fresh and judicious selections, within the comprehension of the youngest speakers. Such American authors as Story, Wilson, Seward, Webster, Loring, Boutwell, Greeley and Everett contribute to this book, which should find a place in the hands of all teachers. The poetry is good and simple, and a number of new dialogues complete the work.

The Wonders of Vegetation, from the French of Fulgence Marion. Edited by Prof. SCHELE DE VERE. With 61 Illustrations. New York: Charles Scribner & Co.

AN attractive and enticing work, which will lead many to a further study of botany. The most remarkable phenomena connected with the wonders of the vegetable kingdom are narrated in this book with scientific accuracy. No people surpass the French in rendering science as attractive as fiction, and no better American editor could be found than Prof. DE VERE. This book is of especial interest to people engaged in rural occupations, and would prove an ornament to any library. The young are sure to be delighted with it. The illustrations are very fine, and the book is handsomely printed.

The Federal Government | Its Officers and their Duties. By RANSOM. H. GILLET. New York: Woolworth, Ainsworth & Co.

THIS is a volume which should be in the library of every American citizen. Every man who exercises the right of suffrage, and upon whom devolves the duties of citizenship, should make himself familiar with the construction of the Government under which he lives, and in the administration of which he has a voice. There is a far too general ignorance among the people upon this subject—a matter vital to their individual and collective interests. Few, alas! even know the character of their own township and county organizations, much less that of the State and National Governments. We not unfrequently meet men born in other lands, who, before coming hither, were better posted in relation to the details of our governmental system, by far, than the average citizen. And it is strange that, in a land where any citizen may fill the highest office, so little attention is paid in the education of our children, to teaching them the structure of our political organism; and that so few thoughtful men seem to regard it their duty to know what forces are employed to administer our laws. This volume is a compendium of information upon the subject of its title, prepared by a gentleman who has held public office, and is familiar with both the law-making and law-executing duties of Federal officers.

Meister Karl's Sketch-Book.—By CHARLES G. LELAND (Hans Breitmann). Philadelphia: T. B. Peterson & Brothers.

THIS new and elegantly gotten-up edition of a long-time popular work, needs neither praise nor introduction at this late day. WASHINGTON IRVING called it one of his choice books, full of raciness, quaint erudition and graphic delineations. Mr. LELAND has seen much of the world, and writes with a rare, subtle humor. He takes his readers all over the world, calls to their minds many beautiful legends, and tells them pleasing stories. This book is intensely interesting, and will be the delight of all who peruse it. The edition at hand makes a volume of 300 pages, on fine tinted paper, bound in purple and gold.

Our Story-Teller.

BEFORE AND AFTER.

A THRILLING ROMANCE OF THE WAR FOR THE UNION.

Written Expressly for Moore's Rural New-Yorker, BY TWO WELL-KNOWN AUTHORS.

IV.—The Mystery of Susan.

[Continued from page 106.]

"BRAYTON, you are not looking well to-night," said the Colonel, as he passed the gentleman in the hall on his way to the library to enjoy his usual evening's smoke. "Come in and try one of the royal Havanas just arrived to-day. I tell you, sir, they'd put life in a dead man!"

"Nothing personal intended, I trust?" said BRAYTON, cheerfully.

"Oh, no, not that exactly; but 'pon honor, my dear fellow, you do impress me latterly as a man very much down in the mouth. You don't anticipate ruin from this infernal muss, I trust?"

"I don't anticipate anything, Col. HEATHERSTONE; I am almost convinced that both hope and fear were crushed out of my nature long ago; but I should like to talk to you a few moments, if you have the time to spare, about SUSAN;" and the red blood mounted into the broad, white forehead, and for a second Mr. BRAYTON'S voice threatened to fail him utterly.

"SUSAN, eh?" and Col. HEATHERSTONE took a long puff of the fragrant weed, then, with a light laugh and a familiar slap on his visitor's shoulder, rolled the lounge a little nearer the fire, and bade him be seated. "The trouble with you, BRAYTON [you'll excuse me, I know, because I speak for your good], is that you are inconveniently sensitive. Do not suppose that it is necessary for you to say one single word to me on the subject you propose. True, I saw you out with the girl a few days ago, but bless your heart, that was your own concern! I'd like to see any one minding my business on such a matter——"

"Just as I supposed, Col. HEATHERSTONE; you do not understand me," interrupted Mr. BRAYTON.

"Understand you? What the devil *is* there to understand? If there's any mystery, out with it at once, and don't keep a fellow on the anxious seat."

"The matter is this, Colonel, I gave SUSAN her liberty. She was for several years a petted slave on my plantation. She was forced back into bondage by a wretch who, if GOD spares my life, I will yet get square with. You bought her from him, and finding all attempts to make him refund fail, I wish to place in your hands the sum you paid for her, and set the poor woman free once more."

Just then HANNIBAL entered with wood to replenish the fire. He had evidently heard the last part of Mr. BRAYTON'S remark, and lingered a little to catch the reply.

"Don't you think, BRAYTON, that this would be a very dangerous precedent to inaugurate at this time? Don't you think you had better wait till the storm blows over a little? 'Pon honor, I should rather be excused from the arrangement just now——"

HANNIBAL tugged away at the logs.

"I hope you are not offended, BRAYTON. Policy now, by-and-by generosity," continued the Colonel.

"No, I am not offended," slowly replied his companion,—"only disappointed; and yet I don't know why I should be. If you will excuse me,—I think I will retire now," and BRAYTON arose to go.

HANNIBAL arose also, and for a moment the old negro seemed absolutely transformed. His eyes shone with a strange light. Nothing more magnetic, commanding or saintly could possibly be imagined than HANNIBAL'S appearance at this time.

"For Heaven's sake, look at that nigger," said the Colonel, evidently strangely moved by the sight. "What the devil ails you, HANNIBAL?"

"A wision, Massa, dat's all!" replied the old man, respectfully.

"A vision! What kind of a vision? Speak if you can, and don't make a fool of yourself another minute."

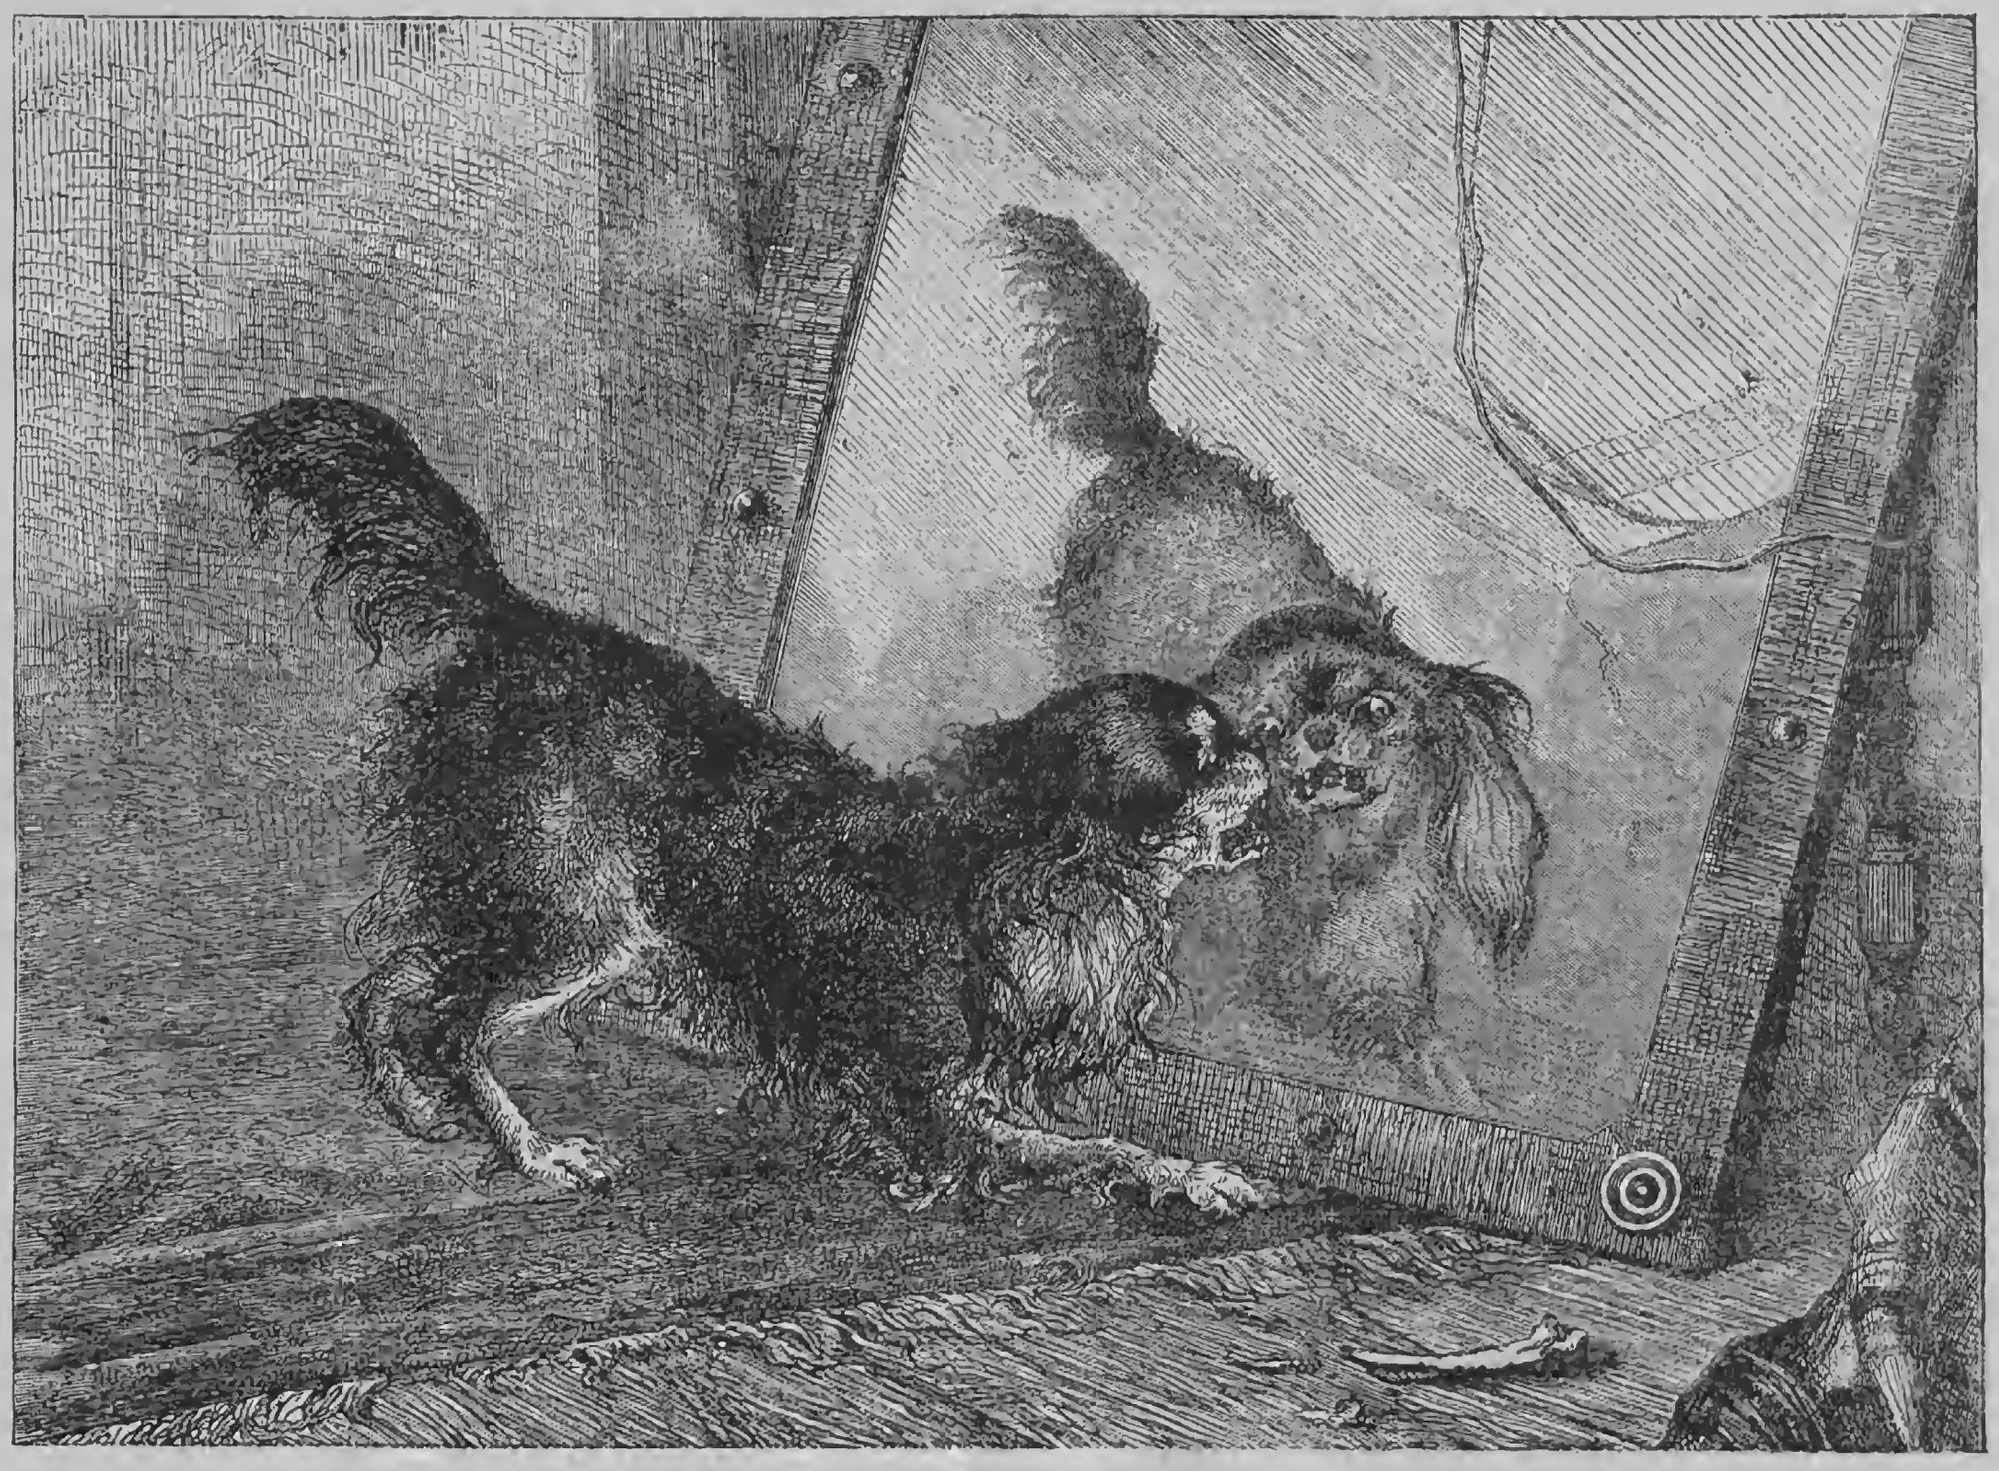
V.—Freedom, Love, Death.

"OH! It be nuffin to tell on;" replied the negro, partially recovering himself. "HANNIBAL do sometimes make a fool of himself, dat be a fac', massa, and nobody hab so much information on dat pint as dis berry nigger! Good night, gentlemans," and the slave attempted to leave the room.

"Not so fast—you black rascal," said Col. HEATHERSTONE, who had not yet regained his composure—"Tell what you saw—and tell it very quick, too. I've a notion to"——and the strangely excited man rose from his reclining posture, and advanced with doubled fist to the side of the negro.

"Don't be hasty," said Mr. BRAYTON, in an undertone.

"I'll teach him to come in here with his stories about apparitions and 'wisions.' The truth is that he has been humored in his freaks 'till he really believes he does see supernatural things. Speak out now—you



"AN UNPLEASANT REFLECTION."

"AN UNPLEASANT REFLECTION."

THE picture of a King Charles Spaniel, admiring himself in a mirror, which we give to the readers of the RURAL NEW-YORKER this week, is a reproduction of a painting by Mr. PERCY T. MACQUAID, recently exhibited in the Dudley Gallery in London. Dogs differ in character, as well as men, and are quite as apt to be spoilt in disposition by bad training. The Spaniel represented has all the advantages of high breeding and aristocratic education. He is a soft, silky, pretty little creature, but has not, by nature, many high qualities. This dog, so cleverly-painted, is, doubtless, the spoilt pet of the lady of the house. He is a terror and nuisance to any one but his mistress, as he is to himself in the present instance, under the impression that he sees an intruder. If such "reflection" were a reality, it would prove decidedly "unpleasant," for he can brook no rival in his mistress' apartment, and so near his bone, too; so he snarls and barks at his own figure in the glass, and will continue to do so until he has raised the house, or discovered his mistake.

old, black ignoramus—or you'll find out, for the first time in your life, what the consequences of disobedience are. You have had too many privileges, you have!"

Mr. BRAYTON stood like one bewildered. A careful student of human nature, and sufficiently intuitive to dive to the depths of motive—he lost sight of his own troubles for the moment in his eagerness to penetrate the mysterious atmosphere which had in some way completely enveloped his host. He felt, rather than saw, that the Col. was curiously alarmed. His whole manner indicated a nervous horror, which BRAYTON, with all his observation of men and causes, had never noticed before. Not so HANNIBAL. He stood perfectly erect, betraying not the first sign of fear or impatience. Indeed, the ebony face had entirely lost its intense expression of a moment before, and in its stead reigned the old look of triumphant resignation.

"Bery well, massa," said he, in low, almost childlike tones, "If you 'sist 'pon it, HANNIBAL mus' tell, of course! And wid de help of de dear bressed SAVIOUR, whose good pinion dis unknowledgeble brack man tink more about dan any ting else on de face ob de footstool, he will tell de hull troof."

"Drive ahead, you black scamp!" said the Col., with a gesture of impatience, as he seated himself where he could look the speaker full in the face.

"HANNIBAL saw——"

"Why in creation don't you say *I* saw, instead of HANNIBAL saw? That third person is enough to kill the devil!" interrupted the Col., throwing his cigar into the fire, and giving the dog by his feet a kick that sent him yelping to the other side of the room.

"Bery well, I saw; dat will do if HANNIBAL can keep it up," replied the negro respectfully, apparently totally oblivions of his master's nervous condition. "When I cum in wid de wood HANNIBAL saw a bright light walk in ahead of he. He say to heself, 'What be dat?' but he get no 'sponse. When Massa BRAYTON say sumting 'bout SUSAN, HANNIBAL not know wut it was"—this apologetically—"he only hear de name mentioned. Dat bright light walk straight round to de back ob Massa HEFFERSTONE'S chair, and fill de hull room wid its buful sunshine. Den HANNIBAL look away, jus' to see what be dar wen he look nex time. In a flash he look agin, and dar stan massa splenid lady, her hair jus' like Miss MARGARET'S, and fix jus like Miss MARGARET'S, too. She hab a sweet smile, and such a pair ob hebenly eyes HANNIBAL neber see in all he life! And now, dear Massa, do not be scared at wat HANNIBAL goin' to say, cause it 'pears jus 'sif de words mus cum out or dey will choke dis brack man to def. She say, "HARRY, dear, I am your sister LOUISE. Remember de ring and de promise. I watch ober you. Be careful 'bout SUSAN"—and den she try to say sumting more, but she seem to stay jus as long as she could, and den de light cum agin—and dat be all."

"And that is enough, HANNIBAL," said the Colonel, springing to his feet. "You never saw my sister LOUISE, HANNIBAL?"

"Neber in dis world, massa."

"You never knew anything about the ring?"

"Before de bressed LORD, neber!" devoutly replied the negro.

"You can go now—and thank you, HANNIBAL; you have done me good; and, HANNIBAL, you old, black scamp, you have always done me good. Go now, and say nothing about this to any one."

"Ob course not," replied the old man, with considerable dignity; and with this he quietly walked out of the library.

"BRAYTON," said the Colonel, after a moment's silence, in a voice so softened and altered that his companion hardly recognized it, "what do you think of this last performance?"

"I think," smiled Mr. BRAYTON, "that there are more things in heaven and earth, HORATIO—— But is this the first you ever heard of the negro's second sight? I suppose it might as well be called that as anything else."

"No, not the first. If my memory serves me, this is the fourth time that he has come to the rescue in an emergency, with something so startling, and so perfectly correct, too, in regard to matters he could by no possibility be acquainted with, that we were literally compelled to change our course of conduct. Now, one word about SUSAN. If you think proper, we will make a little trip to Richmond, and have a talk with HYATT'S lawyer—[I suppose you know that HYATT went North some time ago.] It looks as if it would be an easy matter to prove that man a villain of the deepest dye. What do you say, BRAYTON?"

"That I thank you for your kindness, from the bottom of my heart; but to tell you the truth, I feel scarcely equal to such a proceeding. A protracted lawsuit would quite finish me."

"Well, what then?" interrupted the Colonel, hastily.

"The offer made awhile ago stands good," replied BRAYTON, with a little quiver of the sensitive lips, "if you really feel anxious to help SUSAN."

"As I said in the first place, the proposition does not commend itself to my judgment; but as it seems the thing to be done—in other words as the nail hit on the head by you has been most summarily driven in by some one, whose intelligence I may not question—there is but one course left me to pursue, and that course compliance with your wishes. I do not feel that I am a very superstitious man, BRAYTON," he continued, musingly, "but this last little episode has stirred the very depths of my soul. If I could give you some idea of the character and appearance of my sister LOUISE—and dared to tell you the story of the ring—you would certainly understand that I am neither a fool nor an exthusiast, but a man wide awake, in the full possession of his senses."

"I believe you to be an *honest* man, HEATHERSTONE! and that's all I care to know about my friends," replied BRAYTON, grasping the extended hand warmly.

"And we can arrange this matter satisfactorily, I have no doubt."

"No doubt," responded the Colonel, with a far-away look in his eyes, as if he expected a return of the strange vision. "But here is my little MARGARET! What in the world is the matter with the child? Been crying, too! Mercy, mercy! what is this house coming to?" as the young lady, without appearing to notice their guest, seated herself on her father's knee and hid her face on his shoulder.

"What is this *country* coming to? That's the question to be asked at this time, I should think," replied the young lady, with sudden vehemence. "The South is one huge mad house," she continued. "And the North isn't much better."

"*Much* better?" responded the Colonel, with a curl of the lip. "Be careful, MARGARET. You will have to weigh your words now. Troublous times are upon us, and every sentence and every action will be criticised. Especially, child, must you be careful how you conduct yourself before the negroes. You have more influence with the slaves than any one else, and they will watch you narrowly. I shudder to think of the trouble these ignorant creatures can cause us if they are not properly managed."

"*Managed?*" repeated MARGARET, rising from her father's knee, her eyes flashing fire and walking excitedly across the apartment. "Managed! that speaks well for the institution, doesn't it? You think there is danger of the slaves taking up arms against their masters?"

"I fear this will be the case before the trouble is ended," replied the Colonel, regarding his daughter in consternation.

"That strikes me as an eminently fair proceeding," said the headstrong girl, continuing her impetuous walk.

"Those infernal abolitionists!" interrupted the Col. "The Lord only knows what they will suggest next! Really, BRAYTON, the occurrences of the last few weeks are totally inexplicable to me. The idea that this country can be rocked from center to circumference by a few hot-headed, crazy fanatics, I cannot understand. Why, there were only a handful of them at the start. Is there any way of accounting for these developments?"

"Yes, there is," replied MARGARET.—"The time has arrived when GOD says this iniquity—this flesh and blood traffic—must be stopped. Abolitionists have nothing to do with it. GOD is speaking now, and will be heard! Mr. BRAYTON, you do not believe that this institution of our fathers should be longer continued? I know you do not! I have felt this ever since you first entered the house;" and MARGARET laid her hand in that of her friend and waited for him to speak.

"I have been doing a great deal of thinking on this subject, for several years past, little girl; and I find it a very delicate question to handle."

"I don't see anything especially delicate about it," said MARGARET, withdrawing a step or two and looking her companion full in the face. "There is only one question to be asked, and that one—is it right?"

"I do not think then, Miss MAGGIE, that slavery is right—if that is what you desire me to say; and more than that, I never did. But with many others I can not see the way clear to its abolishment."

"Whether you see it or not the end draws nigh! But it will come through separations, heart-breakings, disaster, and death. You would not hear the still small voice when it bade you put away the vile thing, and now comes the whirlwind against which none of us can stand. If I were a man and owned slaves—if by so doing I became as poor as poverty—I would free every one of them, and turn my back on the accursed country forever."

"I'll give you another week, MAGGIE, to become an inmate of a lunatic asylum," interrupted her father—by this time seriously alarmed. "I am afraid these Northern girls have used their influence to bring out my daughter's latent radicalism and mold it into shape. I certainly never heard such talk before from my little girl's lips."

"Because I was never fully aroused; but you will hear enough of it now, that I can promise. And I shall not hold my tongue for fear of what the slaves may do, and I shall hereafter live up to my convictions, if by so doing I am shut up in a lunatic asylum, or made an example of on the scaffold for the benefit of other Southern women who might be tempted to go and do likewise."

"You can do more good, my dear child, to all concerned, by being temperate in both speech and action," replied Mr. BRAYTON, in low, soothing tones. "You will have need of all your wits; and there is nothing that so destroys all chance of being of service, as intense excitement of any kind! And now, Miss MAGGIE, if you will sit down by me a moment, I think I can promise to make you very happy."

"Impossible, Mr. BRAYTON; but then I haven't the slightest objection to your making the attempt. *Me* happy? No indeed! HOPE and MINNIE leave me to-morrow. GEORGE is tearing round the house like a wild animal, determined to enlist the very first opportunity, and I know, I feel it in my heart, that if he does go we shall never see him again. Mother doesn't seem to have any idea how serious the matter is becoming. HARRY talks and acts like a simpleton, and——"

"And your father—what of him?" interrupted the Colonel, smiling in spite of himself. "He won't free his slaves and leave the country? That is the principal charge against him, if my memory serves me," he continued, seating himself on the other side of his daughter, and drawing her gently toward him.

"Your father has just promised to free *one* of his slaves," said Mr. BRAYTON, softly, turning his face away from the searching eyes of the young girl.

"One of them? which one?" responded MARGARET, eagerly. "Is it HANNIBAL? Oh, I am so glad!"

"No, Miss MARGARET, not HANNIBAL—SUSAN."

"SUSAN?" said the girl, in a whisper. "SUSAN? Is that so, pa? Are you really going to do this? Speak this minute, and let me hear the words from your own lips."

"I shall take the initiatory steps to-morrow, if GOD spares my life," replied the Colonel.

"I wish you wouldn't talk that way about GOD'S sparing your life," said MARGARET, with a little deprecatory gesture. "My GOD is too kind and too loving to interfere with a work of this kind. Why, pa, you old darling, if you were to free *all* the slaves you would live forever and a day, and then be translated—I mean you would live as long as you pleased, and then go to heaven without dying! May I tell SUSAN, Mr. BRAYTON? Oh, do say yes, please!"

"Pardon me, Miss MAGGIE, I have reserved that pleasure for myself, and cannot bear to be disappointed," said the gentleman, kindly.

"Pardon me for wishing to deprive you of it. And now good night, pa—good night, Mr. BRAYTON. Hug me tight, pa, and say GOD bless your little MARGARET. She will try to be good and patient, and discreet, too! Of course she will! No girl ever had such a good father as this bad girl has got."

"GOD bless you, MARGARET!" devoutly repeated the Colonel, "and GOD bless HANNIBAL, too."

"HANNIBAL!" repeated MAGGIE, in surprise. "What had he to do with it?"

"Everything; he did it all; and now, good night, darling;" and wondering what it all could mean, the young lady sought her room.

"So you are going home, Miss ARNOLD," said ALFRED to HOPE, suddenly joining her as she sat alone by the window, watching the coming on of the cold January twilight. It was the day after New Year's, and HOPE was to start for the North the next morning.

"Yes, Mr. HEATHERSTONE," was the quiet reply.

There was a long silence, and the twilight deepened. Both were looking into the future.

At last the single word "HOPE" fell from the lips of ALFRED, or rather escaped from his lips, in a tone so full of indescribable emotion that the young girl's soul stood still to listen.

"HOPE"—the word was repeated, charged with the electricity of the great, strong heart that was just beginning to know its own greatness and strength. Still there was silence.

"HOPE"—the third time, in the same wonderful tone—the call of one soul to another; and with the name so strangely reiterated, the man's hand was stretched out as if blindly searching for that which the name but suggested.

The fine, tender hand of the woman was put in the large, strong hand that sought it, and the tender heart of the woman responded.

"ALFRED!"—soft, mutterably sweet and yearning, but unconscious of its meaning—was the voice.

That one word was mightier than the army that breaks down the gates of a city. It pierced with its exquisite subtlety to the very center of the man, and the soul of the soul—that which loves—and hence, that which dares and endures, suffers and enjoys infinitely, sprung up, awake forever and forever.

"HOPE, HOPE! I love you! Do you forgive me for telling you so? Speak, HOPE! Say something—anything. I do not mean to shock you. I know this is premature; but we shall be separated so soon,—and, HOPE, it is more than likely that I shall never see you again."

"ALFRED!" (HOPE'S soul was in her eyes and in her voice, trying to make itself known to its lover.) HOPE herself, the whole woman, could hardly keep pace with the love that was striving within her.

"HOPE, my darling! Then you are not angry? I may say I love you? You needn't answer me, HOPE. This is enough. It makes no difference now what happens. You wish to go, HOPE. I won't detain you. One word, darling,—I shall go home with you. I can be back in three days. I shan't be needed before that. I will go home with you, and then—and then."

There was a lingering, clasping pressure of the hands, and ALFRED was left alone.

The departure of HOPE, ALFRED and MINNIE, made a blank in the household, felt by all, but most by MARGARET.

Col. HEATHERSTONE was irritable, Mrs. HEATHERSTONE sick with her headaches, GEORGE on fire with excitement, and too eager to be in the midst of the coming fray to have any thought for anybody, and MAGGIE was never so glad to see ALFRED as when he returned from his short trip to the North. He looked worn and anxious, but back of the settled gravity of his face there lingered a sweet, joyous light—an expression that eludes words, but that seemed to say:

"Whatever happens she is mine. I shall probably join our army that is fighting her kin to the death; I may never see her again before I die, or if I do, long years of loneliness may stretch between, but she is mine. Through all, that which is most real and vital in us will be together—she is mine, now and forever."

MARGARET caught a glimpse of this new expression, but it baffled her. ALFRED did not even take his sister into his confidence, as he would have been the first to do, had not his love been forced to expression by the trouble of the times. The new chamber opened in his soul was too full of sacred joy—of holy mystery—to admit, as yet, any presence but his love. By and by his dear little MAGGIE should know all; she was a sister to HOPE now, and that satisfied him.

Events connected with the administration of home affairs prevented, for several days, the final arrangement of SUSAN'S business. Mr. BRAYTON decided not to tell her until he could again place in her hands the evidences of her liberty. MARGARET grew nervous over the procrastination, and almost worried the Colonel into wishing that she had never been taken into their confidence in this matter of SUSAN'S ransom. Finally, late one evening, as Mr. BRAYTON prepared to retire, the Colonel said to him: "My lawyer writes me he will be here at eleven to-morrow morning; and we can then finish this business—get it off our minds. So you know, BRAYTON, that if a man stood over my shoulder with a lash to drive me on in this matter, I could not feel more in a hurry. For the last few hours I have hardly been able to sit still, this sensation of haste has been so all-absorbing. What do you think it means?" and strangely enough the Colonel caught the hand of his guest between his own, as if to assure himself that he had human company.

"It means, I think," laughed BRAYTON, returning the kindly pressure, "that Miss MAGGIE'S nervousness has at last re-acted upon you. She has been in a strange state of agitation all day, and seems to be fully impressed with the idea that something will happen to prevent the conclusion of our business arrangement."

"Has she thrown out any hint as to what she thought the nature of the hindrance would be?" inquired the Colonel, closing his eyes as if to exclude the light, and waiting in evident interest the reply of his companion.

"Not the slightest. It is sheer nervousness, of course. Miss MARGARET reads too much. I wish the newspapers could be kept from her for awhile. She is ten times better posted in regard to political affairs than I am, or hope to be."

"Make a good General, eh?" smiled the Colonel, evidently pleased with this compliment to his daughter's mental endowments.

Just then SUSAN walked by, carrying Mrs. HEATHERSTONE'S pillow and smelling salts. She acknowledged the presence of the gentlemen by a slight, dignified inclination of her queenly head, and had almost passed when the Colonel said, impulsively:

"Can't you stop long enough to say good night, SUSAN?"

This was a strange call—one the woman was entirely unused to. For a moment she hesitated, and, without lifting her eyes, replied, sweetly:

"Good night, Master HEATHERSTONE."

"After to-morrow, you will never say that again, SUSAN," answered the Colonel, shading his eyes from the light.

"Will never say what again?" inquired the octoroon, now glancing fiendly into his face, a frightened expression overspreading her countenance,

"Never say 'Good night, Master HEATHERSTONE' again," said the Colonel, his eyes still closed. SUSAN looked appealingly to Mr. BRAYTON.

"Why, Colonel," he interrupted, "you have just about frightened poor SUSAN out of her wits. She looks as if she thought you were contemplating suicide."

"Well, if that's the case," and now the Colonel seemed wide awake again, "I might as well change my tactics. Mr. BRAYTON will tell you what I mean to-morrow, my girl. And now good night, and—and——"

SUSAN waited.

"And GOD bless you, and keep you. Promise me, SUSAN, that you will always be a friend to MARGARET."

"So long as I live," replied the woman, with bowed head.

"All right then; off to bed with you!" laughed the Colonel. "Getting sentimental, BRAYTON? Who the d—ickens do you think has run away with my common sense? And now here comes MAG and ALFRED. Going to bed, children?" as they drew near to bid him good-night. "Where's GEORGE?" he continued, looking anxiously around.

"Reading the Northern papers," replied ALFRED.

"And grimacing like a monkey," put in MARGARET. "In imagination he already has a gun over each shoulder, a knapsack behind, a saber, cutlass and half a dozen swords dangling from different parts of his body. That boy is spoiling for a fight, and, pa, what *shall* we do with him?"

"Let him go, I suppose; there's no other way; but there's no need of worrying over it to-night. Kiss me, MAGGIE. How long is it, ALFRED, since you kissed your father?"

The young man looked up astonished.

"Not very long," he replied. "Ain't you feeling well, father?"

"Well, yes, my boy; never better. But when you left that little Northern witch a few days ago, and asked her to kiss you—[ah, ha! you sly fellow; do you think your paternal ancestor has had his eyes closed all this time?] do you suppose for a moment that she thought you were ill, because you whispered 'kiss?' Troublous times are coming, children; kiss me, both of you, and scamper to bed."

It was, indeed, the last time that SUSAN would say "Master HEATHERSTONE." The next morning breakfast waited a half hour for the Colonel, and when a servant was sent to his room to see what caused the unusual delay, he was found dead in his bed.

[TO BE CONTINUED.]

Ladies' Port-Folio.

THE LAST THING OUT.

WHAT new-fangled notions these days,
This Professor's beginning to teach!
And even declares just how far
The soles of our slippers should reach.
In winter of course I am cold;
How these gaiters do pinch my toes,
And the heels are awfully high—
'Tis the fashion, as every one knows.

What nonsense to lecture on dress—
On ruffles and long-sweeping trains;
My polonaise, sashes and bows
Were all made by Madame DEBAINS.
Thirty yards for my last silk I bought,
And Madame complained all the while
It really wasn't enough—
Am I to be blamed for the style?

And he talked for ever so long,
Of cooking, both wholesome and nice;
Oh, dear, what a burden and care,
Ever since I have been Mrs. PRICE!
For BRIDGET is saucy and slow,
And the rest I've tried are as bad;
Next year I'm determined to board,
Where food fit to eat can be had.

Early hours he said health required,
And CHARLIE keeps saying the same;
At the party 'twas full ten o'clock
Before Mrs. General B. came.
How absurd to grumble and scold,
And talk of ways better, and best;
I am sure I have trouble enough,
And I only do like the rest.

This new education of girls,
And reproof for the women who shirk
The duties of life, is all right
For those who were brought up to work;
I'd not think of the lecture again.
But the Governor's wife and her set
Will be there, so I must go, too,
For Reform is the last thing out yet.

MAJASA.

WASHINGTON LETTERS.—II.

BY MARY A. E. WAGER.

SENATORS—AGRICULTURE—THE ADMINISTRATION CHURCH.

THERE are a great many women in Washington just now—society women, lobbyists, department women, suffrage and literary women, and transient visitors, who come singly or in battalions for sight-seeing. But among them all none have more interested me than a little old lady in black, who has won the right to one of the most eligible seats in the Senate gallery by her persistent occupancy. She comes early, settles herself quietly, where she can command a full view of the Republican side, and then takes out her knitting, which is of white, homespun yarn, and will one day be a man's sock. I mean to "interview" her some day, and if I do will tell you all about it, for her industry and moral courage are very remarkable characteristics in this city of loafing.

The Senate has not perceptibly changed since I was here two years ago. ROSCOE CONKLING looks as young, as handsome, and seems as happily conceited and assertive as ever. Senator FENTON smokes less than he did, but as usual abounds in leisure, looks as neat as a new pin, and exercises his old knack of bowing, talking, and winning visitors into his political harness. MATT CARPENTER has grown bigger and lazier, tumbles his iron-gray hair about, and looks as if he luxuriated in physical repose. CHARLES SUMNER looks hardly as robust, but retains his terrible husky voice and terrifying manner. His wife, or rather the lady who had the courage to marry him, lives in Europe. Senator AMES, who won the beautiful BLANCHE BUTLER, and is the youngest member of the Senate, has a fine figure, a pleasant, intelligent face, and looks happy. GARRETT DAVIS, cadaverous and threatening, is full of fire on that branch of the Civil Service Reform which shall investigate the GRANT family and its relatives who hold office under the Government. Congress must find a dearth in the need of Reform to stoop to such miserable and petty persecutions of the President.

In the House end of Congress one is never conscious of but one thing, and that is, that that it is a perfect Babel of the most distracting nature. The atmosphere that pervades the galleries is enough to demoralize the best constitution on the earth. The only encouraging sign of improvement in either branch of the National Legislature, is that there is decidedly less smoking of tobacco by the members, than two years ago. And less smoking means less wine and whisky-drinking, less mental muddle and more sensitive moral convictions. It is a vice too disgusting and ruinous for any one not in its service to have a particle of patience with. The Agricultural Department has added somewhat to the attractiveness of its grounds. A large conservatory has been erected, and objects of ornament and architecture add to the general outside appearance of things. In the interior, some new pictures and models have been added. Prof. GLOVER seems a little less enthusiastic than of yore. Mr. DODGE is quite as dignified and English-ified in his appearance as ever. Commissioner WATTS is as unlike Gen. CAPRON as it is possible for two men to be. He is, however, pleasant and chatty, has a certain benignancy of countenance that reminds one of his kindly-faced grandfather, and, moreover, expresses some very beneficent ideas in regard to the Department work, and believes that Congress and the Department were never more in unity and sympathy than at this moment. Mr. SAUNDERS, who presides over the leafing and blossoming things, cheers one most radiantly with his hearty Scotch ways and words. Talking of women and strawberries the other day, he says, "What does Horticulture for Women mean?"

"Why, I suppose it means the culture of fruits for a livelihood," I said; "raising strawberries and tending green-houses." "I wonder if they fancy it to be easy work!" he exclaimed. "Why, it is the heaviest work I know of, and it is unwholesome, moreover. It is terribly back-breaking to cultivate strawberries; and to get off small fruits to the market, one has rest neither night or day in their season. The dampness of conservatories or green-houses gives one the rheumatics and lumbago, and from all I can see it is a most miserable undertaking for a woman."

Perhaps so; there's considerable misery in anything a woman undertakes, or a man either, for that matter. The first employment I hear of that is *not* hard on the back, brains and heart, I will subscribe for. If suffrage will only turn the world right side out, I pray that we may all vote twenty times a day. Just now there is considerable suffrage talk. At a reception the other evening a member of Congress from Tennessee introduced the topic, and I asked him what Congress was going to do about woman suffrage.

"Oh, we don't mean to do anything. When women want suffrage, they shall have it. It is not a matter for legislation. It comes from within," and he placed his hand on his shirt bosom. Sentiment is an agreeable sauce at times, and one can die on it, but it is poor stuff to live on. So long as four or five hundred thousand women have already petitioned Congress for the right to vote, it constitutes quite too formidable an asking to authorize a man in the insinuation that women don't want the privilege. Because I do not care to vote, or go to church, or get married, it does not follow that my next door neighbor feels as I do. If five hundred thousand women want the privilege of going to "destruction," let them have it, I say. I am not at all afraid of losing my feet or head in case of such an event, or of society being any worse than it has been with twice five hundred thousand male "idiots and lunatics" controlling the polls.

I am going to a woman's prayer meeting this afternoon, for women pray here, as well as powder, and for preparation will tell you a little about religious matters, as seen on a Sunday morning in the Metropolitan Methodist Church, which is the church of the Administration. I went with a friend whose seat adjoins that of the President, so that for my right hand worshipping neighbor I had Mrs. GRANT, who was clothed in a black velvet suit, trimmed with Russia sable. She is usually accompanied by the President, Miss NELLIE, who is a very young lady, and a son of twelve years, perhaps. Back of the President's seat, sit Mr. and Mrs. COLFAX, two rather ordinary and sensible looking people. In front sit Judge FISHER and family, and two or three Japanese Princes, who are studying law with him. They are very devout, and one is said to be a member of the church. Just back of my friend sits Chief Justice CHASE, looking somewhat feeble, but better than last year, so his friends say. He is almost entirely bald, there being scarcely any hair left on or about his head. Save when his face is illumined with a smile, one would hardly think of calling him handsome now. But when he takes your hand and speaks, you at once accord him love and reverence most hearty. The entire congregation at the Metropolitan is most remarkable, being made up of notables from all parts of the country. Rev. Dr. NEWMAN, the pastor, speaks entirely without notes. He is a handsome man, with a mellow voice, happy in his choice of words, and a popular, if not a great preacher. The singing is congregational, led by an organ and choir. The latter comprehends a man singer, whose solos at the close of the service are very delightful, which assertion every one who has heard him will indorse. The church has a chime of bells, which gingle all sorts of pious and some secular melodies, which are good to lull one to sleep, if you are not too near, and to summon you to service. There they go this very moment, to the tune of "Sweet Hour of Prayer," and I'm off. Good-by.

P. S.—I meant to add, for the edification of the party-going girls, that the most effective party dresses worn here are of white tarletan, trimmed with alternate ruchings and quillings of black tarletan,—sashes and all.

Reading for the Young.

GOING TO SLEEP.

BY ROSE GERANIUM.

COME, MAIDIE, darling, and sit on my knee,
Coy little nestling, so wild in your glee,
Let your round head on my shoulder here lie,
And while I rock, coo your loving "by-by."

Wee, restless fingers, that tenderly press
Close round my neck in a loving caress;
Rosy lips, parting, and hazel eyes bright,
Are ye not weary of playing to-night?

Aye! for thy head, like a dew-thirsty rose,
Droopeth and droopeth, adown to repose,
Lower and lower the dark lashes sweep—
Dear little MAUDIE has fallen asleep!

O, precious baby! in slumber serene,
Heaven's protection be ever thy screen,
Guarding thy spirit thro' earth's weary night,
Into the morn of eternity's light.

THE CHILDREN'S LETTERS.

BY AUNT EDITH.

I ALWAYS read the children's letters with delight, and want to place a letter to them in their columns to encourage them to write letters. It is an excellent way for them to learn to do business, and feel self-reliant. It improves their writing and spelling, and strengthens their faculties of thought. I remember teaching a young man to write his first letter. He was far from his home and parents, who were anxious to hear from him. He knew how to write, but said he had never written a letter, and did not know how. "What shall I write them?" he asked. "Write them where you are—when you came here—what prospects we offer you, and all other things that you would tell them were they near enough for you to visit them." After giving him these directions, he went to writing, and wrote a very good letter.

The inexperienced, whether young or old, need to be taught how to do the things they are not accustomed to do. Some learn early; others require more careful and patient instruction. When children are taught to do things correctly, it is a great blessing to them, and others, ever after. Those who do their work well, whatever kind of work it is, will, if faithful, honest and temperate, always find employment where they are known.

Now, children, I want to tell you—one and all—never swear, never use tobacco, or drink beer or liquors of any kind. Resolve now, while you are young, to refrain from these things, and you will grow up much healthier, happier, and be much more useful and respected, and live to greater age, than otherwise.

Onondaga Co., N. Y., Feb., 1872.

OUR LETTERS FROM BOYS AND GIRLS.

How a Young Boy Figures.—WILLIE W., eight years old, writes from Union City, Pa., thus *figuratively*:—"I go to school and am trying to learn. I have two sheep. My Uncle, JOHN COE, gave them to me for a Christmas present. I have put them out on shares, and expect, if I live to be forty-one years old, and can keep them out until that time to double every three years, that I will have enough to keep me the balance of my life. For I would have over twelve thousand dollars worth, if sold at three dollars each; and if that amount of money was put out at six per cent. interest, it would bring seven hundred and twenty dollars per year. Our place is growing very fast. We think very much of your paper and that every person ought to take it, as there is so much useful information in it. I do not think of anything else to write, so good-by, Mr. RURAL." [Didn't your papa help you figure?]

A Pennsylvania Miss, NELLIE P., says: My father takes the RURAL NEW-YORKER, and I love so much to read the letters of the little boys and girls. I have long been wanting to write one, too. I am a little girl nine years old. I do not live on a farm, and have lots of pets, as many of the little girls do; but I live in town, the pleasant little town of Emporium, situated on the headwaters of the Driftwood, a branch of the Sinnamahoning. I have three brothers and one sister. My little four-year-old brother is as eager every week to see papa's RURAL as any of us. Last summer I had some beautiful flowers, such as Balsams, Asters and Portulaccas, besides many other kinds. I had quite a variety of house plants, but our cold nights proved too much for them, and I lost them all.

Study and Work.—CHARLIE M. D. says:—I am ten years old, and am a farmer's boy. I live near the town of Bellevue, Ohio. I am going to school; I go to school about nine months out of a year. I work on the farm during vacation, and on Saturdays. My father thinks education ought to be well rubbed in with work. I have a nice black team, that is called mine. Last summer I plowed twelve acres of corn twice; I also cut twenty-three acres of grass, and raked it with the horse-rake. I also raked fifty acres of wheat stubble for father, on shares. For my share I got me a suit of clothes this winter. I help father do the chores evening and morning. When I grow up I want a farm of my own and mean to be a farmer.

A Missouri Girl.—LOU ELLAE M. writes as follows:—This is the first year we have taken your paper. I like to read the letters of the little girls very much. They put me in the notion of writing for your paper. I am nine years old. I have been in six States—Kentucky, Ohio, Indiana, Illinois, Iowa and Missouri. My home is now in Missouri. I live in Rocheport, Boone Co., on the Missouri River. I can see the boats passing every day. I have two little sisters; one is named JENNIE WRIGHT; baby sister's name is DAISY WOODS. She is six months old. I am learning to sew. I made DAISY WOODS a wrapper last week.

From the Green Mountains.—CORA D. L. writes:—My papa is a subscriber for your paper, and I read the boys' and girls' letters, so I thought I would try and write one. I am a little girl of eleven years old. I came from Bloomington, Ill., to Milton, Vt. I came here when I was six years old. I am very much attached to the Green Mountains. I have a little brother; his name is EUGENE. He is full of mischief. I have a little dog; his name is Jetty.

A Pet Owl.—ROBERT D. of Vincent, O., writes:—I do not live on a farm, but we have one; I have no father, or we would live on my farm; my father died in the army when I was a year and a-half old; I am ten years old now. I do not take your paper, but I read my grandfather's. I have no pets, only a kitten; I did have a pet owl, but I let it go, for there were so many other little birds flying around the cage, and they would plague it so, I let it go.

A Feeble Calf.—MARTHA A. W. writes: I live in Jerusalem, only eight miles from Albany. My pa is a farmer, and has over two hundred acres of land, and I often run and play about; but the greatest curiosity I have now is a little calf that papa gave me if I would feed it; for it was so weak and feeble, poor thing. I go to school about two miles from home. We have a good teacher, and my folks think that I am improving slowly.

Breaking Colts.—FRANK J. D., of East Bloomfield, N. Y., writes:—I live in the western part of the Empire State. I do not go to school, but study at home. I have been helping my father break the colts. I have an iron-gray colt, nearly two years old, which I call Major; I intend to break him before spring. A short time ago my mother purchased two beautiful gold fish and made me a present of them.

A Queer Pet.—L. A. L. of Richland Co., Ohio, writes:—I have a cat; his name is Tommy; he will put his paws around my neck; I can dress him up and he will play baby. We have a large dog, he will shake hands; his name is Shep; he is six years old. I go to Sunday School.

Taking Pictures.—T. L. A. writes from Bellefonte, Pa.:—I was learning the photographing art, but I thought I would go to school till March or April, then commence it again. I had taken one picture when school commenced. My boss thought it very good for the first one.

News of the Week.

GENERAL REVIEW.

THE most important event of the week is the threatened abrogation of the Washington Treaty by Great Britain. The United States will stand firm in its course of presenting claims at Geneva. The Washington Government waits for dispatches from England .. Two severe railroad accidents have taken place....The Grand Duke has gone to New Orleans.... Investigations of frauds are the order of the day in New York city, at Albany, and other places....A call has been issued for a Reform Republican Convention at Cincinnati, in opposition to the Philadelphia Convention.

DOMESTIC NEWS.

New York City and Vicinity.

HENRY SMITH, with the other trustees, will become responsible to the depositors of the Bowling Green Savings Bank.....A reward has been offered for the arrest of Henry R. Cooklin, late Secretary of the Market Savings Bank Street robberies are frequent.... About 2,000 people attended the annual Charity Ball... The Union Republican General Committee demands the impeachment of Mayor Hall ...Frequent raids are made on the illicit whisky distilleries in Brooklyn ...The expenses of the Department of Public Works for the coming year are estimated at $2,077,107 ...A great snow storm raged in the city on the 3d, giving the town two or three days of good sleighing.....Mr. Greeley's birthday was celebrated by a large gathering of editors and literary people, on the 3d inst....The East River froze over on the 4th, so that people crossed to Brooklyn and back ...The General Sessions of the Grand Jury brought in twenty-three bills against citizens of New York engaged in the frauds. Some of these have since been arrested, and others are said to have fled the town....The remains of Gen. Robert Anderson have been brought to New York for burial.. A strange and protracted trial has been going on in Brooklyn, because Dr. Cuyler allowed Miss Smiley to preach in his pulpit. She is of the Quaker persuasion, and preached very well. The Presbytery at last decided not to censure Mr. Cuyler, but voted that it was against the Bible to allow women to preach!

Miscellaneous News.

FREDERICK DOUGLASS has been insulted at a St. Louis hotel ...The Irish Catholics in favor of total abstinence will hold a Convention in Baltimore on the 22d inst ...The Grand Duke has had a fine reception in Memphis... A revolt has broken out in the Philippine Islands, and numbers have been killed....A cable has been laid between Java and Australia....No more contributions are needed for Chicago ....The Japanese Embassy is snow-bound at Salt Lake ....The snow blockade on the Pacific Railroad continues. The passengers suffer much, living on crackers and fish.... Switzerland protests against the deportation of Communists into that country....It has been ordered in India to blow 50 Kooka mutineers from the mouths of cannon ....The people of Nova Scotia are greatly excited over the Alabama discussion....Mrs. Fair has been granted a new trial by the California Supreme Court... Ristori has met with an accident on an Italian Railway train,...The Government has sent provisions to the passengers blockaded on the Pacific Railroad....The revolutionists in Venezuela have been defeated, with a loss of 300....A revolution is looked for in San Domingo... The Cuban General, Casanova, has been killed .. The Cape of Good Hope is crowded with strangers, and murder and robbery is so common the people have resorted to lynch law ...The British ship Elizabeth Fry has been burned at sea, 200 miles off Savannah. The crew was saved ...There is much excitement in West Va., over a proposition to remove the Capitol ...Senator Garrett Davis is sick. ..Archbishop Spaulding of Baltimore died on the 7th. He had been sick some time.

Political.

THE greenback bill has passed in Missouri, over the Governor's veto....The Southern Railroad bill has passed the Kentucky Legislature ....A new and very comprehensive educational bill has been introduced into the New Jersey Legislature....The State Printing frauds have attracted much attention at Albany....Several Texas State officials have been indicted for fraud ....A bill to establish a cable between the United States and Asia has been introduced in the Senate....The House has adopted Secretary Boutwell's report concerning the Syndicate.... The letter carriers are before Congress, asking for an increase of salary... The clerkships in some of the Western Houses of Legislation are filled with ladies. ..The Democrats of Connecticut are looking for a man to nominate for Governor....Kansas wants Canadian lumber admitted into the United States free of duty ...The "one term principle" in the Kansas Legislature has been defeated ...A robbery of postage stamps by a clerk of the Assembly at Albany, in 1862 and 1865, has been brought to light....The investigation fever runs high at Albany... Gov. Warmoth says the Legislature of Louisiana has spent 31 days in useless contests....The Academy of Music, in Philadelphia, has been engaged for the National Nominating Republican Convention....The latest opinion in relation to the Alabama claims, is that the Treaty of Washington will break down, with no hope of a settlement of the difficulties at present.

Fires.

IN Bath, N. H., Feb. 1st, several houses and a church were destroyed, and one man was killed ....A warehouse and book-store were burned in Quebec on the first; loss, $35,000....The orphanage of the Good Shepherd at Louisville, Ky., has been badly damaged by fire...There was a $7,000 fire in Worcester, Mass., on the 6th.

Crimes.

PROF. WILSON of Washington, Pa., was shot on the 1st by a pupil named McGiffen....Albert Brown, aged 6, was beaten to death in New York by two boys named Werner, aged 11 and 12....James Gough of Richmond, Ky., murdered his wife, while intoxicated, on the 1st.. ..A daring attempt has been made to rob Adam's Express car on the Pan Handle train, soon after leaving Xenia, O. The thief was shot and captured.... M. E. Hourd, cashier of the Rhode Island National Bank, has been arrested, charged with embezzling $200,000... The County Treasurer of Santa Cruz, Cal., has been robbed of $20,000 in gold... Alderman Bush and ex-Alderman Montgomery of Chicago have been sent to the county jail for six months each....Wm. Ewing, near Norwich, Conn., on the 5th, shot a young girl named Johnson, and then cut his own throat.... Marshall S. P. Lows, a clerk in the Boston post-office, has embezzled $30,000.

Disasters, Accidents, Etc.

ON the 1st inst., a shocking railway accident took place from a broken rail on the Lehigh Valley Railroad, near Rockport. Nine persons were killed and many injured... The weather has been very cold in the Northwest, and many persons were frozen to death....Five powder mills near Xenia, Ohio, exploded on the 5th, killing five men. About 25 tons of powder exploded. The loss was $25,000 .. An explosion of fire-damp in a mine near Pittston, Pa., on the 6th, killed three men....Feb. 7th a passenger train collided with a freight train near Alton, Ill., when four passengers were killed and fourteen wounded. The train took fire, roasting the passengers alive.

A passenger who was on a train wrecked near Alton, Ill., Feb. 7, says that one man, whose name is unknown, was caught in the timbers of a car by one of his feet only, but all efforts to release him were unavailing, and he perished in the flames.

Watch N. 1259, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J." —manufactured by United States Watch Co., has been carried by me six months: its total variation from mean time being only eight seconds per month. Have been traveling through different sections of the country, from New York to Galveston, Texas, and back, by steamer and railroad.—E. RICE, of Whitney & Rice, 179 Broadway, N. Y.

James J. H. Gregory, Marblehead, Mass., now raises over one hundred varieties of Vegetable Seed, and is constantly producing new varieties. His business extends over all parts of the country, orders being received and promptly filled from more than fifty thousand customers annually.—*Charleston South Carolinian.*

Grafton Mineral Fertilizer.—The advertisement of this valuable production of the "Granite State" may be found in our columns of this week.

Abel.—If you are not able, club with your neighbor and buy a $75 Four Ton Hay Scale. The Jones Scale Works, Binghamton, N. Y.

PERPETUAL BEAUTY.

EVERY lady has been wanting for years a toilet preparation in which she could place confidence, and use without fear of injuring health. The recent analysis made by the Metropolitan Board of Health has proven that Geo. W. Laird's "Bloom of Youth" is entirely free from anything detrimental to health or injurious to the skin. It can be used without showing the slightest trace of its use. Will leave the skin soft, smooth, and delicately beautiful. Sold at all druggists and fancy goods stores. Depot 7 Gold st. N. Y.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, February 10, 1872.

SINCE our last report Wall Street, as well as the London Exchange, has been suddenly exercised by the angry English discussion of the Washington Treaty. The Gladstone Government, fearing the effect of our claim presented at Geneva for "consequential damages" growing out of the Alabama and other piracies during the War of the Rebellion, have caused a paragraph to be inserted in the Queen's speech, on the opening of Parliament, protesting against this part of our case as presented at Geneva. And the Foreign Secretary has addressed a note to our Government, requesting its withdrawal. As this cannot be done, the chances seem to be that the discussion will go on, and the case left over for some time, (the Geneva Commission not meeting again until April,) to the unsettling of financial confidence. Gold advanced here, and American Government Stocks fell in London, but thus far general trade has not been seriously disturbed. The imports continue on a large scale, and Cotton is going up. Money is in good demand at 7 per cent. Exchange still below the Specie shipping point.

The Bureau of Currency at Washington has published the returns of the National Banks, called for us on the 16th December last, and we make the following abstract as compared with the previous returns of October 2:

ALL NATIONAL BANKS—STATEMENT OF DEC. 16, 1871.

	Oct. 2, 1871.	Dec. 16, 1871.
Capital paid in	$478,226,036	$489,975,891
Surplus fund	101,112,971	101,567,153
Profits unappropriated	47,008,714	48,501,333
National circulation	315,517,397	318,013,841
Old local circulation	1,021,056	1,886,538

Although prices fell off considerably on Wednesday and Thursday of this week, the ultimate adverse changes in our table of quotations apply chiefly to the Government Stocks, which are ¼@1 per cent. lower from political causes referred to above. The Railroad Stocks stand nearly the same as on previous report. Gold has been as high as 110¾, but receded as suddenly as it went up to 110¼ per cent. The Railroad Bonds also show much steadiness. The new negotiations pending in Europe for the sale of American Railroad Loans are checked for the present, and if delayed or defeated by the treaty question, the fact may cause an earlier spring export of Gold than usual, as the supply of other exchange will be diminished if we stop selling Bonds abroad.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, Feb. 9, 1872.

Beeves and Pens.—As was expected, the improved prices of last week have started increased shipments forward from the West, and with the stock accumulating, prices have dropped to their old point. The quotations are $2.15@2.50 for prime medium, $2.30@2.40 for good do., $1.75@2.20 for common to good do., $3.05@3.10 for prime marrow fats, $2.70@2.95 for good do., $2.30@2.60 for common to good do. Pens at $2.40@2.70. Red Ikdoey, $2@2.25. Green peas are in good demand. Canadian sell more freely; Canada, free in barrels, $1.24@1.25; prime green, $2@2.10; Southern blackeyed, $2.70@2.75 per two bushel bag.

Butter.—The market has again run through a very irregular week, and prices for everything except the conventional "gilt-edge," have favored buyers, but the buyers have not favored sellers by accepting stock at the suggested ranges. Fine butter is still quoted up to 33@35c., and nearly every dealer is willing to break off his tubs or subject firkins to close trying, in order to obtain those rates. Receipts are light. Western rolls are absorbing about all that is doing in Western butter, but they are not higher, except for a few choice, carefully packed and wrapped half bbls. These have been sold at 26c. as an extreme price. State Welsh tubs sell well when right in price and quality, which means 32c. for fresh, full of good color.

State dairies, fine, 29@31c.; State dairies, fair to good, 26@28c.; State, half-tubs, good to fine, 32@33c.; State, do., common to fair, 24@28c.; State firkins, fine yellow, 28@31c.; State Welsh, good dairies, 28@29c.; State do., common to fair, 22@25c.; State do., fresh made, 32@31c.; State, fancy select tubs, 33@35c.; Ohio, good, 18@20c.; Ohio, Central and Southern, 14@15c.; Western, choice yellow, 20@21c.; Western, store-packed, 9@14c.; rolls, good West, 18@20c.; rolls, common to fair, 13@16c.; grease butter, 9@9½c.

Beeswax is in more demand at better prices. Sales of Southern at 33c.

Cheese.—The cable shows a further advance, to-day quoted at 63s. The prophets who have so long held to the opinion that cheese would go out high this season are quite jubilant over the advance that has followed the improvement noted last week. The home trade is somewhat checked by the rapid upward movement, but what it handles exceeds the receipts. A few Ohio are arriving but none of fine or desirable quality. State factory, fancy, 16½@17c; do., fine, 14½@16; do., fair, 13½@14; State dairy, good to prime, 14@15½c; do., fair, 7@10c; English dairy, Conn., new, good to prime, 10@12½c; Vermont factory, 13@15c; pine-apple, new, 15@21c.

Cotton.—The market has been steadily advancing for contracts under favorable foreign news and further important trade from the South. At the close the political controversy has unsettled the market, and in some instances fractional concessions have been made, but as a rule all parties desire to wait further developments.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¼	20⅝	20⅝	21⅛
Good Ordinary	22	22¼	22¼	22⅝
Low Middling	22⅝	22⅞	23⅛	23⅝
Middling	23⅛	23½	23⅝	24
Good Middling	24⅛	24½	24⅝	24⅞

For forward delivery latest sales are at 23½c. for Feb.; 23c. for March; 23¼c. for April, on the basis of low middling.

Dried Fruits.—The market continues dull, and where a purchase of apples or peaches for local use has any approach to a good round lot, the buyer can have extreme prices shaded for him. Small fruits are lightly inquired for, and are not quotably changed.

Apples Old State, grs., 7@8c.; Western, new, 8@8½c.; Southern, new, grs., 7@8c.; do. fine, sliced; 9½@11½c.; new State grs., 10@10½c.; do., sliced fine, 11@13c. Peaches, peeled, new N. C., 17@18½c.; do., do., do., 15@16½c.; do. E. Sh. Va., 15@16½c.; new unpeeled halves, 7½@8c.; do. quarters, 6c. Plums, 25@27c. Cherries, new, ₱ lb, 29@30c. Blackberries, 13½@14c. Raspberries, 28@29c.

Eggs. With more stock coming in than can be conveniently handled, as well as lower prices at the West, receivers are disposed to realize at the reduced prices. Fresh Western, 27@28c.; State, 28@29c.; Pennsylvania, 28@30c.; Southern, 27@28c.; Jersey, 29@30c. The observance of Lent begins Feb 14th this year.

Flour.—The features of the market are pretty much the same. The foreign advices are unsatisfactory, and, with a burdensome stock, the disposition generally is to realize. We quote at $5.80@6.25 for superfine State; $6.50@6.80 for common extra do.; $6.85@6.80 for good to choice do.; $6.85@7.25 for fancy do.; $5.80@6.25 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.40@6.90 for extra do.; $6.75@7.25 for choice extra do., including shipping brands of round hoop Ohio at $6.60@6.80, and trade brands of do. at $6.85@7.30; good to choice white wheat extras at $7.30@7.40; Minnesota, fair to very choice extra, at $7@8.10; St. Louis at $6.50@7.25 for common to fair extra, and $7.30@9.50 for good to choice. Southern at $6.55@7.35 for extras and $7.40@9.50 for good to choice. Rye at $4@5.20 for common to fine. Corn meal at $3.40@3.50 for Western white, $3.45@3.65 for Western yellow, $3.60@3.85 for Jersey.

Flax—Nominal at quotations. North River prime, $17@18; do. fair to good, $15@16; Canada prime, $15; do. fair to good, $16. Tow, 2¼@3c.; spinning tow, 8@10c.

Fresh Fruits.—There is an unusual drag in the apple trade, and dealers would be willing to drop something from prices in order to start trade. Cranberries sell only in a small way at the prices. Peanuts have lost some of their late animation, and are easier.

Apples, Mich., &c., bbl. $2.50@3; do. State good, $3.50@4; do. selections, $4.@4.50; cranberries, fine, bbl., $8.50@9; do. common to fair, $5@7.50; do. crates, fine, $3@3.25; do. do. common, $2@2.50; oranges, La., bbl., $7@8; peanuts, Wilmington, bush., $2@2.10; Virginia, new, $2@2.20; do. common, $1.25@1.50; hickory nuts, $1.75@2; Pecan nuts, ₱ 8@9½c.

Grain.—The foreign trade in wheat is small, but with moderate arrivals no further changes are made in prices. No. 2 spring in store, $1.52@1.55; No. 1 spring in store $1.57@1.58; Winter red Western, $1.62@1.67; amber Western, $1.68@1.71; and white Western, $1.68@1.75. Rye is quiet; Western, 95@9lc. Oats are selling slowly, and lower prices have been submitted to. Western and Ohio, 52½@55. Barley is hard to sell; Canada West $1.05. Corn is offered at lower prices, with fair receipts and less shipping trade. New Western mixed afloat, 71@73. Western yellow, 73@73½.

Hay and Straw.—The arrivals are larger, and buyers have the advantage in prices. Shipping hay, $1.30; retail qualities, $1.45@1.65. Straw at $1.05@1.10 for long rye; 90c. for short rye; 35@40c. for oat; 95c@$1.15 for clover hay; 75@90c. for salt do.

Hops.—Holders remain firm in their views, but the business is almost wholly in best grades for local use. We quote:

New Yorks, growth 1871, 20@65c.; Eastern do. 1871, 30@60c.; Western do. 1871, 30@60c.; yearlings do. 1870, 10@30c.; olds do. 1869, 10@35c.; old olds do. 1868, 8@12c.; Californians do. 1870, 15@30c.; Californians do. 1869, 0@15c.; Bavarians, 85c.; English, 65c.; Belgians (nominal), 55c.

Meats.—Hog-dressed calves are in good demand, and, with the advance in mutton, bring full prices readily. Very little dressed beef is arriving. Hog-dressed calves, prime, 14@15c.; do. good, 12½@13c.; grass calves, 5@7c.; country-dressed mutton, 8c.; country sausage, 12@13c.

Poultry and Game.—Receipts are moderate and prices have generally improved. Western dry picked turkeys are well thought of in the trade, and receivers desire that that class of dressing be more largely adopted.

Turkeys, Western, good, 16@18c.; do. poor and frozen, 12@15c.; do. State, 17@18c.; do. Jersey, 18@19c.; Ducks, Western, 16@19c.; do. poor and frozen, 12@16c.; do. State and Jersey, 18@20c.; Geese, Western, 10@12c.; do. poor and frozen, 8@10c.; do. State and Jersey, 12@14c.; Fowls and Chickens—Western good, 15@17c.; do. poor and frozen, 12@14c.; do. State, 16@18c.; do. Bucks Co. and Jersey, 18@19c.; capons, 20c. Fowls and chickens—Live, State and N. J., 17@18c.; do. Western, 15@16c; roosters, 10c.; ducks, per pair, 75c.@$1.50. Geese—Western, $1.50@1.75; do. Canada, $1.75@2; do. Jersey $3@3.50; turkeys, 17@19c.

GAME.—Buffalo has been well sold up at low figures. Of venison we have about all we can handle between date and expiration of legal limit. Prices are better, as there is not so much other game crowding the market. Quail scarce and high. Rabbits scarce, the price has been too low for shipments. Ducks, teal and wigeon, 30@40c.; do. mallard and red, $1; do. canvas, $1.50@2. Venison, whole, ₱ lb., 7@9c.; do. long saddle, 10@12c.; do. short saddle, 12@14c.; do. Minn., 15@19c. Buffalo hind saddles, 2@3c.; do. calves, 3@5c. Quail, sound, ₱ doz., $2.25@2.50; do. soft and small, $2.00. Grouse, ₱ pair, 65@75c. Partridges, Eastern, 40@60c.; do. State and Western, 60@70c. Rabbits, 30@40c. Hares, 40@50c. Squirrels, gray, 8@10c.

Provisions.—Mess pork has been very quiet and in the buyer's favor. The receipts are larger and the reports from the West are unsatisfactory. New, $11¾@12.25; prime mess dull; new extra, $12@; mess for forward delivery is unsettled; sales for March at $14.25, and for June $14.50. Dressed hogs are quiet; the demand is mainly for city-dressed, at relatively higher prices; city, 6¾@7c.; Western, 5¾@6c. Middles are in good export demand at firm figures; sales of short rib, 7½c.; long clear, 7½c.; short clear, 7¾c. Cut meats are in moderate demand at steady rates; hams in pickle, 9@9½c.; do. in salt, 8¾@9c.; shoulders, in salt, 5½@5¾c.; do. in pickle, 6c. Smoked meats bring 11@13c. for hams, 6¾@7c. for shoulders, 8@8½c. for clear rib. Stearine is quiet; prime, 9½c. Lard has been selling freely at strong prices; prime Western steam, 9¾c.; city, 10c. for prime and 9½c. for No. 1. Beef is dull, at $8@11 for plain Western mess, $11@13 for extra mess. Tierce beef at $13@18 for prime mess, $19@21 for India mess. Tallow is in good export demand, at 8@8¼c. for prime.

Seed.—For clover the shipping demand has fallen off, and, to work off full arrivals, lower prices are submitted to. Sales at 11@11¾c. for Indiana and Michigan, and 10c. for Ohio. Timothy is quoted at $3.75@4, without sales.

Sundries.—New cider, 18@20c. ₱ gallon; cider vinegar, 18@22c. ₱ gallon; ginseng, southern, 85@95c.; do. Western, 70@80c.; feathers, prime live geese, 75c.; honey, white clover comb, 20@25c.; buckwheat comb, 16@20c.

Tobacco.—Kentucky leaf is in rather more demand for shipment; no further changes are made in prices. Seedleaf remains in pretty much the same position. A few sales are making at prices that show a steady feeling.

	Light Grades.	Heavy Grades.

Wool.—The market for fleeces is very strong. The inquiry is fair, but generally at prices something below the views of holders. Good Ohio quoted at 80c. Pulled have advanced with a brisk trade. Tubbed are higher, quoted generally at 85@90c. Foreign is in more demand at strong prices. Latest sales of XXX Ohio, 75½@80c.; X Ohio, 75c.; Oregon, 62½c.; super pulled, 72½@80c.; Cape, 45c.; Mestiza, 38½@40c.; Magdalena, 38½@40c.; Montevideo, 38½@40c.

Whisky.—Western is firm at 93½c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Feb. 10, 1872.

No transactions of importance to note at the Little Falls market for the week ending Feb. 10. Small lots of ordinary farm dairies have been sold at 9@10½c., and we hear of no sales from factories. The railroad shipments of cheese from Little Falls during the past year, or from Jan. 1st, 1871, to Jan. 1st, 1872, are returned by the freight agent as follows:—140,023 boxes, amounting to 8,967,008 pounds. Butter during the same time, 1,378 packages, amounting to 133,938 lbs. The shipments by canal have not yet been received, but will probably make the aggregate more than 10,000,000 pounds. A very large quantity of cheese sold at this market is shipped at other places, and the transactions in cheese here during the year it is estimated have been about 25,000,000 pounds.

We have advices from abroad to the third week in January. Our London correspondent says there is an immense demand for fine and secondary cheese. The best American is quoted at 63@67s.; fine, 62@65s.; good, 54@58s. The other descriptions of cheese sell as follows:—New English Cheddar, 74@80s.; Wiltshire double, 51@58s.; Cheshire medium, 52@60s.; fine, 66@78s.;

Scotch, new, 66@72s.; Dutch cheese Edams, 56@58s.; Gondus, 53@58s.; Derby shape, 50@50s. Butter is mainly confined to European. The quotations are as follows:—Clonmells, 134s.; Corks, 128@130s.; Normandy extra, 144s.; Canadian, 70@118s. The corresponding prices for butter and cheese last year were as follows: Clonmells butter, 150s. American cheese, 80s.

ROCHESTER, N. Y., Feb. 8.—Wheat firm at $1.45@1.50 for winter red, $1.55@1.65 for white. Corn dull, at 70c.. Oats 1c. higher, selling at 45@46c. Barley, 68@70c. for two-rowed, 80c. for four-rowed. Dressed hogs firmer, at $5.50@5.75 per cwt. Beef, $6@8 per cwt. Mutton 5@8c. ₱ lb. Chickens, 14@15c. ₱ lb. Butter, 21@24c. ₱ lb. Eggs 30@32c. ₱ doz. for packed, 35@35c. for fresh. Wool is higher, and a few sales have been made at 60@65c. ₱ lb. Sheep pelts have advanced to $2@3.50, according to quality. Clover seed dull, at $5.75, retailing at $6.25@6.50; timothy seed, $3.25 @3.50 ₱ bush. Hay scarce, at $17@21 ₱ ton.

LIVE STOCK MARKETS.

NEW YORK, Feb. 9, 1872.

ARRIVALS are much larger again in all departments, owing partly to the belief that the freights were to be raised on stock started after Feb. 1st, and so shippers hurried off droves previous to that time, while stock has been coming in for some days past. Then again there were fears of delays by snow blockade, so shippers crowded their droves on the trains on this account, and, no delays occurring, they are now pouring in rapidly. Cattle and hogs show a weakness, but sheep are not likely to decline, nor will they be rushed in as they have been some former years. The high price of wool is exciting farmers towards its greater production.

TOTALS LIVE STOCK FOR THE WEEK.

	Beeves.	Milch Cows.	Calves.	Sheep.	Hogs.
This week	8,408	146	872	26,558	32,886
Last week	7,159	85	752	23,013	29,154
Correspond'g w'k '71	5,088	58	1,009	31,117	17,873
Average, '71	7,187	83	2,301	25,132	25,177

Beeves.—There is now a cattle market nearly every day in the week, not excepting Sundays. Formerly stock was started with the idea that it should reach here on certain regular market days, but now, when trains are so crowded that shippers are glad to take cars when they can get them, and when they fear that snows will block up the roads, there is no waiting for regular shipping days; and when the stock arrives here, butchers are notified and sales made as soon as possible, for owners well know that cattle fall away from the time they leave home, to say nothing of the cost of feeding, so every day's delay is a loss, unless the market chances to advance. For the trade of Monday last, there were only 3,612 cattle on sale—109 cars at Communipaw, 8 at 130th street, and 20 at Weehawken. There were more cattle ready to ship, but cars could not be had. The result was an active, strong market, in which stock generally brought ½c. advance, making allowance for the poorer quality of the droves this week. There was nothing good enough to bring over 12c., and none went below 9c.; very few selling under 10c. The great bulk of the cattle went at 10½@12c. A very noticeable feature is the absence of "long-horns" or Texans. Only two cars such cattle have been received for a week past. Instead of sending them here for sale, Western feeders are buying them to graze the coming season. Such heavy losses on the plains during the past season will cause a large demand to make good the deficiency. It is to be hoped the lesson of the present winter will convince stock men on the plains of the folly of attempting to carry their droves through the winter without hay.

The receipts of cattle since Monday have been 2,858 head, coming in very irregularly, and selling slowly at a decline fully equal to the advance of that day, leaving the market just where it was one week ago, with some stock unsold. The freights remain unchanged, but are not regarded as permanent.

The following are the prices at the close of the market:

	This week. Cents.	Last week. Cents.
Choice bullocks, ₱ lb	12½ @ 13	12½ @ 13
Good to prime	11½ @ 12	11½ @ 12
Medium	11 @ 11½	11 @ 11½
Ordinary	9½ @ 10½	9½ @ 10½
Poorest grade	8½ @ 9½	8 @ 9
Average of all sales	11¼ @ —	11¼ @ —

Milch Cows.—The great increase in receipts of fresh cows and springers gluts the market and prices are lower again, with quite a good many cows unsold. Dealers had their ideas too much elevated by late good markets, and have entirely overdone the thing now. Most of the recent sales have been at $100@80. each, one lot of decent milkers averaging $62 ₱ head. They were just such cows as sold at $95 a week ago.

Sheep.—The increase of 3,500 sheep over the receipts of the previous week, has no effect to lessen prices. The high price of pelts goes a great way towards selling a lot of sheep. Trade is quite lively, most stock selling soon after arrival, only very mean lots going under 7c., while scarcely medium sells at 7½c.; fair to good at 8@8½c., and choice to extras at 8¾c., with one very extra lot of 81 fine wool O., 100 lbs, at 9c.; a car 81½ lbs, sold at 8c.; a car 81 lbs, 7½c., and a car coarse, thin 80 lb Ill., at 6½c. Sales of 5,225 head made during the week, averaged $7.50 each, with 8,361 at $6.96.

Hogs.—Besides the 32,886 live hogs received during the week, there were 5,761 Western dressed. These increased receipts cause a decline in prices, and the market closes dull at 5¼@5¾c. for live; 6@7c. for city dressed, and 6@6¾c. for Western slaughtered.

Veal Calves.—Live calves have been coming in sparingly, and are worth a little more money, but in view of the near approach of the season for a great increase in receipts, it is not safe to count upon any better rates, even if quite a number of fine milk veals are now selling for 11c. ₱ lb. Very good ones are still offered at 10½c.; common to fair at 8@10c. Hog, dressed, brought high rates during a few days of scarcity, select calves selling at 15¾@16c., but they are not regularly quotable above 14½@15c., with fair at 12@13c. and grass calves slow at 7@10c.

DEPOSIT INSURANCE

is a new form of LIFE INSURANCE, originated and just introduced by the old and popular

Charter Oak Life Insurance Co.,

OF HARTFORD, CONN.

ORGANIZED 1850.

$10,000,000 ASSETS.

It is confidently recommended as far superior in all respects to any Tontine or other plan upon which payment of profits is deferred. Insurance on all the usual plans is offered by this Company at far Lower Rates than are charged by other mutual companies.

☞ Agents in all the principal cities and towns.

8 PER CENT. GOLD.
INTEREST PAYABLE QUARTERLY.
FREE OF GOVERNMENT TAX.
9 1-2 PER CENT. UPON THE INVESTMENT.

SIXTY PER CENT. MORE INCOME THAN UPON GOVERNMENT BONDS, AND AN UNDOUBTED SECURITY.

FIRST MORTGAGE SINKING FUND BONDS.
(COUPON AND REGISTERED.)
ISSUE LIMITED TO $16,300 PER MILE.
OF THE
Logansport, Crawfordsville and Southwestern Railway, of Indiana.

Price 95 and Accrued Interest.

This Road, 92 miles in length, 70 of which are in actual operation, runs southwesterly from Logansport to Rockville, passing centrally through five of the wealthiest and most productive counties of Indiana, hitherto without railway facilities, and penetrating for Twelve Miles at its Southern terminus the celebrated Block Coal Fields of Parke County. It affords the shortest existing outlet to Chicago, Toledo, Detroit, Fort Wayne, Logansport, and all other intermediate points for the Block Coal (now in such large demand), Lumber, Cattle, Grain, and other surplus products of this rich Agricultural and Mineral section of the State.

For the present we offer a limited number of these First Mortgage Bonds at 95 and Accrued Interest in Currency, or will exchange them for U. S. Bonds or other marketable securities at the rates of the day.

At the above price these Bonds yield to the Investor 50 per cent. more income than the Bonds of the United States, and we unhesitatingly recommend them to all classes of investors as offering the most ample security and liberal returns.

Further and full particulars, with Pamphlets and Maps, furnished by us on application.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.
Patented June 27, 1871.

One of the most important inventions of the age!
The most perfect Button-Hole Worker ever invented!

So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a life-time. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and traveling agents wanted everywhere.

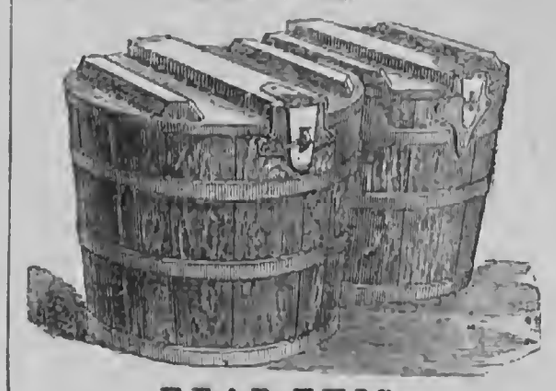
Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

A. W. WEBSTER & CO., 599 Broadway, N. Y.
Please state you saw this in RURAL NEW-YORKER.

FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.

Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.



READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

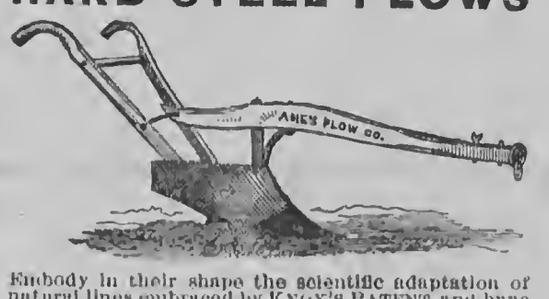
Principal Warehouse, Binghamton, N. Y.

SESSIONS & KNOX'S
PATENT
HARD STEEL PLOWS



Embody in their shape the scientific adaptation of natural lines embraced by KNOX'S PATENT, and have extra qualities of hardness, each piece of metal being made by a process that converts about one-third on each side into steel, and allows it to be hardened as much as fire and water can make it, while the center remains soft or flexible. This gives them a toughness that avoids the liability of breakage so general with other plows, and a surface better adapted to slide through the soil, which reduces the amount of power required and further adds to durability.

These Hard Steel Plows received the highest premium, $25, awarded to Plows at the Vermont State Agricultural Fair, Sept., 1871.

Messrs. Sessions & Knox were awarded the highest prize by the New York State Agricultural Society, October, 1871.

Awarded the highest prize, a Silver Medal, by the New England Agricultural Society, September, 1871.

ALSO,

KNOX'S PATENT AND IMPROVED EAGLE,

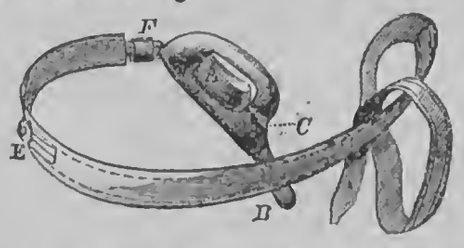
Pomeroy's Trusses.



These trusses are made under six different patents granted to us during the last six years, and embody the most important improvements ever made in this class of instruments. Our celebrated "Finger Pad," "Adjustable" and "Night" trusses are unrivaled for the support of hernia, combining the utmost security with a degree of comfort unattainable by any other means; and hence, as experience shows, are more likely to effect a radical cure than any other.

They are recommended by the very best surgical authorities, and have received the highest awards and most flattering reports at all the late Fairs of the American Institute.

No one should purchase a truss without first calling on or writing to us for information and advice.

Fertilizers, Etc.

TO FARMERS.—DOUBLE REFINED POUDRETTE of the "LODI MANUFACTURING CO." for sale in lots to suit customers. This article is sold for *half the price* of other fertilizers, and is cheaper for tobacco, cotton, corn and vegetables than any other in market. It is made entirely from the night soil, offal, &c., of New York city. Price, delivered on board in New York city, Twenty-five Dollars per ton. I ask attention to the following Testimonials:

ONEIDA Co., N. Y., Oct. 12th, 1871.—*Dear Sir:* For two years past I have used the Double Refined Poudrette for corn, potatoes and garden Vegetables, and I have realized on the first crop 100 per cent. for all the money invested. Yours truly, T. B. ALLANSON.

WINDHAM Co., VT., Dec. 4th, 1871.—*Dear Sir:* I think the Lodi Company's Double Refined Poudrette the best manure I can find for tobacco, corn and potatoes. I shall order a number of tons another season. Yours respectfully, E. S. HORTON.

JESSE VAUGHN of Lancaster, N. Y., under date of September 20th, says:—I applied the Double Refined Poudrette, last Spring, on corn and potatoes, and I believe I have the best corn in town, and my potatoes are an excellent crop. I have used your Double Refined Poudrette several times before, and always with good results, but this year the effect has been more perceptible than ever before.

A pamphlet giving full directions, &c., sent on application to JAMES T. FOSTER, 66 Cortlandt St., N.Y.

BONE MANURES.

Implements, Machinery, &c.

"March winds" and "Poor help" can't prevent owners of Allen's No. 3 Planet from getting in their Guano, Peas, &c., evenly and in good time.

CHEAP CORN CULTURE.
20 Acres a Day, Better than by Hand, with
THOMAS' SMOOTHING HARROW.
81 Slanting Teeth of Tempered Steel for $25.

The many small teeth being round and sloping backward do not tear up the strongly rooted corn, but effectually **Destroy the Young Weeds** on the surface, stirring the soil in as well as **around** the hill. A boy can take entire care of 100 acres of corn, and thus **obviate Hand-Hoeing entirely.** The number, shape and position of the round, slanting teeth render this Harrow the most **complete and rapid Pulverizer** ever used, cutting the lumps with a downward **draw-cut,** instead of pushing them aside; for the same reason it **draws very easily,** and covers a wide surface.

Wheat and all sown crops are benefited by cultivation, as certainly as corn or cabbage, which can be profitably done with the Harrow.

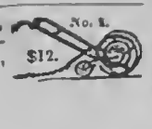
Increasing the Yield 3 to 5 Bushels per acre.

Farmers' Club, N. Y. City, says:—"In potato culture it is really excellent; saves half the expense."

24-page Descriptive Catalogue sent free, with full particulars; prices of five sizes, delivered at depots in twenty cities, including Texas and California; 11 pages of the experience of farmers using it. ☞ One good **Canvasser Wanted** in every town. Made and warranted by J. J. THOMAS & CO., Geneva, N. Y.

Sold in NEW YORK CITY only by **R. H. ALLEN & CO.,** 189 and 191 Water St.

Nothing equals Allen's Planet, No. 3, putting in Guano and all Fertilizers for row crops. 119 S. 4th, Phila., Pa. Circulars and testimonials free.



Implements, Machinery, Etc.

All Saws warranted to Coil and Touch uninjured.
NOT ONE FAILED IN 20,000.

"THE GREATER INCLUDES THE LESS."

Note extra steel and durability as contrasted with old V outline on M tooth. After wearing teeth out they may be recut or sold to some admirer of the old V friction process, used by all other Saws.

BOYNTON'S LIGHTNING SAWS.

I submit fair samples of letters daily received from ordinary farmers. Occasionally there is a man who does not know how to set or file any saw; uses one set for dry beech to saw soft wood without widening set. Such a man may learn to use saws, or employ some one who knows how to sharpen and set; but there is some chance that he will go back to chopping one cord per day when a saw could as easily saw TEN if he knew how. For the benefit of such, I indelibly engrave full directions on each cross-cut saw-plate. Many will thus learn to use any saw. For sawing hard wood the points should not be filed thin but left about as when sent out. I am now prepared to fill all orders, having doubled capacity recently. I regret delay many have suffered.

BELLEVILLE, Ontario, Can., Jan. 20, 1872.
E. M. BOYNTON, 80 Beekman St., N. Y.:
Dear Sir:—I received your Lightning (Cross Cut) Saw in due time, and am perfectly satisfied of its superiority. We have cut one cord of Beech wood in 20 minutes. My neighbors are quite anxious to get saws, and I therefore send you check on Jay Cooke & Co. for the following quantity of Lightning Saws.
S. S. POTTER.

NEW YORK, Jan. 18, 1872.
E. M. BOYNTON:
Dear Sir:—Your saw that I purchased has cut several hundred cords of the hardest kinds of Beech, Maple, Oak and Hickory timber at a rate of speed and cost of cutting saving more than one-half the time and labor—common hand sawing down the trees and cutting about one cord per hour with a Lightning Cross Cut. From practical experience with men and other saws, I am certain of a gain of one hundred per cent. in speed and cost over other saws. I think the Lightning Saw is worth many times its price to the farmer and wood-cutter. Indeed, it is a great invention.
A. BRAYTON,
Smith's Basin, Washington Co., N. Y.

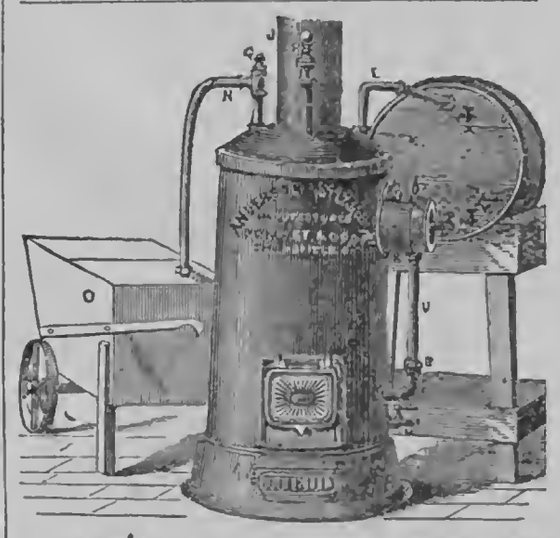
Implements, Machinery, &c.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK: Heating Cheese Vats: Tanners' Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.
For further particulars address
P. P. MAST & CO., Springfield, Ohio.

CARHART'S
PATENT TWO-HORSE
PULVERIZING CULTIVATOR
Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the mowing machine better than any cultivator in use, and can be used for more purposes than any other implement on the farm.
Price, $20.

NEWS CONDENSER.

— Capt. Burton has found the skeleton of a man 11 feet high.

— President Grant has made several hundred ladies postmistresses.

— The Grand Duke has been getting letters from love-sick maidens.

— H. W. Beecher once offered to write 6 articles for the Observer for $15.

— Lord Brougham spent the two past years of his life collecting hymn books.

— Mrs. Charles Mcnlton has given up singing, owing to the sickness of her husband.

— General Banks' daughter is the belle of the season — handsome, graceful and exquisitely dressed.

— Mr. Washburn is the 24th Governor of Massachusetts, since the adoption of the State Constitution.

— Mrs. Corbett is said to be the most beautiful, and Mrs. Carpenter the cleverest, of the Senators' ladies.

— The Countess of Landon has bought in all the estates squandered by her miserable brother, the Marquis of Hastings.

— Eben D. Jordan, of Boston, has assumed the entire pecuniary risk ($200,000) of Gilmore's next Grand Musical Jubilee, in that city.

Real Estate, Etc.

FRUIT AND GRAIN FARM in Delaware.—402 acres, situate in New Castle County, 45 miles south of Philadelphia, adjoining station on Del. R. R. 70 acres in peaches; 70 acres in apples; balance No. 1 farming and grazing land. $7,000 for apples has been realized in one season from this farm. Buildings good; situation remarkably healthy. Price only $125 per acre; *really worth* $150. Would be cheap as an investment. Terms, $12,000 cash, or within sixty days; balance easy. Apply to WM. H. NEWTON, St. Georges, Del.

IOWA FARMING LANDS

THE CHICAGO, ROCK ISLAND & PACIFIC RAILROAD COMPANY

Is now offering for sale to actual settlers more than

500,000 ACRES

of the finest and most desirable Farming Lands in the West.

The lands are chiefly situated along the line of its railroad between the cities of Des Moines and Council Bluffs, and are the most fertile and accessible lands offered for sale at low prices in the State. Prices will range from $5 per acre, the average being about $7 or $8.

Sales are made either for cash, or on short or long time, so as to suit all purchasers. Full warranty deeds given.

EXPLORING TICKETS,

entitling the purchaser of land to a credit of amount paid for fare upon his land, are for sale at the principal ticket offices of the Company.

For pamphlet (with map), or any information regarding the lands, address

J. L. DREW, Land Commissioner, Davenport, Iowa.

1,500,000 ACRES OF THE

RICHEST FARMING LANDS IN THE WORLD,

For Sale to Actual Settlers.

NEOSHO VALLEY, KANSAS, MISSOURI, KANSAS, AND TEXAS RAILWAY CO.

CARS NOW RUNNING 400 MILES.

The Lands offered by this Company are mainly within 20 miles of each side of the road, extending 150 miles along the NEOSHO VALLEY, the richest, finest and most inviting valley for settlement in the West. One-third of the labor required at the East in the culture of farms will insure here double the amount of crops.

PRICE OF LAND.—$2 to $8 per acre; credit of ten years' time.

TERMS OF SALE.—One-tenth down at the time of purchase. No payment the second year. One-tenth every year after until completion of payments, with annual interest. For further information, address ISAAC T. GOODNOW, Land Commissioner, Neosho Falls, Kansas.

FARM AND MILK ROUTE for Sale. Contains 135 acres. In and adjoining the flourishing village of Baldwinsville, which lies upon the Oswego and Syracuse R. R., 12 miles from Syracuse, and contains about 3,500 inhabitants. The best of schools, &c. Elegant two-story frame house, with two wings; good and spacious barns and sheds; splendid location; well watered and fenced; adapted to grass or grain; young orchard, and variety of fruit. Soil, sandy loam. Terms easy. For further particulars, address JOHN W. SIMMS, Baldwinsville, Onondaga Co., N. Y.

TRAVELERS TO THE SOUTHWEST! Take the "BEE LINE"—Cleveland, Columbus, Cincinnati and Indianapolis Railway—from Cleveland, Ohio, by way of Crestline, Bellefontaine, Indianapolis, Terre Haute, St. Louis, etc., or by way of Columbus, Cincinnati, Louisville, etc., for all points South or West. PALACE DAY and SLEEPING CARS from Cleveland to Columbus, Cincinnati, Indianapolis and Louisville, without change.

E. S. FLINT, General Superintendent, Cleveland, Ohio.

WHY GO WEST? We have cheap farms, short winters, good land, schools, rivers, railroads, markets and churches. Send stamp for Catalogue. F. MANCHA & BRO., Ridgely, Md.

ELECTRO-MAGNETIC CURLING COMB!

This is the most wonderful, novel, scientific, and useful instrument ever discovered for curling straight hair in soft, luxuriant curls. One combing will curl the most stiff, stubborn hair, **instantaneously**, into rich, glossy curls. It does away with all hot curling irons, poisonous and dangerous curling fluids. It is perfectly **reliable**, never can fail, being the only sure and scientific method ever discovered to curl straight hair without the **least possible injury.** Only one combing required to curl the most stubborn hair into soft, luxuriant curls. To Actresses and others wishing to curl their hair in the shortest possible time, this article is **invaluable**, as it does not require more than three minutes' time to transform the most harsh, stiff, stubborn hair, into soft, massive tresses. The ELECTRO-MAGNETIC COMB is so constructed that it forms a perfect electro-magnet, and causes straight hair to curl by taking up or absorbing the electricity with which all straight hair is overcharged. It is well known that **natural** curly hair contains only about one-tenth the amount of electricity found in **all** straight hair. By the application of the ELECTRO-MAGNETIC CURLING COMB the electricity is **instantly** absorbed or taken into the comb, leaving the hair in perfectly beautiful natural curls, which will remain in curl from **two** to **five** days.

The ELECTRO-MAGNETIC CURLING COMB is simple in its construction and use; will last a lifetime, and never fails to produce the above beautiful results. It will be sent, free of postage, to any part of the United States or Canada for One Dollar and Twenty-five Cents. Address

ELECTRO-MAGNETIC CURLING COMB CO., Garrettsville, Ohio.

WHITE PROBESTEIER OATS were introduced by me in 1870, and the past season have yielded 101 bushels per acre. *Straw strong; not liable to lodge.* Grains large; hulls very thin. Weight 38 lbs. per bushel. Price $1.50 per bushel. Also **Excelsior Oats,** same price. WHY NOT WRITE AT ONCE?

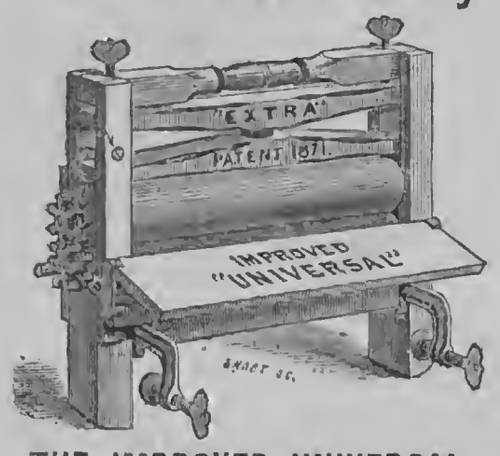
We are trying to distribute information in regard to Waltham Watches. We know the better they are understood the more they will be sold. Hence, we have prepared an interesting pamphlet, illustrated with fine engravings, which gives a full and correct account of their manufacture; also a Descriptive Catalogue, with prices of every size and grade. We send this free to any one. From it you will learn the prices, also our plan of sending them by Express: the Watch not to be paid for till you have handled and examined it. Address HOWARD & CO., 865 Broadway, N. Y.

Mention that you saw this in the Rural New-Yorker.

No stamps required for return postage.

Residents of California, Oregon and the Territories will find special advantages in writing to us, as we make the extra heavy cases adapted to these localities.

10 Reasons Why



THE IMPROVED UNIVERSAL
IS THE BEST WRINGER.

1st REASON.—It has ROWELL'S PATENT DOUBLE Cogs on one end only of the shaft. These cogs have longer teeth, can play apart farther without disconnecting, can never crowd together so as to bind, never work sidewise out of place; wear more evenly and turn easier than any cog-wheel ever invented.

2d REASON.—It has the **Patent Stop**, which keeps the Cogs from disconnecting and losing their power, yet allows the rolls to play apart far enough to wring the largest article easily.

3d REASON.—It has the **Malleable Iron Folding Clamp**, which cannot be broken, and fastens securely and easily to tubs of any curve, and fits washing machines or stationary tubs of fully two inches in thickness, which no *curved* or ordinary clamp can do, and it folds under out of the way when not in use and for convenience in packing.

4th REASON.—It has the **Folding Apron** or Guide, to conduct the clothes safely over the side of the tub, free from contact with the clamp or screws.

5th REASON.—It has the peculiar advantage of **Two Pressure Screws**, so arranged with patent wooden springs, that each screw presses on both ends of the roll alike, the same as if it was in the center, while the two together *give double the capacity for pressure.*

6th REASON.—**The Elastic Rubber** between the strong wooden springs relieves their rigidity, makes the machine turn easier, saves the rolls from strain, and causes the pressure to bear on both ends of the roll alike.

7th REASON.—All its IRON parts are WROUGHT or MALLEABLE, not liable to break, and carefully galvanized, to prevent rust.

8th REASON.—**The Handle or Crank** is not screwed on like other wringers, but BOLTED or RIVETED, and will turn clothes backward or forward, or from one tub to another, without coming loose.

9th REASON.—Its folding lower slat fits down to any stationary tub or washing machine, and prevents water slopping over, as it will with ordinary wringers.

10th REASON.—**It is very light and portable**, yet built so substantially that the strongest person can not break it in wringing the largest garment.

With all these Advantages, its price is no greater than that of any inferior wringer with cogs.

Sold by the House Furnishing and Hardware Trade generally.

The Herdsman.

DEVON CATTLE.

CAPTAIN J. T. DAVY, Editor of the English Devon Herd Book, says the Devon breed of cattle belongs to the middle-horned variety (he classifying the earlier breeds as long, middle and short horned) and as evidently an aboriginal one. He says the middle-horned varieties are fairly good milkers, but are remarkable for the *quality* rather than the quantity of their milk, which yields a larger proportion of cream and butter; and he asserts, "as a general rule the better the milking properties of cattle, the more are they disposed to internal accumulation of fat."

Of the distinctive external characteristics of the Devon, he says: "Notwithstanding his curly hair, the skin of the Devon must be mellow and elastic. Experience shows that some animals fatten faster than others. On 'handling' them we find the skin and parts beneath soft and 'mellow.' This 'mellowness' is a kind of softness or elasticity perceived upon pressing the skin with the fingers, and is a favorable sign of the aptitude of an animal to fatten. These parts are the cellular membranes, which in fat animals are full of fat, and the possession of this mellow feeling by store stock denotes that there are plenty of membranous cells ready for the reception of fat. None have been more thoroughly successful than the Devon breeders in attaining this desirable object; they consider an animal of little value if it cannot be fattened without very extraordinary food.

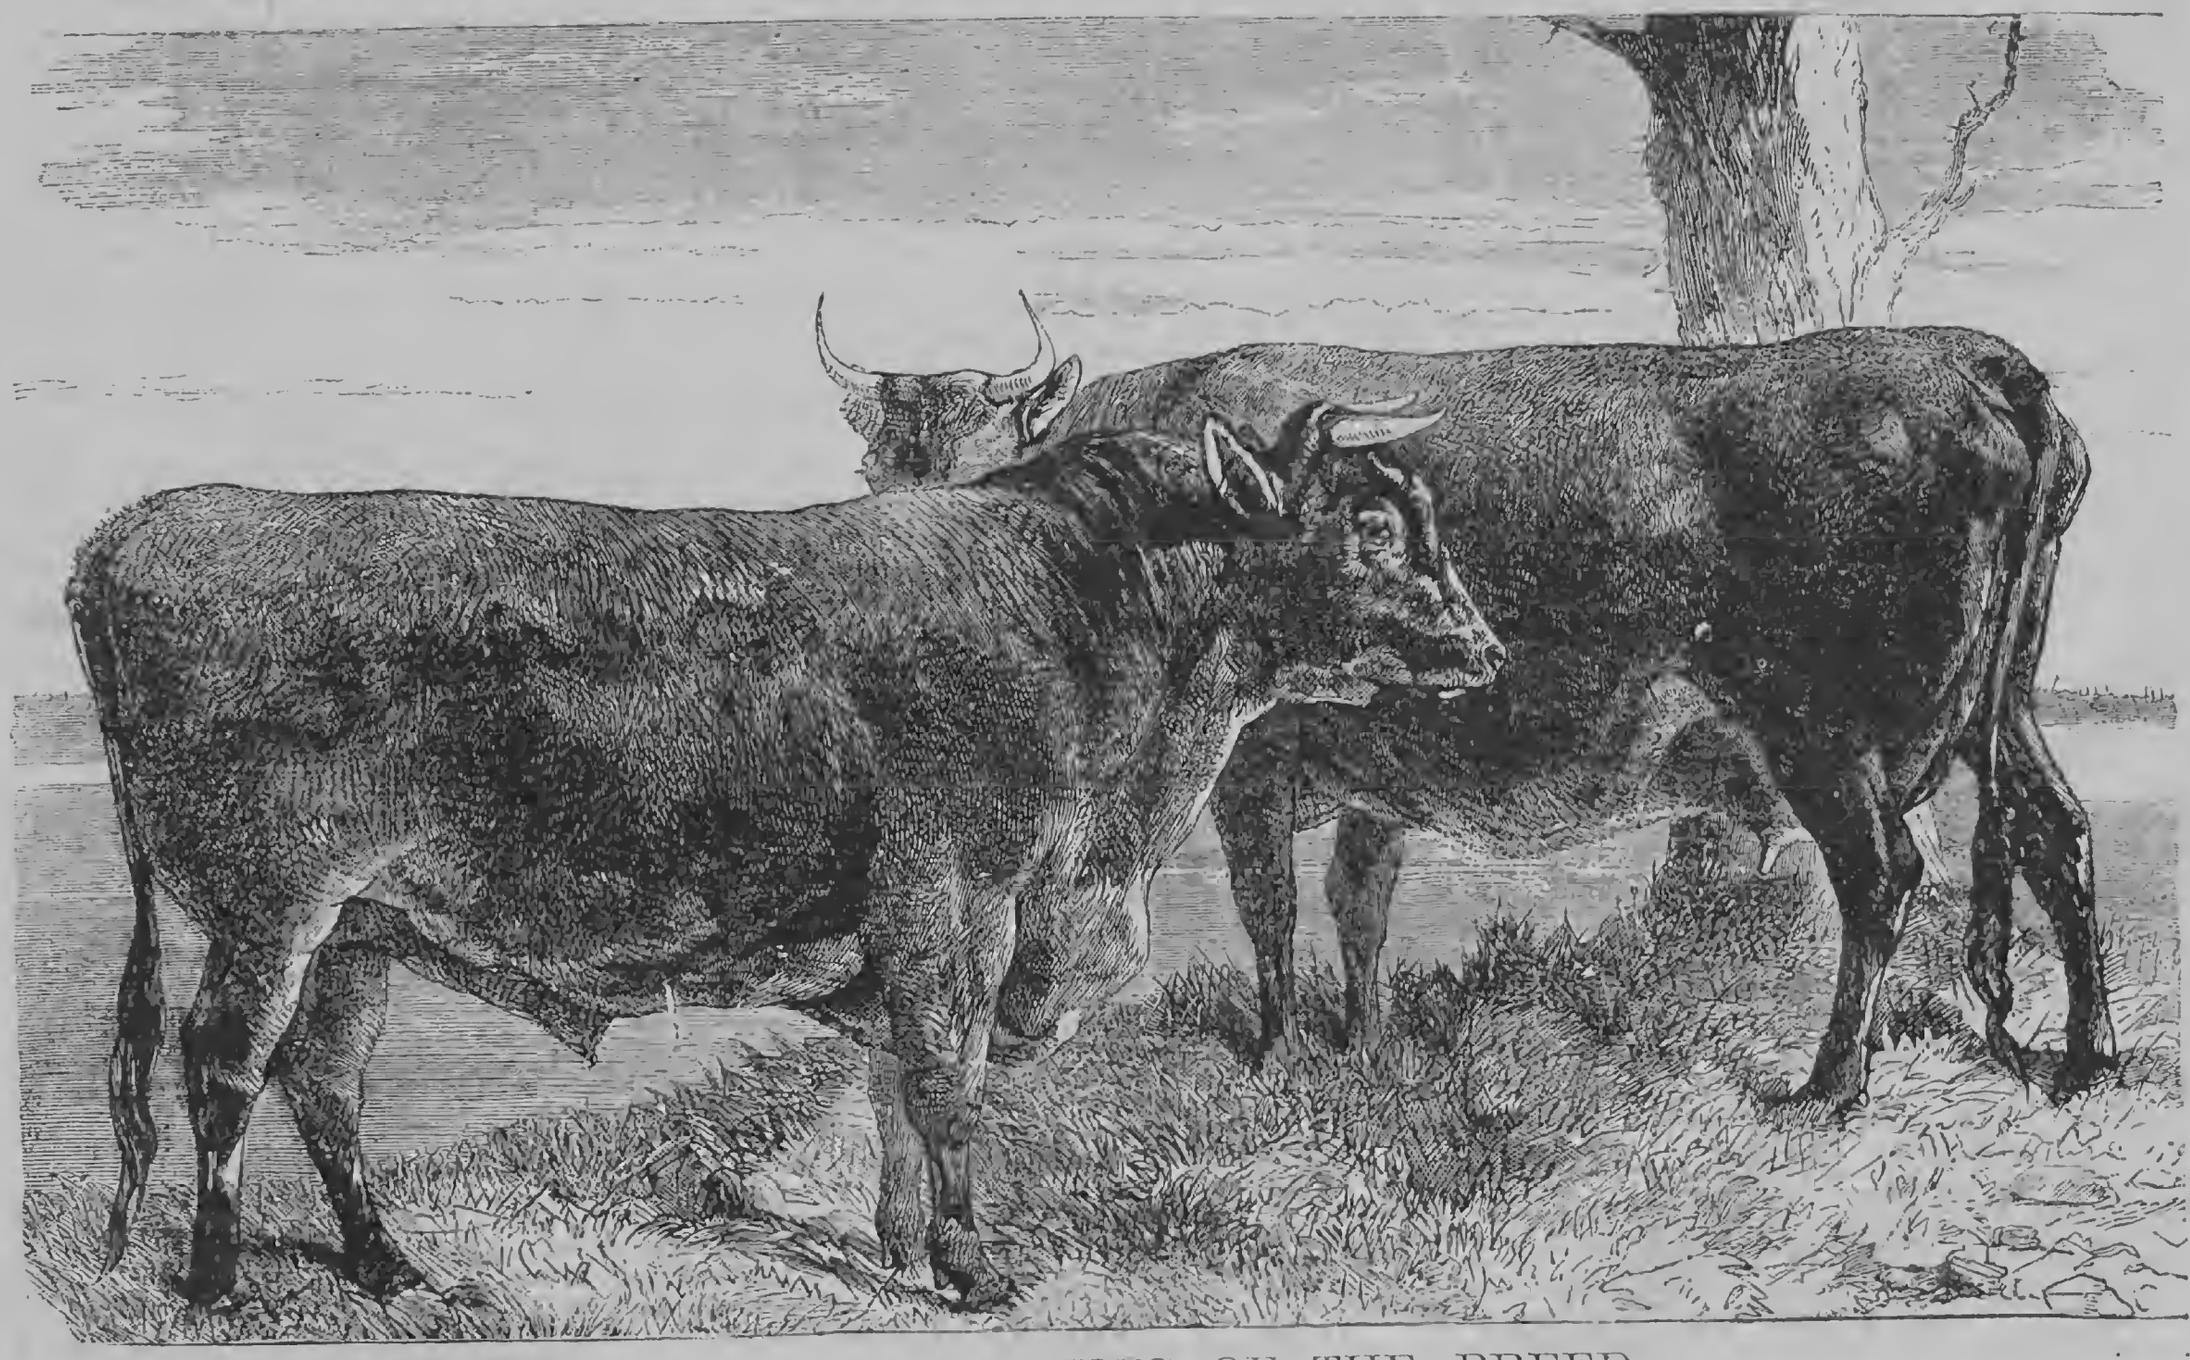
THE PATH TO SANDRINGHAM CHURCH.

[SEE PAGE 137.]

"The general form of a Devon is very graceful, and exhibits a refined organization of animal qualities unsurpassed by any breed. The expression of the face is gentle and intelligent; the head small, with a broad, indented forehead, tapering considerably towards the nostrils; the nose of a creamy white; the eye bright and prominent, encircled by an orange-colored ring; the jaws clean and free from flesh; the ears thin. The horns of the female are long and spreading, gracefully turned upwards, and tapering off towards the ends. The general aspect of the head should in many points resemble that of the deer. The horns of the bull are thicker set and more highly curved, in some instances standing out nearly square, with only a slight inclination upwards.

"Red is the true Devon color, which varies from a dark to a lighter, or almost to a chestnut shade. In summer the skin is mottled with beautiful spots of a slightly darker shade than the ground color of the skin.

"The outline of a fat Devon very nearly approaches a parallelogram. The frame is level from the tops of the shoulders to the tail; the belly is longitudinally straight, and well filled out at the flanks. The breast is wide, coming out prominently between the fore legs, and extending downwards almost to the knee



DEVON CATTLE—TYPES OF THE BREED.

joint. The neck is long and thin, increasing towards the shoulder, which is tapered off to meet it. The ribs project at right-angles to the back, with wide, flat loins, and long rumps well filled out, thus enabling them to be loaded with more beef in the most valuable parts than almost any other breed.

"As converters of vegetable into animal food, breed against breed, they return as much per acre, or for weight of food consumed, as any. Animals possess no magical power of producing beef, except from the food which they consume; it is therefore contended that, if the herbage of any given number of acres were to be consumed by Devons, they would produce in the aggregate as much beef as any other breed, a greater number being required to consume it; at the same time there would be a greater weight of the most valuable beef, and less of the coarse joints and offal. This is the reason why Devons and Scotch cattle sell first in the morning, and command the best prices, in the London and other markets.

Mr. Wainwright, a Devon breeder in the State of New York, says:—"Their beef is of a fine quality, and brings a high price in the markets. They withstand extremes of temperature, On a poor pasture, from their peculiar build, they are enabled to travel rapidly over the ground without fatigue, and get sufficient nourishment where a heavy Short-Horn or Hereford would starve. The very best of this breed are the best in the world." Mr. Steinmitz of Pennsylvania, writes to Captain Davy, the editor of the "Herd Book:"—"I find North Devon cattle the most profitable breed in America; I can raise more valuable beef on them with the same amount of food than any other breed."

WE give portraits of what may be regarded typical animals of this breed.

NOTES FOR HERDSMEN.

How a Bloat of over Two Weeks was Cured.—As our cattle were turned to pasture last spring, a nice yearling heifer was affected with bloat, which did not abate, but increased for more than two weeks. We did not see her chew her cud, although she was not within observation except at milking time. We gave her a slice of salt, fat pork, sprinkled on both sides with ground, black pepper. She ate it readily, and soon made a spasmodic effort, as if to raise something into her mouth. Another slice of pork, well peppered, was given her, and she went to pasture with the other cattle as usual. When she was next observed, she was chewing her cud as leisurely as the other cattle, but the bloat had not all gone down. A teacup full of salt was moistened and rubbed upon her blonted side, and the next day the bloat was all gone, and did not appear again. She grew nicely through the season, and was lively and well.—E.

"What will Kill Lice on Cattle?" asks S. A. P. We have given scores of remedies in the RURAL NEW-YORKER. Good food, cleanliness and care are preventives. We have disturbed the insects by sprinkling gypsum along the line of the back and carding it in. Water lime, rubbed on dry, is also recommended; but the animal must not be allowed to get wet while the lime remains. Spirits of turpentine and soft soap, *well mixed and diluted with water*, is recommended as a wash. Feeding the animals sulphur occasionally is an excellent preventive, and a remedy also. Grease calves with lard, whey-butter, linseed oil, or any soft grease, and the lice will go.

Swelling on a Steer's Jaw.—I wish to know how to remove a swelling from a steer's jaw. It is about two inches in diameter, in the center, on the side of the jaw—a fleshy swelling, very sore and hard, but with no inflammation, no form of a head. The skin and hair are natural and smooth, the steer is well, eats and chews as natural as ever. I think it must be a bruise, or it is what we call a wen in an early stage. If any of your readers can give me any information or remedy they would confer a favor.—E. B.

A Large Short-Horn Calf.—We have a Short-Horn calf, bred by GEO. BLISH, Lake Co., O., whose weight at three months old was 450 pounds; at five months old, 650 pounds. It had all the milk from the dam, but nothing else.—W. & A. DILLE, *Cuyahoga Co., O.*

How to Cure a Jumping Heifer.—S. W. CROOK asks how to cure a year old heifer from jumping. We answer, by having fences she cannot scale.

Field Crops.

GRASS ON SANDY LAND.

A CORRESPONDENT of the RURAL NEW-YORKER at Palestine, Ill., asks what kind of grass is best to sow on sandy land. That must depend upon condition. If sandy land has been properly enriched with vegetable matter—with leaf mold, muck or coarse manure.—a mixture of Orchard Grass. Red-tops, June grass, Red clover and White clover, equal parts, makes a good sod and yields a good crop for both pasture and mowing. But if the soil is not rich in humus, we should (as we have) seed more heavily with red clover. The red clover roots and the foliage which will fall will help to enrich the soil and render it productive. If red clover alone were sown first and plowed under in June or July, about the time it is in blossom or just before, and then a mixture such as we have sown, a better permanent grass land would, in our judgement, be secured.

Since writing the forgoing, we find that FLINT in his "grasses and forage Plants" recommends the following mixture for mowing on light lands: Orchard grass, 4 lbs; June grass, 3 lbs; Hard fescue, 3 lbs; Fall Oat grass, 3 lbs; Meadow Soft grass, 3 lbs; Red-tops, 3 lbs; Italian Rye grass, 4 lbs; Red fescue, 2 lbs; Perennial Rye grass, 6 lbs; English bent, 2 lbs; Perennial Red clover, 3 lbs; Black medic, 2 lbs; White clover, 4 lbs; Sainfoin, 2 lbs.

There is nothing to be said against this mixture. The greater the variety of nutritious grasses the farmer can get established in his soil the better and the more enduring and productive will the pasture or meadow be, if it is properly fed and taken care of.

IOWA AG. COLLEGE FARM CROPS.

THE Report of the Superintendent of the Agricultural College Farm of Iowa shows the products of the farm to have been as follows: — Wheat, 18 acres; average, 17 bushels; total, $153.90; cost, 51½ cents per bushel. Oats, 15 acres; yield per acre, 52 2-5 bushels; total, 786 bushels; cost, 16¾ cents per bushel. Rye, 10 acres; 22 3-10 bushels per acre; total, 223 bushels; cost, 65 cents per bushel. Considerable expense was incurred on the rye field to prepare it for the future ornamental grounds. Corn, 115 acres; number of bushels raised, 6,059; yield per acre, 60½ bushels; cost, 15 cents per bushel. This crop included 63 acres of sod corn, estimated to yield 50 bushels per acre; of this land 21 acres were broken last fall, the balance last spring, seven inches deep, and well harrowed, and most of it planted with a corn planter and afterwards well cultivated; the yield was good, as was shown above, and the ground is now all rotted and in good order for another year. Twelve hundred and five bushels mangel wurtzel, 412 bushels turnips, 398 bushels potatoes, 890 bushels carrots, were also produced.

FIELD NOTES AND QUERIES.

Culture of Seed-Leaf Tobacco.—W. B. G. S., Warren Co., N. C., writes:—"I have been trying for some time to find the mode of cultivating and curing seed-leaf tobacco, with the view of trying an experiment here, but thus far without avail, and have concluded to try through your valuable paper. Would there be any sale for tobacco grown here from Cuba seed? What probable price would it command in New York?"

There would certainly be a market for such tobacco, but its price would depend so much upon its quality, the manner in which it is grown and cured, and the supply and demand, that it is not safe to predict for next season. Our correspondent will have seen an article in the RURAL of Feb. 10, that gives some information. On receipt of twenty-five cents we will send you a Manual of Tobacco Culture, which gives, in detail, the practice of some of the best cultivators.

How to Grow Sweet Potatoes.—A correspondent of the Georgia Plantation says:—"Subsoil the land in November, January and March; then let the weeds and grass grow until your slips are ready to set out, then take a turning plow and turn them under; make your hills or ridges, whichever you prefer, set out slips; then fill in between the hills or ridges, and about two or three inches above the level of the hills or ridges, with straw or leaves, (the older the better,) and then your work is done. The straw or leaves will prevent the growth of weeds or grass, and keep the ground moist, and the vines will soon spread over the straw or leaves, and will not be taking root at the joints, as they do when they run on the ground, consequently all the strength goes to the potatoes in the hill."

Cotton Production for 1872.—From our correspondents South, we learn that the high price of cotton is stimulating extensive preparations among planters to extend the area of cotton the present year. We hope the lessons of the past will not be forgotten, and that the corn crop will not be neglected. The practice of rushing headlong into any one specialty, ignoring other needs, is too much like rushing all of one's money on a single throw of dice—it is unwise and likely to prove disastrous. A large and exclusive cotton crop usually results in low cotton and high corn. This should be remembered.

The Best Roots for Milch Cows.—"A RURAL Reader" asks our correspondents, having experience, to name the best roots to cultivate for food for milch cows, and detail mode of culture, and soil best adopted therefor.

The Swine-Herd.

CURTIS VS. BABBITT.

IN reply to L. W. BABBITT'S argument that the Chester White is a *thorough-bred*, because in a cross of this hog with the China Poland, and in a subsequent cross of a half-bred Chester White and China Poland, more of the pigs were white than spotted, I argue as he does, that the white blood was the "strongest," but differ from him that this fact proves that the Chester White is any more thorough-bred. A "breed" that does not always breed alike cannot be proved thorough-bred when they happen, in a cross with other pigs, to have more of the offspring marked after themselves. It is a proof of a stronger constitution and physical vigor. As, for instance, a case of my own. I have now a litter of pigs from a Chester White sow, two and a-half years old, and a Berkshire boar, less than one year old, the pigs being nearly all white. Is the Chester White more thorough-bred than the Berkshire? Mr. BABBITT further says:—"When a man shows me a pig with straight or erect ears, and calls it a Chester White, I either conclude he thinks me a fool, or" (to abbreviate his language) "he is a fool himself." PASCHAL MORRIS, who is authority on this question, says there were two families of hogs started in Chester county, one with lopped, and one with straight or erect ears. I have seen and observed specimens of both families. Our friend BABBITT may rank himself in either of the classes he has mentioned, according to his comprehension of the above facts. From Mr. BABBITT'S description of his Chester Whites they must be well bred, but in breeding off the wrinkles and folds he is effacing one of the peculiar characteristics of the breed which, if I was a breeder of Chester Whites, I should be careful to preserve; as they are a certain sign of purity, and have no objectionable features. I have never had the pleasure of seeing Mr. BABBITT'S articles proposing a Swine Herd-book, but I am glad to know he is alive to the importance of having an authoritative standard of characteristics, and I extend to him the hand of co-operation.

Kirby Homestead, N. Y. F. D. CURTIS.

PIG-PEN PAPERS.

To Prevent a Sow from Eating her Pigs.—"A New Subscriber," Park, Nebraska, asks what will prevent a sow from eating her pigs, his neighbors having been seriously troubled. It is the opinion of some excellent breeders that the cause of a sow eating her offspring, is costiveness, and that proper food is the preventive and cure. The proper food in winter is roots of some kind—sugar beets, carrots, parsnips, mangel wurzel, turnips or potatoes. Give a little charcoal occasionally, with sulphur once or twice a week, if you have no roots. Don't feed heating food, such as corn meal. It will make her costive, feverish and cross, and she will attack and destroy her pigs when in the frenzy this induces.

Measles in Swine.—What shall I give my hogs to prevent them having the measles? Some of my neighbor's hogs are afflicted, and I want to avoid the disease if I can. So asks JOHN PORTER of the RURAL NEW-YORKER, which answers, feed them sulphur once or twice a week in their slops—a tablespoonful to each animal. It will generally prove a preventive, provided the pigs are kept clean and warm, as they ought always to be.

The Poultry-Yard.

SURE CURE FOR ROUP.

I HAVE twenty fowls of Dark and Light Brahma that caught this most dreaded disease of the poultry yard from a Dark Brahma cock that I purchased of a fancier, who had him on exhibition at the Cleveland Poultry Fair. I took him home, and in two days he could hardly crow. The third day one of the hens was very bad. I began doctoring them, and cured them both; but in five days I noticed my whole flock was infected; ten of the hens were blind and could not see to eat; their heads swelled nearly round. I had to put food in their mouths to keep them alive, and water them with a teaspoon. Yet all my fowls are living now, and I routed the disease in a few days. I should have isolated those showing symptoms of the disease from the rest, and I probably would not have had the whole flock to attend. Those that were the worst with swelled heads I began at by squeezing the discharge out of the head through the nostrils, as clean as I could. I then washed their heads and mouth with a bath made of a pint of warm water and two tablespoonfuls of good vinegar, using my finger and bathing their head and roof of the mouth well. I then applied a liniment to their heads and mouths, made in the following manner: — Four ounces camphorated sweet oil and twenty-eight drops of carbolic acid—in other words, seven drops of carbolic acid to the ounce of camphorated oil. It will take longer to cure those that have become very bad, but I will warrant that if the fowl gets feed enough put in its mouth to keep it from starving, that by using the above remedies, it will come out all right in a few days, no matter how bad they may be.

Preventive of Gapes.—I would also say that by putting a few drops of carbolic acid in some water, and then mixing in coarse meal twice a week, for young chicks, that I had no trouble with gapes, in the spring, while my neighbors lost several with the disease. I also saved chickens for others by dipping a feather, or a timothy head, in a solution of carbolic acid and water (ten drops to the ounce), and running it down the wind-pipe, giving it a twist and withdrawing it; but an ounce of prevention is worth a pound of cure, and a little administered in the food occasionally will be sure to keep off this troublesome complaint.

Regarding the roup, I would like to have some person try the remedy and see how miraculously it works. W. T. A.

POULTRY NOTES AND QUERIES.

Experience with the Light Brahmas.—My chicks were hatched between April 1st and July. The eldest made splendid broilers in June, and equally good for the table up to the present. I reserved twenty-five pullets to keep over, which commenced laying the latter part of October, and have ever since furnished me from eight to ten eggs per day. They have had no extra feed nor access to grain, for we raise none; they run at large. I have fed them only the crumbs from the table, and once a day boiled potatoes, sprinkled with a little corn meal. They are excellent mothers, and seldom lose a chick, although left to roam at large with their brood. When sitting, they can be changed from one nest to another, and they will remain quietly.—MRS. D. L. WORTHINGTON, *Genesee Co., N. Y.*

Are Pigeons Quarrelsome?—In the RURAL NEW-YORKER I discovered a statement that I think ought to be corrected. It is said—"Pigeons are as quarrelsome as owls, and they will fight to the death rather than have two nests built in one tree." I certainly *know* that, in the year 1825, the pigeons nested in the town of Pittsfield, Otsego Co., and they had very many nests on the same tree. Myself and three other persons spent a day in the woods among the pigeons. I saw no quarreling among them. Their nests were regularly visited by the parent birds; all seemed to vie with each other in loving attentions to their young! Other varieties of pigeons may act as represented by "C.;" but of them I have no knowledge.—RUFUS PEET, *Castile, N. Y.*

Does it Pay to Keep Geese? asks a correspondent at Seville, O. Yes, it pays some people, but it does not others. If any of our correspondents have found it profitable, we should like to see their figures.

The Sex of Eggs.—Long, slim eggs are males; short, round eggs are females.

Land Department.

FROM FLORIDA.

We have lately received requests "to publish whatever information we may obtain concerning Florida." It will be remembered that during last year we published several articles from MYRON STRONG. We find we have another (which has been overlooked), that may prove of interest and profit to our readers seeking information concerning that "Land of Flowers." Here it is:

ABOUT FLORIDA:

Its Soil, Climate, Productions, &c., &c.

THIRD ARTICLE.

In my last letter concerning cattle, I omitted some things which I wish to mention. The cattle of this country are usually smaller than the common breed of cattle North, and are remarkable for their variety of color—striped, spotted, *ring-streaked* and speckled, as were the herds of JACOB of old. The cows furnish only about two quarts of milk per day, even if the calves get none of it. More might be obtained with extra feeding. An enterprising Yankee would, no doubt, succeed well in the milk business, if he would bring with him a few best breed of cows, and establish himself near Jacksonville, or Augustine, or some of the larger towns. He should also ship a full supply of good Northern hay, mill feed, bran, etc., and feed them in the same manner as at the North, until they become acclimated. This, to be sure, would require money, but it would be well invested, as every quart of milk sold would put twenty cents into his pocket, that being the city price. The market is best during the winter months, as then the hotels and steamers are crowded with Northern visitors.

During the summer, when the demand for milk is less, it could be made into butter and cheese, the former selling at forty to fifty cents, the latter twenty-five to thirty cents. As yet I have heard of no extensive dairies in Florida.

After the Southern farmers have driven their cattle into the distant range to feed for another year, the next thing they attend to is to *list* up the cow pen for

A Crop of Sweet Potatoes.—Light furrows are made with a small scooter plow, usually four and a-half feet apart, as a guide, then, with a long-handled hoe, portions of manure, all the grass, litter, etc., are hauled to the furrow from either side; then the soil hauled upon that, thus forming high, straight ridges. Then from the seed beds, prepared in February in the same way in which the "mamma" potatoes were planted, strings of long vines are pulled, in sizable bunches, laid straight upon the ground, and cut in lengths of about eighteen inches; one person takes as many of these as he can handle, and places rapidly across the top of the ridges pieces of the vine, about fifteen inches apart. Another follows with a stick having a notch in one end, and presses the center of the vine into the ground, three or four inches, and the job is done.

The best time for this is immediately after a heavy rain. If there is little or no rain, the plants should be watered. If timely rains occur, the vines soon throw out their shoots and cover the ground. Very little labor is afterwards required, except to go over the beds once or twice, and cut out the pestiferous crab grass while young. If that is allowed to grow, the crop will be very much diminished.

With good cultivation and a favorable season, the crop is usually about 200 bushels per acre—sometimes 300; even more when highly manured. Without manure, from 100 to 200 may be expected, on good ground.

This is considered a very important crop, as all domestic animals eat the sweet potato greedily, and every family depends upon it, in a great degree, for their daily food. In gathering the crop, after the first white frost of December, a small turn plow is run alongside of each ridge, turning out the valuable tubers, which are gathered and banked, covered with pine tree bark and a little soil, with a little hole at the top for ventilation. Dryness is essential to keep them from rotting.

The hogs are then allowed to go into the field and root out the remainder, and thus get partially fattened. A few cow peas and a *very* little corn added, makes these long-nosed, slab-sided swine sufficiently fat to suit the crackers; from which, however, most Northern pork-eaters would turn with disgust. The sweet potato crop prepares the ground admirably for the

Sugar Cane, which is the first crop of the new year, and demands first attention. As soon as the cane of the old year is ground and made into sugar, the plow is put in motion, preparatory for the new planting early in January, to be completed in February. The soil is turned over with a small, one-horse plow, in December. Then in January the ground is laid off in furrows five feet apart—some prefer six feet. The seed cane is cut into short pieces, having three eyes in each, and placed in the furrow end to end. Some stretch the pieces apart a little, and place another parallel, so as to have a piece opposite each space. The object is to have a thick, good stand. The seed is then covered with soil, lightly, just filling the furrow. Level culture is the best—better for the rattoon cane for the second and third years. Where the ground has not been "cow-penned," the furrows should be made deeper, so as to receive the manure from the compost heap, or other commercial fertilizers.

It is customary with many to omit the first plowing with the turn plow, and proceed with the furrows and the planting, leaving the middles to be plowed subsequently.

The cane is rather tardy in springing up, unless the weather is warm and favorable rains fall, so that to keep down the young grass it becomes necessary to give the rows a very light, careful scratching with the hoe, even before the cane appears. The middles are then plowed, throwing the dirt from the cane. At the second plowing it is turned towards the cane. After two more plowings and hoeings the crop is "laid by," the cane having become so dense and thick by the first of July as to shade the ground thoroughly, so that no further working is necessary.

From this time onward the growth is very rapid. Next to the sight of a large orange grove, loaded with golden fruit, is the sight of a large cane field with its dense mass of long leaves rustling in the wind. There is money in both—*deliciousness* in one, great *sweetness* in the other.

The next operation is the stripping of the cane leaves from the lower part of the stalk during the latter end of October. This lets in the sun, hastens maturity, and prepares the way for cutting with greater facility. The cutting of the cane begins about the middle of November, or in good time to get the whole crop secured from frost. The cutting is commonly performed with a sharp hoe, level with the ground. About two feet of the top end is cut off for seed, carefully banked and covered with cane leaves and soil to secure it from the frost, should any occur. The stubble or roots of the cane should also be covered. If protected it will spring up and produce the rattoon cane for three years, and on rich hammock land six or seven years.

As the cane is cut it is immediately hauled to the mill, ground, and the rich juice made into sugar. If it cannot be made up as fast as cut, it is placed in banks and covered, then ground at greater leisure.

The time of sugar making is looked forward to with great interest as a very busy time, and a very *sweet* time for the operatives, who often sip the precious saccharine without stint, and indulge in fun and frolic.

The cane is ground or crushed in an iron mill, between three rollers, one or two stalks at a time placed by the feeder. From thence the juice is passed to the kettle, or evaporator, set in an arch, then cleansed with a little lime water, and boiled down to the proper stage for granulating, as indicated by the saccharometer. Experts here, however, seldom use the instrument. When boiled to the right state it is dipped into the cooler, and from thence into barrels, placed upon an inclined platform, from which the sirup is drained into a trough, or into tubs, leaving the sugar light and well granulated.

Now, a few words as to the product:—It has been supposed, by many, that it cannot be profitable to make sugar, unless upon a large scale; but we have, here in Florida, proved this to be an error. Every farmer can, in a small way, make his family supplies and enough extra to bring him many good dollars to fill his pocket—far more per acre than Northern farmers can gain from their very best crops.

One of my neighbors, DURRANCE, made last year, on pine land, "cow-penned," from two acres cane, 20 barrels sugar and 10 barrels of sirup; or 4,000 lbs. sugar, 12½c., $500; 400 gals. sirup, 50c., $200. Total, $700.

Another neighbor, EBINGTON, from five acres similar land, 40 bbls. sugar and about 20 bbls. sirup. Mr. ARNOT near Lake Monro, from pine land, made 1,500 lbs. sugar and 300 gals. sirup per acre. Mr. HOLDEN, from two and one-quarter acres, made 20 bbls. sugar and 11 bbls. sirup. Rev. J. C. LEE told me that from a half acre he made 640 gals. sirup. These are fair specimens of what may be done in a small way, on ordinary pine land, when well fertilized. Upon a larger scale, with more perfect machinery to press out the whole of the saccharine element, still larger results would be obtained.

The Southerners here say that we Northerners cannot raise cane without adopting the "cow-pen" system. We are confident that we can by using muck, composted with other fertilizers. Many are making the trial, with every appearance of success.

I have been thus particular about sugar cane because it is the most important crop we make, and sugar will, ere long, become the leading staple of Florida. The crop this year (1871) will be more than 50 per cent. greater than last year. In the older settlements of West Florida and middle Florida, the more wealthy planters will have a large increase. Capt. J. M. TAYLOR of Marion Co. has 55 acres planted this year. Many others have similar fields, and others more or less.

Cotton has heretofore been cultivated to a considerable extent, in Florida, as the grand staple. More sugar and less cotton is now the rule. Cotton requires far more labor and is far less profitable than cane. Under the present system of labor cotton cannot be successfully cultivated as in slave times. A Southerner, with a large family of children to work in the fields, can accomplish something by planting a few acres, but it is folly for a Northern man to undertake it. One year's experience has satisfied *me*. I want nothing more to do with cotton.

In my next I propose to tell you what a Northern man can do in Florida, and hope to regale you with some of our delicious fruits. It is curious to see how little some people at the North know about Florida. "*Where is it?*" says one in a letter just received, "*Where is it? I have never studied grammar* (!) enough to know. Tell me all about Florida."

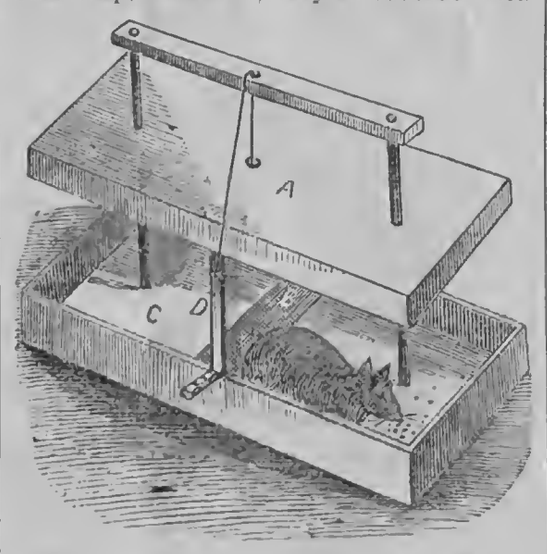
I hope I shall be able in future numbers of the RURAL NEW-YORKER to answer such earnest inquiries in my best grammar.

Palatka, Fla. MYRON STRONG.

The Sportsman.

DEAD-FALL TRAP.

As many of your readers are inquiring after a good rat trap, I will send you a sketch of one which is easily made and will be understood from the sketch with but little explanation. It is an old device, not patented, and perhaps not generally known. Rats, when well fed, will not be meddling with traps. Cut off their supplies and then you may get them into almost any trap. This trap, when set, may be covered with



corn husks or shavings so that Mr. Rat will not be afraid of it. A, is the drop, which slides freely up and down on the two vertical guides, or rods of wood, one-half to three-quarters of an inch in diameter, made fast in the floor of the trap, and also in the cross-piece above. When the drop is down, it fits into the casing which surrounds the floor of the trap. B, is a thin strip of wood (usually made of a shingle), and let into the floor of the trap its thickness, the upper side level with the floor and fastened at the back part of the trap with a string. The floor, C, is surrounded with a covering which projects above the floor about one inch, with an opening in front for the piece B, to project through, having notches cut in to receive the dog, D, which is also placed in a notch in the front of the drop, A, and attached by a string, as shown. When a rat steps on B, (which is raised a very little in setting the trap) his weight presses it down and lets D, out of the notch, and down goes A, and Mr. Rat finds himself in a tight place, which is very flattering and not very flattering. H. M. S.

Fremont, Ohio.

Industrial Societies.

INDUSTRIAL SOCIETIES.

The Quaker City, O., Ag. Soc. held its annual meeting in Quaker City, Guernsey Co., O., Jan. 15, 1872. The election resulted in the choice of the following officers: *Pres.*—W. N. COWDEN, Quaker City. *Vice-Pres.*—Dr. J. B. Hollingsworth, Quaker City. *Sec.*—J. C. Steele, Quaker City. *Treas.*—J. G. Webster, Quaker City. *Directors*—H. Miller, Batesville Co.; W. P. Hartley, E. Hall, S. Carter, J. Hall, W. H. Hartley, T. M. Johnson, I. Hartley, E. Hall, T. Webster, M. Gildow, H. Keenan, Quaker City; W. P. Broomhall, S. Fordyce, Spencer's Station; J. A. Stoneburner, Salesville, Guernsey Co. The next annual Fair will be held Sept. 10-13, at Quaker City.

Cazenovia, Fenner and Nelson, N. Y., Farmers' and Mech's Assoc'n.—Officers elect: *Pres.*—E. B. TILLOTSON. *Vice-Prests.*—Amasa Swift, John Woodcock, Fenner; G. W. Irish, Nelson. *Sec.*—D. Elgabroadt. *Treas.*—C. H. Perkins. *Directors.*—B. H. Stanley, J. F. Kingsbury, C. L. Chappel, S. J. Anderson, W. W. Lyon, L. M. Case, Nelson. L. V. C. Hess, S. K. Hyatt, Fenner.

Laomi, Ill., Farmers' Club.—EDITOR MOORE'S RURAL NEW-YORKER:—I write to let you know that you have been voted an honorary member of the Laomi Farmers' Club. Officers: *Pres.*—A. M. BROWNING. *Vice-Pres.*—James Short. *Rec. Sec.*—A. Meacham. *Cor. Sec.*—Isaac Colburn. *Treas.*—Henry King.—ISAAC COLBURN, Corresponding Secretary.

Thanks, gentlemen, for the honor.

Elm Spring, N. Y., Farmers' Club.—Officers for 1872: *Pres.*—W. W. MAWNEY, Dundee. *Vice-Pres't's*—G. D. Baker, Geo. Eldred. *Sec.*—W. W. Buxton, Milo Center. *Treas.*—D. H. Clark, Himrods. *Librarian*—O. Moteaff. *Ex. Com*—J. F. Reynolds, G. Connidry, C. D. Davis, Mrs. W. Sutherland, Mrs. A. C. Bartholomew.

Westmoreland, N. Y., Ag. Soc.—Officers elect: *Pres't*—ARTHUR BARNES. *Vice-Pres't's*—J. Park, J. S. Knapp. *Treas.*—Geo. H. Smith. *Sec'y*—V. C. Smith. *Ex. Com.*—A. S. Bailey, F. S. Morrill, Luke Coan, John L. Dean, C. H. Draper, Wm. Hamilton, E. W. Brigham, R. H. Williams, John Bell, B. Stephenson, J. W. Osgood, H. H. Tyler.

Galen Ag. Soc., Clyde, N. Y.—At the annual meeting held Jan. 13th, 1872, the following officers were elected: *Pres.*—MATHEW MACKIE. *Vice-Pres.*—Ethan B. Kellogg. *Sec.*—Wm. H. Peckham. *Treas.*—Seth Smith. *Ex. Com.*—Henry Southard, Prosper Sloan, H. C. Ketchum, Levi Lundy, J. M. Horn, Benj. Weed.

Camden, N. Y., Industrial Soc.—Officers elect: *Pres.*—SPENCER J. UPSON. *Vice-Pres'ts.*—Eben Abbott, Richard Emply. *Sec.*—Ezra B. Cobb. *Treas.*—Robert Robotham. *Cor. Sec.*—Curtis J. Wright. *Ex. Com.*—Ashbel Upson, Joseph Stark, Riley Scoville, Wm. Baldwin, John Owen.

Trenton, N. Y., Union Ag. Soc.—Officers for 1872: *Pres.*—HENRY RHODES. *Vice-Pres'ts*—A. Blue, A. S. Blue. *Treas.*—D. W. Rhodes. *Sec.*—Storrs Barrows. *Directors*—S. N. Andrew, F. A. Hamlin, J. W. Brooks, D. D. Crumby, G. A. Hughes, A. D. Moore.

Kennebec, Me., Ag. Soc.—Officers: *Pres't*—D. H. WING. *Vice-Pres't's*—F. Fuller, H. O. Nickerson, Sewel Eaton. *Sec'y*—G. A. Russell. *Treas.*—B. T. Richards. *Agent*—G. Howes. *Trustees.*—S. Kilbreth, S. G. Fogg, J. E. Brainard, J. R. Marston, Geo. Keith.

Thorn Hill, N. Y., Farmers' Club.—Officers elect: *Pres.*—JOHN MCDONELL. *Vice-Pres't's.*—Geo. B. Willsie, Mortimer Mason. *Treas.*—S. S. Kneeland. *Sec.*—Allen Brown. *Cor. Sec.*—E. C. Cowles. *Librarian.*—E. C. Cowles. *Directors.*—Wm. Dorrance, Silas A. Wright.

North Kennebec, Me., Ag. Soc.—Officers for 1872: *Pres.*—H. C. BURLEIGH, Fairfield. *Vice-Pres't's.*—Wm. Dyer, Waterville; Wm. H. Pearson, Vassalboro. *Sec.*—Daniel R. Wing, Waterville. *Treas.*—Ira H. Low, Waterville.

Central Iowa Dist. Ag. Ass'n.—Officers elect for 1872: *Pres.*—A. J. LYON, De Soto. *Vice-Pres.*—Larkin Wright, Knoxville. *Sec.*—P. F. Bartle, Des Moines. *Treas.*—Joel Jacoby, Indianola. *Chief Marshal*—J. Jones, Knoxville.

The Mass. Hort. Soc. has arranged a course of lectures in its Hall in Boston. The first of the series was delivered Feb. 7, by Hon. Marshall P. Wilder, on "The Hybridization and Production of New Plants."

Hampshire, Mass., Ag. Soc.—We have received the Transactions of this Society for 1871. The volume contains papers and reports creditable to the organization with which they originate.

Chester, Vt., Dairymen's Ass'n.—Officers: *Pres.*—J. P. BARNES. *Vice-Pres.*—Wm. M. Howard. *Sec.*—T. H. Whitmore. *Directors.*—L. M. Carpenter, J. C. Carr, A. S. Adams. *Treas.*—F. W. Marsh.

York Co., N. B., Ag. Soc.—Officers elect: *Pres.*—JOHN H. REID. *Vice-Pres.*—John Pickard. *Treas.*—John A. Beckwith. *Sec.*—John Richards. *Ex. Com.*—Samuel Fleming, Charles McGibbon, William Grieves.

Ithaca, N. Y., Farmers' Club.—Officers elect for 1872: *Pres't*—EZRA CORNELL. *Vice-Pres't*—P. B. Crandall. *Rec. Sec.*—S. M. Babcock. *Cor. Sec.*—L. B. Arnold. *Treas*—G. Benedict.

Union Ag. Soc., Wellington, Lorain Co., O.—Officers for 1872: *Pres.*—E. S. TRIPP. *Vice-Pres.*—John Houk. *Sec. and Treas.*—J. S. Bowlby. *Supt.*—E. Benedict. *Marshall*—E. Phelps.

Cass and Essex, N. H., Ag. Soc.—Officers for 1872: *Pres.*—J. W. HARTSHORN. *Vice-Pres'ts*—Wm. Clough, J. H. Dudley. *Sec's.*—C. E. Benton, G. H. Emmerson. *Treas.*—H. J. Kent.

Waterville, Me., Jersey Cattle Club.—Officers elect: *Pres.*—Dr. N. R. BOUTELLE; *Sec.*—Wm. Dyer. *Prudential Com.*—S. K. Smith, C. M. Barrell, H. Percival.

Northern Ohio Fair Ass'n.—Officers for 1872: *Pres.*—Dr. J. P. ROBISON. *Vice-Pres.*—D. A. Dangler. *Sec.*—G. W. Howe. *Treas.*—S. T. Everett.

Hardin Co., O., Ag. Soc.—Officers for 1872: *Pres.*—DAVID JORDAN. *Vice-Pres.*—J. Q. A. Sieg. *Sec.*—S. J. Wright. *Treas.*—P. Griffin.

Greene Co., Wis., Ag. Soc.—Officers elected: *Pres.*—T. H. EATON. *Sec.*—W. W. Wright of Monroe, Wis.

Lafayette Co., Wis., Ag. Soc.—Officers elect: *Pres.*—F. CAMPBELL. *Vice-Pres.*—J. G. Knight. *Treas.*—S. S. Allen. *Sec.*—H. L. Brown.

Tenn. Apiarian Soc.—The address of the Secretary of this Society is, W. E. Ladd, Brentwood, Tenn.

The N. Y. State Grape Growers' Ass'n meets at Rochester, N. Y., Feb. 15, at 10 A. M.

Diary of a Ruralist.

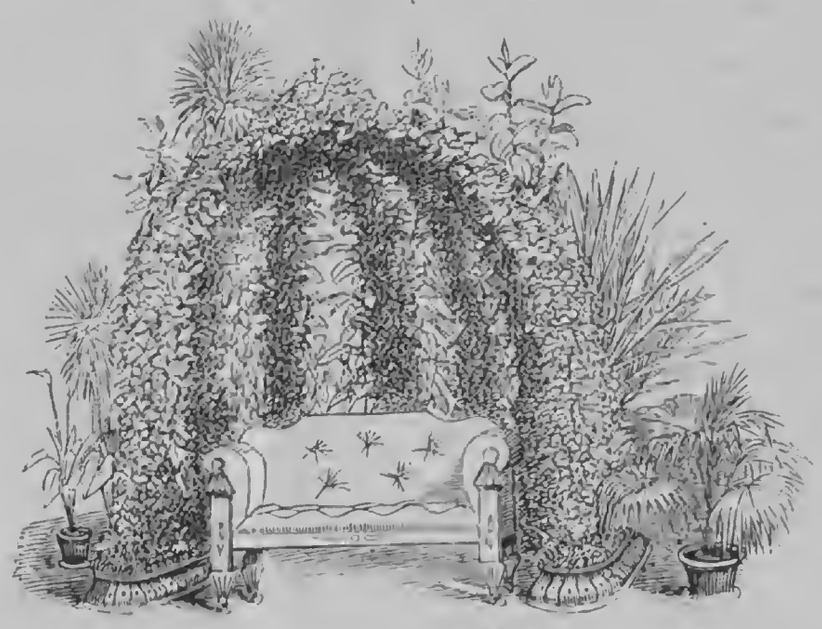
DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Garden Labels.—*Feb.* 5.—Few persons ever have on hand, at planting in spring, a good and full supply of garden labels. This is due to carelessness or want of forethought, and the result is either a loss in valuable time in the most busy season of the year, or a total neglect to preserve the names of seeds sown or plants set out. A very common mode of trying to preserve the names of seeds purchased at the seed store, is to insert the printed envelope into the end of a small stick, hastily placed in the bed after sowing the seed. If the first wind does not carry this bit of paper to parts unknown, the first shower will, and the gardener's memory usually takes a similar direction, and all knowledge of the names of plants grown is lost. I do not know of a more provoking predicament to be placed in than to have some one ask me the name of a plant which I am cultivating, and be obliged to confess my ignorance. The confusion which exists in every neighborhood throughout the country in regard to the names of fruits, flowers and vegetables, is due in a great measure to carelessness, in not keeping them labeled. Tree labels can now be purchased so cheaply from the manufacturer that individuals can scarcely afford to whittle them out by hand, but large stake labels, to be driven into the earth, may be made of old pieces of boards, or hard wood, and a goodly quantity should always be kept on hand. I have always made it a rule to have a sufficient number of labels made in winter for spring use, and no plant is ever set out or seed sown without being labeled at the time. Before planting vegetable or flower seeds, I go to my store of labels and select the sizes desired, and rub some fresh white paint over the side on which I wish to write the names, then carry labels and seeds to the place where they are to be used. As each variety of seed is sown its name is written upon a label and this inserted into the soil. Small tree labels may also be used for this purpose if fastened upon strong stakes. There ought to be enough of the Yankee spirit left in our people to enable them to whittle out all the labels required during the long winter evenings, without trespassing upon a more busy season.

Rabbits in the Garden.—*Feb.* 6.—Wild rabbits are a great pest in the Eastern as well as the Western States. They come into one's garden or orchard by night and eat the buds and small twigs from small fruit trees and ornamental shrubs. They visit my garden more or less every winter, although the sportsmen have waged war against them in this locality for the past hundred years; still they are so numerous that nearly a hundred were trapped by the boys in my immediate neighborhood last winter. One of the simplest methods of keeping them away from garden trees and shrubs with which I am acquainted, is to raise a quantity of sweet corn and leave it in small shocks where the rabbits can feed upon it during winter. They seem to prefer this kind of food to almost any other, and when they congregate about the corn in winter, the sportsman is afforded a good opportunity of trying his skill. I have known young pear orchards to be protected from rabbits by this simple and inexpensive method.

Making Ashes.—*Feb.* 7.—There are very few farmers or gardeners who do not know the value of ashes, particularly upon old land that has been many years under cultivation. In the older States it is not an easy matter to obtain a supply of this material, but a far larger quantity could be produced than at present, if those who own timber would save that which annually goes to waste, and burn it into ashes. Whenever I cut down any old trees I save all the small branches, and have them hauled upon some vacant spot in my garden, and when dry they are burned and the ashes scattered over the surface. All the trimming from shrubbery, grape vines and other wood plants are treated in the same way, and it would astonish those who have never tried it, if they could see the rank vegetation produced upon these ashed places. On every acre of woodland there is more or less otherwise worthless wood that might be drawn out on to some barren place and there burned, and the ashes would restore fertility. One of my neighbors has cleared the stumps from five or six acres in the past two years, but instead of burning and saving the ashes, they were hauled into adjacent woods and left to rot. This man is very careful to save all the ashes made in his kitchen stove, which are applied with great care to his corn or garden vegetables. I hope this hint will be sufficient to make some of the readers of the RURAL NEW-YORKER gather up the waste wood about their places, burn it and save the ashes. There is nothing better to keep insects from vines and garden vegetables than dry ashes dusted over the leaves.



SOFA ARBOR.

Fuchsias from Leaf Cuttings.—*Feb* 8.—It may or may not be generally known that fuchsia leaves will grow as readily as the young, tender stems. Upon examining, to-day, some leaf cuttings put into the propagating beds ten days since, I found them well rooted and young stems an inch or more in length, that had sprung from the base of the petioles. In making the cuttings, the leaf should be removed entire from the plant, leaving a portion at least of the heel or enlarged part where it joins the stem of the parent plant. By using the leaves as well as young tender shoots for cuttings, new varieties may be multiplied with great rapidity. Those who have no hot-bed or propagating house in which to strike the cuttings, can use pots filled with pure sand, placing them in a warm position in the house, and then cover the cuttings with a bell-glass until well rooted, afterwards transplanting into good rich soil.

Azalea Amoena.—*Feb.* 9—It is only a few years since our nurserymen discovered that this beautiful Chinese azalea was perfectly hardy in our Northern States. As its hardy character is now well established, I hope our nurserymen will propagate it extensively, because we have few low growing evergreen shrubs of greater beauty The flowers are about an inch in diameter and of a rich purplish crimson color.

LABURNUM, OR GOLDEN CHAIN.

This species forms a low, dense shrub, with numerous slender stems—each being crowned with a cluster of flowers. It blooms in early spring, the flowers remaining for several weeks. It is also an excellent species for house culture; a large plant placed in my greenhouse last fall has been in bloom for the past month, and is still loaded with flowers. There are several nearly-related species, obtained from China, that are also hardy; among the best known of these are *A. obtusa*, with small, flame-colored flowers; *A. ovata* has pink flowers, and *A. ovata alba* pure white. A few years ago these were placed in the list of tender greenhouse plants, which only shows that there is still a chance to learn something new even in regard to the characteristics and habits of the oldest plants in cultivation.

Floricultural.

LABURNUM, OR GOLDEN CHAIN.

(Cytisus Laburnum.)

THIS beautiful Alpine tree is no stranger in the gardens of the Eastern States, still

"*Laburnum*, rich in streaming gold,"

is far too seldom seen, even among collections of less rare and beautiful trees. The *Laburnum* seldom grows to a large size, even in its native country (Southern Europe), but the wood is extremely hard and formerly used in place of ebony. BOUTCHER tells us that he once saw a large table and a dozen chairs made of this wood, which were considered by good judges of elegant furniture to be the best they ever saw. This tree will probably never be cultivated in this country for its timber, but it is well worthy of a place in every garden as an ornament. The position where it seems to fit in best is among evergreen, where the long pendent racemes of flowers shine out more strongly by way of contrast. If a group of snowball bushes stand near by, the brilliant tints of the golden chain will show even more brilliantly, for these two old favorites bloom nearly at the same time.

We give an illustration of a cluster of *Laburnum* flowers as they hang from the long slender branches, and a tree loaded with these graceful ornaments is an object worthy of admiration. Although the *Laburnum* is usually considered quite a hardy tree, and grows in barren, bleak localities in Britain, still it often fails in this country, on account of the dryness of our climate.

To grow it successfully the trees should be given plenty of mulch in summer, the entire surface of the soil for several feet in extent about the roots needs to be covered, especially if grown in a light, dry soil. They require moisture, but not a wet soil. The trees are readily propagated by seeds, grafting or budding. There are several varieties, which are usually propagated by budding upon seedlings of the wild European species.

FLORICULTURAL NOTES.

Sofa Arbor in the Parlor.—Now that flowers and plants have come to be regarded a necessary adornment in the parlors of our people, whatever gives suggestion to aid in such garniture will be interesting. We give herewith an illustration showing a sofa arbor, beside which are two boxes in which ivy is planted and trained on a trellis so as to form a canopy over the sofa; and round about it are set flowering plants in pots. This is only one feature of a well-adorned parlor, which, by the exercise of good taste and judgment may be made to look like a miniature garden of plants.

Blue Glass for Conservatories.—Some few weeks since I saw a statement in one of our papers to this effect: that it had been proven that plants growing under glass of a blue shade grew more rapidly, did better in every way, than under common glass. A sky blue was the shade named. There was a plausibility in this statement, to my mind, and as I am thinking of building me a small conservatory, I have taken the liberty of consulting you. Would you, in making a bay window (a very large one) or small conservatory, opening from parlor, have glass roof? and would you use glass of any shade but the common glass used in dwelling houses!—JOHN T. CARPENTER.

IF the exposure be east or south we would not make the roof of glass. As to the effect of the use of colored glass, we have no experience. We should certainly try it. ROBT. BUIST, an experienced florist, has used the blue glass, and says:

I applied a coating of Prussian-blue paint, six inches wide, up the center of each row of panes; the result was electric, and in a few days the plants assumed their beautiful green color, and the trusses of bloom came to maturity. The green-house had been used to grow geraniums for bedding purposes, but they had lost their color every year, about the first of April. The plants were completely rejuvenated by the blue glass.

Arboricultural.

ARBORICULTURAL NOTES.

Protecting Peach Trees.—WM. HARRIS sends us the following, which may be practicable for amateurs who have but a few choice trees, and want to secure fruit from it, to adopt:—Preserve your peaches if not too late. The little twigs that would bear peaches freeze during the very severe weather; consequently we have peaches some seasons and some seasons not. In order to have fruit, bind these little twigs well with straw or coarse paper, using twine, and collecting as many of them together as you can. I suppose a man can bind what may be required of any one tree in from one to two hours. It should be done previous to very cold weather; and be sure to shake the snow off from time to time to prevent breaking.

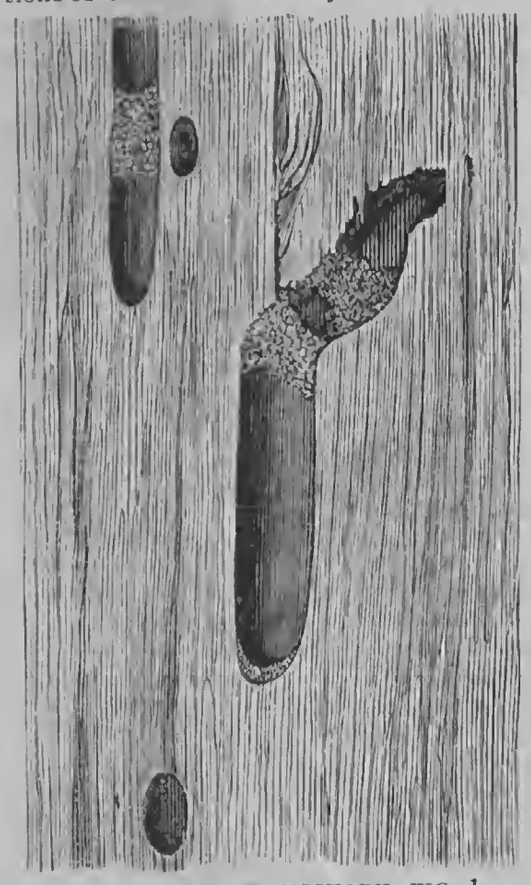
The Best Time to Girdle Timber is at the full moon in August. The timber dies so suddenly, that it is not good for firewood after the first winter—*from dead rot.* It is also the right time to cut hazel bushes and Canada thistles. The writer has had no experience with elm-beach or other hard wood bushes, but will warrant them to die and not sprout if cut at the full moon in August. We knew an experienced ax man who used to say he could see a tree begin to wilt when he was walking up to it with his ax. Don't laugh at the *full moon.*—H. C.

The Way to Sandringham Church.—On the first page of this issue of the RURAL NEW-YORKER we publish an illustration of the path to Sandringham Church, which illustrates one of the desirable effects of tree planting to form arches and avenues. We like the "natural" order of ornamenting grounds, but we think excellent effects and comfort are often sacrificed to this "natural" business.

Entomological.

HICKORY OR LOCUST BORER.

In many portions of the country it is almost impossible to raise locust trees, (*Robinia Pseudacacia,*) on account of borers which infest the wood. This insect is known by various names, such as *Clytus flexuosus* of FABRICUS, *C. pictus* of DRURY, and *C. robiniæ* of FORSTER. Its habits are pretty well known, and may be briefly stated as follows:—The beetles appear in August and September, the female laying her eggs in the crevices of the bark, where they soon hatch, and the young borer or larva enters the soft wood of the tree, remaining near the outer surface until the following spring, when it penetrates into the more solid portions of the stem. In July the borers as-

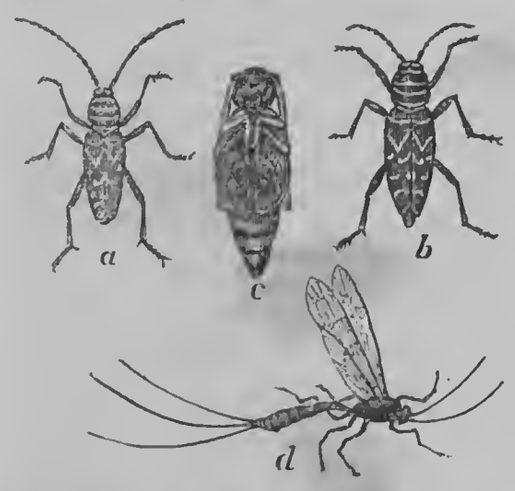


BORER-INFESTED HICKORY, FIG. 1.

sume the quiescent or *pupa* state of the insect, and after remaining in this condition for a few weeks, its transformations are completed, and it again comes forth a beetle.

The beetles are five-eighths to an inch in length, antennæ in the males fully as long as the body, and in the females about one-quarter less; color black, ornamented with transverse yellow bands, of which there are three on the head, four on the thorax, and six on the wing covers. This beetle, as we have already stated, makes its appearance in autumn and attacks the locust; but there is another insect which attacks the hickory, which, if not identical, is a very near relative, or, to speak entomologically, closely allied. This hickory beetle appears in spring instead of autumn, which at first might seem to be as wide a departure from the natural laws supposed to govern the insect world, as it is for them to feed upon two trees as widely separated in the vegetable kingdom as the locust and hickory.

Another peculiarity of this hickory borer, at least so far as we have been able to discover its habits, is that it does not attack living trees, like the locust borer, but preys upon fallen trees, such as those blown or cut down in winter, cord-wood and hoop poles. We found, the past summer, large hickory



HICKORY OR LOCUST BORER, FIG. 2.

trees, felled the winter previous, as well as cord-wood, that were so filled with borers that not a square foot could be found unmolested. We placed several small blocks of this infested hickory, in which there were scores of pupæ, in our green-house a few weeks since, and the spring-like heat has hastened the appearance of the beetles, which have come out in abundance.

A small section of one of the logs is shown in Fig. 1, with the excavations made by the larva. In Fig. 2, two of the beetles are shown; *a*, male; *b*, female; *c*, pupa. This insect, like all others, appears to have its natural enemies, for we have also obtained several ichneumons (*d*) which infest this borer.

The question now arises, Is this hickory borer the same as the locust borer? The late BENJ. D. WALSH claimed that they were distinct (see Practical Entomologist, Vol. 1, pages 28 and 29), the principal difference, as pointed out by him, is in the antennæ, those of the hickory being a little stouter. We have also observed this difference in some specimens, but not in all; in fact, there is a wide variation in this organ as well as in the size of the beetles, taking a large number from which to make a selection. The variation in the season could be more easily accounted for than their attack upon so widely different trees; for a belated pupa in the locust tree might not appear until spring, or the same in a hickory might come out in September, and the autumn brood give rise to a spring brood. But whether our entomologists will be able to point distinctive characteristics between these insects or not, will make no difference in the destructive habits of either. They are certainly a great pest, and we are at a loss to know where insect depredations are to end if our hickory cord-wood is to be devoured in the manner we have described.

Domestic Economy.

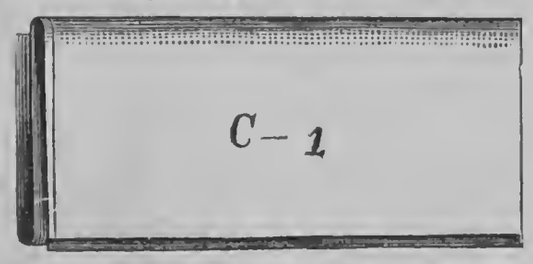
ODDS AND ENDS.

Directions for Making Fringed Mittens.—The yarn for the fringe is best if spun very coarsely and but slightly twisted. It may then be reeled into skeins and colored to suit the fancy. Some dark color, flowered with lighter on the back, is best for common use, or light for nice ones. They may have flowers knit on the outside of each, so as to be very pretty. Cast from fifteen to eighteen stitches, according to the size of the mitten you wish to knit and the quality of the yarn, upon three coarse knitting needles, reserving the fourth to knit with; double the end of the yarn you hold in the left hand to make it strong at the edge; knit around plain four times, then, having your fringe cut in pieces of six threads, if quite coarse, or eight if fine, place the end of the fringe at the corner of the needle a half-inch out, and knit one stitch, then turn the other part of the fringe out and knit two stitches, then turn in, leaving a loop, when cut, that will be half an inch long; after knitting around in this way once, knit around plain twice, before putting in more fringe; widen, for thumb, and narrow off the mitten like any plain mitten.—E.

Bean Soup.—With all thy dinner getting get soup. Get into the habit of having it. Soup is to a dinner what an anthem is to a divine service. It is not half the trouble that inexperienced housekeepers imagine it may be. Only a little is required on which to begin a dinner. When once in the way of having it, regularly, you will appreciate the convenience of soup stock, and value it equally with prepared fruits. To make bean soup, clean the beans over night, pour boiling water over them and let them stand until morning. Then place in plenty of fresh water and put over the fire; add a small piece of corned beef with half as much pork; cover tight and skim as needed. When the beans are partially cooked, add sliced carrot, parsley, celery and pepper; boil slowly until done; strain into tureen and cover.

To Prevent Rusting of Stove-Pipes.—In the RURAL NEW-YORKER of Sept. 23d, 1871, page 186, "Florida Subscriber" inquires for compound as above. For the past eighteen months I have used "Spalding's Russian Stove-Pipe Polish and Preserver" on my stove-pipes and sheet-iron stoves; it arrests and prevents rusting, is desirable and cheap. It gives a dark, glossy polish, similar to that on *new* Russian pipe. It is easily applied, requiring no rubbing. I live in a moist climate; am unable to compound it. It is applied with a flannel cloth, or sponge, saturated, and requires about an hour's drying.—GEO. B. GASKILL, *Niagara Co., N. Y.*

Home-Made Cream Candy.—To any quantity of white, or clean, light sugar, add an equal quantity of cold water; dissolve in a little cold water wheat starch, in the proportion of two spoonfuls to one teacup of sugar, and set it aside ready for use; set the sugar and water on the fire to boil; do not stir much after the sugar dissolves; let it boil until a little of it dropped in cold water will harden readily; then add the starch, stirring very rapidly, and boil a minute or two; again try; when done, pour into a buttered dish, or pan, and set aside till cool enough to work with the hands; add to it while working such flavoring extract as may be preferred; work till very

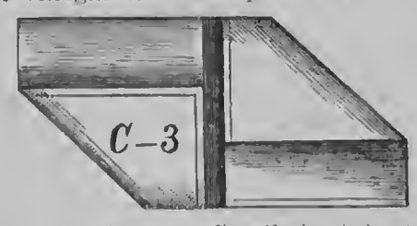


light; draw out into flat lengths, and cut into sticks. This will be found as good as any made at a confectioner's.

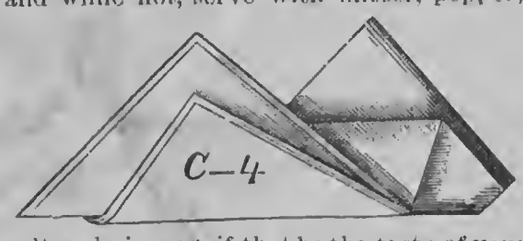
Folding Napkins Miter Shape.—We give another of our series of modes of folding napkins. C 1, is the first fold; C 2, the

second; C 3, the third; C 4, the fourth; C 5, the fifth, and C, the final appearance.

How to Boil and Serve Beets.—Acids of some sort are usually required to give a dinner a proper relish, and food dressed with vinegar is much preferable to that



pickled in vinegar. Small-sized beets are more delicious than those of larger growth. Wash well, but in nowise cut the beet or break the skin or roots. Boil until tender, placing first in cold water. When done, skim them into a pan of cold water, and slip the skin off. Cut them into thin slices, and while hot, serve with butter, pepper,

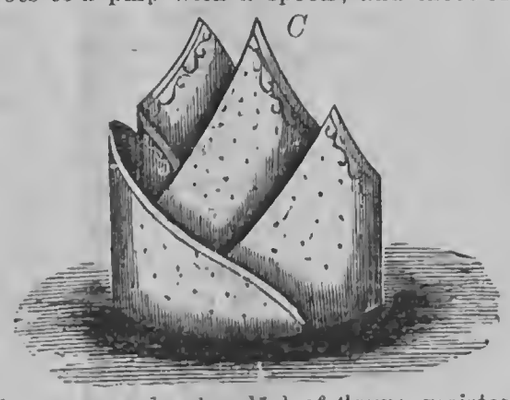


salt and vinegar, if that be the taste of your family. If served cold, slice lengthwise and lay in cold vinegar.

Washing Butter.—I do not believe in washing butter. I never did; I think I never shall. Good butter does not need it. All the waters of Jordan cannot make bad butter good; if it does remove any bitter or bad taste, why not the sweet from the good? My experience for thirty years has been

that it is injurious to color, and in no case beneficial. I keep butter thoroughly worked without water. You would hear a like testimony from very many in old Connecticut, if they speak from personal experience.—M. N., *New Haven Co., Conn.*

Carrot Fritters.—Beat two small carrots to a pulp with a spoon; add three or



four eggs and a handful of flour; moisten with cream or milk, and sweeten to taste; beat all well together and fry in boiling lard. When of a good color, drain, squeeze over them the juice of an orange, and strew with finely sifted white sugar. They form a nice and palatable side dish at dinner, tea or a party.

Hygienic Information.

"WILD TEA" AGAIN.

In the RURAL NEW-YORKER, Jan. 6th, I notice a paragraph headed "A Cancer Cured." You ask—"What is wild tea?" I think you can safely say that it is the *Chimaphila umbellata* (Pipsissewa), as my recollection is having heard that plant called either "Mountain Tea" or "Wild Tea." I enclose you specimens; see the U. S. Dispensatory for its medical history.—E. B. PENDLETON, *Berkley Springs, West Va.*

The plant you enclosed is the well-known "wintergreen," *Gaultheria procumbens*, also called Checkerberry, Boxberry, etc. The *Chimaphila umbellata* and *C. maculata*, are the two most common species of Pipsissewa or Princess-Pine. They are low-growing evergeen plants, but quite distinct from the *Gaultherias*, or true aromatic wintergreen, their leaves possessing a bitter taste. We find by referring to the medical botanies that the common wintergreen, or *Gaultheria*, is called mountain Tea. See GRIFFETH'S Medical Botany, page 424. But we find no allusion to its being used for cancers. These plants have been thoroughly studied by medical experts, and were used during the revolution as a substitute for tea. The first notice we have of any attention being paid to the medical qualities of the *Chimaphila* was by SCHAEFF, who says that it is astringent, styptic and tonic. The late Dr. MITCHEL of New York city published an inaugural dissertation on it in 1803, but it attracted little attention from professional men, until Dr. SOMERVILLE of the British army gave the results of his trials of it in the 5th Vol. of the Medico-Chirurgical Transactions, as a remedy for dropsy, it being used as a tonic where there is much debility and loss of appetite. Dr. BARTOW, (see his vegetable Materia Medica, Vol. 1, page 17,) says it was extensively prescribed during the revolutionary war for camp fevers. So much for the plant which you probably intended to send us but did not. We are still in doubt as to the name of the "Wild Tea" that cured the cancer—if indeed a cancer was ever cured by it, of which we have much doubt. We advise caution, and are inclined to believe that we, with numerous other journalists, have been badly "sold" by this CHARLES YARDLEY.

HYGIENIC NOTES AND QUERIES.

Remedy for Nervous Headache.—"Can you or any of your correspondents give a remedy for the terrible suffering with which I am often afflicted, called 'nervous headache?'" So asks SUSAN P. FELLOWS, of the RURAL NEW-YORKER. We have seen the following recommended as a sure cure, but never have tested it:—"Take a dessert spoonful of common soda, such as is used in making bread, and dissolve it thoroughly in a quart of cold water; with this thoroughly shampoo the head for about five minutes, scratching the skin of the head and the back of the neck well with the finger nails; then rinse the head with clean cold water." If any of our readers do test it and it proves effective, will they not inform us?

A Good Healing Salve.—Take of rosin, beeswax and Castile soap, one part each; two parts mutton tallow; three of lard; dissolve all slowly together. This salve is used a great deal by people here, who prefer making such articles themselves to paying five times what they are worth. For my part, I could not do without it in the family. For a cut joint, Orleans molasses or sirup (never Sorghum) should be used instead of the tallow and lard.—W. S. G.

To Stop Bleeding of the Lungs.—In answer to an inquiry in the RURAL NEW-YORKER, G. E. COONLY writes:—"Peel a handful of witch hazel bark, downwards, seven or eight inches long; also break from a peach tree a handful of twigs the same length. Boil well together in water enough, by adding a pound of brown sugar, to make a quart of sirup. Bottle tight, and keep in a cool place. Take two tablespoonfuls three times a day."

Remedy for Chills and Fever.—In RURAL NEW-YORKER, Jan. 13, p. 38, we published a paragraph under this head, in which the dose of mandrake recommended was one tablespoonful for an adult. G. W. writes us it should be one *teaspoonful.*

Remedy for Caked Breasts.—Stew hops in good lard until the strength is out, and bathe the breast with the resulting salve, three or four times a day. It has never failed to relieve my sufferings.—A MOTHER OF TEN CHILDREN.

Dairy Husbandry.

COOKING FODDER FOR DAIRY STOCK.

A CORRESPONDENT who has a dairy of forty cows, asks us concerning the advantages or disadvantages of cooking the food for the winter keep of dairy stock. He says: "Would you consider it advisable for me to arrange buildings and fit up machinery for cutting and cooking all the food needed for my cows during the foddering season? Is there sufficient saving in cooking the food to make it an object? Is it certain that the health of animals is better when they are kept upon cooked than upon uncooked food? Please give me your experience and views upon this question, and oblige a constant reader of the RURAL NEW-YORKER."

We have never tried cooked food for stock in our own dairy, and therefore cannot speak of the matter from practical experience. We have visited farms where the system was in operation, and we have talked with many persons who have given it trial for longer or shorter periods. Some are quite enthusiastic in their advocacy of the system, believing that "cutting and steaming food" for cattle is a paying business, and should be more generally adopted. Others express a contrary opinion, and do not think the system is economical or calculated to promote the health of stock. We do not regard the question as altogether a settled one; and although very much may be said in favor of cooking food for cattle, there are some serious objections to its general adoption. We very much doubt whether it ever pays to cook good, early cut hay. When large quantities of straw and coarse fodder are to be utilized, and hay is expensive, the straw and coarse fodder may be cut and steamed, and by addition of bran, or meal, the mixture can be made equal in nutrition to a day's ration of hay, and at much less cost for the raw material. But there is a question right here, whether the English system of cutting the straw and mingling with it meal and pulped turnips, or other roots, may not, on the whole, give quite as good results, in proportion to cost, as the steamed food. The important points to be considered are whether the increased labor and fuel expended, together with the interest on capital invested in machinery and fitting up of buildings, etc., for the purpose, are not equivalent to the saving made by way of fodder. If a saving, for instance, of $100 per year be made by the use of cooked food, and if the cost of labor be $50, fuel and other expenses $50, in preparing the cooked food there is, in reality, no gain.

In our examination of English dairy practice, in 1866, we did not find the cooking system generally adopted, or indeed in favor. And it must be observed that the English dairymen are much more economical in their system of feeding stock than the dairymen of America. In fact, the English study economy very closely in this matter, and are pretty sure to follow any plan for cheapening the cost of feeding stock.

Most dairymen with whom we conversed in regard to this question, were quite positive in their views that the advantages gained in cooking were not sufficient to pay the extra cost. We are aware that the cooking theory appears remarkably well on paper, while the arguments and facts adduced are of a character to carry conviction to most minds in its favor; still the practice does not gain ground, and a good many persons, who at one time adopted the system with high hopes as to its advantages, have now abandoned it. This may have been done in many instances from particular circumstances, or reasons not connected with the real merits of the case; but the return to the old system of feeding must always carry a damaging influence against cooking.

Some years ago Mr. J. B. LAWES of Rothamstead, England, gave some strong arguments against the cooking of feed for ruminating animals. As Mr. LAWES is, from his extensive and exact experiments, justly recognized as the highest authority on any matter which he has thoroughly investigated, his opinion on the question before us may not be without interest. In referring to the watery flesh of animals fed on cooked food, he said there was scarcely any limit to the quantity of water that might enter the animal organization, if we gave food which contained a large quantity of water. Speaking as a pathologist, he believed that a great number of diseases among the lower animals arose from the bad state of blood, induced by excess of water and deficiency of nitrogenized matter in the food. The practical farmer knew that if, in the lambing season, he gave his ewes too many white turnips, or other green food which had grown rapidly, and containing a large amount of water, it would lead to disease and loss; whereas, if he put them on dry food, containing, weight for weight, a large proportion of nitrogenized matter, a good quality of blood was produced, and the health of the animal preserved. Admitting that cooked food had the effect of accumulating weight, to say nothing about flesh, in a certain space of time, he was inclined to think that this arose from the facility which it gave for the digestion of the food, by anticipating a part of the process commonly carried on by the action of the gastric juice.

But it was questionable policy giving to an animal, and especially a ruminant animal, cooked food, for thus they might, to a considerable extent, supersede mastication; if so, they would supersede in-salivation, and thus interfere with one of the chief processes of nature. The action of the saliva was first to convert the amylaceous parts of the food (or starch) into sugar or gummy matter. A further provision was made in the ruminant animal for stirring up, if he might so express it, the food; and a chemical change took place in its character before it passed into the true digestive stomach. There was a re-mastication and a re-insalivation; and inasmuch as the secretions coming from the rumen were very analogous to those with which the food was mixed in the mouth, it not only remained mixed with saliva a much longer time, but was mixed with a much greater quantity of that or like substance.

If, then, by the use of cooked food they dispensed with part of the operations of nature, and sent the food quicker into the intestinal canal, they would dispense with the process of re-mastication and re-insalivation; and he could easily understand why, although a large increase might take place in bulk, the quality of the animal might become bad. The digestive process depends materially upon the condition of the food; it is even possible by giving cooked food, or other food which was physically in the same condition with regard to fineness and moisture, to render animals non-ruminative which are naturally ruminative; that is to say, we may give them food that would be retained for a very short space of time in the rumen, pass quickly into the true digestive stomach, and become subject to the action of digestion without first undergoing re-mastication.

We should thus interfere at once with the law of nature; if we cook food at all, we ought not, before cooking, to reduce it too fine. If the straw be cut into lengths of from four to six inches, a cooking process may be set up, so as to convert the amylaceous parts into sugar, without interfering with the functions of the rumen; but such food would be re-masticated.

He would advise that if food is pulped and mixed it should not lie too long to undergo the process of fermentation, but be given pretty soon after it is mixed. Straw, doubtless, might be converted into palatable food, and animals induced to eat a large quantity of inferior provender, cut into chaff, by simply throwing over it a small quantity of oilcake, dissolved in water. This was a common practice among farmers in Lincolnshire in feeding their horses, especially during the winter months. Upon the whole, he was certainly *not in favor* of the so-called system of cooking food, either for the preservation of the health of the animal, or for the promotion of the process of digestion, and was inclined to think that, by the physical alterations they might make in character and condition by the cutting straw, pulping roots and mixing a solution of oilcake with them, they would gain their point at a lower expenditure, and with much more advantage to the animal economy.

With the light of our observation we cannot advise our correspondent to enter upon any very expensive outlay for the purpose of introducing the system of cooking food for dairy stock. We do not say but that the system may have great merits in certain cases and under particular modes of farming, where large quantities of grain are raised and the breadth of meadow lands is comparatively small. Our advice would be to test the system first on a small scale and with a few animals, noting the amount of labor and cost, and the advantages, if any, as compared with the old method of feeding. Such trial, if carefully made, will be more satisfactory than volumes of advice in favor or against the system. Our experience, as farmer and dairyman, teaches us that plausible theories are not always practicable. We are not opposed to experiment or trial of any system of feeding animals or of farming which looks reasonable and feasible, but unless you are thoroughly convinced that the change is to be for the better, let the trial at first be upon as small and inexpensive a scale as possible.

Farm Economy.

THE SUGAR ORCHARD.

THE MANUFACTURE OF MAPLE SIRUP AND SUGAR.

As the season of the year is now about here for commencing operations in the sugar orchard, we are inclined to believe that a slight history of the manner of conducting this branch of farming in this State will not fail to be of some interest to many of the RURAL NEW-YORKER'S readers. There is certainly nothing belonging to the farm of those whose woodlands consist of a heavy growth of the sugar maple, that proves so remunerative, considering the labor required and the small amount of money invested, as the manufacture of maple sirup and sugar. And in order to give our method of managing the business in as clear and concise a manner as possible, we propose to notice the subject under various headings, being as brief in each as will merely serve the purpose for which this article is intended. The first thing we shall notice and describe is
